LITERATURE.

The Life, Letters, and Friendships of Richard Monckton Milnes, First Lord Houghton.

By T. Wemyss Reid. In 2 vols. (Cassell.)

MR. WEMYSS REID has been fortunate in his subject. For more than half a century Richard Monckton Milnes occupied a conspicuous position in society—in the widest and best acceptance of the term—not only in England, but throughout Europe; and the magnetic influence of his personality continued after he had passed away. A man of singular quality, with a decided strain of genius, he achieved honourable distinction in various capacities, if he attained pre-eminence in none. A true poet, and within measurable distance of being a great one, he was also a graceful prose-writer and an admirable critic. Despite his deep feeling for literature, he was even more strongly drawn to affairs, and his highest ambition was for a political career. In him peculiar intellectual attractiveness and manifold accomplishments were united with a generous heart and a phenomenal talent for inspiring confidence and liking in all whom he met. A catalogue of his permanent and temporary friendships would comprise the names of the majority of the eminent men and women of the century.

"The man who had known Wordsworth and Landor and Sydney Smith, who, during the greater part of his life, had been the friend, trusted and well-beloved, of Tennyson, Carlyle, and Thackeray, was also one of the first to hail the rising genius of Swinburne, and to lend a helping hand to other great writers of a still younger generation. Nor were his friendships confined to the literary world. The Miss Berrys, who had known Horace Walpole in their youth, knew and loved Monckton Milnes in their old age. Among statesmen he had been the friend of Vassall Holland, Melbourne, Peel, and Palmerston, in the hey-day of their fame; he had first seen Mr. Gladstone as an undergraduate at Oxford; had been the associate of Mr. Disraeli when he was still only the social aspirant of Gore House; had been the confidant of Louis Napoleon before he was a prisoner at Ham, and had known Louis Philippe, Thiers, Guizot, and Lamartine, alike in their days of triumph and defeat. Lamennais, Wiseman, Edward Irving, Connop Thirwall, and Frederick Maurice, had all influenced his mind in his youth; he had laid the first plank of a kind of pulpit from which Emerson could preach 'throughout all Saxondom,' and he had recognised the noble character and brilliant qualities of Miss Nightingale long before the world had heard her name."

These were but a few of Monckton Milnes's friends; and even more illustrative of his catholicity of temperament and sympathy was the number of budding or passing celebrities to whom he extended his famous

hospitality. When, in connexion with this extraordinary social experience, it is stated that Lord Houghton wrote to his intimates unreservedly about everybody he met or knew, and received in return their own unguarded impressions, that he kept his letters, and, moreover, used to jot down his own thoughts and other people's sayings, some idea may be obtained of the rich treasury of fascinating information and gossip on which Mr. Reid has freely, yet discreetly, drawn.

From the opening chapter, which treats of Monckton Milnes's father, there is hardly a page that the reader would wish to skip. That father was himself a remarkable man. During a parliamentary career which was counted by months, Robert Pemberton Milnes made for himself a reputation that seemed to ensure an eventual attainment to the highest place in political life. Within a few months after entering the House of Commons he saved the Government by an extraordinarily clever speech; at the age of twenty-five, he was offered the choice of a seat in the Cabinet either as Chancellor of the Exchequer or as Secretary at War. "Oh, no," he said, "I will not accept either; with my temperament I should be dead in a year"; and thenceforth he ceased to take any prominent part in parliamentary warfare. Nearly half a century later he declined Lord Palmerston's offer of a peerage, which his son had strongly urged him to accept. Though Mr. Pemberton Milnes thus early quitted the political arena, he never ceased to cherish a strong desire that his son should follow a path from which he had himself turned away.

Not the least interesting portion of the biography is that which deals with Monckton Milnes's early years, his school and college life. Most readers will find in these chapters much that is either new or forgotten. At Trinity, Cambridge, where his father before him had gained distinction, his tutor was Connop Thirwall, afterwards Bishop of St. David's, whose influence, according to Milnes's biographer, was far more powerful than any other in the "making of his mind." When Alfred Tennyson entered Trinity as an undergraduate, he was so struck by Milnes's face that he said, "That is a man I should like to know; he looks the best-tempered fellow I ever saw." They at once struck up a close friendship that lasted through life. Milnes gave a striking proof of his superiority to fashionable prejudice by enrolling himself among the undergraduates of the recently founded University of London. Afterwards he stayed several months at Bonn, taking care to live entirely among Germans so that he might acquire a better knowledge of the language. The account of his residence in Italy and his tour in Greece is very agreeable reading.

After a prolonged sojourn on the continent, occasionally broken by brief visits to England, Milnes returned to London in 1836, a cloud of pecuniary anxiety that long overshadowed the family fortunes having passed away. At the general election which followed the demise of the Crown in 1837, Milnes was returned for Pontefract, his father's old constituency. Mr. Disraeli, still known as "young

D'Israeli," was among the new members who entered the House at the same time. When Disraeli delivered his memorable maiden speech, Milnes, who was sitting next him, said, "Yes, old fellow, so it will," in response to the famous words, "The time will come when you will hear me." On the following night, Milnes made his own first essay in parliamentary oratory with distinct success. Of his aptitude for affairs we shall speak presently. Although Mr. Reid appears to regard him as a considerable statesman, it was not in this capacity that the personality of Robert Monckton Milnes so powerfully impressed the popular mind.

He had already entered on that social career in London which gained for him a unique place in the history of his time. Immediately after their return, the Milneses were giving dinner parties in South Street to their son's friends, "some of them being very agreeable and literary"—among them, Wordsworth and Samuel Rogers. Through Charles Buller, Milnes made the acquaintance of Carlyle, who had been living for some two years in Cheyne Row and was then writing *The French Revolution*. Milnes's eccentricities and disregard of the conventional impressed Carlyle, who described him to Emerson as

"a most bland-smiling, semi-quizzical, affectionate, high-bred, Italianised little man, who has long olive-brown hair, a dimple next to chin, and flings his arms round your neck when he addresses you in public society."

Milnes soon became a familiar figure at Rogers's breakfasts. At one of these Milnes and Carlyle met Macaulay for the first time, shortly after his return from India. The guests had hoped to hear Carlyle, the fame of whose utterances was then at its zenith, but Macaulay monopolised the conversation. When the party broke up Milnes followed Carlyle into the street.

"'I am so sorry,' he said to the philosopher, 'that Macaulay would talk so much, and prevent our hearing a single word from you.' Carlyle turned round and held up his hands in astonishment. 'What,' he said, with the accent of Aumandale, 'was that the Right Honourable Tom? Ah, weel, I understand the Right Honourable Tom now!'"

In his bachelor apartments in Pall Mall, Milnes adopted Rogers's custom of social breakfasts, and the fame of his entertainments quickly spread. Disraeli, in his celebrated passage in *Tancred*, wrote,

"Mr. Vavasour's breakfasts were renowned. Whatever your creed, class, or merit—one might almost add your character—you were a welcome guest at his matutinal meal, provided you were celebrated."

Carlyle used to say that if Christ were again on earth Milnes would ask him to breakfast. Many are the delightful stories told of the host's eagerness to bring out "some society curiosity." Sir Henry Taylor has preserved one which it is disappointing to learn is absolutely without foundation. One day at table somebody asked if Courvoisier, the murderer, had been hanged that morning. "I hope so," replied Milnes's sister, "or Richard will have him at his breakfast party next Thursday." It ought to be true, so aptly does it indicate one

phase of Lord Houghton's character. Mere celebrity, however, as his biographer observes, was never the key to the attentions of Milnes. Froude accurately said of him that he had open eyes for genius, and reverence for it, truer and deeper than most of his contemporaries. Mr. Reid writes:

"To the last he was always curious about the 'rising men,' always anxious to know them, and, if he could, to give them a helping hand. One day he remarked to his biographer, 'I think I know every man of letters now whom I want to know, except one.' The exception was Mr. Thomas Hardy, for whom he felt a great admiration."

When Fryston became his, on his father's death, Lord Houghton entertained visitors from every quarter of the globe in the pleasant home which Lord Sherbrooke, because of the presence of books in every portion of the building, likened to one of "those amorphous animals which have their brains all over their bodies":

"Never was there a more delightful host than Milnes. Whether his guests were famous or obscure, whether they belonged to the great world or had merely for the moment emerged from the masses, they could not be long in his company without feeling the charm of his manner, and being warmed and attracted by the tenderness of his heart. His fame as a talker was world-wide, and there is no need to say that the dinner-table at Fryston was the scene of a hundred happy encounters of wit, intelligence, and knowledge. But to hear Milnes at his best, it was necessary to meet him at the breakfast-table. . . . It is with a great sadness indeed that those who often had the privilege of meeting him in this fashion in his own house must recall those breakfasts, absolutely informal and unpretending, but made memorable by the choice treasures of wit, of paradox, of playful sarcasm, and of an apparently inexhaustible store of reminiscences, which Milnes offered to his guests."

It were bootless to inquire to what extent his unique social success prevented Lord Houghton making good his title to a loftier fame. "I think you are near something very glorious, but you will never reach it," wrote Stafford O'Brien, one of his college friends, to Milnes while yet at Cambridge; and the event fulfilled the prediction. His most gifted contemporaries saw in his brilliant powers a sure and certain presage of a high destiny. The number and variety of his interests, however, told against his chance of attaining supreme distinction in any particular sphere. This was especially the case as regards poetic achievement, in respect of which, however, it seems to us that his biographer has done him less than justice. To a friend sitting beside him in a company of which Tennyson chanced to be a member Houghton said, pointing to the Poet Laureate, "A great deal of what he has done will live," and then added, half, as it were, to himself, "and some things that I have done should live too." Mr. Reid acquiesces in this modest self-appraisal. In the after-light of Tennyson's splendid pre-eminence we are not unlikely to over-estimate the extravagance of Landor's dictum that Milnes was the greatest poet then living and writing in England. By the way, this assertion of Landor's is differently recorded by Mr. Reid as having been made at a breakfast at Crabbe Robinson's (i. 183) and at a

breakfast at Rogers's (ii. 438). Rich in fancy, thought, and feeling, with a distinction and charm peculiarly its own, Lord Houghton's poetry certainly entitled him to more than the thrifty homage accorded to him as poet during his later years. We share Mr. Aubrey de Vere's belief that one day the world will discover, with much pleasure and surprise, what a true poet there lived in a man whom it had chiefly regarded as a pleasant companion.

Mr. Reid has not underrated Lord Houghton's capacity in another field of his multitudinous activities. He credits him with the higher qualities of statesmanship, and is evidently of opinion that he would have been offered office, which he ardently desired, but for Sir Robert Peel's belief that political fitness and the literary character are not to be found together. We fail to discover Mr. Reid's grounds for that opinion. A careful perusal of his pages has confirmed us in the belief that it is only in politics that Monckton Milnes can be held to have failed. It may not be true of the son, as Sir Henry Bulwer said of the father, that he was "always finding something to condemn on all sides." But Disraeli's familiar description imputed to him a temperament hardly more conducive to a successful political career:—

"With catholic sympathies and an eclectic turn of mind, Mr. Vavasour saw something good in everybody and everything, which is certainly amiable and perhaps just, but disqualifies a man in some degree for the business of life, which requires for its conduct a certain degree of prejudice."

An extract from Lord Houghton's commonplace book, a delightful selection from which forms an appendix to Mr. Reid's volumes, may be quoted in this connexion:

"'You are a man of a large heart,' said Lady Waldegrave to me. 'That may be,' I answered, 'but it is not near so useful as a narrow mind.'"

One of the best after-dinner speakers in the kingdom, Milnes's natural ease failed him when he addressed the House of Commons, and he gave his audience an impression of affectation. His parliamentary career, however, was not barren; and, in the passing of his Bill for establishing reformatories for juvenile offenders, he accomplished a reform the importance of which can hardly be exaggerated.

Milnes's disappointment at missing the coveted prize of office, even if keen, which may be doubted, can only have been transient. In his large nature there was scant lodgment for any mean regret. His intense delight in life, his joyous spirit and unfailing good humour, were a source of constant happiness alike to himself and to those with whom he came in contact. "He always put you in a good humour," Lord Tennyson told Mr. Reid. The friend and protector of men of letters, he gave freely of his counsel, his substance, and his sympathy, to the writers and artists of three generations. "Other people," he once said to a neighbour at Fryston, "like to give their friends bread; I like to give them cake."

Lord Houghton truly, in Landor's expressive phrase, "warmed both hands before the fire of life." But, though in his lifetime he

received his good things, it was not appointed unto him, as unto his great contemporary and friend, to have his reputation tormented after death. He has been happy in his biographer. Mr. Wemyss Reid has given us a faithful presentment of "the real Milnes—not the outward Milnes, as he appeared to those who only saw him at a distance," the most amiable trifier of his time. It is a speaking likeness, admirable in both breadth and detail. While the sterling qualities of the man are conspicuously revealed, the "superficial oddities and eccentricities of his manner and character" are put in with appropriately light touch. Excessive love of paradox, short-lived outbursts of irritation, and irrepressible self-assertiveness were the venial infirmities of this noble mind.

We lay down Mr. Reid's volumes with a feeling that, whatever may be the precise value of Lord Houghton's work, the man was far greater than what he accomplished.

JOHN F. ROLPH.

Emin Pasha and the Rebellion at the Equator. A Story of Nine Months' Experience in the Last of the Sudan Provinces. By A. J. Mounteney-Jephson. (Sampson Low.)

MR. JEPHSON'S book forms a necessary complement to Mr. Stanley's *In Darkest Africa*. It deals with the interesting episode covered by the period from April 22, 1888, to January 31, 1889, which may be described as Mr. Jephson's quest of Emin in the Equatorial Province, and which Mr. Jephson himself was alone competent to relate at first hand. Hence this chapter in the general story of the expedition was wisely left by Mr. Stanley to his able lieutenant, who has performed his task with rare skill and judgment. It will be remembered that, when the van of the expedition reached the southern shores of Albert Nyanza, Emin was nowhere to be found, though there were indications of his recent presence in that part of the lake. But he had left no message for the relieving party, though aware of their approach, and had again vanished into the wilds of the Bahr-el-Jebel, apparently more anxious to elude his rescuers advancing from the west, than to escape from his Mahdist foes already closing round him from the north. The situation, if *piquant*, was certainly embarrassing, and, but for the resolute action of the leader of the expedition, might have ended in a tremendous fiasco. He could not leave his followers to their own resources, while he went himself wandering up and down the Zeriba lands, in the hope of repeating on the banks of the White Nile the exploit already performed on the shores of Lake Tanganyika. But in Mr. Jephson he found a deputy who proved himself fully competent for the work, and who, after a series of thrilling adventures, brought the truant Pasha in triumph to the feet of his stern deliverer.

These adventures, together with many side issues, are here related with a graphic vigour and unaffected modesty, which do immense credit to the narrator's qualities both of head and heart. But most readers

will probably turn first to those sections where the author formulates his estimate of Emin's character, or seeks for a *raison d'être* of his puzzling attitude towards the Relief Expedition. On this, as on all other subjects, Mr. Jephson speaks with the frankness of a man who has no motive to serve beyond the cause of truth, and his judgment carries all the greater weight because, like most people, he was at first distinctly prepossessed in favour of Emin Pasha. He still speaks of him in the kindest way, fully appreciates the difficulties of his position, and deals tenderly with his inherent mental shortcomings. But after ample opportunities of forming a just estimate, his conclusion is, on the whole, decidedly adverse, approaching even the verge of censure. In the Preface he already writes that

"enough is now known of Emin Pasha for people to readily understand that he was not the man all Europe supposed him to be, or 'a second Gordon,' as some of his admirers termed him. It was not until I had witnessed many deplorable examples of his weakness and vacillation that I began to lose faith in his judgment; and it was not until afterwards, when I had conversed frequently with his people and himself about things in his province, that I found out that Emin had only told part of the story—only that part which was creditable to his people. It was, perhaps, natural that a man who professed to love his people should prefer to dwell rather on their good qualities than on their bad ones. Still, his story, as related in his letters, completely misled the people of Europe."

Farther on his language becomes even more severe, as when he speaks of "constant ebullitions of spite," which excite a certain degree of "indignation," quickly, however, developing into "a feeling of pity." Then, towards the close, he writes of Emin as

"a man with a kindly and generous mind, physically courageous, but morally a coward; a clever accomplished gentleman, enthusiastic for the science of natural history, but not of that firm temper required to lead men, or of that disposition to attract or sway them—a man whose natural kindness of heart is being constantly spoilt by his delicate susceptibility and childlike vanity—a man whose straightforward directness and accuracy has been warped by a too-long residence among Orientals."

Among the numerous illustrations adorning this volume, there is a good portrait of Emin, which seems to breathe the very spirit of this appreciation—considerable intellectual power, indicated by a lofty brow, combined with the wavering glance expressive of moral weakness.

The book is so charged with interesting matter that a notice almost involuntarily resolves itself into a series of quotations. Endowed with a singularly quick eye and retentive memory, the author fills his pages to overflowing with shrewd remarks on the appearance, usages, industries, and mental qualities of the people, and on the more salient features of their physical environment. At the Mswa station on the Albert Nyanza, he is taken to

"a large open hut, at one side of which a trench had been dug, and an exceedingly primitive spindle was fitted into it, which was worked by an intelligent-looking negro lad. Several qualities of cotton were made here,

some remarkably fine for the women's clothes, and some of a coarser description for the men's tunics and loose Turkish trousers. The men's clothes were usually dyed a warm reddish brown colour, from a solution made by soaking the bruised bark of a wild fig-tree in water. These fig-trees grow in great numbers all through the entire country. The cloth had a slightly fluffy appearance; it was almost as warm as flannel, and was wonderfully strong and serviceable."

Much of Mr. Jephson's time was passed under arrest in a Sudanese guardhouse at Dufile, where he had ample opportunity of studying the ways and humours of these gentry. His opinion is not favourable, Emin's "stalwarts," whose praises had been so loudly trumpeted in Europe, proving to be for the most part brutal ruffians and abject cravens in the presence of danger.

"They did not understand the duties of soldiers in the least. They never had drill, nor did they even understand that the first duty of a soldier is obedience to orders. One might be inclined to look over a good deal if they were good fighters, but they were not; for, if confronted by a tolerably determined enemy, they always ran. I could not see one redeeming quality about them; they, who were only natives themselves, looked down on the other natives who were not 'soldiers,' and treated them with the utmost arrogance. They were ill-mannered and insubordinate, and, in spite of their ignorance, gave themselves the greatest possible airs. I have no hesitation in saying that, as a body, I have never seen a more useless set of men."

Their Egyptian officers and the other officials were no better, or rather worse, having more opportunities of displaying their vicious qualities—cruelty, insolence, and corruption. A favourable contrast to the lawless conduct of Emin's people is presented by the dignified bearing and heroic attitude of the Mahdi's three unfortunate envoys, who were sent up the Nile to treat for the surrender of the province, but who were subjected to the greatest indignities, torture, and death, under the very eye of the helpless Pasha.

"I felt inclined to dash my fist into the grinning faces of those cowardly Egyptians, who were pointing with such pleasure to the evidence of their cruel work. The dervishes looked full at me seated among the Egyptians as they passed. They probably thought I had some hand in the ordering of their torture. That look haunted me for days. It was as if I had been torturing some animal, and it had turned and looked at me with a human face. Death must have come like a relief to them. In all our calendars of men who have suffered for their religion, no one could have better deserved to be called martyrs than these three brave martyrs."

Mr. Jephson has some interesting remarks on the dwarfs, whom he met both in the Arnwimi basin and again in the Equatorial Province. A good many of the latter had been studied and measured by Emin, who found that the extreme height, whether of the men or women, was in no case more than four feet one inch. They are, consequently, the smallest people of whom we have any knowledge, for even the Batwa, seen by Wissmann in the Kassai basin, south of the Congo, measured four feet three inches. These pigmy people appear to be distributed over a far more extensive area than had been supposed, their settlements being found almost everywhere in the

forest-zone west of Lake Albert. They are described as well built and well proportioned, with a fair muscular development, a light brown or a yellowish colour, and bright, glittering eyes. A peculiarly-elfish appearance is imparted to them by the "thick felt of stiff greyish hair" covering the whole body; while the men have often "very long beards," a feature in which they differ from all other negro or negroid peoples.

The volume is introduced by a prefatory letter from Mr. Stanley, written by an American citizen for the sole and avowed purpose of securing copyright in the States. There are also a small map of the Equatorial Province, an index where the pagination has "got mixed," and a lithographed facsimile of the Mahdi's letter to Emin, brought up by the three dervishes, and calling on him to surrender.

A. H. KEANE.

SCARTAZZINI'S INTRODUCTION TO THE STUDY OF DANTE.

Prolegomeni della Divina Commedia. Per G. A. Scartazzini. (Leipzig.)

DR. SCARTAZZINI has at last published his long-looked-for *Prolegomeni*. The three years within which they were promised have grown to fifteen; and this long delay, combined with the knowledge that some years ago the author sold his valuable library, has caused the long expectation to pass into despair of ever seeing the completion of his great work. Happily (in one sense at any rate) we have not seen it even yet, for there is still more to look forward to. But from another point of view, the present work may at first sight cause some disappointment. The author originally intended to have supplied here the materials for bringing up the Commentary on the *Inferno* to the same degree of elaborateness as that with which he has treated the *Purgatorio* and *Paradiso*. In the notes to the *Inferno* and earlier Cantos of the *Purgatorio*, the fuller discussion of several knotty points was reserved for the *Prolegomeni*. Afterwards the author embodied such disquisitions in the Commentary itself. The very elaborate notes on "Matelda," the "Dux," the "Concubina di Titone," are examples of what students looked forward to in reference to numerous points of equal difficulty and importance in the *Inferno*. But Dr. Scartazzini has changed this purpose, and all will agree that he has wisely done so. He now hopes that he may live to bring out another edition of the *Inferno*, worked up to the same scale and level as the Commentary on the other two *Cantiche*. All lovers of Dante will fervently re-echo this hope. Dr. Scartazzini's unrivalled Commentary will then have a symmetry and completeness which it lacks at present, and which it always would lack if similar information on the different *Cantiche* had to be sought in one case in the *Prolegomeni*, and in another case in the Commentary itself.

The author modestly says that the present work does not profess to be more than an introduction to the study of Dante and his works, "destinata ai giovani studiosi, e a tutti coloro che di Dante e delle sue opere

non fecero ancora l'oggetto di studi speciali." It is rather a perfect encyclopaedia of information on the whole of the enormous field of Dantesque literature, and on the almost endless discussions that have grown up respecting his life, his works, and everything connected with him. This vast subject is systematically parcelled out; each branch of it is summarily treated; the principal views that have been maintained are expounded and discussed, and the author's own opinions stated, not infrequently (as might be expected) with a good deal of positiveness, not to say dogmatism, though one is glad to observe little of that rough treatment of opponents by which the author's Commentary is often (especially in the *Purgatorio*) disfigured. Each chapter is followed by an ample bibliographical statement of the literature connected with the subject, so that the student can follow out for himself any line in which he is interested.

It would be quite impossible in the limits of an ordinary review to do justice to this most important work. The following brief sketch will give some idea of its method and completeness, and of some of its most interesting conclusions. It has two main divisions: (1) Historical, (2) Literary. The former deals with the life of Dante under three heads. (1) His life before his exile; (2) His life afterwards; (3) His *vita interiore*.

In the first two parts Dr. Scartazzini displays the most "advanced" scepticism as to details—a result very disappointing, if indeed it is inevitable; for one cannot but think that it is here pushed needlessly far. If in regard to the record of any life whatever a few centuries ago we are to reject everything for which absolute and unimpeachable evidence is not now producible, if all that is unproved is to be treated as disproved, we must accept an attitude of simple agnosticism as to mediaeval biography generally. From the nature of the case, most biographical details never can produce such evidence. In the present instance we are dependent almost entirely on Boccaccio; and Dr. Scartazzini repeats with various forms of emphasis his opinion of the utter worthlessness of Boccaccio as evidence for any fact whatever. He examines, but dismisses as insoluble, the often-discussed question whether Dante's family was noble or plebeian. Among other points which he denies, or throws doubt upon, are Dante's connexion with Brunetto Latini, his alleged embassies generally, and in particular those to Boniface in 1301, and to San Gemignano in 1299; the latter (as he admits) never doubted before, not even by Bartoli, who generally surpasses Dr. Scartazzini in his scepticism. His priorate in 1300 is almost the only event in Dante's political life admitted to be certain, though the incidents usually associated with it are set aside. One other public office, indeed, is allowed to him; in April, 1301, he was appointed commissioner ("sopraistante ed ufficiale"), to superintend the widening of a street (San Procolo) in Florence! Dr. Scartazzini thinks that he remained on in Florence until the approach of Charles of Valois caused him and many others to fly from the city. In reference to the period of his exile, he decides that the

much-disputed "Gran Lombardo" must have been Bartolommeo della Scala; he rejects the letter of Fra Ilario as "scioeca e ridicola impostura"; he admits the journey to Paris, and thinks it took place probably in 1308-9, but considers the pretended visit to Oxford as not worth serious discussion. He supposes, further, that Dante visited Padua, Bologna, and Paris, not, as has been absurdly supposed, as a student, he being then about forty years old or more, but in the hope of supporting himself by teaching, which, indeed, Boccaccio asserts that he actually did at Ravenna. Still more interesting, and often most suggestive, is the section on the *vita interiore* of the poet. It is, I think, the most satisfactory and intelligible account of his moral, religious, and psychological development that has yet been given. Dr. Scartazzini treats it as falling into three periods, represented by the *Vita Nuova*, the *Convito*, and the *Divina Commedia*, respectively; which, of course, corresponds with the view expounded by Witte in *Dante's Trilogie*.

In the first period "his heart was right within him," and his whole life was guided and elevated by the mysterious influence of Beatrice. By her death all was unhinged; he at once abandoned himself to a despair in which there is no trace of Christian resignation or of the consolatory influence of religion. This, according to Dr. Scartazzini, is the beginning of his aberrations.* He shortly turned (as he tells us himself in the *Convito*) to Boethius and Cicero for consolation, and was thus led on to the keen pursuit of the study of philosophy, symbolised by the Donna Gentile of the *Convito*, in which treatise this period of his mental development is represented. He became gradually more and more estranged from religious thoughts and pursuits, more and more "worldly," as the phrase is, in his interests. He became lost in the *selva oscura* of

"Le presenti cose
Col falso lor piacer." (*Inf.* xxxi., 34, cf. xxx.
130-1.)

After a time he became weary and dissatisfied with all this; he awoke to a sense of his wretchedness (note *ritrovai* in *Inf.* i. 2), though the way of escape was not found till after many failures and false starts (*Inf.* i. 31-60), which, though poetically represented as within the limits of a day, may have lasted for some years. In this way Dr. Scartazzini would reconcile the assumed date of the awakening (1300) with the continued devotion to philosophy represented by the *Convito* (circa 1309), and the much later date of the actual "return to the way of righteousness" symbolised by the renewed devotion to the glorified Beatrice. This Dr. Scartazzini would put at not more than seven or eight years before the poet's death, the final turning point being probably his complete abandonment of all political hopes and pursuits in consequence of the crushing blow of Henry VII.'s death in 1313. It is most satisfactory to find Dr. Scartazzini contending

* Dr. Scartazzini, however (p. 204), believes in the slenderly-supported tradition of Dante's noviciate in the Franciscan Order, and supposes that it was shortly after Beatrice's death that he thought of thus abandoning the world. (This hardly seems to suit the supposed allusion in *Inf.* xvi. 106.)

for the interpretation here implied of the reproaches of Beatrice in *Purg.* xxx., xxxi., and insisting emphatically that Dante's "unfaithfulness" to her had no connexion with immoral conduct on his part (the few passages supposed to imply this being easily disposed of) or with the "spretae injuria formae" on her part, but consisted in alienation from religion or theology as typified by Beatrice. Another interesting point strongly, and, I think, quite conclusively maintained, is that this alienation amounted to no more than neglect of theology, and undue devotion to philosophy and human knowledge, but never involved denial or even doubt of any articles of the Christian faith. Of such scepticism as this there is, as Dr. Scartazzini truly affirms, absolutely no trace in any of Dante's works.

This portion of the work naturally includes a discussion of the cardinal question, Who or what was Beatrice herself? Dr. Scartazzini's own view is that Beatrice is certainly not (1) a mere symbol—that theory is dismissed in a line as no longer having *difensori attendibili*. This surely hardly does justice to the elaborate work of Gietmann, published in 1889, and included in Dr. Scartazzini's bibliographical list, and carefully reviewed by himself a few months ago in the *Allgemeine Zeitung*. Probably the sentence quoted was penned before Gietmann's work appeared—nor (2) an abstract ideal—This is proved by an elaborate refutation of Bartoli and Renier, the chief apostles of this theory—but (3) a real person beyond all doubt. So far well. But Dr. Scartazzini next proceeds to affirm that she was certainly *not* Beatrice Portinari, or any other person who can now be even guessed at; but some Florentine maiden whom Dante really and literally loved, and who died, as Dr. Scartazzini confidently maintains, unmarried. This view is defended by fifteen arguments duly marshalled and numbered, which we cannot now examine. But we may observe of them generally that some appear very trivial and far-fetched (of which the author seems half-conscious); others insist on difficulties as existing against the other theories, which are insoluble on any theory; others are anachronistic, as depending on transferring to the thirteenth century ideas and associations of the nineteenth century—as, for instance, where he describes Dante's feelings as *amori illeciti*, if Beatrice were a married woman! With regard to the Donna Gentile, space compels us merely to note that Dr. Scartazzini maintains that she was certainly Gemma Donati, referring to some of his earlier works for the formal proof of this.

Very little space remains to speak of the second half of the work, the *Prolegomeni letterari*. It falls under three divisions: the first treating of the language and literature of Italy before Dante, the second of the minor works of Dante, and the third of the *Divina Commedia*. In the second division a brief account is given of the contents of each work, and the inevitable question of the probable dates of composition is discussed, with the result that Dr. Scartazzini pronounces with much confidence in all cases except that of the *De Mon.*, which he gives up as indeterminate. His conclusions are

as follows: *V. N.* 1292-5; *Convito* 1307-8; *De Vulg. Eloq.* 1309; *Div. Comm.* 1313-21. The *Quaestio de Aqua et Terra* (of which no MS. is known earlier than 1508) is unhesitatingly rejected as spurious. So, also, are many of the *Epistles* commonly attributed to Dante, including the very important and interesting dedicatory letter to Can Grande, which Dr. Scartazzini professes himself very reluctant to give up.

In the part relating to the *Divina Commedia* we have a good deal of information respecting editions, commentaries, translations, textual criticism, &c., besides a discussion, among many other subjects, of its general plan, purpose, and principles of interpretation, including here the record of many monstrosities of perverted ingenuity. Dr. Scartazzini's theory of the manner of its composition is interesting. He holds that its "stupendous symmetry" clearly indicates that its author had formed a complete plan of the whole work from the very beginning of its formal composition. At the same time, he thinks it probable that for many years before Dante had collected materials and fragments, like hewn stones which were gradually worked into the growing edifice, consisting of historical or personal episodes, and many descriptions of scenes and places, like photographs taken on the spot. This suggestion throws light on the theory of "author's various readings," which many critics have suspected, and also on the possibility of some at least of the numerous fragments, or "interpolations," lying about in MS. being perhaps genuine though rejected "chips."

Whatever difference of opinion may exist as to some of the author's conclusions, there can be none as to the supreme value of this work as an indispensable handbook for all students in the future, whatever their stage of advancement or knowledge in this vast and inexhaustible field.

E. MOORE.

"THE STORY OF THE NATIONS."—*Scotland from the Earliest Times to the Present Century.* By John Mackintosh. (Fisher Unwin.)

THERE are many things in this volume which deserve commendation, but, on the whole, it is much to be regretted that such a work should have been included in "The Story of the Nations" series. For Mr. Mackintosh, although he has proved his claim to be accounted a painstaking historical inquirer, has, at the same time, allowed his partisanship not only to affect, but to pervade, what ought to have been an absolutely impartial work. He is, if not a Free Churchman, at any rate a believer in the wisdom and righteousness of the ecclesiastico-religious movement which ended in the formation of the Free Church in 1843. Speaking of the schism or Disruption in the Church of Scotland which preceded that movement, he writes:

"I call it a revolution of a high character, as it was effected without violence or bloodshed. It was an event charged with a moral power of vast import, which could not fail to produce beneficial results."

He speaks in a similar tone of the political

events which led up to the Disruption. Thus, in reference to the debate which took place in the House of Commons in March, 1843, on the Claim of Rights put forward by the Church of Scotland, he writes:

"The Prime Minister, Sir Robert Peel, was vehemently opposed to her claims, although it is very evident that he had not taken the trouble to understand them."

Any person is, of course, quite free to hold the Free Church or "spiritual independence" theory of the relation between Church and State, and to expound it in a pamphlet or other work of a controversial character. But a volume like this is certainly not the form in which to give expression to doctrines which are liable to be—and as a matter of fact are—fiercely disputed.

Mr. Mackintosh has adopted an eminently matter of fact and indeed Dryasdust style, and in consequence none of his chapters is at all calculated to rouse the perfervidness of Scotch patriotism. Every third page or so one stumbles on some bald statement like this about Wallace:

"He was gifted with rare mental faculties, tall in stature, and (*sic*) a commanding presence; he was a military genius, with a remarkable force of moral character. He soon kindled in the heart of the nation an unquenchable spirit of resistance to oppression."

The romance of Scotch history must, it is clear, be sought for in other pages than those of Mr. Mackintosh. At the same time he has several of the better qualities of the useful, though not of the ornamental, historian. He has the sense of proportion. He can tell what amount of importance to attach to the legendary, the half-traditional and the indubitably historical respectively. If the personages who figure in the ecclesiastical history of Scotland are left out of consideration—for Mr. Mackintosh is almost as prejudiced in regard to Maitland of Lethington and John Knox as he is in regard to Sir Robert Peel and Dr. Chalmers—he is a good judge and a fair critic of character. Thus he is scrupulously just to Cromwell and his administration of the country, although it should be remembered that from the first a minority—if it was a minority—of the people were on Cromwell's side. While he allows that the taxes imposed to support an English garrison pressed hard on the Scots, he also concedes that "peace and security reigned, which was not to be lightly estimated." With reference to the Supreme Commission of Justice consisting of seven judges, four English and three Scotch, which superseded the Court of Session at this time, and attempted to abolish the feudal system, he observes "a collection of their decisions is preserved, and they are marked by good sense and careful work." Upon education, the progress of manufactures and industries, the organisation of citizenship—upon everything in fact which goes to the making up of what constitutes "civilisation"—Mr. Mackintosh is not only trustworthy but readable. His literary criticism, too, if not epigrammatic, is honest and painstaking.

This volume is certainly not what it might or ought to have been; it is

not a standard history of Scotland in any sense. But it will not be absolutely left out of consideration by any Scotchman who wishes to see his country from all standpoints. Mr. Mackintosh is a conscientious and laborious, if also biased, investigator.

Leal Souvenir. By Alice Weber. (Walter Smith & Innes.)

The Kisses of an Enemy. By Mary Smith. (Digby & Long.)

It is hardly likely that the American *sans-culottes* will see, at any rate in this country, a speedy realisation of their revolutionary programme; but it is obvious that the leaders of the new generation of English novelists are not bound as firmly as were their predecessors to the ancient traditions of fiction. They do not admit that "the stories are all told"—a proposition as absurd as John Stuart Mill's morbid fear that musical combinations were in danger of exhaustion; but they certainly seem inclined to make the mere story a less important element in their work than it was a very few years ago. Mr. W. E. Norris is by no means a literary revolutionary—he would better be described as a Liberal-Conservative; yet, nevertheless, there are clear traces of the influence of the new tendency in the pages of *Marcia*. It is not easy to believe that it will be generally regarded as one whit less interesting than its predecessors; but the sturdiest sojourner in the old paths will admit that its interest is attained by the smallest possible expenditure of purely narrative material—that is, the material of incident, which has an intrinsic attractiveness of its own, apart from its psychological value as indicative of character. Nor is this the only sign of change. In the old novel of comedy the love affair was the centre of interest, and the importance of everything else depended more or less obviously upon its relation to the happiness of a mutually enamoured young man and woman. In *Marcia* there are several love affairs, but they are kept in the background rather than pushed to the front; and in the story of the hero's special romance the figures of Willie's conscientiously obstinate guardian and his utterly selfish mother are much more conspicuous than is the figure of the young lady to whom, in the old days, they would have been altogether subordinated. If the importance of a character in a novel could be decided by counting the pages in which he appears prominently, Mr. Norris's novel should have been called "Willie Brett"; but the author

knew what he was about when he settled what is often the difficult question of nomenclature. The figure which holds the book together is that of the woman who is actuated partly by calculable selfishness and partly by incalculable whim; who ruins the life of her first husband, whom she has deliberately chosen, knowing well that she cares nothing for him; who lives a life of well-deserved wretchedness, mitigated by undignified complaint, with the worthless second husband, to whom she has given such love as she has; who sacrifices her son as a lad, and sponges upon him as a man; and who yet has something about her which makes her fascination not wholly unintelligible. The one thing not quite intelligible is her acceptance of Mr. Brett; but, after her marriage, the rest of the story is a matter of course: to use a word which is looking rather the worse for wear, but is too useful to be dropped, it is inevitable. Good, however, as Marcia is, she can hardly be described as better than Archdale, painter by profession and lady-killer by practice—a relative, one would say, of Harold Skimpole; for, though the family likeness between him and his great kinsman is obscured by little individualities of feature and expression, he makes some pleasingly Skimpolean appearances. Lady Evelyn Foljambe cannot, perhaps, be numbered among Mr. Norris's supreme successes. We feel that she is too self-contained and self-possessed to be as winning as she might be; but, heroine though she is, she is little more than a supernumerary in a very clever and interesting narrative drama.

Seeing that *Beta* provides us with well on to a dozen mysteries, the elucidation of which is absolutely necessary to intelligent comprehension of the story; and seeing, moreover, that these mysteries are at the end of the third volume as mysterious as ever, it is needless to add that Mrs. Bourne can hardly be congratulated on her constructive skill. Nor is her knowledge of the ordinary details of legal procedure more extensive than that of most lady-novelists who are indiscreet enough to meddle with English criminal law. Magistrates are, happily, not in the habit of signing warrants for the apprehension of a neighbour in order to give that neighbour "a bit of a fright," or of committing a man for trial on a charge of murder without something like legal evidence that murder has been done; while it is absolutely certain that a person committed on such a charge, even by an idiot, would not be immediately and "of course" released on bail. But what avail these strictures? *Beta* will kill a few hours of time not disagreeably; and for this kind of murder no one is committed for trial, at any rate by the habitual novel-devourer.

An Honourable Estate is not a bad title as titles go, for it is sufficiently descriptive to make us aware that Miss Crow's story deals with somebody's matrimonial experiences. For Rolf and Percie, however, marriage had more of discomfort than honour; as when the wedding ceremony—conducted under the perplexing laws of North Britain—was hurriedly gone through in Mrs. Brent-

hurst's bedroom, Rolf thought he was marrying somebody else, Percie had no idea that she was being married at all; and though both afterwards feared they were really tied, they maintained a lingering hope that they were free. Of course, a situation like this could not possibly be prolonged by a novelist who believed, with Bishop Butler, that "probability is the guide of life"; and, indeed, in dealing with *An Honourable Estate*, the less said about probability the better. The book is not without cleverness of a kind, especially in the delineation of the character of the hero, who is a sort of damaged Felix Holt; but surely it is possible to be even as unworldly as Rolf without being a complete imbecile.

There is perhaps something a little melodramatic both in the general architecture of *A Living Epitaph* and in one or two of its more prominent situations, notably in the surroundings of Nathaniel Ashe's final act of renunciation. The deed has both pathetic impressiveness and dramatic consistency, but it is impossible not to feel that probability is hard pressed in order to bring together the rival lovers of Miranda Dane on the deck of the sinking vessel. Things of this kind are, however, insignificant trifles when one has to deal with a book so rich in power, pathos, and beauty as is this story of one life's atonement and of another life's quietly passionate waiting for a long delayed vengeance. The wrong for which Nathaniel Ashe strives to atone is one with the wrong which Letitia Letherbarrow waits to avenge; and for years the sinner and the judge live in an association of warm and trustful friendship, each unconscious of the other's identity. Here, it will be seen, is a situation as freshly conceived as it is strongly handled. The emotional interest aroused by the opening chapters never flags for a moment, and as we near the catastrophe it acquires an almost painful intensity. That the short third book which follows the fortunes of Nicholas, Richard, and Miranda, after the momentous revelation has been made, should have something of the nature of an anticlimax was inevitable. Here, as in *Adam Bede*, the culmination and the dénouement of the narrative fail to coincide; but notwithstanding this and other weaknesses already referred to, *A Living Epitaph* is one of the finest and most fascinating novels of the year.

Gilbert Elgar's Son is a quietly and carefully written tale, the actors in which are members of a rural Quaker community in the State of Maryland. The "son" of the title is really the daughter of a somewhat shiftless farmer; and she, while quite a child, hearing her father lament that she is a girl and not a boy, determines to assume the virtue of masculinity which nature has denied to her, and take the place that would have been filled by her dead brother. While Gilbert Elgar lives Robin is his right hand, and when drink brings him to a premature grave she takes the farm upon her shoulders and very pluckily supports the burden. For most readers there may be rather too much agriculture, but there is, of course, some love-making as well; and the book has

the appearance of being a very truthful picture of the life with which it deals.

Three of the most delightful and lifelike children of recent fiction are to be found in the pages of *Leal Souvenir*; and if the story had no other attractions, the little girls, Clare and Maud, and the not much bigger boy, Jack Robinson, would amply suffice to make it most enjoyable reading for either contemporaries or seniors of the youthful hero and the pair of heroines. Other attractions, however, are not wanting: the grown-up folks—especially that charming Aunt Judith—are almost as good company as the children; the narrative has a strong interest of its own; and the covers of the book enclose nothing but pleasant pages.

It is impossible to say anything worth saying about so ordinary a novel as *The Kisses of an Enemy*. The plot is made up of very familiar materials, the characters are thoroughly conventional, and the style is not relieved from commonplace even by exceptional badness. The "enemy" who gives the "kisses" is rather wicked in an uninteresting sort of way, and the people who are less wicked are not one whit more entertaining. There seem indications that one character, Lord St. Barbe, is intended to be amusing, but there has evidently been a slip somewhere between the cup of intention and the lip of performance.

JAMES ASHCROFT NOBLE.

SOME AMERICAN BOOKS.

Boston Unitarianism, 1820-1850. A Study of the Life and Work of Nathaniel Langdon Frothingham. By Octav Brooks Frothingham. (Putnam's.) That indefatigable biographer, Mr. Octavius Brooks Frothingham, has incorporated in this memoir of his father a sketch of Boston Unitarianism from 1820 to 1850, as he says, but really to a somewhat later date. The period thus covered was important in the annals of free religion in New England. At the beginning of it, Unitarianism and Trinitarianism were parted from one another on a mere doctrinal point—whether Jesus of Nazareth was the second person of the Godhead or a magnified man. Conduct which, in later times, Matthew Arnold has pointed out, is "three parts of life," was regarded as comparatively unimportant by both parties to the controversy. But soon afterwards came that ethical revival, since known as Transcendentalism, which gave to Unitarianism and to free religion generally a new and important aspect. The dispute was no longer about the nature of a person whose word, whether as man or God, was held to be supreme, but about the nature of revelation itself. The new affirmation was that, not to Jesus only, but to every man born into the world, the divine guidance was granted directly, and not through book or creed. The difference between the Transcendentalist and the old-school Unitarianism was even greater than the former difference between Unitarianism and orthodoxy. Many persons left Unitarianism altogether; others, like Theodore Parker, were ostracised and insulted by their fellow ministers because, as members of a Church which professed to base itself on freedom, they dared to claim their liberty. The founder of the new spirit was Dr. Channing; and the three stages of its progress are marked by the names of Channing, Parker, and the essentially modern Unitarian, Mr. Minot J. Savage, of Boston. Unitarianism has made itself an influence in

New England to a degree beyond anything it has achieved in the mother country. There it exercises something of the power which the Friends, and latterly, still more, the Positivists, exercise here—a voice of conscience to the nation, so to speak, often felt if not always heeded. To the student of the subject, Mr. Frothingham's book will prove highly interesting. Treating of the movement from the inside, it throws light on facts and incidents of a more public nature already known. Mr. Frothingham sketches the history of the famous Boston "Thursday Lecture," from the time when John Cotton brought the institution with him from Lincolnshire, until, some two hundred years later, it was discontinued rather than that Theodore Parker should be tolerated as one of the lecturers. Many other instances of the persecuting spirit of the old Unitarianism are given, but it is more interesting and important to note the admirable features in the characters even of some of the most determined bigots. There is no doubt Parker brought much persecution upon himself by his extreme aggressiveness. If he "could simply have shifted the basis of authority from the Bible to the soul," says Mr. Frothingham, "without disturbing the traditions of faith, there might have been no contest in spite of his biting sarcasms. But he discredited all the external proofs of revelation." Emerson, with equal courage but more courtesy, achieved similar ends; and, as a rule, his method is the more effectual. Yet in every great movement the fighter is necessary. The work Parker did must not be underrated, although its direct consequences are growing less visible. As to the man himself, it would be difficult to discover a more perfect type of the hero. Of Dr. N. L. Frothingham the present volume gives an interesting account. He may be said to have belonged to the old school, but was fairly open to the influences of the new spirit. Never very prominent, his influence was yet weighty. As his son says: "With Dr. Frothingham died virtually his type of Unitarianism. It was the old-fashioned faith with a sentimental modification." Mr. Frothingham himself was for many years a noted clergyman in New York, until he found it no longer possible to reconcile the revelations of science with organised religious beliefs. But even since then Unitarianism has progressed; and Mr. Savage, already named, is glad to welcome evolution as a powerful ally of the essentially practical and nineteenth century religion which he preaches. New England Unitarianism is the lineal descendant of the Puritanism of the early colony. Such a development gives rise to reflections; yet amid the wreck of institutions and of creeds the spirit of religious liberty which inspired the Pilgrim Fathers is the motive force of whatever is good in the Church of to-day.

A Synopsis of English and American Literature. By G. T. Smith. (Edward Arnold.) So excellent is the purpose of this work that we are sorry we cannot give unqualified praise to the manner in which that purpose is executed. Here is a long list of authors—British and American—classified in a convenient manner, with dates of birth and death, names of principal works, and, in a parallel column, the leading events of the time. Such a work, if tolerably complete and trustworthy, must be, as the author thinks, useful not only to teachers and students, but to the general readers—and he might have added to writers also. Everything, however, depends on completeness and accuracy. Of course, no list could be absolutely complete; the line must be drawn somewhere, and where to draw it is a matter for the judgment of the editor. But a list which is comprehensive enough to include Theodore Tilton should surely include Richard

Jefferies; and Edward Dowden is at least as well entitled to a place in it as, say, De Witt Talmage. The line must be a zig-zag one which includes Richard Proctor and Grant Allen, but not Richard Owen; Harriet Martineau, but not James; John Henry Newman, but not Francis; Anthony Trollope, but not his mother; Mrs. Oliphant, but not her namesake. But it is still more surprising to find the name of Morley represented by Henry and not John; Hutton by Laurence, and not Richard Holt; and Meredith by Owen, and not George. Robert Burton is included, but neither John Hill Burton nor Sir Richard has a place. The critical features of the book are of doubtful utility. As Mr. Smith remarks, "authorities must always widely differ." Mr. Smith distinguishes the different grades by style of type, and gives, in addition, what he terms "a summary of the ranking." It would seem that, in his view, Dickens is "about on a par" with Scott, and in the same rank with these are only seven others, including Shakspeare. Fielding appears in a lower class, with Richardson, Anthony Trollope, and Disraeli; Principal Shairp and John Stuart Blackie a "type higher" (to use a commercial phrase which seems peculiarly suitable) than Dr. John Brown and Sir Arthur Helps, and Mr. Froude than Mr. Freeman. Among American poets Bryant and Mr. Lowell stand with the first, while Whittier takes a second place. But Mr. Lowell reappears as critic in quite a humble position. The editor occasionally adds brief critical notes. Walt Whitman is described as "a singular poetical iconoclast; graceful, tender." Of Joaquin Miller it is said, rather vaguely, "some of his work is very fine." Thomas Hardy is summed up in the words, "fresh, original; peasant life"; and Mr. Ruskin is described as "the creator of a new literature: that of art." Despite many faults, we give Mr. Smith credit for the immense pains he must have taken with his book. Such a work could not be free from errors at the outset; and a carefully corrected second edition would prove invaluable. We think the assistance of a competent English editor should be secured; and, if Mr. Smith can see his way to omit the critical features, so much the better.

The Story of a Noble Life: William Lloyd Garrison. By William E. A. Axon. (Partridge.) In preparing a brief and handy life of Garrison, Mr. Axon has done good service. Such a work was needed. The four ponderous volumes which form the official memoir are a monument of patience, perseverance, and filial zeal and affection; but, to be candid, they are not readable. Perhaps Mr. Isaac Pitman, who, according to his recent biographer, read Walker's Dictionary through twice, might find them so, but most other people would attempt to use them only as works of reference. The present volume is characterised by the thoroughness we have learned to expect in anything that bears Mr. Axon's name. Whatever he undertakes is sure to be good of its kind. He writes with dignified self-restraint. His style is clear, incisive, and always studiously moderate. Exaggeration and superlatives are not allowed to mar its natural force. These qualities are especially noteworthy and commendable in the present connexion. A strenuous upholder of many of the "isms" championed by Garrison, Mr. Axon might easily be excused a little extravagance of language. At any rate, most writers would have been guilty of it. His attitude throughout is that of a dispassionate, though friendly, critic. The book is described in an advertisement at the end as "beautifully bound and illustrated." The words "but badly printed" might have been added with good reason.

Recollections of My Childhood's Days. By Louisa M. Alcott. (Sampson Low.) The

"recollections," which give an attractive but misleading title to this book, extend to only fourteen pages. They are taken without acknowledgment, and we fear without permission, from Mrs. Choney's *Life of Miss Alcott*, published only a few months ago, and easily accessible. For some reason best known to the compiler of the present work, various verbal alterations have been made. The rest of the book consists of stories, none of which, as far as we know, appear now for the first time.

CURRENT LITERATURE.

The Snake's Pass. By Bram Stoker. (Sampson Low.) One day some competent critic, it may be hoped, will make a thorough study of the Anglo-Irish literature of this century. That literature is a thing apart from the English literature of the same period. Scarcely affected by the religious doubts or the scientific dogmas which have so deeply influenced English literature in our day, it has clung steadfastly to the ideal, and insists on portraying life not as it is, but as it ought to be. And that, perhaps, is as legitimate an exercise of the imagination as the portrayal of life as it ought not to be. Such, at least, is the defence which an admirer of Mr. Stoker's new novel will probably make if he hears it reproached for the purely imaginary order of life in which its events transact themselves. Imaginary or not, it has a sufficient subjective coherence and propriety; and these Norahs and Andies and Dicks and Joyces are distinctly pleasant company, in spite of the fact that they inhabit a purely archetypal Ireland in the universe of Platonic ideas. The story centres on a curious natural phenomenon—a moving bog, with the strange proceedings of which the fate of the principal personages is more or less deeply connected. It has many touches of picturesque description and exciting episode, and shows again and again that delightful mixture of homeliness and romance which has characterised Celtic poetry from its earliest days. A charming instance is the rescue of the hero from being engulfed in the bog by means of his peasant sweetheart's homespun petticoat. The book, we may add, would lend itself admirably to illustration. The plot is enacted in a region which, as described by Mr. Stoker, should stir the imagination of an artist who possessed any of Doré's genius for the representation of strange and terrible scenery.

Queen of the Ranche. By Emma E. and J. L. Hornibrook. (Griffith, Farran & Co.) This is a lifelike, entertaining, but not unduly boisterous story, in which due prominence is given to "the marked preponderance of the male sex over the female population in the Far West," and to the fact that "the younger ranchers were often at a loss to obtain suitable partners, and many amusing anecdotes are related of the devices to which they resorted for this purpose." The beginning of the story—the quarrel of Rowley Neville with his peppery uncle, and his consequent appearance as a rancher in America—is commonplace enough. He finds a wife there, of course—though not probably the particular woman, Miss Janholte, whom most of his readers would select—and has all sorts of adventures of the kind which are most appreciated at this season. The action of the story seems occasionally to halt, which is perhaps due to the fact that it is the work of two hands. But, in spite of this, it is full of "go," and is not devoid of humour, and there are several very powerfully-drawn personalities in it.

Roland Hallbrid. By Hector Malot. (Hutchinson.) Naturally, seeing the author is Hector Malot, this is a first-rate book for boys or girls. It is impossible to put it down, when you have once

taken it up, until you have finished it or are ordered off to bed. Its adventures by land and sea follow fast, thick, and exciting.

Hugh Latimer. By the Rev. James Ellis. (Nisbet.) Mr. Ellis is writing a series of "Men with a Mission," and Latimer succeeds Mr. Stanley, Kingsley, and Tyndale. The career of the Reformer is clearly and vigorously sketched, within the limits Mr. Ellis has imposed upon himself. He writes obviously for Protestants, and makes no pretence to any original research; but he possesses a considerable talent for popular narrative, which finds full scope in the series of biographies he is engaged upon.

The Builders of the Church in Northumbria. By M. H. Hall. (Masters.) Some of Mr. Ellis's briskness and vigour would improve these sketches of Northumbrian saints. The author is careful and scholarly, and in many ways superior to the biographer of Latimer; but his book is a little dull, despite the interest of the subject. It is impossible to make the lives of Bede and Aleuin uninteresting; but in dealing with the less-known saints, a greater vivacity of style would help Mr. Hall's readers. Those who care about Mr. Hall's subject will enjoy and value his careful and accurate work, but he will not attract new students to his period.

Glady's. By Emily N. Daughlish. (S.P.C.K.) It is very difficult to write a readable tale describing the state of mind in which young girls ought to be when they are confirmed. The author, who wishes to teach certain lessons, is apt to make the characters over-ready in their expression of religious emotion. There are certain emotions which must be described with careful reserve if they are to be read with any comfort. *Glady's* is not a readable story, but what it has to say about confirmation is earnest and right.

Pixies. By Mrs. Gerard Ford. (Simpkin, Marshall & Co.) Two Northumbrian tales—the first sentimental, with nothing in it but a description of a Northumbrian farm and Northumbrian dialect in dialogue, a dreadful bore for a child. The second story better, but too sentimental also, though in a way better suited to a child.

My Schoolfellows. By Ascot R. Hope. (Biggs.) A very excellent boys' book, cheery, chatty, and jolly.

Dulcie's Love Story. By Evelyn Everett Green. (Nelson.) Too much of a novel for the ten-year-old girls for whom it seems to be intended, but otherwise readable enough.

The Holiday Toy-Book. (Dean.) First-rate coloured illustrations of a circus.

A B C of the World. (Dean.) A coloured geographical A B C. Brilliant pictures of the costumes and scenery of different countries.

The Three Tiny Pigs. (Dean.) The pigs score off the wolf in delightful coloured pictures.

Mon Primer Alphabet. (Hachette.) A picture French A B C, ending up with nice little tales and nice little illustrations.

NOTES AND NEWS.

MR. JUSTIN WINSOR, the learned librarian of Harvard, is taking a year's holiday after his ten years' work at his big history of the United States. As he travels he corrects the proofs of his *Life of Columbus*, a volume of six or seven hundred pages, which is to tell the truth, for the first time, about the great discoverer's weaknesses of temper and character, while doing full justice to his strength and enthusiasm.

WALT WHITMAN, we learn, is putting into final shape a new volume, to be entitled *Good-*

bye, my Fancy! in which his scattered writings and addresses of the last two years will be gathered up. It will also contain Col. R. Ingersoll's recent lecture in Philadelphia, and translations from Gabriel Sarrazin's study in his *Poesie Anglaise* (1888), and from a German lecture delivered to the Litterarischer Verein at Dresden by Mr. T. W. Rolleston (Dresden, 1883).

MR. W. CONNOR SYDNEY—a well-known student in the British Museum—has nearly finished printing a work in two volumes, to be entitled *England and the English in the Eighteenth Century: Chapters in the Social History of the Times*. The work is based upon a careful investigation of original sources of information, particularly the curious and voluminous collection of MSS. relating to national manners and morals under the House of Brunswick, made by Francis Place, the political reformer, and now deposited in the British Museum. Mr. Sydney has also drawn largely from the Fleet Registers, preserved at Somerset House. His book will be published by Messrs. Ward & Downey.

NEWMAN'S Correspondence while in the English Church will be published by Messrs. Longmans on January 15. It will form two volumes, with two portraits.

MRS. J. A. H. GORDON, the wife of the electrical engineer, has nearly finished her little book on "Decorative Electricity," founded on her experience in lighting her own home in Queen's Gate-gardens. Her article on the same subject is in type for the *Fortnightly Review*. The book will be largely illustrated, and will be published, like her husband's well-known work, now long out of print, by Messrs. Sampson Low & Co.

MR. JOSEPH JACOBS has, during the last fifteen months, printed about three thousand pages of English text—mainly Tudor reprints—and written to them a thousand pages of introductions and notes. It is a good record.

THE Wyclif Society was beginning to congratulate itself that it was half through its work, the printing of all the Reformer's MS. Latin treatises; but it has just received from St. Petersburg the tidings that a mass of Wyclif MSS. exists there, no doubt removed from Warsaw when the Russians captured that city. Rumour says that the executive committee hope that no fresh treatises are among these MSS.; for if there are many, a fresh Wyclif Society will be needed to print them.

M. PAUL MEYER is just finishing a long report of about one hundred quarto pages on some old French MSS. in the library of the late Sir Thomas Phillips, at Cheltenham.

THE first volume of the new weekly issue of "Cassell's National Library" will be published next Wednesday. This issue will consist of the most popular volumes of the series, with additional works which have not hitherto appeared in it. Thus, the first volume, Dickens's *The Hunted Man*, is new to the series. The cloth volumes will be published in an improved style of binding.

AMONG the new volumes of verse to be issued shortly by Mr. Elliot Stock are *The Garden of Psyche*, by Benjamin G. Ambler; and *Strains of Solitary Song*.

MR. FITZGERALD MOLLOY contributes to the first number in the new year of *Cassell's Saturday Journal* a sensational story called "The Robbery of Rosa Raywathie." In the same number a serial called "Serjeant Von's Chase" is commenced, illustrated by Mr. J. Finnemore. "What is done at the Foreign Office" is the title of a special article, with

illustrations. "The Strange Doings of Dr. Trax" is the first of a series of articles by Mr. Hall Richardson, which are now appearing in this paper.

MESSRS. A. & C. BLACK, formerly of Edinburgh, have now transferred their business to London, having entered into occupation of a large block of buildings at 4, 5, and 6 Soho-square and 9 Dean-street, W.C., where every facility is afforded for carrying on a large publishing business.

THE members of the Harleian Society have just had issued to them two volumes of *Allegations for Marriage Licences issued by the Vicar-General of the Archbishop of Canterbury*, extending from July, 1679, to June, 1694, and edited by George J. Armytage, hon. secretary. Members of the register section of the same society have also had furnished to them *The Register of Baptisms and Marriages at St. George's Chapel, May Fair*, printed from a transcript of the registers which were kept by the Rev. Alexander Keith and his assistants at St. George's Chapel, May Fair, from 1735 to 1743 or 1744, and from then to 1754 at a private dwelling-house adjacent thereto. This volume is also edited by the hon. secretary, who contributes a preface, tracing the history of Mr. Keith and of the registers.

To the New Shakspeare Society, at its last meeting, was presented a copy of a very recent translation of "Hamlet" into modern Greek, by M. N. Damiralis. There had been three previous versions—by Perbanoglous (1858), Bikelas (1882), and Polulas (1889). We may mention an awkward error in the new translation. Hamlet's words to Ophelia (iii. 1): "I have heard of your paintings too well enough," appears as "ἡκουσα καὶ περὶ τῶν ζωγραφημάτων σας οὐκ ὀλίγα," the "paintings" spoken of being obviously regarded as pictures.

THE next meeting of the Ruskin Society of London will be held at the London Institution on Friday, January 16, at 8 p.m. (not on January 9 as previously arranged), when the Rev. J. P. Faunthorpe, Principal of Whitehalls College, Chelsea, will read a paper on "*Fors Clavigera*."

MR. MONCURE D. CONWAY has added a fresh link to the chain of evidence that connects George Washington with the Sulgrave family. In the *ACADEMY* of October 26, 1889, was printed an analysis of the genealogical researches by which Mr. H. F. Waters succeeded in almost demonstrating that the two brothers, John and Lawrence, who emigrated to Virginia circa 1657, were the sons of the Rev. Lawrence Washington, of the Sulgrave family, by his wife Amphillis. This John was the great-grandfather of George Washington. His will, which has long been sought for in vain, has now been found by Mr. Conway, and printed in the *Nation* of December 18. It is dated September, 1675, and was proved in January, 1677. Unfortunately, the only mention of his English relatives is a legacy to his sister Martha; but from the evidence collected by Mr. Waters, we know that Amphillis Washington had a daughter of this name.

A SECOND series of lectures on "The Religious Systems of the World," in continuation of those delivered a year or two ago and afterwards published in a volume, will be commenced with the new year at South-place Institute, Finsbury, on Sunday afternoons. The programme includes "Old Slavonic Religions," by Mr. W. R. Morfill; "The Armenian National Church," by Mr. F. C. Conybeare; "The Influence of Paganism on Christianity," by Mr. C. F. Keary; "Séicism" and "Babi-ism," by Mr. E. G. Browne, lecturer on Persian at Cambridge; and "Brāhmanism," by Sir Monier Williams. The lectures begin at 4 p.m., being preceded by an

organ recital and vocal music; and all seats are free.

MR. WILLIAM CORY—the once famous master at Eton, William Johnson—has just issued a new edition of his much-sought-after poems *Ionica*, with several fresh pieces, which show that his spirit has not lost its freshness at seventy, nor his hand its cunning. Mr. George Allen, of Bell-yard and Orpington, publishes the little volume.

AFTER giving us a pocket edition of Tennyson, Messrs. Macmillan have conferred an equal boon by a larger-type edition of *The Golden Treasury*. This anthology of English lyrics, which opened the series to which it has given its name, has lost none of its popularity after thirty years. But not only was the print rather trying for elderly eyes, it had also become worn by too frequent impressions. The veteran editor—who now appears on the title-page as Professor of Poetry at Oxford—has taken the opportunity of a new edition to incorporate more than fifty new pieces, mostly from collections of Elizabethan songs that have appeared subsequently, though he has not extended his time-limit so as to include the Victorian age. He has also omitted a few; but comparison between the two editions is rendered difficult by the absence of a proper table of contents. Moreover, the notes have been carefully revised throughout. Among these, we may specially mention the explanation of Gray's Celtic allusions in "The Bard," and the comparison of the Miltonian with the Shaksperian sonnet. There is a misprint in the last line of p. 418; and is it an historical fact that *The Royal George* sank in "Portsmouth Harbour" (p. 430)? We have always understood that she was lying at Spithead, which is a very different place. We only mention these trivial matters in order that such a book may be rendered immaculate.

UNIVERSITY JOTTINGS.

AMONG the honours conferred by the Crown on the occasion of the New Year, we may mention here that Dr. George M. Humphry, the veteran professor of surgery at Cambridge, is knighted; Prof. C. V. Ball, director of the Museum of Science and Art at Dublin, receives a C.B.; Dr. Theodore Cooke, principal of the College of Science at Poona, a C.I.E.; and Mr. Frederic McCoy, professor of natural science at Melbourne, a K.C.M.G. It is, perhaps, worthy of note that all these decorations are confined to the physical sciences.

THE Cambridge University Press will publish immediately a Catalogue of the gems in the Fitzwilliam Museum, by Prof. J. H. Middleton, director of the museum, to which is prefixed an introduction dealing generally with the engraved gems of classical times.

MESSRS. LONGMANS have ready for issue an edition of a unique MS. in the library of St. John's College, Cambridge, prepared by Mr. Henry Littlehales. It contains the Prymer, or prayer-book of the lay people in English, as used circa 1400. The present volume consists of the text alone, reproduced in printed type so as to preserve as far as possible the characteristics of the MS. A general introduction and notes will be given in a second part, which may not be ready for some years to come.

THE spring term of the School for Modern Oriental Studies, in connexion with the Imperial Institute, will be inaugurated by a lecture by Mr. F. V. Dickins, on "The Modern Speech of Japan, as illustrated by Native Methods of Primary Instruction," to be delivered at King's College on Thursday, January 15, at 5 p.m., the president of the college, the Rev. Dr. H. Wace, in the chair. The public will be admitted free.

THE annual conference of principals of university colleges was held at the University College of North Wales, Bangor, on December 23, Principal Reichel in the chair. Among the subjects discussed were the proposed reconstitution of the University of London, with special reference to the holding of the honours examinations at local centres; the relations of the university colleges to day training colleges; and the appropriation of local taxation grants by the county councils to technical instruction. The next meeting will be held at University College, London.

THE committee of University Hall, Gordon-square, have completed their arrangements for the Lent term. These include a course of lectures by Mrs. J. R. Green (already known as the editor of her husband's last work and as the author of *Henry II.*) on "The History of English Towns in the Fifteenth Century." Mrs. Green has long been engaged in studying the experiments in self-government made by our towns, and her lectures are expected to embody the results of much original investigation and to throw a vivid light upon many points of constitutional history. The Warden of the Hall, the Rev. Philip H. Wickstead, who has just entered upon his office, will lecture upon "The Elements of Sociology," taking as his special subjects the Family, Property, and Slavery. The Biblical teaching, which is to form a special feature of the Hall, will be represented by Sunday afternoon lectures on "The Gospel of Luke" by Dr. James Martineau; and by a series of lectures delivered in French on Friday afternoons by M. C. G. Chavannes, of Leiden, on "The Religious Significance of the Old Testament." M. Chavannes is a friend and disciple of Prof. Kuenen, and is known as the French translator of *De Bijbel voor Jongelieden* of Drs. Oort and Hoogkaas, and as the author of *La Religion dans la Bible*. He is therefore a thoroughly qualified exponent of the "modern" school of Dutch theology; but also a man of independent mind and original views. An introductory lecture on "The Traditional and the Organic Views of the Old Testament" will be delivered by the Warden on the evening of Monday, January 12.

THE Grocers' Company have made a grant of £100 in aid of the funds of the London Society for the Extension of University Teaching, which has now branches in over fifty centres in the metropolis.

ORIGINAL VERSE.

ON A PROPOSAL TO RESTORE THE ELGIN MARBLES TO ATHENS.

Great Master of the Parthenon, men wreak
Resentment on us for our raid among
Thy ruining marbles—deem we did thee wrong;
Thine are the stones: but, Pheidias, thou wilt seek,
Save 'mid the English, vainly for the Greek.
Do not the heroes of thy land belong
To us, whose loftiest lyric poet's song
Honours divine Erechtheus? Or, to speak
Of our twain hoary prophets, who as these
Have sung Tiresias and Pheidippides?
Who tells the tale of Jason's wondrous crew?
Who, if not Landor, guards Aspasia's grace
Perfect from soil? Is it too much for you
To trust your darkening torsos to our race?

CORRESPONDENCE.

WHY WAS THE HORSE DRIVEN BEFORE IT WAS RIDDEN?

Queen's College, Cork: December 7, 1890.

Canon Taylor, in that most interesting book *The Origin of the Aryans*, has raised once more a question which has often attracted the attention of scholars, especially those interested in the Homeric Poems. Why is it that in the earliest records of the Greeks, Egyptians, Assyrians, Indians, and Kelts we find the horse used for drawing chariots, but not yet for riding?

Canon Taylor remarks (p. 161), "it is curious to notice at how late a period men first ventured to mount 'the swift one'; and he goes on to say that there is nothing in the Rig Veda to show that the art of riding was practised, and that our first notice of it is in the Zend Avesta. The Homeric Greeks employed the horse almost exclusively for the chariot, riding being only alluded to in some two or three isolated passages, as when Odysseus and Diomedes rode to the ships the horses of Rhesus which they had captured (*Il.* 515 *cf.* *Od.* v. 371). This, however, shows that it was hardly from fear that the Greeks did not habitually ride instead of drive their steeds. The same remark applies to the ancient Britons, who, according to the ancient accounts, performed wonderful feats of agility in running out and standing upon the pole of the chariot.

The true solution may probably be this. The primitive horse that ranged over the plains of Europe and Asia was too small when he was first domesticated to carry a man for any great time or distance on his back. This, of course, would render him practically useless for warfare. There is ample evidence to prove that the primitive wild horse was of very diminutive size; probably of all his descendants the Shetland pony is his best representative. Canon Taylor says (p. 158, speaking of the enormous deposit of their bones found at Solitré, near Macon, which contains from 20,000 to 40,000 skeletons):

"This primitive horse was a diminutive animal, not much larger than an ass, standing about thirteen hands high, the largest specimens not exceeding fourteen hands. But the head was of disproportionate size, and the teeth were very powerful. He resembled the tarpan or wild horse of the Caspian steppes."

Even long after he had been domesticated he remained very small, as is proved by the bits made of bronze and staghorn which have been found at Möringen and Auvernier, which belong to the latest bronze age. "These bits are only three and half inches wide, and could now be hardly used for a child's pony."

Let us now turn to Herodotus, v. 9, where, speaking of the unknown regions to the north of the Danube, he says that the only people he can learn of as inhabiting the region are called Sigynnae, who wear the costume of the Medes, and whose horses are shaggy all over the body, being covered with hair to a depth of five fingers, and are small and flat nosed, and incapable of carrying men, but when yoked under chariots they are very swift, and that the natives accordingly drive chariots (τοὺς δὲ ἵππους αὐτῶν εἶναι λασίους ἅπαν τὸ σῶμα ἐπὶ πέντε δακτύλους τὸ βάθος τῶν τριχῶν, μικροὺς δὲ καὶ σιμοὺς καὶ ἀδυνάτους ἐνθάς φέρειν, ζευγνυμένους δὲ ἐφ' ἄρματα εἶναι ὀξύτατους· ἄρματ' ἡλατίειν δὲ πρὸς ταῦτα τοὺς ἐπιχωρίους). This description of the external appearance of the little horses of the Sigynnae of Central Europe agrees very well with that of the skeletons found near Macon. The simous shape of the head tallies well with the ugly shaped skull and powerful jaws of the bone deposits.

We can hardly doubt that we have here primitive horses such as those whose diminutive

bits have been found in the later lake-dwellings of Switzerland. It seems to me then that the reason Herodotus here assigns for the fact that this tribe of Central Europe drove their horses instead of riding them is the true explanation why all early peoples alike employed the horse for driving long before they ever habitually practised riding. It was only after generations of domestication that, under careful feeding and breeding, the horse became of sufficient size to carry a man on his back with ease. That size was held to be of great importance by the Homeric Greeks is proved by *Il.* x. 436 (καλλίστους ἵππους ἴδον ἥδ' ἐμεγίστους).

It is worth noting that Sophocles, in a famous passage of the *Antigone* (l. 350), evidently considered that it was for the chariot and not for the saddle that man first used "the shaggy-necked steed" (λασάχενα ἵππον ὃ χυμύζεται ἀμφὶ λόφον ζυγῶν, as Prof. Jebb reads).

WILLIAM RIDGEWAY.

"WIDISHINS."

Christ's College, Cambridge: Dec. 6, 1890.

In the story of Childe Rowland, preserved by Jamieson in his *Illustrations of Northern Antiquities*, and recently re-edited by Mr. Jacobs in his *English Fairy Tales*, it is told how the hero gains entrance into the King of Elfland's castle by going three times "widishins" round the green hill on which it stands. In a note Mr. Jacobs discusses this strange word, and suggests that it is "analogous to the German *wider Schein*, i.e., against the appearance of the sun; 'counterclockwise,' as the mathematicians say, i.e., W., S., E., N., instead of with the sun and the hands of a clock." The second half of the word has, however, nothing to do with the German *Schein*, and the derivation suggested is an interesting instance of "folk-etymology."

The word is fairly common in Scottish writers in the various forms—"Wedder Shynnis," "Widdirsins," "Widdershins," "Withershins," "Woddershins," all in the sense of "backwards, contrariwise." There is no instance of the word occurring south of the Tweed. Its origin is evidently to be sought in some northern Teutonic dialect. *Shins*, or rather *sins*, = Scandinavian *sinnis*, genitive (used adverbially) of *sinni*, or *sinn*, "a way, direction, or walk," cognate with A.S. *sīð*, Goth. *sih*, O.H.G. *sin*, Latin *sensus* (cp. Icel. *sinna*, A.S. *sīðian*, O.H.G. *M.H.G.* *sinnan*, "to go," Latin *sentire*). In O.H.G. and M.H.G. the genitive occurs frequently in the combination *widersinnes*, "contrary to the usual direction or manner"; e.g., "den namen er widersinnes las," i.e., "he read the name backward." "Sô muoz dîz wazzer ze berge fliezen hinder sich und widersinnes riuschen," i.e., "This water must run up the mountain and rush backwards." Similarly the verb *sinnan wider* occurs in O.H.G. and M.H.G. in the sense of "to go in a wrong direction," though more usually with the simpler meaning of "to turn back, to return." It is curious to note that already in Old High-German the word is used as though somewhat archaic, and an explanatory epithet follows or precedes it. Scottish writers treat the word in the same way, thus:

"In hir unhappy hands she held my heid,
And straitkit bakeward widersinns my hair."

(See Jamieson's *Dict. sub. voc.*)

Probably the sense "contrariwise" covers all the usages of the word in Scotch, the idea of "contrary to the course of the sun" being an extension of sense, engrafted later, and perhaps connected with the Christian custom of turning to the East. At all events, "wider" is the important element in the word "widishins," while "shins" may be regarded as an adverbial

suffix of the same force as "wise"; in fact, "widderwise" is the form co-existing with it in Scotch dialects. The Southern English word to express the idea would probably have been "witherswards" (cp. A.S. *wiberweard*) or "withwise" (still in use in the folk-speech of Westmoreland).

In O.E., *bestornes*, *bestornez*, *bestorné*, is used in very much the same sense as "widishins"; it is the past part. of *bestornen*, "to turn in a wrong direction," a compound of *bes* (= "mal") and *turnen* ("to turn"). By a curious parallelism, *bestornen* was used specially for that which was turned to the West instead of to the East; and there was a church in Paris in the twelfth century called St. Benoic li bestornez. The origin of the latter name is given by an ecclesiastic writer, about 1350:

"Bestornata olim dicebatur haec parochialis ecclesia quod ejus majus altare tunc temporis spectaret Occidentem, cum ex ecclesiastica consuetudine Orientem spectare debuisset. Nunc contraria ratione dicitur S. Benoic le Bien-tournee quod ad Orientem translatus sit majus altare, cum instaurata est ecclesia."

The word *bestorné* in the "Romant of the Rose" is used similarly for "that which is not *vers orient* but *vers occident*." The curious point connected with the word is, however, its use by an Englishman in the fourteenth century—viz., the author of the poem "Pearl." He was anxious to naturalise the word in English, and he attempted to do this by altering it slightly so to bear its meaning on the face of it; he changed it therefore to *westernez*; this is the explanation of the hapaxlegomenon *westernays*, which occurs in l. 307: "Ye setten his wordez ful westernays"—i.e., You read his words in a contrary way, perversely (*cf.* "den namen er widersinnes las," above). "Widishins," if known to the poet, would not have done in this place, for not only was a *w* word required for the alliteration, but also a French *ez* sound for the rhyme.

The various suggestions that the word stands for "westernways" (i.e., desert, from A.S. *weste*), or that it is in some way or other connected with "winstre" are all equally untenable. The disguised "westernays" has strictly no more to do with "west" than "widishins" has with "shine"; though in the one case "learned etymology," and in the other "popular etymology," has been at work.

In the story of Childe Rowland as recorded by Jamieson the word "widishins" is used only in connexion with Rowland's attempt to rescue Burd Ellen from the Elf-King; no reason is, however, assigned to account for the lady's capture; we are merely told:

"Burd Ellen round about the isle
To seek the ba' is gane;
But they bade lang and ay langer
And she came na back again."

Mr. Jacobs, in his beautiful rendering of the story, makes the lady's capture the result of going "widishins" round the church. He does this evidently for the purpose of explaining the strange term. From a folklore point of view, I venture to think that this "story" is unwise. I am of opinion that the action was never told with any explanation of the capture. It was, no doubt, an ordinary case of bride-capture, so common in ballad-lore. If Burd Ellen had gone "widishins" round the church, she would, I think, have used the best homoeopathic specific against the Elf-King's power; for "to go widishins" was the chief element in elfin practices, and if mortals wished to resist or unspell elf-craft, they, too, had "to go widershins," or they had to repeat the Pater-noster backwards, which came to the same thing, or do something else contrariwise.

It would indeed be an interesting subject of debate for the members of the Folk-lore Society

as to whether Burd Ellen ran round the church thus-wise or not. Personally I should vote for the negative. In my opinion, had the lady by any chance really gone in this contrary direction, there would probably have been no lady to rescue, and we should have been deprived of the story of Childe Rowland, as committed to writing by Jamieson, as retold by Mr. Jacobs in his most precious volume, and as portrayed by Mr. Batten's skilful pencil; Milton's "Comus" would probably have lost some of its intrinsic elements; Shakspeare's "King Lear" would not have given us internal evidence of its date, and we should be less rich by losing a glimpse into the poet's nursery.

I. GOLLANCZ.

SOME ENGLISH DOCUMENTS TEMP. HENRY VII.
(THE BARWICK MSS.)

Stanhoe Grange, Norfolk: Nov. 22, 1890.

The following documents, which were discovered at the same time as the Stanhoe Manor Court Rolls (see ACADEMY, November 15 and 29), are interesting from several points of view.

They are peculiar as being written in English, instead of the customary Latin—a peculiarity shared by only one or two more in a total of some forty documents. For this reason their publication will, no doubt, be acceptable for dictionary purposes on account of the spelling and phraseology. They illustrate, too, several points in the legal procedure of the day as regards the conveyance of land.

I transcribe *verbatim et literatim*, save for the usual expansions.

No. 1, dated December 20, 4 Hen. VII., on parchment, with top edge indented, and wax seal (blank) attached below on parchment slip:

"This indenture made the xx day of December the iijth yere of the reign of kyng herry the vijth between sir Roger Touneshend knyght on the oon partie And Robert Gyggys late of london Gentilman Executour of the testamēt of John harward Gent on the other partie witnesseth That the said Robt hath bargaynd and sold to the said sir Roger the maner of Esthall in Stannowe w^t all the londs & tenements rents & seruices w^t ther Appartenances to the same maner perteynyng in the Townes of Stannowe Aforesaid Bermyk [i.e. Barwick] Southcreyk Northcreyk Burnham Thorpp & Burnham Overey And in any other Towne withinne the Countie of Norff which late were the

said John harwardes for ^{xx} iij [i.e. eighty] marcs Wherof the said Robt hath receyued in hand of the said sir Roger the day of making of thes presens x marcs of laughfull money of Inglood And x marcs to be paid to the said Robt or his Assignes at Estern next cummyng And x marcs at Michelmas next folowyng And so forth yerly at the said fest of Michelmas x marcs till the said summe of ^{xx} iij marcs to the said Robt be content & paid To haue and to hold the said maner w^t all the said londs tenements rents & seruices w^t thappartenances in the Townes before-said to the said sir Roger his heires & Assignes for euermore w^t all the arreragys [i.e. arrears = Lat. *arrearagium*, not in *New Eng. Dict.*] nowe beyng behynd of the same And also the said Robt shall deliuer or cause to be deliuered to the said sir Roger or his Assignes all such Euidence dedys Escripts & muniments as longen to the said maner w^t thappartenances And also make or cause to be made a sufficient suer & laughfull Astat by dede w^t a warrantie in the same to the said sir Roger his heires & Assignes of & in the said maner w^t thappartenances by the said fest of Estern And furthermore shall well & truly obserue & fulfill the will of the said John harward And also the will of John harward the older fader to the said John as towchyng as well the said londs in Stannowe as in flege And the said sir Roger shall discharge the said Robt ayenst Thomas Gyggys of Hecham Gent of xl s. be yere which the said John harward bequethd to the said Thomas by his will owte of the maner of fflyby in flegge abouesaid All which premisses well & truly to be don & performed either

of the said parties byndeth hym to other. . . In wytnes wherof either of the said parties to thes present endutentes enterchaungeably hath sette his seall yonen the day and yere Abouesaid."

No. 2, dated January 3, 13 Hen. VII., on paper, with seal (lamb? bearing flag) impressed on wax through the paper, on a slip cut out from the sheet for the purpose:

"Be it known to all men be this present byll y^t I Willm Suttonne of Snetisham in the Countie of Norff Gent haue grantid & sold to Thomas Thorisby of lyne byschop [i.e., Lynn Episcopi] marchand the xvij daye of marche In the ixth yere of y^e reygng of kyng hary y^e vijth my maner in Barwyke calid ffoxis maner w^t all thapornances [sic] to y^e same maner in onys wyls belonging lying in the towen & feldis of Barwyke Stanhowe Barmer and other towens theradiominyng [sic] to y^e said maner belonging for the summe of lx li x li & xvs [i.e., £70 15s.] of the wiche summe I haue receyued xxx li y^e xxvij daye of october in y^e v yere of kyng hary y^e vijth Item receyued y^e xvij daye of marche in y^e ix yere of kyng herry y^e vijth Item receyued y^e xxvij daye of marche in the same yere & reygng of y^e seyd kyng xx li xvs Item receyued the xij daye of aprell in the seyd yere of y^e seyd kyng x vii of y^e wiche lx li & x li & xvs I y^e seyd Willm Suttonne knowlage me well & truly content & paid in forme aforesaid be y^e handis of y^e seyd Thomas In wytnes wherof to this byll I haue sette my Seayll yonen y^e iijth daye of Jancuer the xij yere of kyng herry the vijth & wrytyn w^t myn owen hand In wytnes of this bargayn made Richard mounteyn of Snetisham gent & Vmfray lytylbere gent [these names are in the same hand as the rest of the document]."

No. 3, dated December 12, 13 Hen. VII., on parchment, with top edge indented and scrolled in ink, and wax seal (R) attached below on parchment slip:

"This indenture made the xijth day of Dyscember the xijth yere of kyng herry the vijth Be twen Robte Gyggys of Rollyshy in the Counte of Norfolkke Gentilman execut^r of the testymēt & the last will of John herward younger late of london Gentilman on the on partye and dame Aliano^r Touneshend late the wyffe of Sir Roger Touneshend knyght on the other partie Witnesseth that the said Robte hath Barganed & sold to the said dame Aliano^r the Maner caled Esthall in Stanhowe w^t thappartenances which wer late the said John herwardes w^t all the londes & tenementes rentes & seruyces pastures & all other Comodytes & Appartenances in Stanhow forseid Dockyng Southmer [now corrupted to Summer-field] Barmer Barwyke & north Creke whych late were the said Johnes Excepte and reserued to the said Robte Gyggys his heres & his assignes All the londes tenementes rentes & seruyces lyng in Burnham Thorp Burnham ouere [i.e., Overy] & north creke to the said maner of Burnham be longeng which wer late the said John harwardes And I the said Robert Gyggys graunte [i.e., promise = O.F. *creanter*] to make or cause to be made a sufficient suer & lawfull estate of fee symple to the said dame Aliano^r of & in all the premisses excepte before excepte for wych the premysses & for full recompens & plenary satisfacion as well of all the issues [i.e., rents, returns = Lat. *exitus*] & profytes perceyued of the said maner londes & tenementes and other the premisses as well by the said sir Roger in his lyffe as by the said dame Aliano^r after his deces it is Agreed & accordyd be twyx the seyd partyes by the medyacon of Sir Robert Clere knyght that the said dame Aliano^r shall paye or do to be payd vnto the said Robte Gyggys or to hys execut^rs or assignes ^{xx} iij li of lawfull mony of Englood in forme folowyng y^t is seye Att the feaste of the Epiphanie [Ephe, with barred h, in MS., and so below] of o^r lorde gode next cummyng after the date of theis indentures xl marcs And att the feste of the Epiphanie than next folowyng xl marcs And so yerly att the said feste of the Epiphanie xl marcs vnto the summe of ^{xx} iij li be plenerly payd & content And more ouer it is Agreed that the said dame Aliano^r or hir Assignes shall dyscharge the said Robte by mater of good Autorty for j honest prest to syng att Rome att scala cely by the Space of iij yeres contynually for the soule of the said John herwarde

PAGET TOYNBEE.

["Scala Cely" is, of course, the chapel outside the walls of Rome on the road to Ostia, to which special indulgences were attached. It derived its name from a vision of St. Bernard, who, while celebrating mass, saw the souls for whom he was praying ascending to heaven by a ladder. In the *Calendar of Wills enrolled in the Court of Husting, London* (vol. ii., 234), a testator, under date 1382, makes certain "bequests for pilgrims to go to Rome and cause masses to be said for the good of his soul in the chapel of the Blessed Mary called *Scala Coeli*." The editor, Dr. Reginald R. Sharpe, refers in his Introduction (pp. xxx.-xxxii.) to "The Stacions of Rome and the Pilgrim's Sea Voyage," edited by Dr. Furnivall for the Early English Text Society in 1867.—ED. ACADEMY.]

"A MIDSUMMER NIGHT'S DREAM."

London: Dec. 27, 1890.

If Prof. Skeat will take the trouble to refer to work of mine in a former state of existence—so one, well beyond the three score and ten allowance of years, may refer to his "dead self"—he will find in "Critical Essays on Shakspeare's Plays," attached to Singer's edition of the poet (1858), that I quoted the illustrative and delightful passages of Chaucer's Merchant's Tale in that on "A Midsummer Night's Dream." So much for posthumous fame! My taste for contemporary fame had to derive what gratification it could from the words of the *Saturday Review*:—"We never heard of Mr. Watkiss Lloyd before, and never expect to hear of him again." What better apology for the Shaksperian critics who never heard of him at all?

W. WATKISS LLOYD.

APPOINTMENTS FOR NEXT WEEK.

- SUNDAY, Jan. 4, 4 p.m. South Place Institute: "The Church of England," by the Rev. H. C. Shuttleworth.
MONDAY, Jan. 5, 5 p.m. London Institution: "Herald and Cleopatra," by Prof. Mahaffy.
8 p.m. Royal Academy.
8 p.m. Aristotelian: "Lux Mundi and Dr. Martineau's *Seat of Authority in Religion compared*," by the Rev. T. B. Strong.
TUESDAY, Jan. 6, 3 p.m. Royal Institution: "Frost and Fire," adapted to a Juvenile Auditory, V., by Prof. Dewar.
8.30 p.m. Zoological: "A New Lizard of the Genus *Ctenoblepharis* from Chili," and "Some Chelonian Remains preserved in the Museum of the Royal College of Surgeons," by Mr. G. A. Boulenger; "The Anatomy of the Kagu (*Rhinoceros jubatus*)," by Mr. F. E. Beddard.
WEDNESDAY, Jan. 7, 8 p.m. Geological: "The North-west Region of Charnwood Forest," by the Rev. E. Hull and Prof. T. G. Bonney; "A Contact Structure in the Gneiss of Bradgate Park," by Prof. T. G. Bonney; "The Unconformities between the Rock-systems underlying the Cambrian Quartzite in Shropshire," by Dr. Charles Callaway.
8 p.m. Elizabethan: "John Webster," by Mr. F. Roberts.
THURSDAY, Jan. 8, 3 p.m. Royal Institution: "Frost and Fire," adapted to a Juvenile Auditory, VI., by Prof. Dewar.
8 p.m. Mathematical: "Geometrical Metamorphoses by Partition and Transformation," by Mr. H. Perigal.
6 p.m. London Institution: "Explosives and some of their Developments and Applications," by Col. Majendie.
8 p.m. Royal Academy.
8.30 p.m. Antiquaries.

SCIENCE.

Philosophy and Theology: being the First Edinburgh Gifford Lectures. By James Hutchison Stirling. (Edinburgh: T. & T. Clark.)

It is related of Lady Mary Shepherd that she would sometimes invite a friend to "sit down and have a good talk about space." Lady Mary would have enjoyed these Lectures. They contain many a "good talk" about space and other metaphysical topics, enlivened by a great deal of humorous personal gossip, and exalted by occasional outbursts of the highest philosophical eloquence. Dr. Stirling's great metaphysical reputation has perhaps prevented his literary merits from being estimated at their full value; but in the present instance we may anticipate that many who were first drawn to his new volume by its speculative interest will find themselves as they read on more and more impressed with the great qualities of style, the literary power and charm which its pages reveal.

Dr. Stirling is well known as the founder of Hegelian studies in this country. Thanks to his powerful initiative, they have become acclimatised in British universities; if so inclined, he might even boast of having given a new lease of life among the English-speaking peoples to a philosophy that has been abandoned not only in the country of its birth but over the whole European continent. As acclimatised among ourselves, Hegelianism seems so far not to have developed that internecine conflict between the right and left wings of the school which proved fatal to its continuance as a system in Germany; but here, also, the split must surely declare itself before long. There are immense possibilities of heterodoxy in the dialectic method; and one is not surprised to hear that simple-minded citizens of Edinburgh regard what they call a "Heejeelian" with grave suspicion. Possibly for this reason Dr. Stirling has been careful at the very outset to define his theological position with unmistakable distinctness. The Church of Scotland, he tells us, is, like the Church of England, divided into three parties, high, broad, and low; and it is to the last-mentioned that he belongs. Only, as he goes on to explain, what they have in the *Vorstellung* he has in the *Begriff*; that is to say, what the ordinary believer feels as a sentiment or accepts as a truth on external evidence, he holds as a reasoned conviction, a demonstrated truth—in a word, as I conceive the lecturer to mean, something which he cannot think as being other than it is. There can be no question here of insincerity or pretence; the only distinction is that between believing with and without proof. The method pursued by Dr. Stirling in his Gifford Lectures is therefore to discuss the proofs of God's existence, to trace their successive appearance in the history of philosophy, and to vindicate them against the objections of Hume, Kant, and Darwin. This he does without any appreciable help from Hegelian principles, although such principles are occasionally referred to and assumed as true

in the digressions with which his volume abounds.

The alleged proofs are the well-known three, bearing the somewhat formidable names of the teleological, the cosmological, and the ontological argument. The first, although much older than Paley, is so well worked out in his *Natural Theology* as to have become intimately associated with his name. It appeals to the evidence of design in organic nature, asking has not the eye been made to see, the ear to hear, and so forth? The second takes broader ground, and was very tersely stated by Napoleon when, pointing to the starry skies, he called on his atheistic savans to tell, "Who made all that." The third argument is of a more abstruse character, and has probably never found favour with any but professional metaphysicians. We have, it is said, the idea of a perfect being, but perfection implies existence, therefore a perfect being, or in other words God, exists. Dr. Stirling, in his first course of Lectures, studies the evolution of these three arguments from Anaxagoras to Anselm. His survey of ancient philosophy is vigorously written, but seems to show a less intimate acquaintance with the earlier than with the later forms of speculation. His knowledge of Hellenic life and thought is hardly up to date, and contrasts unfavourably with Prof. Chantepie de la Saussaye's contemporaneous handling of the same subject. The *Nous* of Anaxagoras was in all probability not a designing artificer but a mere segregating force, a quasi-material precipitant by whose intervention the confused assemblage of heterogeneous molecules were redistributed in homogeneous groups. It is provoking to find Empedocles spoken of once more as having anticipated the Darwinian theory, when Darwin's central idea, the accumulation of minute differences into specific variations by means of inheritance and selection, was as strange to him as to every age before our own. A more original and fantastic anachronism is to explain what Plato calls the world, or only begotten Son of God, by a reference to the principle of Difference (p. 106)—a sort of Hegelian "Anderseyn," I suppose—and to describe this Difference as itself a realisation of the principle of Identity (p. 104); whereas Plato's world was constituted by the union of Identity and Difference, conceived as co-ordinate principles. The truly theistic character of Aristotle's philosophy is well brought out; and the extraordinary lyric power with which the Stagirite intones his creed receives, perhaps for the first time, full recognition; but his relation to the cosmological and teleological proofs is not exhibited with sufficient clearness. The former, as we understand it, assumes the necessity of a First Cause in time. Now, of such a cause Aristotle knows and can know nothing, since, according to his view, the world of our experience has existed, much as we see it now, from all eternity. On the other hand, his false cosmography and false physics led him to think that all terrestrial and celestial motions depended on the diurnal revolution of the starry sphere, which again was only caused by a yearning love for the supreme self-

thinking thought—a somewhat grotesque idea, seeing that love in our own experience has not generally the effect of making people revolve uniformly on their own axis. With regard to the teleological proof, Aristotle stands in just the reverse attitude—that is to say, an attitude scientifically justifiable, but prejudicial to the claims of theology. He points out abundant evidence of adaptation of means to ends in living bodies; and every naturalist, even the most thoroughgoing Darwinian, will agree with him here, so far as descriptive physiology is concerned. But he never seriously adduces these marks of adaptation to prove the existence of a God, for the excellent reason that he did not believe, as Socrates, and possibly Plato believed, in the creation of animal species. Had the evidence of a beginning to terrestrial life, such as is furnished by modern geology, been laid before him, we may be sure that he would have reconsidered his views on the whole subject of origins; but there is no reason to suppose that he would have revised them in a supernaturalist rather than in an evolutionary sense. What Aristotle would have said to the ontological proof we know by his pithy observation that "existence cannot be the essence of anything; for Being is not a genus."

It would have been an interesting task to show how this last proof was developed by Spinoza into a system which denied personality to God, and long passed, not without reason, for something indistinguishable from absolute atheism. But such a study did not enter into the plan of Dr. Stirling, who speaks somewhat slightly of Spinozism as a "milk-and-water" system (p. 71). It seems, nevertheless, notwithstanding the Gifford lecturer's anxious repudiation of such an idea, to have been the philosophy of Lord Gifford himself. However this may be, the most formidable opponent that the three proofs have ever encountered is undoubtedly David Hume; and Dr. Stirling has shown both candour and courage in devoting a large space to the analysis and attempted refutation of his great countryman's destructive criticism. The personal characterisation of Hume, though highly entertaining, seems rather irrelevant. The philosopher was very fat and a little sentimental, he could not make himself agreeable to French ladies of fashion, and he had an absurdly high admiration for a poet whom, shameful to say, he called "Mr." Pope. If I remember rightly, Dr. Hutchison Stirling once spoke of Goethe as "a certainly not greater German Voltaire"; but I should be very sorry to bring up that astounding dictum as a reason for questioning his philosophical competence. Nor does it much matter whether Hume was himself a theist or not. His own affirmations prove nothing, unless the famous declaration in the *Essay on Miracles* is admitted to be good evidence that he was an orthodox Christian. Theist or not, he has exposed the fallacy of the teleological proof by an argument whose force the Edinburgh Gifford lecturer has failed to break. Let me quote it as reproduced in the present volume:

"If a material world, or universe of objects, be such as to require a cause for the arrange-

ment in it; not less will a mental world, or universe of ideas, to which as cause the universe has only been transferred, require for itself a cause—a cause of its own. . . . The explanation is only shifted one step back, thinks Hume; but why stop at the first remove? . . . 'If the material world rests upon a similar ideal world, the ideal world must rest upon some other; and so on without end.' 'That the parts of the material world fall into order of themselves' is 'as intelligible as that the ideas of the Supreme Being fall into order of themselves.' And that being so, we really assert the material world to be God. . . . These are Hume's own words; and it is really sufficient reply, so far, to say: There is no principle in matter itself to explain the design it exhibits; only a Designer can explain that. . . . To ask a second question is not to dispose of the first" (pp. 266-7).

The reply to Hume's objection seems invalid; for it has not been shown that there is in mind, that is to say in simple consciousness as such anterior to all experience, any principle that can account for design. But, in fact, Dr. Stirling himself may be cited as a witness on Hume's behalf. He tells us (pp. 279-80) that there is a relation of identity between cause and effect. If this be true, then in saying that God is the cause of the world we predicate a relation of identity between the two; in plain English, we say that they are the same thing, that the world is God, which is precisely what Hume maintains, with the exception of the term "material," a term by no means necessary to his argument. And Dr. Stirling seems to have something of the sort in his mind when he says elsewhere (p. 67):

"To me it is quite as certain that there is an absolute subject, God, as it is certain that there is an absolute object, His universe. Still, it appears to me that the object should be brought much nearer the subject than is customary among us."

Very much nearer, indeed! But then, what is to become of evangelical Presbyterianism?

The lectures on Kant's criticism of the proofs open questions far too wide for discussion in this brief review. Nearly a fourth of the volume is devoted to Darwin, but with far less of serious argument than might be expected from the greatest British metaphysician of the age controverting the theories of its greatest naturalist. There is a great deal of rather boisterous merriment at the expense of Darwin personally, but as against evolution by natural selection little or nothing that the principle has not already lived down. The concluding lecture in particular strikes one as a sad anticlimax. The finches in the Galapagos Islands, it is urged, are too like other finches, and the tortoises too unlike other tortoises, to have been evolved out of South American species. The future fate of theism, or even of Darwinism, can hardly depend on such considerations as these.

ALFRED W. BENN.

CORRESPONDENCE.

ORIENTAL transliteration.

London: Dec. 29, 1890.

In his notice of Col. Malletson's *The Indian Mutiny of 1857* (ACADEMY, December 20), Mr. H. G. Keene revives the vexed question of transliteration in those cases where there is

antagonism between spelling and pronunciation in the original. Such antagonism, of course, arises in compound Arabic forms wherever the article is followed by a solar letter, which assimilates the preceding *l*, as in *Fakhr al-dîn*,* as transliterated by Mr. Keene, though pronounced *Fakhr ud-dîn*. Here we have the old battle of phonetic *versus* historical spelling, complicated by laws of Arabic pronunciation and orthography. The Arabs themselves solve the difficulty by always retaining the *l* in writing, but assimilating it in the spoken language, so that no mistakes arise. But how is the problem to be solved in transliterating for English readers ignorant of Arabic orthography? My own practice is always to assimilate, the object being to reproduce the living sound, not the dead form. But Mr. Keene appears to advocate the historic or etymological spelling, which must at times give rise to strange misconceptions and inconsistencies. Thus the famous Caliph is popularly *Harûn al-Rashîd*, while the reigning Shah is usually *Nasr ud-dîn*. Uniformity can be attained only by a common consensus to one or other method, and I submit that the phonetic is here preferable to the historic spelling.

A. H. KEANE.

THE EARLY CIVILISATION OF ARABIA.

Munich, Adalbertstrasse 62ii.: Dec. 29, 1890.

In the ACADEMY of December 27 Mr. A. H. Sayce publishes a review of my *Skizze der Geschichte und Geographie Arabiens* under the above title, in which he says:

"He [Dr. Glaser] has been assisted in his work by the brilliant learning of Prof. Hommel . . ." and in another passage:

"Prof. Hommel believes that he has found a reference to the age of the Hyksos in an inscription copied in Southern Arabia by Halévy, the historical importance of which was first noted by Dr. Glaser."

I am astonished to read such remarks, especially as pp. 572-3 of my book contain the following declaration by Prof. Hommel:

"Ich habe auf Glaser's Publicationen keinen andern Einfluss ausgeübt, als jeder andere Arabist, und ich glaube auch nicht, dass ein so selbständiger und unabhängiger Charakter, als welchen ich Glaser kennen gelernt habe, sich eine derartige Beeinflussung gefallen liesse. Wo der eine von uns beiden dem andern irgend eine wissenschaftliche Mittheilung machte, wurde das stets in unseren Schriften besonders gekennzeichnet."

To this I added on the same page the remark that I never recurred to any Arabic or other scholar for help in the investigations contained in my book. I have occupied myself with the ancient history and geography of Southern Arabia since 1882; while Prof. Hommel, on the contrary, only entered on this branch of study in the summer of 1889, when my book was actually written.

As to Mr. Sayce's remark about the reference to the age of the Hyksos in a Halévy inscription (No. 535), this reference was not found by Prof. Hommel, but by myself. But this little error seems to me to be without importance. It is more useful to state that the Minean inscription (No. 535 of Halévy) relates to a war between *Misr* (Egypt) and *Mazay*, which latter are not, as I erroneously said in my book, the Mizzah of Genesis, but the police-guard *Ma'loy*, or the people of *Ma'loy*, which is known in Egyptian inscriptions from the Vth to the XXVth Dynasty. It is evident that intercourse between Egypt and *Ma'loy* in the Minean epoch can only be assigned to the latest period of the Hyksos, or better still to the first years after the expulsion of the Hyksos. In this

* Here Mr. Keene has *dîn*, presumably a lapsus for *dîn*.

epoch we find in our inscription Mineans escaping from Egypt and occupying places called Sar and A-shûr. It is Prof. Hommel's merit to have identified Sar with the Egyptian frontier fortress Tar, and A-shûr with the Ashurim of Genesis xxv. 3.

EDUARD GLASER.

Prof. Fritz Hommel also writes to us from Munich to the same effect. He has already stated, in his *Aufsätze und Abhandlungen* (p. 45), that he gave no assistance to Dr. Glaser in the writing of his book, which, on the contrary, has opened to him, as to other orientalisks, abundance of new scientific vistas.

SCIENCE NOTES.

THE committee of the council of the Royal Society, appointed to make arrangements for a memorial to the late James Prescott Joule, have decided that the memorial should take an international character, having for its aim the encouragement of research in physical science, and should also include the erection of some personal monument in London. For the latter object, they have set apart the sum of £300, to be expended on a medallion portrait of Joule; and they have handed over the balance (amounting to about £1400) to the treasurer of the Royal Society, to be administered by the council.

"In such manner as may appear to them most suitable for the encouragement of research, both in England and abroad, especially among younger men, in those branches of physical science more immediately connected with Joule's work."

THE President of the Board of Trade has appointed a committee to consider whether any, and if so what, steps should be taken for the provision of electrical standards. The following are the members of the committee:—Lord Rayleigh and Sir William Thomson (representing the Royal Society), Prof. G. Carey Foster and Mr. R. T. Glazebrook (representing the British Association), Dr. John Hopkinson and Prof. W. E. Ayrton (representing the Institution of Electrical Engineers), Mr. E. Graves and Mr. W. H. Preece (representing the General Post Office), Mr. Courtenay Boyle and Major P. Cardew (representing the Board of Trade). The first meeting of the committee will be held at the Board of Trade on Thursday, January 15. Sir Thomas Blomfield, of the Board of Trade, will act as secretary.

PHILOLOGY NOTES.

MESSRS. LONGMANS have in the press *An Introduction to the Study of the History of Language*, written conjointly by Prof. Herbert A. Strong, of University College, Liverpool, Mr. William S. Logeman, of Newton School, Birkenhead, and Prof. I. Wheeler, of Cornell University, New York.

At a recent meeting of the Académie des Inscriptions, a paper was read from M. G. Devéria upon the discovery of a new set of inscriptions in Siberia, similar to the Yenisei inscriptions, which have formed the subject of several communications to the ACADEMY by Mr. Robert Brown, jun. The new set were found by M. Yadrintseff on the banks of the river Orkhoun. One of them, which is written in Chinese, employs the ethnic appellation Kien-Kouen, which ceased to be used after 758 A.D.; another, which is bilingual, mentions the name of a chieftain, Kine Khan, whom we know to have founded the Khanate of the Uigours in 744. M. Devéria remarked that the writing is composed of alphabetic characters, from 38 to 42 in number. It is much richer than that which the Tartars borrowed from the Nestorians not later than the ninth century; and, consequently, the inscriptions cannot be

attributed to any of those races who, having ruled on the banks on the Orkhoun after the foundation of the Uigour Khanate (744), adopted either the Nestorian alphabet or any of its derivatives.

MEETINGS OF SOCIETIES.

ENGLISH GOETHE SOCIETY, MANCHESTER BRANCH.—
(Wednesday, Dec. 3.)

DR. WARD in the chair.—The hon. secretary, Dr. Hager, read a short paper drawing attention to the fifteenth volume of the Weimar Goethe edition, and showing what fresh light is thrown by it on the history of the second part of "Faust," and particularly of the Helena episode.—Dr. Ward read a paper bearing on the personal relations of Goethe with Bürger and Müllner, the former of whom was at one time the lyrical, as his nephew Müllner was at another time the dramatic, favourite of Germany. Dr. Ward first alluded to Lewes's account of that unfortunate visit of Bürger to Goethe in Weimar (probably in 1789), when, instead of the genial fellow-poet, Bürger found only the stiff minister of state, anxious for information respecting the number of students at Göttingen. This visit gave rise to the well-known epigram—

'Twas my heart's wish to pay a morning call
Where a great poet dwelt and cabinet minister.
The poet I went to see, but not at all
An everyday affair—the cabinet minister.
Alas! there stiffly stood the cabinet minister,
While my beloved poet kept the wall.
That everyday affair, the cabinet minister,
Shut in the poet; so I left the hall,
But not without an imprecation sinister!

This epigram was not published till after Bürger's death in 1791, and was then greedily caught up by Nicolai when intent on proving, to the satisfaction of himself and of the public (1), that Goethe ought not to play the privy councillor when only the poet could be in place, and (2) that, in order to be esteemed as a poet, he ought not to write such trash as the *Xenien*. Now, said Dr. Ward, whether or not Bürger had provoked unusual coldness in Goethe by any misplaced bounce or buoyancy of his own—such as one would hardly have thought him capable of in this period of his life, full of sorrow and disappointment, although it was to be followed by his plunging into a yet deeper slough of despondency—it cannot be denied that the anecdote leaves a painful impression. And this, not because we are likely to be childish enough to quarrel with Goethe for a reserve which in this case there was enough and more than enough to explain and to excuse, but because when the careers and achievements of the two poets are remembered, a contrast in itself melancholy enough is deepened with a sadder irony, as we see them face to face, the one on the eve of the full wretchedness of his last years, the other in the middle of his serene course. He then pointed out that Bürger was in truth but a year and a half older than Goethe, although students of literature are apt to think of him as one of an earlier generation than that of which he actually formed part, mainly through his association with the *Göttinger Hainbund*. Yet he belonged not to the generation of Klopstock and Gleim, but to the *Sturm-und-Drang* period of Goethe's own earlier days. He underwent the same chief foreign literary influences that affected the rest of his youthful generation—Ossian, Shakspeare, and Homer—although, at the same time, he was original enough and true poet enough to find and work out a line of development of his own. In 1773, when he was writing his *Lenore*, which he composed bit by bit, and day by day or week by week, with an extraordinary imaginative tenacity, he hailed *Götz von Berlichingen* with rapture. Far from following wholly the ideals of Klopstock, Bürger, a genuine precursor of the great romantic school, drew his inspiration from popular models, and from the very depths of the traditions, the legends, and the poetry of the people. The newly discovered ballad poetry of the earlier centuries—Percy's Reliques in especial—suggested to him those felicitous experiments in the same direction to which he owes the best part of his fame. Unfortunately, the extraordinary recklessness and the unmistakable vulgarity, which were alike inborn

in him, combined with a facility of versification which he had cultivated assiduously from his earliest youth to prevent him from husbanding his precious talent. Bad example and precept in his early manhood, and a systematised perversion of the most steady influences of life, which makes his supra-sensual sensuality rather sickening even where it seems sweet, blunted the moral perception which, however it may suit him from time to time to ignore it, the popular poet is least able to spare. Though he filed and filed away at *Lenore* and others of his ballads, he was without the true refinement and true elevation which is rarely wanting either in Scott or in Scott's models. Goethe's earlier letters to Bürger, dating from the years 1774 to 1776, are thoroughly cordial in tone; and in 1776 he directly interested himself in Bürger's fortunes by encouraging him publicly to complete his translation of the *Iliad* in iambs, and by starting a subscription, which was to secure a sum of sixty-five louis d'or to Bürger, if he would only so much as promise to complete the work. (Bürger never did finish it, though he received the greater part of the money.) Goethe's manifesto is drawn up in a style at once dignified and complimentary to Bürger, who was deeply gratified by it. Goethe thus, though perhaps with no very special insight into the most characteristic features of Bürger's genius, had shown a real interest in the literary career of his contemporary. While there is no evidence of influence, either of general or individual work on the part of the lesser on the greater poet, Goethe had too true and unclouded an insight into genuine poetic power, even when far lower in type than Bürger's, and at least equally alloyed by admixture, to have been capable of ignoring his position in German literature. As late as 1782, Goethe seems to have done what he could, though in a somewhat lofty and official manner, towards helping Bürger out of the pecuniary difficulties in which he found himself. But, as time went on, the older poet made himself more and more impossible, and it is natural enough (even if we are to take as correct the account of the interview which we have some years later from a hostile pen) that, when Bürger called on him some years later, Goethe should not have received with open arms one who was at once a suppliant and a disclaimer against supplication; a literary labourer who on a former occasion had very clearly shown himself unequal to, if not unworthy of, his hire; a man of business who never answered a letter; one whose private life had contrived to give offence even to the unsqueamish, and whose Muse seemed determined on giving to that private life as wide a publicity as possible. Visitors of his description, however celebrated they may be in their generation, are not the most widely welcome. But it was a melancholy incident that excited poor Bürger's spleen, when we remember how he and Goethe, born much about the same time, had in their youth so largely shared the same ideals, had cherished so many cognate aspirations, and had contended against so many adversaries hailing from the same strongholds of artificiality, stagnation, and cant. Dr. Ward, in conclusion, touched briefly on the farcical epilogue to this sad story—the relations between Goethe and Bürger's nephew, Müllner, who was at once the most successful and the most barren of the writers of *Schicksalstragödien*. This man—who began his life as an attorney, ended it as a professional critic, and was a poet only *par parenthèse*—paid Goethe a visit in 1817 in Jena, whither he had retired for a while to nurse his just wrath at the Duke's last and most unlucky *Pagenstreich*—the introduction of a performing dog on the Weimar stage. According to Müllner's account, he found in his great fellow-dramatist so little trace of Philistine pretentiousness that he (Müllner) did not even think of avenging his uncle by inquiring for the number of students in Jena. Of this interview Goethe says nothing. The reserve which, according to Müllner, he did not show in personal intercourse, he certainly showed very unmistakably in his writings; for Müllner's name is mentioned by him only once when his famous play *Die Schuld* is dismissed in the following words: "Whatever for the rest may be thought of this piece, it has this great advantage from the point of view of the stage, that each actor has to use his utmost exertions and do his very best, in order to appear at all adequate to his part."

EDINBURGH MATHEMATICAL SOCIETY.—(Friday, Dec. 12.)

R. E. ALLARDICE, Esq., president, in the chair.—Mr. A. J. Pressland read a paper on the parabola in reference to its circumscribed triangles; Mr. Allardice submitted a communication from Mr. R. H. Pinkerton on the normal to a conic, and afterwards gave some geometrical theorems of his own.

ASIATIC SOCIETY.—(Monday, Dec. 15.)

SIR FREDERIC GOLDSMID, vice-president, in the chair.—Mr. T. G. Pinches read a paper on "The Akkadian Version of the Story of the Creation." This was a translation of, and commentary upon, the tablet recently found by Mr. Pinches among the numerous ones discovered by Mr. Hormuzd Rassam, at Kouyunjik, in 1882. The obverse is devoted to the account of the Creation, and the reverse is simply an incantation for the purification of the great temple-tower E-zida, now called the Birs-Nimrud. The obverse is therefore the more important part, and it was to this that Mr. Pinches paid the greater attention. He pointed out that the text might be divided roughly into sections of about ten lines each. The first describes the time when nothing was, neither the "glorious house of the gods," neither plants, nor trees, nor cities, nor houses, and not even the Abyss (Hades), nor Eridu (regarded by the author as a type of Paradise) existed. The second section describes the making of Eridu, with its temple E-sagila, which had been founded within the abyss. Then were made Babylon, the gods, the spirits, the land, the abode of the gods, and mankind. The third section treats of the creation of animals, plants and trees, the Tigris and the Euphrates, &c.; and the fourth and last remaining section records the building of cities and houses. Merodach seems to be the principal creator and constructor of all things. This inscription contains many interesting words and forms, and is of great value also on that account. Parallels between this version and that first published by the late George Smith are exceedingly few. The text formed one of a series in which the legend was probably continued.—Mr. C. A. Strong read a paper on "A hitherto Untranslated Inscription of Sennacherib." He proposed various amendments of the text, and adduced reasons for regarding it as referring to Sennacherib's campaign against the Kassî. He also communicated to the society the text and translation of a hitherto unnoticed altar-inscription of Assurnâsirpal.

FINE ART.

THE EXHIBITION OF THE GLASGOW INSTITUTE.

IN order the better to adapt its displays to the period of the Glasgow season, and to enable its exhibits to be afterwards forwarded to the Salon and the Royal Academy of next spring, the Institute has changed its opening day from the beginning of February to the middle of December. If we are to judge by the present aspect of the rooms, the alteration has been a judicious one; for the present exhibition is particularly rich in important works fresh from the Glasgow studios.

In the exhibition held in these galleries last spring, the works of the younger and more original of the artists of the West were concentrated in one of the smaller rooms, and there supplemented by examples of the London Impressionists; this year they are more widely diffused through the entire exhibition, leavening the lump and impressing the whole display with their distinctive character. Mr. Stott of Oldham's circular, "Birth of Venus"—so whimsical in the type of divinity selected by the painter, so freshly decorative in the white wavering lines of its foam and its reflections—holds a prominent place of honour in the main gallery; Mr. P. W. Steer and Mr. Roussel also contribute, the portrait of

"Mortimer Mempes, Esq." by the latter being much in evidence on one of the walls of Gallery No. IV.

The most individual and in many ways the most delightful examples of local art are the subjects by Mr. E. A. Hornel. Trained—if we are not misinformed—at Antwerp, it was certainly not in the modern schools of Belgium that he learned those strange colour-secrets which form the spell with which he conjures in the works he is now producing. Some hint of method he may have caught from Monticelli; doubtless he has been powerfully stimulated by the pictorial art of Japan; but what he has learned has been turned to clearly personal uses, has served simply to set free his own artistic individuality. Nature serves but as the basis of his art, an art purely decorative in its aim; and facts of aerial perspective, with fidelity to the actual local colouring of nature, are frankly and consciously discarded. This painter's only aim seems to be to develop the splendid technical possibilities of colour—to produce satisfying combinations of potent colour-tones, and satisfying arabesque in the arrangement of the darker or lighter colour-masses. His aim has been excellently attained in "The Brook" and "Butterflies," which, with "Among the Wild Hyacinths," shown last May in London, are the subjects by which he is here represented. Work upon very similar lines is contributed by Mr. George Henry, who, it may be remembered, was the joint-painter with Mr. Hornel of that "Procession of Druids," which attracted attention in the Grosvenor Gallery last spring.

Mr. James Paterson shows excellent landscape work. "Sundown" is delicate and harmonious, its fading sky and flushed evening clouds being contrasted tenderly by the dark hills and shadowy tree-masses that appear beneath. There is force and vigour in Mr. Harrington Mann's bold effort to depict a famous battle of Scottish story—"The Attack of the Macdonalds at Killiecrankie"; and fronting this work at the end of the Great Gallery is Mr. G. D. Armour's "Lion's Den," in scale, at least, the most important work of this clever young animal painter. Mr. Lavery shows considerable refinement in his portrait of "An Irish Girl"; and Mr. T. M. Dow has an admirably fresh and brilliant sea-piece—"A Northern Shore"—full of the sparkle of whitest foam, and a sense of the infinite, free breadth of ocean. E. A. Walton's "Peasant Girl and Boy" shows hardly enough of subject to justify such an amplitude of canvas, and the planes and proportions of the girl's figure and head are far from satisfying; but the handling is broad and workmanlike, and the sense of open air is well preserved. Mr. A. Roche exhibits strong if not very pleasing landscape work; and his "Girl's Head," while not faultless in draughtsmanship, has individuality, and is not wanting in charm. Mr. W. E. Lockhart contributes a quiet and excellent seated portrait of "John Polson, Esq."

As usual in the Glasgow exhibitions, a few important works come from London; and the art of the past is represented by selected examples. In the former class is Mr. Tadema's "Hadrian visiting a Romano-British Pottery"; Mr. Pettie's telling and faithful portrait of Mr. Campbell Noble, the landscape painter; Mr. R. W. Macbeth's "Cast Shoe"—lent from the Chantrey collection—with his "Mother and Child"; and an important sea-piece by Mr. Henry Moore. The works by deceased masters are chiefly from the collections of Mr. Arthur Sanderson, Mr. T. G. Arthur, and Mr. W. J. Chrystal. They include examples of Etty, Cotman, Crome, Hoppner, and Monticelli.

In the water-colour-room we have thoughtful and sensitive landscape-work, by Mr. R. B. Nisbet; in his "Breaking up of the Great

Eastern" Mr. Frank adds the charm of rich and forcible colouring to that fascinating simplicity and breadth of composition which gives distinction to his etching; Miss Constance Walton shows an excellent colour-sense and the delicate touch of a hand that knows when to stop in her charmingly artistic study of "Oranges and Tulips," and Mr. James Guthrie has several examples of his telling work in pastels, which is now being exhibited, in greater mass, to the London public.

In a Scottish exhibition one seldom cares to spend much time, one is seldom able to bestow much admiration, upon the display of sculpture. The best in this department that is here shown are the "Peace" and a "Marble Bust" by Mr. Onslow Ford, and Mr. George A. Lawson's picturesque, vigorously modelled head of "Old Marjorie."

OBITUARY.

DR. SCHLIEMANN.

THE news of the death of Dr. H. Schliemann has come as a shock to his many English friends, who hoped, from his extraordinary activity of mind and body, that he would yet add fresh triumphs to his glorious career of archaeological exploration. He died suddenly at Naples, from a deep-seated disease of the ear, on Friday, December 26, when within a fortnight of completing his seventieth year; but his body is to be brought to Athens, to be buried on the mound of Colonus, by the side of the German archaeologist, Ottfried Müller.

Heinrich Schliemann was the son of a Lutheran pastor in Mecklenburg-Schwerin, and was born at the village of Neu Buckow, in 1822. The autobiographical sketch which he prefixed to his *Ilios* gives interesting details about the extreme hardships of his boyhood and his early enthusiasm for the poems of Homer, with whose name his own will henceforth be associated. Having acquired a large fortune by trade in Russia, he was enabled to realise the dream of his life, and excavate the site of Troy. Guided by his own spirit of divination, as much as by the traditions of antiquity, he set to work at Hissarlik in 1870, with no skilled assistance, and unsupported by the encouragement of scholars. After many months of patient digging, his results were finally made known to the world in *Troy and its Remains* (1874). So startling were some of these results that a few old-fashioned scholars not only refused to credit his inferences, but also threw doubt upon his veracity. His only defence of himself was to resume his excavations, and to challenge his opponents to be his guests on the spot. The entire subject was treated by him at length in two later volumes—*Ilios: The City and Country of the Trojans* (1880); and *Troja: The Results of the Latest Researches upon the Site of Homer's Troy* (1884); and even so recently as last winter he was compelled to refute his latest calumniator by re-opening the diggings at Hissarlik.

Meanwhile, the attention of the public had been transferred to Dr. Schliemann's work at another site. Again inspired by the story of the *Iliad*, he obtained the permission of the Greek government in 1874 to excavate the site of Mycenae, the traditional capital of Agamemnon. Here his discoveries were even more surprising and more decisive than at Hissarlik. He found tombs, filled with barbaric weapons and gold, and also pottery which can be proved to date far back in prehistoric ages. The facts are stated and illustrated in his *Mycenae: A Narrative of Researches and Discoveries at Mycenae and Tiryns* (1877), to which Mr. Gladstone contributed a preface. But though

the name of Tiryns appears on the title-page of this book, it was not till some years later than Dr. Schliemann undertook, with the assistance of Dr. Dörpfeld, the systematic excavation of the later site. Here, for a third time, exceptional success rewarded his perseverance. He laid bare the entire ground-plan of a prehistoric palace, with its gates, courtyard, hall, chambers, and even bath room, as may be seen illustrated in the last of his series of great books, *Tiryns: The Prehistoric Palace of the Kings of Tiryns* (1886). Meanwhile he had, by his careful excavation of the so-called treasure-house of the Minyae at Orchomenos, accomplished another piece of work which would have made the reputation of any lesser man—*Orchomenos* (1881); he had also proved, by digging into the famous mound of Marathon and finding only primitive stone arrow-heads, that it was in existence long before the battle; and he had comparatively failed, owing to native obstruction, in excavations at Alexandria. For many years past he had contemplated undertaking some great work of archaeological exploration in Crete; but even his enthusiasm was checked by the extortionate sum demanded for the necessary permission.

Dr. Schliemann—who knew English perfectly as well as nearly every other European language—came to this country in 1877, bringing with him the treasures of Hissarlik, which were for some time on exhibition at the South Kensington Museum. There they would probably have remained, as his gift to the nation, if he had not taken umbrage at some not very creditable criticisms of his works in the English press. Accordingly, he transferred them to the Royal Museum at Berlin, to which they are finally bequeathed by his will. The spoil of the tombs of Mycenae is the property of the Greek government, and is admirably exhibited in one of the many public museums of Athens. Dr. Schliemann, however, was not without honour in England. The Society of Antiquaries and other learned bodies admitted him to their fellowship. The university of Oxford conferred upon him the honorary degree of D.C.L. at the Encaenia of 1883; and at the same time Queen's College elected him an honorary fellow—a distinction which he shared with Dr. Birch and M. Maspero. Among his most intimate friends were Mr. Sayce, Prof. Mahaffy, and Dr. Karl Blind; while no Englishman who visited Athens failed to receive from him splendid hospitality.

Dr. Schliemann was not a classical scholar; he was not even an archaeologist, in the strict acceptance of that term. Properly speaking, he was a discoverer, in the same sense in which Columbus was. Throwing himself upon his own enthusiasm, he was enabled to make discoveries which realise the romance of poets, and open a new horizon to posterity. Perhaps he may be compared most fitly with Sir Henry Austen Layard, to whom we owe the excavation of Nineveh and the foundation of the study of Assyriology. By Dr. Schliemann's unaided efforts, our knowledge of civilisation in Greece and the Levant has been extended backwards over a period of nearly a thousand years; while the supreme importance of the spade in archaeological research has been decisively demonstrated to a younger generation. To the impulse given by his discoveries is due the German excavations at Olympia, the exhaustive exploration by the Greeks themselves of the site of the Acropolis, and the resolution of the Americans to disclose the buried secrets of Delphi. Englishmen, too, may feel proud that the genius and the methods of Dr. Schliemann have been inherited by Mr. W. M. Flinders Petrie, whose work in Egypt, though less showy, has been almost equally fruitful in important results.

J. S. C.

CORRESPONDENCE.

THE LATE RICHARD FISHER.

Hill Top, Midhurst: Dec. 26, 1890.

May I ask you to rectify, by the insertion of this short letter, an important omission in the otherwise just and kindly notice of my father, Mr. Richard Fisher, which appeared in the ACADEMY of December 20?

His most important and last published work, printed in 1886 by order of the trustees of the British Museum, was entitled *An Introduction to the Early Italian Prints in the British Museum*, which was reviewed at the time in the ACADEMY. This work is, in fact, from its comprehensiveness and research, the Early History of Engraving in Italy—a name by which he himself would have wished it to be known.

The catalogue of the early Italian engravings existing in the British Museum, compiled and written by my father, and printed for the trustees (though never published), is by their order made use of to this day in the Print Room, although the proofs did not have the advantage of his correction. It is to be hoped, in the interest of students, that this catalogue will soon be published.

R. C. FISHER.

NOTES ON ART AND ARCHAEOLOGY.

THE last sheets of M. Naville's long-expected memoir on *Bubastis* have gone to press. The book would have been in the hands of subscribers by the beginning of the new year but for the repeated miscarriage of proofs between London and Geneva during the last month.

THE annual winter exhibition of Old Masters at the Royal Academy will be opened to the public next week; the private view is fixed for to-day (Saturday). Next week, also, Mr. Walter Severn, president of the Dudley Gallery, will have on view a collection of his own water-colour drawings at the Egyptian Hall, Piccadilly.

AN exhibition of antiquities, &c., found during the recent excavations at Silchester, is now to be seen in the rooms of the Society of Antiquaries, Burlington House, between the hours of 11 a.m. and 2 p.m. It will remain open until Wednesday, January 14.

MR. C. P. SAINTON's exhibition of "Sketches from a Caravan Window from the North to the South of France" will open at Messrs. Dowdeswell's Galleries on January 10. The series comprises both paintings and silver-points.

MR. JAMES L. BOWES will contribute an article on "Japanese Pottery" to the January issue of the *European Trade Mail*.

MR. MAURICE HEWLETT will deliver a course of six lectures on "The Rise of the Renaissance in England," at the South Kensington Museum on Wednesdays, at 3.45 p.m., beginning on January 7. He will treat in particular of such subjects as the Franciscans in England, the beginnings of English poetry, and the return to nature in English art. The lectures will be fully illustrated.

MR. TALFOURD ELY proposes to deliver a course of six lectures on "England and the English in Early Times" at his house in Hampstead on Wednesdays, at 5 p.m., beginning on January 14. The lectures will deal mainly with archaeological matters, and will be illustrated with lantern slides.

WE are glad to see that Mr. Lewis F. Day's admirable little book, *The Planning of Ornament*, has reached a second edition, and reappears with some beautiful additions to the illustrations. An abridged edition of the same author's *Every-Day Art* has also been published, forming an introductory volume to Mr.

Day's excellent series of text-books on Ornamental Design, of which *The Planning of Ornament* forms one.

WE have received from the Autotype Company an auto-gravure of Mr. Herbert Schmaltz's picture of "Zenobia's Last Look on Palmyra," exhibited at the New Gallery on its opening, and since acquired for the National Gallery of Melbourne. We are unable to profess any great admiration for Mr. Schmaltz's design, but it evidently appeals to a popular sentiment, and the reproduction is successful.

THE STAGE.

THE "ANTIGONE" AT QUEEN'S COLLEGE.

THE "Antigone" of Sophocles was performed in the original Greek by the students of Queen's College, Harley-street, on Wednesday, December 17, and repeated on the two following days. In spite of the inclemency of the weather, the rooms were each time crowded.

No greater contrast is conceivable than the open Attic theatre, with the blue sky overhead, and the far-off hills or the purple sea forming the background, and the modern London saloon, which on a December evening had to do duty for a Greek stage. Yet such is the witchery of Sophocles' verse that, after the first words passed between the daughters of Oedipus, the listeners forgot the surroundings and were completely carried away.

Mrs. C. Foss made an excellent Antigone; she appeared fully conscious of her part; each word she pronounced seemed to carry in its tone the full burthen of its meaning. The only fault that might have been found, were we speaking of a modern piece, was that the actress displayed all her strength at the very outset in the prologue, where she expresses her intention of burying her dead brother, and that the same height of pathos was maintained throughout the various scenes in which she appeared. Unconsciously, perhaps, Ismene formed a perfect foil to her stronger sister. Creon, with all his harshness, his headstrong stubbornness, his *tyranny*, was well rendered by Miss C. Hughes. Very strikingly was the end of the dialogue between him and Haemon (Miss E. Langridge) given. Tiresias looked as much like a blind and aged seer as modern art could effect; yet it was impossible to banish the suspicion that behind that ambling gait, those long robes and masses of grey hair, were concealed a lithe, nimble figure, and a fresh-complexioned young face.

In the last scenes all the actors worked well together. The limited space of the stage was utilised to the best advantage; and when the curtain rose, disclosing the biers with the bodies of Eurydice, the wife, and Haemon, the son of the King of Thebes, when Creon was seen falling under the stroke of this calamity, the effect which tragedy has in calling forth "fear and pity" was felt by every spectator. The chorus, making its exit after a brief dirge-like song, formed a fitting close to the play. The entire representation brought home to one's mind, beyond all that had been anticipated, what the original production of one of Sophocles' master-works must have been.

M.

STAGE NOTES.

THE two Christmas productions which have interest for the lover of pretty sights and music are those at Drury Lane and the Prince of Wales's. We hope to speak a little later on, in greater detail, of the piece at the latter house—an adaptation by Mr. Saville Clarke (with

music by Mr. Slaughter) of Thackeray's story *The Rose and the Ring*. To-day we will confine ourselves to Drury Lane, where Mr. Augustus Harris has at great cost and with infinite ingenuity prepared a piece which has little in common with the old-fashioned pantomime, and which is but slightly akin to the sort of piece which, until, at all events, his latest years, the late Mr. E. L. Blanchard was wont to indite for the managers of Drury Lane to grapple with; but which, whether for good or ill, is the single pantomime that may be counted upon to draw the town. At Drury Lane the thing is done magnificently. Mr. Augustus Harris has surrounded himself with an army of the comic and the fair, and has spent a fortune on the equipment of the piece. With an energy and rapid perception of the requirements of the moment worthy of the editor of an important review, or of the recognised proprietor of a well-advertised soap, Mr. Harris has succeeded in engaging as the heroine of his piece the admirable Lady Dunlop (Miss Belle Bilton), whom it is always a pleasure to see, but whom it is particularly a pleasure to see after her successes in "another place." Lady Dunlop is an excellent beauty. She has charm together with talent. With her is Miss Vesta Tilly. The men, like the ladies, are apt in pantomimes to come from the music-halls. But the music-halls—as a popular writer has not quite fully recognised in his paper upon them in the new number of *Harper's Magazine*—are often in their own way nurseries of dramatic skill. The scenery at Drury Lane is amazingly beautiful. A whole panorama is unrolled before the audience, who have nothing whatever to complain of but a surfeit of landscape, a surfeit of song and dance, a surfeit even of picturesque humanity. Seriously, the pantomime is a success. Such effort as Augustus Harris has bestowed upon it is usually in this world reserved for a business in which competition is expected and is to be feared. But with Mr. Harris there is no fear and no expectation of competition. He takes, we believe, a genuine pride in doing his work with all the completeness and lavishness that he can command, and his reward is that alike from the heart of the West-end and from the remotest suburbs the population flocks to revel in his show.

THE wonderful revival of interest in the theatre has led to the publication of a good deal of second-rate literary matter dealing with the stage, not critically, but in a merely gossiping fashion. The cheap and handy "booklet" called *The Dramatic Peerage* (General Publishing Company), though certainly it does not aim to be very serious, is a welcome relief from the flood of pure commonplace or pure nonsense which the hack or the "faddist" pour out from the press anent the theatre to-day. To begin with, it is quite up to date. Again, it gives a generally accurate, and—what is perhaps better for its purpose—a distinctly lively account of hundreds of people who are among the major and the minor lights of the profession. For those who know how to read between the lines, it contains several allusions which have an air of piquancy, and which could hardly have been made but by an unconventional writer, and one whose labour was at least like Maeduff's, a "joyful trouble." The compiler of *The Dramatic Peerage*—which our stage-struck readers should at once obtain—is capable of writing, some day or other, something of equal smartness and of more continuity and of less enthusiasm. We say of "less enthusiasm"; but then this work hardly pretends to be seriously critical.

SATURDAY, JANUARY 10, 1891.

No. 975, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Poetical Works of Matthew Arnold. (Macmillan.)

THE publication of Arnold's poems, at a low price, in a single volume, is an act of such merit that we are scarcely permitted to criticise the bibliographical details of this book. It is enough to say that it is a little heavier than is comfortable; something handier, and less awkward, would have been more acceptable. But we have all Arnold's poems, and the best of his portraits, in one volume; let us be satisfied with that, and grateful for it.*

There are two poems, not hitherto included: the elegy on Kaiser, and the Horatian Echo. The first contains that just and pleasant satire upon the Laureate, and upon his follower, which we enjoyed a few years ago:

"What, Kaiser dead? The heavy news
Post-haste to Cobham calls the Muse,
From where in Farringford she brews
The ode sublime,
Or with Pen-bryn's bold bard pursues
A rival rhyme."

The Horatian Echo, which enriched the *Hobby Horse* last year, contains, among many felicities of expression, two exquisite stanzas:

"Of little threads our life is spun,
And he spins ill, who misses one.
But is thy fair Eugenia cold?
Yet Helen had an equal grace,
And Juliet's was as fair a face,
And now their years are told.

"The day approaches, when we must
Be crumbling bones and windy dust;
And scorn us as our mistress may,
Her beauty will no better be
Than the poor face she slights in thee,
When dawns that day, that day."

The complete poems of Arnold are little more than one hundred in number. Of these, only five are of considerable length; yet, taken together, they do not fill half this volume of five hundred pages. So careful and discreet an achievement, during some forty years, ought to come close upon perfection; and this it does. But of Arnold's rare and happy qualities we will speak later; let us first have done with his few and venial faults. In reading this volume through, two things, now and again, are noticeable. There are lines, phrases, and constructions, not perfectly polished; and there are poems, or stanzas, not perfectly poetical. That is, there are faults of expression and of conception. Arnold, as Lord Coleridge tells us, had a most imperfect ear

for music. Now, while no one questions his wonderful ear for the cadence of verse, it is equally true that his sense for melody sometimes failed him. Within one short poem occur two such discordant lines as "There the pines slope, the cloud-strips," and "Where the high woods strip sadly." It explains Arnold's avowed preference for the rhythm of

"Siehst sehr sterbeblässig aus,"

over the rhythm of

"Que dit le ciel à l'aube, et la flamme à la flamme?"

Again, the construction is at times forced, as in

"That furtive mien, that scowling eye,
Of hair that red and tufted fell"—

where the second line "is only poetry because it is not prose." These technical faults are few, and they are less troublesome than the foolish affectations of much modern workmanship. The second fault, faults of conception, is more serious. Arnold rarely fails to write in a spirit of singular loftiness and beauty; he is rarely neglectful of his own precept:

"Such, poets, is your bride, the Muse! young,
gay,
Radiant, adorn'd outside; a hidden ground
Of thought and of austerity within."

But, at times, the thought is unadorned and the austerity far from radiant. To take an example:

"Religious fervours! ardour misapplied!
Hence, hence," they cry, "ye do but keep
man blind!
But keep him self-immersed, preoccupied,
And lame the active mind!"

Contrast that, in its nakedness, with the ornament and the radiance of the preceding poem: a poem full, too, of austere thought:

"So, in its lovely moonlight, lives the soul.
Mountains surround it, and sweet virgin air;
Cold plashing, past it, crystal waters roll:
We visit it by moments, ah, too rare!"

At once we feel that the first lines are not interesting, not heightened, not touched with emotion; that the second are no less beautiful than elevated.

These things are worth a few words, because the admirers of Arnold are in danger of being held his worshippers also, unless they show themselves aware of his faults. Arnold, great and admirable as he is, is no more perfect than is Gray, Milton, or Sophocles; but he stands above the first, and the others were his most successful masters.

Arnold's poems are of two kinds: there are the narrative poems, whether dramatic or otherwise; and the lyrical, emotional, or meditative poems. Now, it is observable that Arnold is at his best in poems neither long nor short: in poems equal in length to the average Hebrew psalm, the average Greek ode. No doubt there are exceptions: "Sohrab and Rustum" among the longer poems, "Requiescat" among the shorter, are nearly faultless. But, for the most part, it is in such poems as "Thyrsis," "A Summer Night," "Stanzas from the Grande Chartreuse," that we find the true Arnold; not in "Balder Dead," "Progress," "Revolutions." In other words, Arnold, to use his own phrase, had not "the archi-

tectonics of poetry, the faculty which presides at the evolution of works like the 'Agamemnon' or 'Lear.'" Nor was he in the literal sense a singer, such as was Heine or Catullus. Rather, his quality was meditative; he accepted, at least in practice, Wordsworth's definition of poetry, that it is "emotion remembered in tranquillity." But it may be objected that Arnold is genial, exultant, even rapturous; that he wrote nothing in the least like "The Excursion." That is true; but let us consider a little more curiously. Arnold was fond of national distinctions, qualities of race and temperament. Were one to distinguish Arnold's own qualities, the conclusion might be of this kind. From the Greek culture, he took a delight in the beauty of life and of fine imagination; from the Hebrew genius, a sense of reverence and meditation; from the French, a certain grace and lucidity of spirit; from the German, a steady seriousness of mind. By descent he was, in part, a Celt: that gave him a "natural magic" of emotion and of soul; while from his English origin, he took that daring common sense which enabled him to hold in harmony these various qualities. Trained in those chosen places of beauty and high tradition, Winchester and Oxford, with all the strength of his father's influence at Rugby, he was always attached to the English ideal: to the ideals of Milton and of Burke. A scholar, a man of the world, a government official, his affections were not narrow, not provincial; but they were not cosmopolitan, not unsettled. His heart was at home in the quiet dignity and peace of an English life, among the great books of antiquity, and the great thoughts of "all time and all existence." Hence came his limitations; not from prejudice, nor from ignorance, but from a scrupulous precision and delicacy of taste. No one loved France more than he; no one abhorred more than he "the great goddess Aseigeia." He revered the German seriousness, depth, moderation of life and thought; he disliked and ridiculed pedantry, awkwardness, want of humour and of grace. In all his criticisms, the same balance between excess and deficiency appears: he was a true Aristotelian. And so, when it is said that Arnold was not a poet of profound philosophy, not a thinker of consistency, or not a man whom we can classify at all, the only answer is a *distingo*. It was Arnold's work to find beauty and truth in life, to apprehend the meaning and moral worth of things, to discriminate the trivial from the grave, and to show how the serene and ardent life is better than the mean and restless. His poetry, then, is not didactic; but meditative, in the classical sense, it is. Lord Coleridge—in those papers which make us regret that he has "to law given up what was made for mankind"—is of opinion that Arnold's meditative poems are not destined to live, "not from any defect of their own, but from the inherent mortality of their subjects." Yet, surely these poems are more than records of a transitory emotion, the phase and habit of an age. Such a description would apply to Clough; his mournful, homesick, desultory poems are indeed touched with decay, because they are composed without care, in no

* We may call attention to an ugly misprint in the third line of a familiar stanza on p. 323.—Ed. ACADEMY.

wide spirit of contemplation; reading them we do not think of "Sophocles by the Aegæan," nor of the *lacrimæ rerum*. But Arnold's thoughts and emotions are profoundly human; we cannot say of them, that only an Oxford man, under such and such influences, at such and such a time, could have felt them in youth and expressed them in after life. True, their immediate tone is that of one "touched by the Zeit-Geist" in the latter end of the nineteenth century; but their fundamental character is common to all times. For Arnold is human; and what is humanism but the belief

"that nothing which has ever interested living men and women can wholly lose its vitality: no language they have spoken, no oracle beside which they have hushed their voices, no dream which has once been entertained by actual human minds, nothing about which they have ever been passionate, or expended time and zeal?"

Arnold, if this be so, was himself a true humanist, and no true humanist will ever forget him. No doubt the *Christian Year* or the *Essay on Man* have lost their charm and their significance; but we read the one as the memorial of a great phase of sentiment, and the other for its brilliant setting of a very tarnished theory. Much more will Arnold live in these grave and lovely poems, which have so little in them of merely transient feeling. Whatever be the future estimate of Arnold's poems, there is no doubt of their singular charm now. They possess the secret of great verse, its power of haunting the memory, and of profoundly satisfying it. Sad as are some of them, their melancholy is true to nature, and leaves us calm; rejoicing as are others, they never soar out of sight, away from life. But they give a view of nature and of life as contemplated by a mind of great sympathy and insight, acquainted with the choice spirits of ancient civility, and with the living emotions of our own age. No hymn to Dolores can so touch us as the lines "To Marguerite": the feverish, antiquarian rhetoric of the one may thrill the nerves and leave us tired; the pure beauty and the austere passion of the other appeals to every faculty in us, and leaves a sense of the beauty of human sorrow. Paradoxical as it may sound, there is something very hieratic about Arnold; his apprehension of the beauty of holiness, his love for what is clear and lofty in the pleasures of thought, his constant service of meditation.

"Ah, les Voix, montez donc, mourantes que vous êtes,
Sentences, mots en voix, métaphores mal faites,
Toute la rhétorique en fuite des péchés,
Ah, les Voix, montez donc, mourantes que vous êtes!"

Arnold would not have liked M. Verlaine's poetry; but those lines express much of Arnold's mind. The false worship of words, the conventional acceptance of phrases, all the spurious wisdom in the world, he fought against, and conquered much of it; and there is no one left to take his place in the struggle against vulgarity and imposture. No voice like his to sing as he sang of calm and peace among the turbulent sounds of modern life.

"Calm soul of all things! Make it mine
To feel, amid the city's jar,
That there abides a peace of thine,
Man did not make, and cannot mar.
The will to neither strive nor cry,
The power to feel with others give!
Calm, calm me more! nor let me die
Before I have begun to live."

LIONEL JOHNSON.

Four Frenchwomen. By Austin Dobson.
(Chatto & Windus.)

THERE are a few contemporary writers of whom one always thinks as belonging to the past rather than the present; and such a writer is Mr. Austin Dobson. I do not, of course, mean that his work lies habitually remote from the interests of to-day, for this is very far from being the case; but that there is in all he does a certain measure and restraint, a dainty accuracy and precision, a kind of elegant simplicity and unaffectedness, and that such characteristics are rather those of the classic periods of literature than of our own days of storm and stress. Many an author now popular would scarcely, I fear, have been highly esteemed by the wits and critical quidnuncs of Queen Anne's time. But Addison and Steele, St. John and young Mr. Pope, would have had many a good word for Mr. Dobson's prose, and have spoken of his verse with all possible honour.

How does it happen that a writer so sober in his effects, so opposed to all exaggeration and over-emphasis, should have selected for treatment such subjects as three out of the four lives in this little volume? Charlotte de Corday the assassin, Mme. Roland the victim of the guillotine, the Princess de Lamballe butchered by the populace with every foul accompaniment of bloodthirstiness and bestiality—what attraction had themes like these for a poet so delicate and charming? True, no doubt, that Charlotte de Corday, if a murderess, was a murderess of an almost sympathetic kind, beautiful, heroic, disinterested ally, consumed by zeal for the public good, and that her victim, so unlike the victims of Ravallac or Balthazar Gérard, was a monster unfit to live; true, also, that Mme. Roland, notwithstanding much in her Memoirs that one would wish away, stands forth in history a noble figure, and walked to her death with unfaltering feet; true, again, that M^{me}. de Lamballe, *mieux femme que ces autres*, as Mr. Dobson repeats, showed a beautiful courage and devotion to her friend and queen, Marie Antoinette. All true, no doubt; but against what a background of horror do these figures move, and how blood-bedabbled they are. Mr. Dobson here is like an exquisite *genre* painter called upon to depict the darkest scenes of human tragedy.

And the *genre* painter, it must be owned, comes admirably out of the ordeal. The artist that is in Mr. Dobson shows himself quite equal to this new task. "What can the man do that cometh after the king?" asks the Ecclesiast; and in writing the story of Charlotte de Corday's journey from Caen to Paris, of her sudden attack on Marat, of her trial and death, Mr. Dobson comes after

a king indeed. There are few chapters in Carlyle's *French Revolution* more striking, more full of movement and of a vivid, if lurid, light, and at the same time more excellently ordered in the midst of seeming disorder, than the chapter on Charlotte de Corday. Even so, however, Mr. Dobson may fairly be said to hold his own. His account may be read after the other, and still with pleasure. Nor with less pleasure may be read what he says of M^{me}. Roland, the heroine of the Revolution, or of that more feminine heroine of the *ancien régime*—for surely in her devotion to Marie Antoinette there was something heroic—the Princess de Lamballe. Here she stands before us in Mr. Dobson's words, as if in a portrait by Gainsborough—lovely with her old-world charm of distinction and womanly grace:—

"We recognise her merit by the few testimonies of her contemporaries, by the total absence of any authentic accusation, by the 'She was as good as pretty' of a man like the Prince de Ligne, by the 'good angel' of the peasants of Penthievre; and looking back to Hickel's portrait—a blonde, beautiful, head, with the luxuriant hair, which once, they say, broke from its bands and rippled to her feet—looking back, too, not ignorant of the days in which she lived, we dare not choose but believe that this delicate girlish woman of forty, round whose lips, despite the veil of sadness in the eyes, a vague *infans pudor* still lingers like a perfume, was, what we account here to have been, a very tender, loving, and unhappy lady."

Of M^{me}. de Genlis, the one non-tragic Frenchwoman whose story is here told, we get a far less definite picture, notwithstanding that nearly half the volume is devoted to her eighty-four years of life. But this is scarcely Mr. Dobson's fault. M^{me}. de Genlis was an enigmatic person. Her voluminous writings rather veil than reveal her. Her many enemies raised round her a cloud of calumny through which it is difficult to see clearly. Even Sainte-Beuve, the subtle analyst, to whom difficult problems of character often offered an irresistible attraction, even he "thanked God," when writing about her works, that he had not to write about her life, saying that the latter would be "a task too delicate and perilous." And so Mr. Dobson, for all his pleasant account of her youth, and maturity, and age—and most pleasant it all is—scarcely makes us "touch bottom," as it were, in her character. Was she really "very unaffected," as Mrs. Opie reported of her? Is it true, as Miss Burney said, that "there was a dignity with her sweetness, and a frankness with her modesty," testifying, "beyond all power of report," to "her real worth and innocence"? Or, was she the Becky Sharp of her time, as there is more reason to think? There the riddle remains—though with the adverse solution the more probable.

To question the facts of a writer so accurate as Mr. Dobson would require more boldness than I possess. Differences of impression one may, however, avow without rashness. Thus of M^{me}. Roland's Memoirs he says that they were "composed with all the easy fluency, and something of the naïve cultivation of Sévigné." But, is this quite an appropriate comparison? M^{me}. Roland's

Memoirs were written, as he admits, and all who read them must recognise, under the very direct influence of Rousseau. Rousseau is responsible for nearly all, not quite all, that is objectionable in their matter. He is responsible, also, for their manner, even in those more autobiographical portions which Mr. Dobson had probably in view when he instituted his comparison. But, between Rousseau's manner and Mme. de Sévigné's manner there is a whole century of difference. The alertness, the sparkle, the directness and spontaneity, the absence of all mannerism, of all pose, of all declamation in the works of the immortal letter-writer—how should a disciple of Rousseau have possessed these qualities or enjoyed these immunities? A word, too, I might say, remembering the lines of thought of George Sand, of Michelet, of Victor Hugo—in opposition to Mr. Dobson's view that Rousseau's influence is a thing altogether of the past. But, *cui bono*? Did ever two people agree about everything? And Mr. Dobson's opinion, when I come to think about it, is more likely to be right than mine.

FRANK T. MARZIALS.

Over the Teacups. By the Author of "The Autocrat of the Breakfast-Table." (Samson Low.)

DR. HOLMES in the mansions of British aristocrats felt himself "at home," but his truest admirers preferred to meet him at the famous breakfast-table. These will now gladly welcome him again "over the teacups," where he discourses genially and wisely of men and manners. It is unnecessary to draw comparisons between his present conversations and those which, some thirty years ago, made him famous. That he "feels he has something he would like to say" is his sufficient justification for the present work, and there are plenty of people on both sides of the Atlantic who will listen to him gladly. We may, however, note in passing that the always genial Doctor is now, if possible, more genial than ever. Even his old friend the New England deacon is not held up to ridicule.

Among the characters that assemble around the tea-table are two of our old familiar friends: the Autocrat himself—now known as the "Dictator," though he dictates very little and, indeed, takes, ostensibly, only a small part of the conversation—and the Professor. All the rest of the old company have departed, and given place to new and not uninteresting guests. Among these is, of course, a doctor who is one of the parties in the slight love-romance that runs through the book.

That much of the talk relates to old age is natural enough, seeing that the author has now completed his eighty-one years and is not anxious to conceal the fact. He seems to regard himself at this stage of life with something of the curious scientific, or semi-scientific, interest which hitherto he has always manifested with reference to external things. He studies his sensations, and notes the gain and the loss—being quite alive to the privileges as well as to the inconveniences connected with his time of life. He is of opinion that

"old age is infinitely more cheerful, for intelli-

gent people at least, than it was two or three thousand years ago. It is our duty, so far as we can, to keep it so. There will always be enough about it that is solemn, and more than enough, alas! that is saddening. But how much there is in our times to lighten its burdens! If they that look out at the windows be darkened, the optician is happy to supply them with eyeglasses for use before the public, and spectacles for their hours of privacy. If the grinders cease because they are few, they can be made many again by a third dentition, which brings no toothache in the train. By temperance and good habits of life, proper clothing, well-warmed, well-drained, and well-ventilated dwellings, and sufficient but not too much exercise, the old man of our time may keep his muscular strength in very good condition."

Dr. Holmes is by no means an enthusiastic admirer of "the good old times." He believes in the things and the men of to-day. If the match were possible, he says he would be prepared to back Mr. Gladstone for a hundred shekels against Caleb, "that over-confident old Israelite," to "cut down and chop up a cedar of Lebanon."

About many other topics which interest him Dr. Holmes takes the present opportunity of discoursing. He is somewhat severe on the persons he styles "brain-tappers"—those "literary operatives who address persons whose names are well known to the public, asking their opinions or their experiences on subjects which are, at the time, of general interest." The object with which the brain-tapper puts his questions may, he admits, be a purely benevolent and entirely disinterested one. But this is not always the case. In many instances the brain-tapper

"is acting much as those persons do who stop a physician in the street to talk with him about their livers or stomachs or other internal arrangements, instead of going to his office and consulting him, expecting to pay for his advice. Others are more like those busy women who, having the generous intention of making a handsome present to their pastor, at a little expense as may be, send to all their neighbours and acquaintances for scraps of various materials, out of which the imposing 'bed-spread' or counterpane is to be elaborated."

Akin to the "brain-tapper" is the writer of unnecessary communications, who desires to express admiration, or to seek information, or to procure an autograph. Dr. Holmes confesses he has encouraged this vice. He was willing to answer all correspondents as long as he was able; but at length it became necessary to give notice that the letters, books, and pamphlets which reached him were too numerous to be attended to. If he undertook to read and answer them all, he would have little time for anything else. It is gratifying to receive them, no doubt. "When large numbers of strangers insist on claiming one as a friend on the strength of what he has written, it tends to make him think of himself somewhat indulgently." Dr. Holmes hints at the difference that exists between the written and the unwritten answers to correspondents, and remarks that "the hypocrisy of kind-hearted people is one of the most painful exhibitions of human weakness." He gives a few specimens of the "unwritten answers," of which one may be quoted by way of example:—

"Think the lines you mention are by far the

best I ever wrote, hey? Well, I didn't write those lines. What is more, I think they are as detestable a string of rhymes as I could wish my worst enemy had written."

Dr. Holmes concludes his present series of papers with the hope that he may yet meet his readers "in the now and then of the future." We hope so too, for many years to come. He has given us his views about old age and the world in general, from the standpoint of eighty years. We shall hope in due time to learn how he regards them at ninety.

WALTER LEWIN.

Impressions of a Tenderfoot during a Journey in Search of Sport in the Far West. By Mrs. Algernon St. Maur. (John Murray.)

A "TENDERFOOT" in Western slang is the equivalent of what is known in Australia as a "new chum"; and did not Mrs. St. Maur at once inform us of the fact, this charming little book contains ample evidence of her claims to be numbered among that exceeding great army for whom a trip over the Canadian Pacific Railroad still possesses novelty. She and her husband (who had served in Lord Wolseley's Red River Expedition, and, seventeen years ago, hunted the then little known Colorado country) made the usual trip to Vancouver. But with the exception of a canoe voyage a little way up the British Columbian coast, and a journey into the interior of Vancouver Island as far as Cowichan Lake, neither on this journey nor on an extension of it to San Francisco and the Upper Columbia did the two travellers cover any but the most familiar ground. And Mrs. St. Maur makes no pretence of jotting down in her diary anything but the most familiar of facts. The object of the excursion was sport. But beyond catching plenty of trout, neither of the hunters were fortunate in bringing home many trophies. The summer is, indeed, in North-West America the worst season for game, unless the sportsmen are prepared for loftier climbs and a much rougher country than that traversed by Mrs. St. Maur. At that period of the year the deer keep to the high grounds, close to the snow-line, to avoid the mosquitoes, which are the pest of the lowlands. In autumn they descend, and in September and October the crab-apple thickets, in the interior of Vancouver Island, are often swarming with black bears; while in the winter season, especially should there be snow on the ground, deer are abundant almost anywhere. Thus I have known a single rifle bring down during two months more than one hundred black-tails in the vicinity of Leech River, distant about twenty miles from Victoria. However, the game has by this time been pretty well thinned in the well-frequented localities to which the professional guide is likely to conduct "tender-feet." Accordingly, slaughter of bird and beast does not occupy a large place in the volume. But as the writer jots down everything she sees, or hears, or does, or thinks of interest, her diary—unfortunately without an index—is a pleasant mixture of many things. Thus, in this literary *olla podrida* we learn in the course of a few pages her

opinion of Mr. Ingersoll's theology, of the edgings to the Sutro Park flower beds, of the kind of jewellery which "Adela's" maid wore, and how "Algernon" baked bread in the frying-pan, and carried a heavier load than anybody else in Lord Wolseley's command.

But though Mrs. St. Maur's book is not quite equal to *Etthen* it is penned in that confidentially-domestic style which made *The Voyage of the Sunbeam* so popular; and—what is rarer in female travels—her remarks seldom offend in matters of good taste. However, it contains an account of one place not generally known. This is Cowichan Lake in Vancouver Island. Though not the discoverer of this large sheet of water, I was the first person who reached it after Mr. Pemberton, and laid down its geography with approximate accuracy. At that period—now twenty-six years ago—it was quite in the outer world, only one Indian family visiting it to hunt wapiti. Now it seems there is a waggon road to the lake, a kind of hunter's hotel near it; Indians live there, and land even is "taken up" in its vicinity.

A volume so unpretending does not call for severe criticism. Nevertheless, should it attain the dignity of a second edition, it might be well to correct a few errors and misprints before they get into general circulation. Thus (p. 19), it is a little misleading to imply that in the West 160 acres of land can be bought for 10 dols.; and it is altogether erroneous to say (p. 26) that the Micmacs of New Brunswick are the only Indian tribe who possess a written language. Nor (p. 40) is the gopher a "kind of marmot"; it is a ground-squirrel. And it is incorrect to speak of the Douglas "pine"; it is a species of fir, or more accurately of *Pseudotsuga*. The botanist who has compiled a catalogue of the Canadian plants is not "McEwan" (p. 44), but Macoun; Asa Gray spelt his name not as it is given on p. 130; and Dr. George Dawson is not "Professor" except in the vulgar fashion which bestows that academical title on every man of science. The North-West and not the Hudson Bay Company were "the first to open up an organised trade" with the Rocky Mountain region (p. 63); and the steamer on the Upper Columbia runs down, not "up," the river to the lakes (p. 68). Mount Baker (which is printed "Parker" on the map) is not 13,000 feet high (p. 74); and Mount St. Elias, instead of being "19,600" (and therefore the highest of the North-American peaks) has been discovered to be under 15,000 (p. 105). Esquimault, which on the map is placed about fifty or sixty miles from Victoria instead of three, is not "north," but west of that town (p. 74). Seattle (map), Ranier, (p. 100), Port Townsend (p. 100), Willamette (p. 102), Thleigets (p. 107), Phillips (p. 104), and Ehluna (p. 130) for Abelsones, are among the misprints which have been noticed. We cannot recall the name of any "Hawati" (p. 85) Indian tribe; and it is certain that there are no lynx in Vancouver Island (p. 80); while the "deer of several varieties" must be reduced to two—namely the black-tail and the wapiti, known in that region, but erroneously, as the "elk." And it is equally certain that there are no mountain goats anywhere near Comox (p. 98), a

prairie section; or, indeed, so far as my tolerably intimate knowledge of the interior of Vancouver Island extends, anywhere in that island. Nor did I ever hear of salmon in any number in the Cowichan Lake, or of the Indians catching them with the spoon (p. 77). They spear them and trap them in weirs. None of the "small islands off the coast of Vancouver are half American and half Canadian" (p. 102); and the Muir Glacier (p. 106) is not "the largest in the world," while we may remind Mrs. St. Maur that Alaska ranks as a Territory not as a State. The Shuswap Indians (p. 154) did not "come originally from near Cariboo"; and though Mr. Justin Begbie was always a sufficiently righteous judge, we can hardly believe that he sentenced in one batch "at Victoria" (which was unnecessary, even had that town been the then capital of British Columbia) "fourteen men to death for robbery and murder in Cariboo." I am not aware that Gray ever declared that *Cupressus macrocarpa* and *Pinus insignis* were indigenous to the Cypress grove of Monterey alone (p. 130). But if he did, then he was wrong; for the one is found not only at Cypress Point, but at Pescadero ranch and Carmelo Point also; while the other grows in California from Pescadero to Monterey and San Simeon Bay, and the variety *binata* is found on Guadalupe Island. Lastly, Mrs. St. Maur has been misinformed by people even less accurate than the guide-books which she anathematizes in such sweeping terms, when she states that "at Sitka there is a fine Greek Church with silver gates" (p. 106). My acquaintance with this humble fane dates back to the period of the Russian occupation. But the "silver gates" are not within my ken. It would also improve the next edition did the author see fit to weed it of that absurd story about the "Viceroy of the time" surrendering Oregon to the Americans because salmon would not take a fly in the Columbia (p. 102). This venerable legend—which seems to be told to every tourist, for every one repeats it—is a simple myth. In 1845, there was no "Viceroy" in Canada—Lord Ashburton was the envoy it was originally fathered upon; and, as a matter of fact, the North-West salmon will rise to a fly, though certainly, with abundance of aquatic food, the temptation to leap after aerial bait is very moderate.

However, we do not wish to find unnecessary fault with what is really a very pleasantly-written volume. And its literary matter is essentially enhanced by Mrs. St. Maur's excellent sketches, which Mr. Whympers has engraved in his usual admirable style.

ROBERT BROWN.

Miscellanies. By F. W. Newman. Vol. III. (Kegan Paul & Co.)

THE notice to which this volume is undeniably entitled has been for various reasons unduly delayed, for which the reviewer's regret is hereby expressed.

The selection of *Miscellanies* here made does not differ materially from the two col-

lections previously published. If any such difference be observable, it is that this seems more miscellaneous than the preceding volumes. Whether it was worth Mr. Newman's while to incorporate in a volume intended as a permanent record of his life's work and teaching such incidental and fugitive matter as, e.g., the leaflet on p. 285, and some other papers equally slight and occasional, may well be questioned. No doubt in his long and honourable prophetic career the venerable author has succeeded in enlisting the interest and sympathies of a gradually increasing circle of disciples and admirers, who will not willingly allow any of his words to fall to the ground; but the general reader, in the eager rush of contemporary literature and the constant change of political questions and interests, may surely be pardoned for impatience in having his attention called to matters and issues whose importance has passed away, or to social and political evils which subsequent legislation has either largely mitigated or wholly removed.

Remembering that some of the *Miscellanies* of this volume date so far back as thirty-five years, it seems needless to insist that their chief interest for readers of our own time is rather historical and antiquarian than immediate and direct. Another criticism to which they seem open is their apparent want of arrangement. The book wears an aspect of heterogeneousness which, as a little attention to order and coherence might have obviated it, seems gratuitous and needless. A third general criticism relates to the author's animus—the spirit which animates, without scarce a single exception, everyone of these *Miscellanies*. To say that it is singular or eccentric would be merely adopting a commonplace or superficial verdict. In itself singularity cannot be regarded as a vice, literary or other; on the other hand, it may, under due conditions, claim to be the noblest of virtues.

But, while I am far from wishing to charge Mr. Newman with originality regarded as a vice or shortcoming, I think he may not unreasonably plead guilty to an indiscriminate worship of the Ideal in practical questions. Like other pioneers and reformers, he is carried away by the enthusiasm of his mission. He makes little or no allowance for purely human and terrestrial conditions. He ignores the fact, at any rate unduly minimises it, that human institutions and state policies are not exactly moulded on a pre-arranged plan of ideal excellence; more commonly they develop in a casual and accidental manner—like an organism in a mixed environment of health and disease—assimilating errors and abuses not as elements recognised as hurtful, but as indispensable conditions and co-efficients of normal growth, to be eliminated from the system when they assume the form and baneful activity of acute diseases. That our system of party government or the growth of English power in India contains features in complete discord with abstract justice few thoughtful persons would care to deny; but it is one thing to point out errors or shortcomings in a complicated state-system or section of history, and quite another to determine accurately how under

the inevitable conditions of the case they could have been avoided. A man standing before a Nebuchadnezzar image, or any other analogous object, would have no difficulty in pointing to the clay portions and insisting on their incongruity with reference to the other component elements of the statue; but his laments or warnings would not alter the fact that the clayey portions were equally structural with those of the silver and gold. One would, of course, not care to push the analogy too far. It will be an evil day for humanity when reformers do not forget a judicial or impartial attitude in sight of manifest abuses, when, *e.g.*, a Martin Luther will hesitate to attack the sale of Indulgences for the reason that they form an integral part of Romish sacerdotalism, or when a Mr. Newman will be so much impressed with the heterogeneous blending of evil and good in our Indian administration that he will hesitate to attempt a severance at all costs and hazards. On the whole, then, I think all just-minded men will welcome Mr. Newman's resolute and ruthless attacks on the various abuses in our political, ecclesiastical, and social systems which fall under his notice. That the labours of pioneers like himself have not been in vain is demonstrated by the fact that not a few of his animadversions of twenty or thirty years ago have now ceased to be applicable, and therefore have to be occasionally qualified by footnotes admitting an ameliorated condition of things.

There is, however, one particular department of Mr. Newman's reforming energy which seems to me to deserve a more cordial recognition than it has hitherto received. I allude to his labours in the cause of India. Since the year 1829—as he has recently reminded us—he has been an assiduous student of Indian affairs, and has repeatedly attempted to waken the conscience of his fellow-countrymen by powerful pleas in the interests of justice and humanitarianism. Indeed, Mr. Newman might claim to be one of the few Englishmen who have given Indian subjects and interests the attention they deserve but so rarely receive, and for that reason his essays on India seem to me to have a peculiar value.

In my opinion, therefore, Mr. Newman would have done well if, in the arrangement of his three volumes of *Miscellanies*, he had collected in a separate form his various papers on Indian subjects. There are three in this volume, each of them possessing an interest which is not yet exhausted or nullified by any substantial change in the subject-matter thus treated of. To enumerate Mr. Newman's charges against the government of India would take up too much of my space, and would be introducing the alien elements of politics into the pages of a literary journal. Yet, in the mere interests of justice, we are tempted to give one instance in which the welfare of our Indian subjects was pitilessly sacrificed to the supposed requirements of our military administration. The subject is treated at length on p. 365 of this volume; but I here give the epitomised form in which it appears in Mr. Newman's recent letter on the "Government of India":

"Sir Arthur Cotton urged to make canals first

and railroads later, in order that the railroads might have goods to carry. So far as he was allowed, it gave plenty and stopped famine. But military ambition led English ministers to give railroads the priority."*

But my space is exhausted. I can honestly commend this volume to all—I fear they are in a considerable minority—who are disposed to reflect freely and independently on the various political and social questions of our recent and present history. Mr. Newman has been so long before the English reading public, and has attained such a deserved eminence, that to enumerate his well-known characteristics would almost seem an impertinence. Let me, therefore, conclude by saying that in this as in all his works we have that large scope of interest, that profound and original thought, the cosmopolitan erudition, the generous sympathies, the high moral standpoint, the noble aspirations, which have become and will continue to be indissolubly associated with his self-denying life-work.

JOHN OWEN.

NEW NOVELS.

Armored of Lyonesse. By Walter Besant. In 3 vols. (Chatto & Windus.)

Port Tarascon. By Alphonse Daudet. Translated by Henry James. (Sampson Low.)

The Schooner Merry Chanter. By Frank R. Stockton. (Sampson Low.)

The Deliverance of Robert Carter. By Hugh Westbury. In 2 vols. (Bentley.)

A Double Knot. By G. Manville Fenn. In 3 vols. (Methuen.)

A Selection of the Tales of Gottfried Keller. Translated by Kate Freiligrath Kroecker. (Fisher Unwin.)

Lore's Legacy. By R. Ashe King ("Basil"). In 3 vols. (Ward & Downey.)

Doctor Cameron. By Lucy P. Smith. (Eden, Remington & Co.)

MR. BESANT has repeated and increased the success of *The Bell of St. Paul's* with *Armored of Lyonesse*. *Armored* herself is as attractive as *Althea*, with more character; the setting of Scilly scenery, in the foreground first, at the background afterwards, is far more agreeable than that of *Bankside*; and there is nothing in the book which is exposed to the charge of Dickensian *pastiche*, as something was in its forerunner. Furthermore, there is a very agreeable bad heroine, Zoe Elstree, otherwise Mrs. Alec Feilding. It is most tolerable and very well to be endured that Mr. Besant, stout champion as he is of the right supremacy of man and decrifier of modern theories as to gynæceocracy, should make his heroines so much nicer and so much more respectable than his heroes—for that is just the humour of it. Woman,

* We are compelled to state that this is precisely one of those statements of Mr. Newman that possess only historical importance. The experience of the past twenty years has by no means confirmed the sanguine anticipations of the advocates of canals in India; while the extension of railways has proved an unmixed benefit, alike from the political, military, commercial, and financial points of view.—Ed. ACADEMY.

as woman, is very much the inferior sex; but she is very often the superior individual. But this is philosophising or philosophastering. Of Roland Lee, who is, if not the hero, the heroine's beloved, Mr. Carlyle's appalling address to the young man of letters, "Eh, mon, but ye're a *poir* creature!" is all that can be said. It is probable that *Armored* trimmed him up and kept him straight a little, but she might have been better employed. She was the heiress of a long line of wreckers, and succeeded to endless bags of coin and punch-bowls and candlesticks and old lace (which she very sensibly wore) and a case of rubies by which hangs much part of the tale. And then she went to town and improved herself, and rescued Roland Lee (he was a poor creature) from the armies of the aliens and clove a studio door with a battle-axe when the wicked hero Alec Feilding endeavoured to insult her. Now this Alec Feilding was an *exploiteur* of the first rank, and published other people's poems, and exhibited other people's pictures, and very nearly got other people's plays represented, as his own. There is some stretch of probability, not to say of possibility here; but the romance comports with such stretches. The wicked but most agreeable Zoe, with whom Feilding is comforted, is a great deal too good for him—as much too good as *Armored* is for Roland, that poor creature—and is the most strictly amusing figure in the book. But the charm of it, if not the amusement, lies in *Armored* herself, who is very attractive indeed. She is a milder Brynhild who should have met a Sigurd. But, after all, the original meeting of Brynhild and Sigurd was not particularly well-starred; and Mr. Besant, like other potters, should have the prerogative of determining the fortune of his pots.

When M. Daudet took it into his head to add *Tartarin sur les Alpes* to the great original, his readers of the critical kind felt very much as Mr. Dobson did when Rose kissed him to-day, "the pleasure gave way To a savour of sorrow." It was nearly sure that M. Daudet having continued would finish; that he would, like Cervantes, and Addison, and Dumas, and other cruel creators, kill off *Tartarin*. He has done it now, as the critical ones knew he would; and *Tartarin* (not wholly unworthy of their company) has gone to join Don Quixote, and Sir Roger, and Porthos. It is a painful thing, and the means which M. Daudet has taken to do it make it more painful still; though it must be admitted that they are consistent with the sterner features of the moral government of the universe. Had many lions disputed among themselves for the bones of *Tartarin*, had those bones lain bleaching on the Alpine mountains cold after the conquest of a hitherto unvanquished peak, it would have been glorious, but it would have been a little improbable, and might even have been *mal exempli*. That the hero of the Baobab should be caught by a Belgian adventurer, that he should be selected as chief of a Provençal colony in the South Seas (if it were not accepted that M. Daudet has never read Dickens, we might have a passing thought of *Martin Chuzzlewit*), that the

colony should be a vast swindle, that Tartarin, after sustaining his part at least to his own satisfaction on the deck of a man-of-war of perfidious Albion, should drop into the vulgar clutches of the French law, and be rescued from them, only to fall from his high estate among the Tarasconians, and fly for a brief refuge to despised Beaucaire, and thence to the majority—these things, though as sad as very amusingly told things can be, are strictly probable. Still they are very sad indeed. As for the translation, Mr. Henry James's name is warrant that M. Daudet has been betrayed as little as possible.

Even a nasty-minded person (supposing it possible that any critic could be nasty-minded) could find nothing to say against *The Schooner Merry Chanter* but that it is in motive a very little like another book, by we forget what author, called *Rudder Grange*. That we are not nasty-minded shall be proved, first by the fact of this forgetfulness; and secondly, by our not so much as mentioning again the word "rudder" (though a schooner must have had one) or "grange." *The Merry Chanter* is an exceedingly pleasing book; and if the expressions of the great American joke were always like it, it is not from us that any questionings of the jocularity thereof would come. For the fun here is real fun of situation; and if the thing were less preposterous it would be less funny—an exact and severe test. The young married couple who invest their savings in a crazy barnacle-clogged schooner; the four captains who agree to navigate it, partly out of benevolence, partly to give themselves full scope for their favourite diversion of fishing; the waiting on a sandbank for a storm which never comes; the stowaway schoolmaster, who is, however, the nearest to failure; the butcher, a most excellent person, who must be the American representative of the elder branch of the family which produced his craftsfellow in *The Hunting of the Snark*; Lord Crabstairs, who is Mr. Stockton's complimentary idea of a British lord; the ghost-baker; and the Tripp family of very New England sisters—all make a delightful group. It is the best thing Mr. Stockton has done for a long time, and good enough to wipe out the memory of a dozen *Ardis Claverdens*.

Mr. Hugh Westbury made something of a hit with *Acte*, and not undeservedly. We fear he will hardly make one with *The Deliverance of Robert Carter*; and we are sure that, if he does, he will not deserve it. There are good things in the book—some even which might be called very good—but they are sandwiched in the crudest way with other things which are not good at all. Robert Carter was the son of a Dissenting deacon and draper. He was first "delivered" by an aunt who brought him up in the lap of luxury on champagne, Horace, and *Mademoiselle de Maupin* ("that Horace done into nineteenth-century French," as Mr. Westbury says in, perhaps, the very oddest piece of literary criticism that we, readers of Horace for thirty years and devotees of Madeleine for twenty, ever read). She died and left him well off, and the

young wife of an aged minister fell in love with him. What happened then we tell not, for summary is not criticism. But afterwards he had an ineffective flirtation with one Dora, and was nearly converted, but not quite, to the Roman Church, and settled down into a set grey life till he was delivered for the last time by *pallida mors* or *la camarde*, according as we adopt the language of one or other of his horn-books. Of such a story there is little more to be said than that all depends on the telling of it, and what we have said above amounts to adding that Mr. Westbury has not told it well. He digresses and preaches, in a would-be Thackerayan manner, far too much. He gives us not even a coherently projected character of his hero, to serve as connecting link to his very disjointly and phantasmagorically arranged procession of scenes; his jesting is sometimes heavy, and his tone not seldom what some readers will certainly, though, perhaps, unjustly, think a little vulgar. Aunt Golding, a sort of younger Miss Crawley, is a good opportunity lost, whether from actual want of power or from timidity we do not quite know. Claire, the minister's wife, is shadowy; and Dora a mere lay figure. The occasional soul-pictures, as some say, of Robert Carter at different times are better, but hardly save the book.

We have seen some good work in different kinds of fiction from Mr. Manville Fenn, but we are afraid that we cannot include *A Double Knot* among it. That it may amuse some people we think not improbable; but for ourselves we find it a most unlucky welter of improbable incident, undigested character, dialogue such as never came out of any human mouth except in a book or on the stage, representations of society which show no familiarity with the things represented, and comedy which to us, at any rate, is simply dreary. We are sorry to be so outspoken, but the worst possible compliment to a workman who can do good work is to praise his work when it is bad.

Gottfried Keller, who died but the other day, may be almost said to have been famous; he was certainly known by all who knew anything about modern German literature as the author of village tales as original as Auerbach's and of a somewhat older and more strictly German fashion. They are very characteristic and very interesting, with that odd mixture of fantastic humour, romantic sentiment, and simple human pathos, which made its appearance in the great German tale-tellers of the end of the last century and has not varied much since. There is nothing in Keller—at least in these tales—of the New Spirit, and we grumble not thereat. Unluckily he is very badly translated, the lingo in which his tales appear being neither German nor English. Relative and antecedent are in the wildest welter; the hideous "did not have" which penny-aliners are spreading among us appears constantly; *derselbe*, the most fatal enemy of translators from the German, triumphs over this translator at every page; and there are numerous other shortcomings.

There are some books which will pass muster better for reading than for criticising; and

Love's Legacy is one of them. In such cases, when the books are novels, criticism becomes rather superfluous. They achieve their object; and nothing can do much more. We shall only indulge the malice of the censor by asking "Basil" how on earth he scans the line "Nos numerus sumus nati consumere fruges?" It is remarkably like another line which does scan; but we, like Landor on a famous occasion, consecrated a night of memories and of sighs to the vain effort to scan it in its present form.

The scene of *Doctor Cameron* is American, and from the use of the perfectly idiotic term "blonde" for a man we presume the authorship is American also. It may be Miss Lacy Pancoast Smith's first venture; and, if so, we devoutly hope she will never make another like it, for it is not even amusingly bad.

GEORGE SAINTSBURY.

SOME HISTORICAL BOOKS.

CALENDAR OF STATE PAPERS.—*Domestic Papers of the Reign of Charles I., 1644-1645.* Edited by W. D. Hamilton. (Printed for H.M.'s Stationery Office.) Students of the history of the Civil War may be roughly divided into two classes; those who care for the politics more than for the war, and those who care for the war more than for the politics. Mr. Hamilton caters for both classes. Several intercepted Royalist letters, which have found their way into the collection now in the Record Office, reveal the schemes and hopes in which Charles and his Court found comfort. On the other hand, Mr. Hamilton gives us the dry business-like despatches of the Parliamentary military commanders, thereby helping us to understand what the method was which led them from the surrender at Lostwithiel to the triumph of Naseby.

THE STORY OF THE NATIONS.—*Switzerland.* By Lina Hug and R. Stead. (Fisher Unwin.) The history of Switzerland, though of course not wanting in striking incidents, is not very easy to relate effectively in small compass, owing to the lack of visible unity in large portions of it, and the obscurity of the causes which led to many of its most important events. The authors of this volume have, however, at any rate succeeded in producing a very attractive story. It may possibly be thought that too much space has been given to the early history of the country before a Swiss nation existed, and that the affairs of Zürich, to which canton M^{rs}. Hug herself belongs, receive a somewhat disproportionate amount of attention. But these faults, if such they are, do not in any way lessen the interest of the book. The political constitution of Switzerland is clearly described in its main features, although, in view of the extreme ignorance of the subject which prevails in England, a little more detail would have been desirable. The legendary portions of the history are on the whole rightly dealt with—neither ignored on the one hand nor, on the other hand, treated as literal fact. The literary and scientific history of the country has not been overlooked. There are a few points which in a book for English readers ought to have been noticed at length, though native readers, no doubt, will not require any information respecting them. For example, it would be impossible to obtain from this book any clear idea of the differences between French and German Switzerland; indeed, there is nothing to show in what parts of the country the two languages are respectively prevalent. It is to be presumed that Mr. Stead's share in the

work is chiefly that of a translator. He is entitled to the high praise involved in saying that the book reads like an original; but he is too fond of using French words and phrases, and we observe some curious eccentricities in the rendering of foreign proper names. "Loewen on the Dyle," for instance, is known to English people as Louvain; and few readers who do not know German will guess what is meant when it is said that Charles the Bold intended to make himself "a Welsh-German sovereign."

Dreamland in History. The Story of the Norman Dukes. By H. D. M. Spence, D.D. (Isbister.) The "learned leisure" which, even in these bustling days, attaches to the office of Dean has been well spent by Dr. Spence in studying the history of that remarkable race which had so large a hand in the making of England. Warm as is the Dean's admiration for what the Normans did in this country, he scarcely does them full justice when he says: "almost the only visible trace which this great people have left are a few grand and stately minsters, such as Durham and Norwich, Ely and Gloucester, and a number of curious and interesting churches." For the Normans were essentially a castle-building race; and though time and circumstances have dealt more hardly with the fortress than with the cathedral, there are plenty of noble structures which still exhibit in their massive masonry the characteristics of Norman architecture—sternness and solidity. Dean Spence divides his very attractive volume into two divisions; the first is occupied with the story of Rollo and his mighty line, the second with the annals of the Norman abbey of Gloucester. Both are enriched with numerous engravings by Mr. Herbert Railton of architectural gems drawn from Bayeux, Rouen, Fécamp, and elsewhere, as well as from Gloucester; and the result is so satisfactory that it would be hard to find any gift-book of the season which surpasses it in beauty and interest. Of course, the Dean writes popularly, and, therefore, minute accuracy in detail is occasionally wanting; but he succeeds in putting before his readers a good picture of Norman times, and from his *Dreamland* many will carry away more substantial knowledge than they have previously had. The inspiring influence of the Deanery—portions of which belong to the eleventh or twelfth century—has been deeply felt by its present occupant, and this is as it should be.

Paper and Parchment: Historical Sketches. By A. C. Ewald. (Ward & Downey.) The tasteful and appropriate binding of this volume predisposes us in favour of its contents. They, indeed, are distinctly miscellaneous in character, and relate to no single period in history. The Domesday Book and its companion, the Valor Ecclesiasticus, form the subject of two papers, while "Early Parliamentary Procedure" and "Our Archives" are treated popularly in two other essays. These, with the stories of Fulk Fitz Warine and the Maid of Norway, are useful as well as interesting studies; but the diaries of Henry Machyn and Narcissus Luttrell are already so well known that the extracts from them scarcely deserve republication. Sir Powell Buxton's life is told—not for the first time—at some length, and we have a paper on "Nihilism," which belongs rather to the political history of modern Russia than to the special domain in literature where Mr. Ewald has already won distinction. Among our national records he is at home; and his past researches have proved, as his present will prove, helpful to the historian and interesting to the general reader. In fact, the latter has, we expect, often been converted into the student by the insight into the treasures of the past given by Mr. Ewald. No one knows

better how inexhaustible they are, or is more skilful in drawing from them things "new and old."

Trial by Combat. By George Neilson. (Glasgow: William Hodge.) This is a most useful book of reference; history it can hardly be called, the condensation is too great. It is somewhat surprising how very small in amount is the English literature on the subject. The interest that it ought to inspire is by no means merely antiquarian in the narrow sense of the word. It touches on many points on theology, and is connected at almost every point with folk-lore. The modern duel—extinct in England, but still in a flourishing condition in most parts of continental Europe—is its last survival. No longer an appeal to the judgment of God, as the mediæval combats were, it is now a mere compound of savagery and vanity, which we may hope the common sense of mankind will soon stamp out. If Mr. Neilson's volume were of no other value, it would be most useful from the classified list of duels to be found in the index.

Guillotine the Great. By Graham Everitt. (Ward & Downey.) This is not a volume of the "shilling shocker" type, as its name might seem to apply, but a series of essays on the French Revolution written in a reflective strain. Mr. Everitt is a Conservative of the thoughtful sort, and has illustrated his views by taking his incidents from the three periods of the Terror, the Directory, and the Consulate. He prefaces these with an account of the birth of "Queen Guillotine." In April, 1789, Dr. Guillotine took his seat as one of the deputies for Paris, but in the National Assembly he bore the character of an amiable bore. His hobby was a humane apparatus for decapitating criminals. He was not the inventor of the machine that bears his name, but the guillotine was called after him in derision by a Royalist satirist. The burr stuck, and to the satire the "realised idea" owes its name (p. 51). Dr. Guillotine himself died in his bed, but his lampooner was killed in the massacres of August 10, 1792. Mr. Everitt is very severe on Florelle de St. Just. He regards him as Robespierre's master, thus inverting the received relationship. But if this were so, it is singular that Robespierre did not sacrifice him to the demon of envy, as he did Danton. Our author quotes M. Edouard Fleury: "The Robespierre of the Constituent Assembly was an ambitious and powerless nobody." His ambition was plain enough, but where was the lack of power? It is charitable to remember that St. Just was a very young man and a prig; and he might have remained both the one and the other had he lived to a ripe old age. "No one," writes Thiers of St. Just, "ever enjoyed so perfect a reputation for purity and virtue. Mr. Everitt has no difficulty in showing that this reputation was ill-deserved; but he seems to us to lay too little stress on the good feature in St. Just's character, his complete indifference to money. In these days when Socialists, so-called, are found promoting companies and speculating on the Stock Exchange, we may be allowed to admire the young Frenchman who, when he could have "plunged his arms elbow-deep into the wealth which his exactions enabled him to gather into the Republican exchequer," died, as he had lived, "in a state bordering upon absolute poverty." Mr. Everitt then deals with Linguet, who, in his day, was the Dr. Kenealy of France. He is now completely forgotten; but in his lifetime he enjoyed a European reputation, and the mere catalogue of his works occupies two and a half columns of the *Nouvelle Biographie Générale*. This prolific writer carried on a journalistic warfare with most of the leading men of his day. He was the opponent of the French

Academy and of the French Bar: it is needless to add that in his conflict with both these powerful bodies he was discomfited. He was imprisoned in the Bastille under the old régime, and died by the guillotine under the Terror. Mr. Everitt dubs him "an enemy of the people." But the unfortunate Linguet seems to have been no one's enemy but his own. The two last studies in Mr. Everitt's book are entitled "The Second in Command of the Army of the Interior" and "A Tragedy of Blunders." The first describes the rise of Napoleon to the Consulate, and the second the murder of the Duc d'Enghien. It is difficult to see the connexion of the latter crime with "Guillotine the Great"; but, be this as it may, the author may be said to be interesting, if discursive, to the last.

Monograph of the Gainsborough Parish Registers. By the Rev. J. Gurnhill. (Elliot Stock.) This is a piece of good work, though arranged on a cumbrous system and rather diffuse. The curiosities of Parochial Registers are best displayed in chronological order, when notes can be affixed wherever deemed needful. Besides a chronological review, Mr. Gurnhill indulges in chapters on trades and occupations named in the registers, on surnames, on christian names, place-names and the like. The account of Thonock, too, in the Appendix is out of place. The Vicarage of Gainsborough was originally founded by the Knights Templars, and at the dissolution of that order passed to the Hospitallers, and in 1547 to the Bishops of Lincoln. Only two worthies seem to have been born in the parish—Bishop Simon Patrick in 1626, and the late Prof. Mozley (whom Mr. Gurnhill does not name), in 1813. The registers of Gainsborough begin in 1564. The editor of these pages seems to think the entry (in 1626), "an old girl," an offence against good taste; but an entry (in 1638), probably by the same hand, of one Thos. Brown as "a young youth" explains it. The phrase had acquired none of the light usage which it possesses at present, and simply meant a woman of twenty-five, say, as opposed to a lad of thirteen or the like. The christian name Abra, found in these registers in the form of its variant Ajlra, belongs to a once celebrated lady, Mrs. Behn, who was buried in Westminster Abbey; while Genniver is only an East Anglian form of the Cornish Jennifer, the name of King Arthur's faithless spouse. Mr. Gurnhill's book is of considerable value to Lincolnshire archaeologists, and it is as well to remind them that only 260 copies have been printed.

THE pages of Mr. G. C. Boase's *Collectanea Cornubiensia* (Truro: Netherton & Worth) supply ample evidence of laborious industry, coupled with intense enthusiasm for the subject. In ages to come the antiquaries of the West of England will be grateful to him for the immense mass of genealogical information which he has collected and arranged for their benefit. No volume showing such minute research on the history of Cornishmen had previously appeared, and it is probable that many years will elapse before it finds a successor. All the matter which it contains cannot be said to be of equal value; but there is not a Cornishman, however wide his knowledge of his native country may be, who will not find within its covers an abundance of facts alike novel and interesting. To the biographical portion of his labours Mr. Boase has added a diary of his grandfather's actions while Mayor of Penzance at the beginning of this century. The record of this mayor's proceedings illustrates the difficulties attending the law of settlement and the apprenticeship of pauper children; while in more than one passage it reveals the internecine quarrels which divided the unreformed corporations. Through the expense of the journey, the

sons of the middle-class Cornishmen were unable in the opening decades of this century to attend the larger schools of the Midland counties, and many of them were sent across the Channel to perfect their education in Brittany. St. Pol de Léon was selected as their abode, both for its proximity to the port of Roscoff and for the cheapness of living there; and Mr. Boase prints a very entertaining diary of a visit which a party of parents and children paid to that decayed seat of ecclesiastical learning. The names of the masters of the numerous grammar schools which once existed in Cornwall have received Mr. Boase's special attention. Some of these establishments—the grammar school of Helston for instance—have flourished under names of distinction in the church, and have nurtured many illustrious pupils. To crown the work an exhaustive index of its contents has been added.

NOTES AND NEWS.

MESSRS. KEGAN PAUL, TRENCH, TRÜBNER & Co. will publish immediately *Some Contributions to the Earlier Life of Cardinal Newman*, by his brother, Mr. F. W. Newman.

MR. THOMAS HARDY is writing a story entitled "To Please his Wife," for the forthcoming periodical *Black and White*.

MESSRS. HUTCHINSON & Co. have in the press *The Childhood and Youth of Charles Dickens*, by Mr. Robert Langton. The work will consist largely of original information, including a fragment of hitherto unpublished MS., partly in facsimile, illustrated with more than eighty-five engravings on wood from drawings by Mr. W. Hull, Mr. Edward Hull, and the author. A limited edition will be printed on hand-made paper.

A WORK on which the Rev. Dr. Samuel Kinn has been long engaged will be published shortly by Messrs. Cassell & Co. It will be entitled *Graven on the Rock*; or the historical accuracy of the Bible, confirmed by reference to the Assyrian and Egyptian monuments in the British Museum and elsewhere. The book will be illustrated by 171 engravings, chiefly from photographs of these monuments.

WE are informed that "Carmen Sylva," the Queen of Roumania, has received the Albert and Victoria decoration from Queen Victoria.

PROF. J. P. N. LAND, of Leyden, who (with J. van Vloten) edited in 1882-83 for the Spinoza Memorial Committee the splendid two volumes of *Opera*, is now, after long preparation, seeing through the press a collected edition (in three volumes) of the philosophical works of Arnold Geulinx, Spinoza's Flemish contemporary. A balance left over from the Spinoza Memorial Fund has been happily devoted by the committee to this purpose. In the last number of the *Archiv für Geschichte der Philosophie*, Prof. Land had an article on Geulinx and the forthcoming edition of his works. It contains so much information about the great Occasionalist thinker, who is very little known in this country, that it will be translated for the April number of *Mind*.

THE *Bibliographie Basque* of Prof. Julien Vinson (Paris: Maisonneuve) may be expected in the course of February. It will contain twelve facsimiles of the rarest and most interesting titles, and mention of all Basque books and books on the Basque language. Newspaper articles and quotations from Basque books will follow in a later supplement.

MR. EDWARD ARNOLD announces for issue this month the first number of a new quarterly periodical, to be entitled *Arnold's Literary List*, which will form a classified guide to the books published in the United States and in

France. Reviews will be given of some of the books described, either specially written or extracted from American and French literary journals. Information as to forthcoming publications and other matters of literary interest will also be included.

MR. ELLIOT STOCK announces for early publication *The English Re-discovery of America*, by J. B. and Marie A. Shipley.

MESSRS SWAN SONNENSCHN & Co. have in the press a criticism of General Booth's social scheme, by Canon Dwyer.

THE second edition of Mr. Wemyss Reid's *Life of Lord Houghton* is now entirely exhausted. A third edition will be ready about January 15.

A GERMAN translation has just appeared of the anonymous medical novel, *St. Bernard's*, published some time ago by Messrs. Sonnenschein.

THE corporation of London have decided to place a brass commemorative tablet on the walls of the new council chamber at Guildhall, as nearly as may be on the site of a former chamber, in which, on January 5, 1641, King Charles I. went to demand the surrender of the five members of Parliament—Hollis, Haselrig, Pym, Hampden, and Strode.

THE first meeting for the new year of the Richmond Athenaeum—of which Sir M. Grant-Euff is president—will be held on Monday next, January 12, when Mr. C. V. Godby will read a paper on "The Stuart Period." Among the other arrangements are two lectures to be given in connexion with the Lower Thames Valley branch of the Selborne Society: "Early Man in the Thames Valley, and the Animals he saw and hunted," by Dr. H. Woodward; and "Gilbert White, of Selborne," by the Rev. Percy Myles.

AT the meeting of the Ethical Society, at Essex Hall, Strand, on Sunday next, January 11, at 7.30, Mr. Bernard Bosanquet, formerly fellow of University College, Oxford, will read a paper entitled "In Darkest England on the Wrong Track."

THE next meeting of the Library Association will be held in the Clerkenwell Public Library on Monday next, January 12, at 8 p.m., when papers will be read on "How the Acts were Carried in Clerkenwell," by Mr. William Robson, vice-chairman of the library, and on "The Working of the Library," by the librarian, Mr. J. D. Brown.

COUNT HENRY RUSSELL has just published at Pau a second and much improved edition of his *Pau, Biarritz, Pyrenees*. This is an excellent and thoroughly trustworthy guide for the winter visitor to these localities, and to all the excursions which can be made at that season. The author knows the Pyrenees better than anyone living, and writes enthusiastically on his subject.

MESSRS. MACMILLAN have now added Shelley to that uniform series of single-volume editions of modern poets, which already includes Tennyson, Wordsworth, and Matthew Arnold. The editor is Prof. Edward Dowden, who has prefixed an introduction, giving a short sketch of the poet's life, and a statement of the sources of his text. The collected poems by the widow form, of course, the groundwork, supplemented—equally, of course—by the labours of Mr. W. M. Rossetti, Mr. H. Buxton-Forman, and Dr. R. Garnett. Some use has also been made of Mr. Woodberry's notes to the MS. volume of poems now in the library of Harvard College, U.S.; but out of consideration for the wishes of Mr. Esdaile, the son of Ianthe, none of the early pieces, contained in another MS. book in his possession, are here reprinted, though Prof.

Dowden has given an account of them in his biography. No reference, either, is given to the letters of Harriet, published in the *New York Nation* of June 6 and 13, 1890. At the end are some textual notes, a list of Shelley's principal writings, the order of the poems published in his lifetime, and indexes to titles and first lines. For frontispiece, we have a new engraving, by Mr. Louis Godfrey, of the well-known portrait by Miss Curran, the daughter of the Irish wit. By far the best engraving of this we should judge to be that in vol. i. of Buxton Forman's four-volume edition, which is repeated in vol. ii. of Dowden's *Life*. The present one differs so materially, in details as well as in expression of features, that an accurate reproduction by facsimile seems to be called for. The original painting is now to be seen at the so-called Guelph Exhibition, which would not be complete without a portrait of the author of "Swiffoot the Tyrant."

UNIVERSITY JOTTINGS.

SIR GEORGE G. STOKES is at present delivering a course of four Gifford Lectures on "Natural Theology at the University of Edinburgh."

PROF. STUART POOLE proposes to continue his courses of "Elementary Archaeology" at University College, Gower-street, with the aid of Mr. St. Chad Boscawen for Babylonia, Prof. Roger Smith for Greek Architecture, Mr. Cecil Harcourt Smith for Greek Vases, taking himself Greek Sculpture and Engraving. There will be in all eleven lectures, and fourteen or more visits to the British Museum. The professor will give the free introductory lecture on January 14, at 5 p.m.

THE following elections to fellowships at Owens College, Manchester, have recently been made by the council for the year 1891: Bishop Berkeley fellowships—J. W. Cunliffe, in English literature; Walter Garstang, in zoology; W. R. Ormandy, in chemistry; and renewed for a second year to P. J. Hartog, in chemical physics; Dr. H. W. Pomfret, in pharmacology. Honorary research fellowships—E. J. Bles, in zoology; Gibson Dyson, in chemistry; J. L. Hoskyns-Abraham, in chemistry; C. H. Lees, in physics. Jones fellowship in history—Alice M. Cooke.

MR. HORACE HART, the controller of the University Press, Oxford, is prepared to take photographic negatives from MSS., printed books, &c., belonging to the Bodleian Library or deposited there, and to supply prints, at the following rates: for a 10"×8" negative, 3s.; for a silver-print (unmounted) from a 10"×8" negative, 4d.; for a platinotype print from a 10"×8" negative, 10d.; for a carbon print from a 10"×8" negative, 10d.; for 20 collotype prints with clean margins from one 10"×8" negative, 5s. 6d.; for 50 collotype prints, 9s.; for 100 collotype prints, 12s.

DR. F. A. TARLETON has been elected professor of natural philosophy at Trinity College, Dublin, in succession to Prof. Williamson, who has been appointed to a senior tutorship.

CALCUTTA UNIVERSITY has for the first time exercised its new privilege of submitting two names for appointment as fellows. The elections excited much interest among the graduates. Several candidates were put forward, of whom two were chosen by ballot.

ACCORDING to an official report recently published, the number of students at the twenty universities of Germany during the present winter amounts to 28,711. Berlin comes first, with 5527; Rostock last, with 371. Leipzig with 3458, and Munich with 3382, each maintain a good position. As compared with the previous year, the total shows a decrease of more than 600, distributed throughout all the faculties, though most conspicuous in phil-

osophy and natural science. This decrease is the more notable, as every former year since 1872 had yielded an increase, sometimes of as much as 1000 students.

ORIGINAL VERSE.

OCEANUS HYEMALIS.

THE waves that now, with sullen roar,
Break upon this lonely shore,
Fill my heart with sadness,
Thinking of the gladness
That seems gone for evermore :
Thinking of the laughter gay
Of the children, blithe as May,
Whose rosy feet were glancing,
O'er the wet sands dancing,
To meet the gentle ripler's play.
Sad and silent are the sands ;
Where the merry groups joined hands,
Nought is heard, except the moaning
As of fettered spirits groaning,
Bound by Winter's icy bands.
Yet though, beneath this sky of lead,
Joy seems crushed and well-nigh dead,
And the spirit weary,
Desolate and dreary,
Feels as if all hope were fled ;
Over this tempestuous main
Summer suns will shine again,
Children's happy voices singing,
O'er the laughing ocean ringing,
Bring peace to weary heart and brain.

ALFRED W. BENNETT.

OBITUARY.

A. W. KINGLAKE.

THE death of Mr. Kinglake, the author of *Eothen* and the historian of the Crimean War, removes another member of that brilliant band who form the glory of the Victorian age of English literature. After a lingering and painful illness, he died at his house in Hyde Park-place, on Friday, January 2, in his eightieth year.

Alexander William Kinglake was born in 1811, at Wilton House, near Taunton, being the eldest son of a country gentleman. Among his brothers were Serjeant Kinglake, well known on the Western Circuit; and another, still surviving, who has devoted himself to adorning the Shire Hall at Taunton with busts of Somersetshire worthies. He was educated at Eton and Trinity College, Cambridge, where he took his degree in 1832. He was called to the bar at Lincoln's Inn in 1837, and for some time practised in the Chancery courts. In 1857 he was returned to parliament for Bridgwater in the Whig interest; but lost his seat in 1869, as the result of an election petition, which led to the disfranchisement of the borough.

Kinglake became famous by the publication of *Eothen*, in 1844; but the tour in the East which that book commemorates took place some ten years earlier, and it is said that the MS. was rejected by a series of publishers. Without anything extraordinary in the way of adventure or experience, *Eothen* owes its reputation (which has lasted for nearly half a century) partly to the author's alertness of observation, and still more to the pungency of his style. He belonged to that fortunate generation who grew up under the generous influence of the romantic movement, in days before the modern Zeit-geist of natural science, of introspection, and of newspapers. Like Disraeli, Bulwer-Lytton, and many another of that time, Kinglake dared to trust to himself and his own ideals. He has left a masterpiece in perhaps the most difficult department of literature, with which no other book can fitly be compared.

Except for the brilliancy of both, it is hard to believe that *Eothen* and *The History of the*

War in the Crimea were written by the same pen. The former is as easy to read as a novel of Scott or a poem of Byron, and seems to have gushed forth fresh from the fount of a youthful imagination. The latter, as all know, was the outcome of exhausting research, protracted over half a lifetime, and dominated by more than one deep-rooted prepossession—to give them no harsher term. In fact, when Kinglake received his commission from Lady Raglan, he appears to have formed the resolution to compose an epic, with the *Iliad* for his model. The general conception of the subject, the characters of the leading personages, even the exploits of individual warriors, are all treated on a heroic scale. The style, too, follows the mode of treatment, and rises to flights of impassioned description which pass the legitimate bounds of prose. Quite apart from the criticisms that have been made upon the prejudiced conception of the part assigned to Napoleon, and upon the handling of military questions, we feel (as we do not, after all, feel with Macaulay) that the author's vehement personality has so transmuted the facts that the truth of history is obscured. *Eothen* will always live, by force of its direct appeal to the perennial sources of wit and fancy. The ultimate fate of the *History of the War in the Crimea* is less certain. Possibly, like Tacitus, it may continue to be read as literature, without regard to its evidential value. More probably—when the contemporary interest has passed away—some of its purple patches will survive only in Collections of English Prose as “by the Author of *Eothen*.”

MAGAZINES AND REVIEWS.

A CONSIDERABLE, and necessarily considerable, space of the January number of *Le Livre Moderne* is occupied with new books, especially *Livres D'Extremes*, with indices for the past year, &c. But there are some extracts from unpublished autograph letters, which, as the editor says, will interest the lovers of *La Vérité Documentaire*; and there is a first article on the portraits and miniatures of Alexandre Dumas, which is fully worth the price of the number. The illustrations are numerous and exceedingly interesting, though—or because—they are quite marvellously unlike each other. It is almost impossible, for instance, to reconcile the Devéria of 1832, taken when Dumas was by no means a mere boy, and looking like the portrait of a very fragile and ethereal eurate, with the jovial Silenus of the later and more familiar figures, or even with the theatrical-looking and theatrically-costumed imagings of almost contemporary years. One thing might, we think, have been omitted—a hideous, and not in the least witty, “Cham” of 1839, which is certainly not a less libel on the skill of the artist than it is on the appearance of the subject. It is permitted to caricature, at need, to be as hideous and as savage as Maelise's famous gibbetings of Talleyrand and Rogers in the Fraser Gallery; but if this is caricature the comie valentine, now happily defunct, was caricature. It was seldom that M. de Noé stooped so low.

In the *Boletín* of the Real Academia de la Historia for December, Fernandez Duro reprints and completes the notices and remains of the works of Gonzalo de Ayora, lately published by Prof. E. Cat. of Algiers. Francisco Codera reports the discovery of an Arabic MS., containing the leaves missing in the Codex of the Escurial from which the *Assila*, which forms vol. i. of the “Biblioteca Arabico-Hispano,” was printed. These leaves will shortly appear as a supplement to vol. viii. of this series. V. Barrantes gives a detailed review of the works on the local history and celebrities of Cabeza del Buoy in

Extremadura, by N. Pérez Jiménez. Padre F. Fita begins a critical investigation of the sources for the life of Ignatius de Loyola. The result is that he was born towards the close of 1491; that he never was page to King Ferdinand, but was brought up at Arévals by Juan Velasquez and his wife, to whom he was related; and after their disgrace, at the age of twenty-six, he served under Antonio Manrique, Duke of Najera, and joined his early companion, Alonso de Montalvo, at Pampeluna.

CORRESPONDENCE.

RALF STRODE.

Christ's College, Cambridge: Jan. 2, 1891.

I shall feel much obliged for information concerning MSS. of Radulphus Strodeus (Ralf Strode), and for any MS. biographical notices of him. There must be MSS. of this writer's works (Latin or English) in some of the Italian libraries.

Dempster quotes as one of his authorities the “Collectanea” and “Historia Ecclesiae Scotice,” or some such works of Gilbertus Brounus (or Brunus). Do any of these works exist? The writer of the article on Gilbert Brown in the *Dictionary of National Biography* does not refer to Dempster's account. The “Historia” is said to have been continued by Richard Brown, Gilbert's “nepos.” Were these volumes merely part of Dempster's useful library of fiction? Some Scotch antiquary can perhaps help me.

I am at present pursuing a course of investigation which may eventually place Ralf Strode among the foremost of our early writers as the poet of the “Pearl,” &c.; but at present the evidence is altogether circumstantial, and any definite statement would be premature. In my search for the lost poet I have had the generous help of Dr. Horstmann, given in the true spirit of literary comradeship. The result of my investigation will appear in my forthcoming edition of the poem. I am anxious to find some missing links.

I. GOLLANZ.

BROWNING AND DANTE.

4, Cleveland Gardens, W.: December 22, 1890.

A short time ago I was asked by the Browning Society to write a Primer to Browning, to accompany and supplement the shilling volume of Selections from his works. In the preparation of this Primer I have come across much that is interesting to readers of Browning, but too much matter of detail to be included in the condensed account to which I shall have to restrict myself.

Two such points, which have arisen lately, may be of interest to your readers.

In "One Word More" this passage occurs:—

"Dante once prepared to paint an angel:
Whom to please? You whisper 'Beatrice.'
While he mused and traced it and retraced it
(Peradventure with a pen corroded
Still by drops of that hot ink he dipped for,
When, his left hand! the hair o' the wicked,
Back he held the brow and pricked its stigma,
Bit into the live man's flesh for parchment,
Loosed him, laughed to see the writing rankle,
Let the wretch go festering through Florence)—
Dante who loved well because he hated,
Hated wickedness that hinders loving,
Dante standing, studying his angel,
In there broke the folk of his Inferno.
Says he—'Certain people of importance
(Such he gave his daily dreadful line to)
Entered and would seize, forsooth, the poet.'
Says the poet—'Then I stopped my painting.'"

The allusions were not clear to me, and I have obtained (through Dr. Furnivall) an explanation from Mr. W. M. Rossetti, which is too useful to leave unpublished. Mr. Rossetti writes:

"I understand the allusions, but Browning is far from accurate in them.

1. Towards the end of the *Vita Nuova*, Dante says that, on the first anniversary of the death of Beatrice, he began drawing an angel, but was interrupted by certain people of distinction, who entered on a visit. Browning is therefore wrong in intimating that the angel was painted 'to please Beatrice.'

"2. Then Browning says that the pen with which Dante drew the angel was, perhaps, corroded by the hot ink in which it had previously been dipped for the purpose of denouncing a certain wretch—i.e., one of the persons named in his *Inferno*. This about the ink, as such, is Browning's own figure of speech, not got out of Dante.

"3. Then Browning speaks of Dante's having 'his left hand! the hair o' the wicked,' &c. This refers to *Inferno*, Canto 32, where Dante meets (among the traitors to their country) a certain Bocca degli Abati, a notorious Florentine traitor, dead some years back, and Dante clutches and tears at Bocca's hair to compel him to name himself, which Bocca would much rather not do.

"4. Next Browning speaks of this Bocca as being a 'live man.' Here Browning confounds two separate incidents. Bocca is not only damned, but also dead; but further on—Canto 33—Dante meets another man, a traitor against his familiar friend. This traitor is Frate Alberigo, one of the Manfredi family of Faenza. This Frate Alberigo was, though damned, not, in fact, dead; he was still alive, and Dante makes it out that traitors of this sort are liable to have their souls sent to hell before the death of their bodies. A certain Branca d'Oria, Genoese, is in like case—damned, but not dead.

"5. Browning proceeds to speak of 'the wretch going festering through Florence.' This is a relapse into his mistake—the confounding of the dead Florentine Bocca degli Abati with the living (though damned) Faentine and Genoese traitors, Frate Alberigo and Bocca d'Oria, who had nothing to do with Florence."

I have just heard from America that Mr. George Willis Cooke (who is compiling a Browning Lexicon) has traced the "Cardinal and the Dog" story (*Asolando*) to the *Grand Dictionnaire Historique*, where it is told in a slightly different form of a certain Cardinal

Marcel Crescentio. Mr. Cooke has also traced the "Monk and Monkoy" story of the "Ponte dell' Angelo" (*Asolando*) to the *Annales des Capucins* of Father Boverie, i.e., Zacharie Boverius, also noted in the *Grand Dictionnaire Historique*. Mr. Cooke is doing his work so thoroughly that it will be a real gain to all students of Browning.

ESTHER PH. DEFRIES.

WHY WAS THE HORSE DRIVEN BEFORE IT WAS HIDDEN?

Oxford: Jan. 3, 1891.

I think it was Darwin who said that "the effects of false inferences are but of little moment, for everyone feels a pleasure in setting them right, but that false facts are most dangerous, because there may be but few who can point out their untruth."

It is not my object to set right the inferences which Mr. William Ridgeway has drawn in the ACADEMY of January 3 as to the priority of driving horses. On the contrary, I quite agree with him. But the fact which he quotes, "that in the Rig Veda there is nothing to show that the art of riding was practised" is not a fact, as by this time every student of the Veda knows.

F. MAX MÜLLER.

London: Jan. 5, 1891.

It is difficult to agree with Prof. Ridgeway's theory expounded in the ACADEMY of January 3, that the reason why the horse was driven before being ridden by the ancients was owing to its small size, "even long after domestication."

With regard to this animal as used by the Egyptians, whom he cites in the beginning of his letter, its size as shown on the monuments is by no means diminutive.

It is true that the horse was not introduced into Egypt till the time of the Hyksos (c. 1700 B.C.), and the earliest mention of it on the bas-reliefs is not until the reign of Thothmes I. (c. 1633 B.C.), where it is called by its Semitic name, *Sus*, in the tomb of Aahmes Pen-nukheb, at El-Kab. But from this reign it became a favourite theme of contemporary art; and who does not know the bas-relief of Rameses the Great charging with his favourite pair named "Victory in Thebes," with their reins tied about his waist, as he dashes among the rebellious Khita?

Now the size of these horses as represented by the Egyptian artist is not abnormally small in proportion to the warriors. The king, of course, is drawn larger than the ordinary men about him; but the chariot and horses he is driving are relatively large, and were he to alight and stand between his chargers his head and neck only would be visible above the centre of their backs.

M.M. Perrot and Chipiez remark that as the horse was only introduced into Egypt when her art had become conventionalised, he is almost always poorly drawn. His body is weak and unsubstantial, though his head is well set on, and his neck and shoulders are good. Yet, although his anatomy can ill compare with that of the animals delineated in the Memphite tombs of the early period, we may surmise that the draughtsman of the XIXth Dynasty drew his horse, as regards size, fairly as he saw him; and that being the case, he was far from being the "diminutive animal about thirteen hands high" which Canon Taylor describes as the primitive type ranging over the plains of Asia and Europe.

M. L. HERBERT MCCLURE.

P.S.—Since writing the above I have had a conversation with Prof. Poole on this subject.

With regard to the Asiatic horse, there is no

doubt, he said, from the Assyrian bas-reliefs, that he was a large animal. The relatively small size of the Greek horses on the frieze of the Parthenon was owing apparently to the desire of the sculptor to give greater prominence to his heroes than to his animal forms.

The smallness of the horse in early times, moreover, is not a cogent argument against its being ridden, as in the tomb of Tih (Vith Dynasty) the ass, which is smaller still, is represented as being used for this purpose.

ODYSSEUS AND THE CYCLOPS.

St. Andrews: Dec. 30, 1890.

In answer to Mr. Watkiss Lloyd's note, I may say that I do not think Homer needs any assistance from me. But the argument of some critics, who do need assistance, is that Odysseus, in the adventure with the Cyclops, acts out of character; and, therefore, they attack the unity of the poems. If I understand Mr. Watkiss Lloyd rightly, he thinks that the behaviour of Odysseus was not inconsistent, that he showed his usual prudence. In that case, the critical objection disappears. In any case, the adventure with the Cyclops is, as I think Mr. Lloyd will admit, essential. The curse of Odysseus is the result of the blinding of Poseidon's son, and the wanderings are the result of the curse. If we remove the Cyclops, the poem falls to pieces. But it may be said—by Canon Taylor, for example—that the adventure may be necessary, while the temerity of the hero is needless, is an interpolation or an excrescence. If Mr. Lloyd will "verify his references," as he bids me do, he will see that the crew of Odysseus, for their part, thought him foolhardy when, after the escape, he taunted the Cyclops from the ship. I do not myself think this out of character in a man of spirit. But, out of character or not—and we are all foolish by times—if Odysseus had not taunted the Cyclops, and named himself, the Cyclops would not have known who his enemy was, and could not have appealed to Poseidon against him. So Poseidon, a deity of limited intelligence, would never have cursed Odysseus; he would have cursed "No-Man." For my own part, I believe that a more excellently worked-out plot than that of the *Odyssey*, in all its details, was never composed. Take anything out of it—as this adventure of the Cyclops, or even the taunt of Odysseus—and the poem lacks motive, and falls to pieces. It appears to me that this is obvious to any student of literature, or even to any reviewer of novels. This is part of Mr. Gladstone's argument, which, with all its defects, is strong as a literary argument.

By a misprint I was made to say that I was sorry that a certain passage in the *Iliad* about fishing was too familiar to need being quoted. I wrote that I was sorry Homer's men fished with bait, an angling pedantry. As to the main question, probably Mr. Lloyd and I are agreed. I do not think Odysseus inconsistent; but, even if he was, his conduct was necessary to the story. He was bound to let Polyphemus know with whom he had the feud for his lost eye.

ANDREW LANG.

"WIDERSHINS."

London: January 6, 1891.

I dare say my friend Mr. Gollancz is in the right in his etymology of "widershins," though phonetically he does not account for the aspirated sibilant, nor semasiologically for the specialised meaning, "contrary to the sun's course."

But in his incursions into folk-lore he betrays the amateur. In the first place one can

hardly call an etymology of "widershins," connecting it with the German *wider Schein*, a "folk-etymology." It can be traced to a definite individual; and, besides, the folk do not derive from foreign languages. He is again wrong in thinking that to do things contrariwise is a spell *against* the Evil One. It is, on the contrary, the way to put oneself in his power. To say the Paternoster backwards was the witches' way of swearing allegiance to Lucifer. So, too, going round a church "widershins" would have put Burd Ellen into the power of the King of Elfland. Indeed, if Mr. Weller had been a folk-lorist he would have doubtless given the advice, "Beware of widershins;" and so say I from the folk-lore point of view to my friend Mr. Gollancez.

JOSEPH JACOBS.

"A MIDSUMMER NIGHT'S DREAM."

King's College, London: January 3, 1891.

With reference to Prof. Skeat's interesting note (ACADEMY, December 27, 1890), allow me to say that the connexion between Shakespeare's "Midsummer Night's Dream" and Chaucer's "Merchant's Tale" has been pointed out, indirectly at least, by German critics. In commenting on Goethe's *Walpurgisnachtstraum*, or "Oberon's and Titania's Golden Wedding," several of them, but most distinctly Herr von Loeper, mention the fact that Shakespeare's drama suggested to Goethe his humorous *Intermezzo*; and they refer at the same time to Chaucer's tale, which was also made use of by Wieland in his composition of "Oberon," after having read Chaucer's poem in Pope's adaptation.

C. A. BUCHHEIM.

APPOINTMENTS FOR NEXT WEEK.

- SUNDAY, Jan. 11, 4 p.m. South Place Institute: "The Church of Latter-Day Saints," by Mr. J. H. Anderson.
7.30 p.m. Ethical: "In Darkest England on the Wrong Track," by Mr. B. Bosanquet.
- MONDAY, Jan. 12, 5 p.m. London Institution: "Light and Electricity," by Mr. Sheldford Bidwell.
8 p.m. Royal Academy: Lecture III., by Mr. J. E. Hodgson, Professor of Painting.
8 p.m. Library Association: "How the Acts were carried in Clerkenwell," by Mr. W. Robson; "The Working of the Library," by Mr. J. W. Brown.
8 p.m. Richmond Athenæum: "The Stuart Period," by Mr. C. V. Godby.
- TUESDAY, Jan. 13, 8 p.m. Biblical Archaeology: Anniversary Meeting.
8 p.m. Civil Engineers: "Auxiliary Engines in connexion with the Modern Marine Engine," by Mr. W. H. Allen.
8 p.m. Colonial Institute: "Agricultural and Technical Education in the Colonies," by Mr. H. F. Moore.
8.30 p.m. Anthropological: "An Ethnographical Album of the Pacific Islands," by Messrs. J. Edge Partington and C. Heape; "The Source of Jade used for ancient Implements in Europe and America," by Mr. F. W. Rudler.
- WEDNESDAY, Jan. 14, 8 p.m. Society of Arts: "Steam Lifeboats," by Mr. J. F. Green.
- THURSDAY, Jan. 15, 7 p.m. London Institution: "The British Orpheus, Henry Purcell," with Musical Illustrations, by Mr. W. H. Cummings.
8 p.m. Royal Academy: Lecture IV., by Mr. J. E. Hodgson, Professor of Painting.
8 p.m. Linnean: "Certain Points in the Morphology of the Crustacea," by Dr. P. H. Carpenter; "A Botanical Visit to the Auckland Isles," by Mr. T. Kirk.
8 p.m. Electrical Engineers: Inaugural Address by the President, Mr. W. Crookes.
8.30 p.m. Historical: "The Political Use of the Lot at Athens," by Mr. J. W. Headlam.
8.30 p.m. Antiquaries.
- FRIDAY, Jan. 16, 5 p.m. Physical: "Photo-Electricity," by Prof. G. W. Minchin; "A Lecture-Room Method of determining *g*," by Prof. F. R. Bawell; "The Change in the Absorption Spectrum of Cebal Glass produced by Heat," by Sir John Conroy.
7.30 p.m. Civil Engineers: Students' Meeting, "A Survey of the Bed of Sutton Pool, Plymouth," by Mr. R. G. Hansford Worth.
8 p.m. New Shakespeare: a Paper by Mr. A. W. Bullen.
8 p.m. Ruskin Society: "*Pors Clavigera*," by the Rev. J. F. Fauntleroy.
- SATURDAY, Jan. 17, 10.30 a.m. Association for the Improvement of Geometrical Teaching: Annual General Meeting.

SCIENCE.

A Finnish Grammar. By C. N. E. Eliot. (Oxford: Clarendon Press.)

FINNISH, though historically of very small account, is, philologically, perhaps the most interesting of all the so-called Finno-Ugric dialects. Turkish and Hungarian are the languages of bellicose, dominating races, who, after establishing themselves by force of arms in the midst of Aryan Europe, learnt the arts of peace from their more civilised neighbours, and gradually adapted their rude dialects to their new circumstances and enlarged spiritual horizon. The Finns, on the other hand, have always been a subject race, and their despised and neglected language, thrust unceremoniously aside into out-of-the-way corners of the world, has consequently been far less exposed to disturbing foreign influences. The vocabulary may, in quite recent times, have borrowed largely from Scandinavian and less plentifully from Slavonic sources; but the grammar (especially as we find it in the national epic, *Kalewala*) has probably undergone little change and lost few of its primitive forms. Its importance, in the eyes of the comparative philologist, is therefore considerable; and yet the study of this curious and interesting language has hitherto been almost entirely restricted to Russian and Swedish scholars, who take a local interest in it, or to Hungarians, who, speaking a cognate dialect, have almost a prescriptive right to regard this branch of linguistic science as peculiarly their own. Not that the Finns have been altogether neglected by the West. In 1845 Léouzen le Duc produced a prose translation of the *Kalewala*, and since then two metrical versions have appeared at New York. The first of these, a mere selection, translated through the German, is of little value; but Mr. Crawford's version, in two volumes, published in 1888, is a sound and careful piece of work, which can even be placed by the side of Castron's Swedish and Barna's Hungarian translation.

Sufficient interest in Finland and the Finns exists among us, therefore, to justify the publication of a Finnish Grammar, and Mr. Eliot's essay (with the possible exception of Budenz's "*Finn Nyelvän*") is by far the most satisfactory attempt to deal with this very difficult language. The author, indeed, is well equipped for his task. He has mastered most of the many Finnish dialects, carefully studied the *Kalewala*, and used to advantage the best Russian and Swedish authorities on the subject. No wonder then if he has made his subject not only intelligible but attractive. It is difficult to pick out particular passages for praise, where all is so good; but it seems to us that the sections devoted to the uses of the infinitive, that crucial difficulty of the Finnish language, are particularly lucid and happy. Mr. Eliot, however, does not seem to have made himself acquainted with the results of the labours of Hungarian scholars in this province of philology. This is not surprising, Hungarian being anything but a cosmopolitan language; but it is regrettable, as most of the standard works on the subject

are written in Magyar. We allude especially to Budenz's monumental *Magyar-ugor összehasonlító szótár* (Hungaro-Ugric Comparative Dictionary), which has done for the Finnic what Bopp's great Dictionary did for the Aryan languages. All subsequent investigators must to a great extent work upon the lines laid down by Budenz.

We have already said that we have no fault to find with Mr. Eliot's Grammar; but his philology, especially as exhibited in his Introduction, is not always according to knowledge, or, perhaps we should say, according to facts. Thus he is inclined to see a resemblance between the Latin and Finnish declensions, which is purely fanciful; and he will find few scholars to agree with him when he claims that, "on the whole, Finnish really presents no great differences from the Aryan languages," or that it shows clearer cases of foreign influence than even Magyar. There can be no real analogy between any of the Aryan dialects and such a language as Finnish, which is so unmistakably impressed with what may be called the three great stigmata of the Ugro-Altaic group—viz., the harmonic sequence of vowels, the post-positional declension, and the agglutinative conjugation. It is only in the case of Bulgarian, which has been Aryanised by centuries of violent and incessant friction with Aryan races, that any such comparison is admissible. On the other hand, between Finnish and her southern sisters Hungarian and Turkish striking analogies can be made out. Nay, even a comparison of their respective vocabularies, wide apart as they undoubtedly are, cannot fail to prove instructive if only we look a little below the surface. Take, for instance, the words *Jumala* and *Isten*, which mean "God" in Finnish and Hungarian respectively. Budenz has shown that while *jo*, the Hungarian word for "good," lies at the root of the Finnish *Jumala*, the Finnish *isä*, "father," lies at the root of the Hungarian *Isten*. The same scholar proves to demonstration that the derivation of very many Hungarian words can only be traced with the help of the Finnish vocabulary, and *vice-versa*. One instance may suffice. "Man" in Hungarian is *ember*. The first syllable *emb* is simply a variation of the usual comparative form *bb* = more, while *er* = the modern *ferj*, "male." The real signification of *ember*, therefore, is "a big male," i.e., a man in contradistinction to a little male, or boy. An analogous distinction is found in the Vögl dialect; while—still more remarkable—the Finnish word for man, *ihminen*, is compounded in exactly the same way, and means, like the Hungarian *ember*, "a big male."

Such details, however, belong rather to a comparative grammar than to a work like Mr. Eliot's, which simply aims at giving "an account of Finnish sufficient to enable anyone to understand the grammatical structure of the written language." In this, as we have already implied, the author has eminently succeeded. A student must be dull indeed who cannot master the principles of the Finnish language with the aid of such a mentor as Mr. Eliot. It is another question, of course, whether Finnish

will repay the time and trouble spent in learning it. Anyhow, it is the key to one of the half-dozen great epics of the world; and many will not deem that labour lost which enables them to read the Kalewala in the original.

R. NISBET BAIN.

CORRESPONDENCE.

BUDDHAGHOSA'S DESCRIPTION OF OLD HINDU ASCETICS.

Dedham, Essex.

The Dharmapāstras give us many interesting details of hermit life in the forest; but in Pāli texts we meet with, comparatively speaking, very few allusions to the practices of the Brahminical ascetics, even in the oldest Buddhist records.

From Baudhāyana, iii. 3, 2, we learn that some hermits lived on cooked food, while others always ate theirs raw. Buddhaghosa (Sum., pp. 270, 271) mentions eight kinds of ascetics, two of whom received, as alms, (cooked) food from the dānāgāra; two ate food cooked by a fire (agyāgāra), the rest lived on uncooked food picked up in the forest.

Buddhaghosa does not (so far as we can judge from the present state of his text) seem to have understood all the terms he employs to describe the various kinds of hermits; but some little light may be thrown upon the subject by a reference to the customs of the Brahminical ascetics.

The eight kinds mentioned by Buddhaghosa are as follows:

(1) Sapattabhariyā, (2) Uñchācariyā, (3) Anaggipakkikā,* (4) Asāmapālikā, (5) Asamanutthikā,† (6) Dantavakkalikā, (7) Pavattaphalabhajino, (8) Pandupalāsikā.

The first epithet needs no explanation. The second has already been explained by the writer of these notes in the *Journal of the Pāli Text Society* for 1887 (pp. 115-16). The Uñchācariya mode of life corresponds to the older Samūhika livelihood called in Pāli Samuñchaka (?). This word is not recorded by Childers, but there is some authority for its use:

"Dhamme care yo pi samuñchakam care" (Jāt. iv., p. 66), on which the Commentator has the following note: "Samuñchakan ti gāme vā āmapakkabhikkhācariyam araññe vā phalāphalaharāna sañkhātā uñcham yo careyya so pi dhammam eva care."

The Pāli samuñchaka may be an attempt to express the older samūhika or samūhaka. In a parallel passage (in *Samyutta Nikāya*, i. 4. 2. 7) we find samuñchakam (v. l. samuñjakam) for samuñchakam.

In verse 440, p. 76, of the *Sutta Nipāta* we have the following line—"Esa muñjam parihare."

A variant (Burmese) reading has muñcam, which does not help us much in solving the difficulty presented by "esa muñjam." On turning to Prof. Fausbøll's translation in *Sacred Books of the East*, verse 439, p. 71, we find, by some inadvertence, that the line containing these words has been left untranslated. The sense of the whole verse, however, is not much affected by the omission; but still a footnote is needed for the information of the reader. Esa appears to be a mere blunder arising out of esa in the preceding verse, and has no meaning in gāthā 440. For "esa muñjam" we might indeed read "esāham uñcham"; but this would be against the metre, unless we pronounce esāham as two syllables. The line would then mean, "I must practise gleanings."

i.e., "I must live away from the world." We must, I think, amend the text by reading "samuñchakam parihare," which would correspond exactly to "samuñchakam care" as already quoted from the *Jātaka* book.

The phrase "dhamme care yo pi samuñchakam care," which makes the practice of the dharma to be identical with the gleanings mode of life, reminds us of a passage in *Manu* iv. 5: "Ītam uñchasilam jñeyam" = "Īta (truth) is to be understood as practising gleanings," that is, gleanings is the true or virtuous mode of life.

3. The Anaggipakkikas, according to Buddhaghosa, cooked the husked grains they received as alms; but this explanation can hardly be correct, as it would be more appropriately a description of the Aggipakkikas. The epithet must mean "eating food not cooked by fire." In Jāt. iv., p. 8, we read of a hermit who was a Dantamusalika, and ate uncooked food—"Dantamusaliko hutvā anaggipakkam eva khadati, thusaparikhitam kiñci na khadati."

4. The Asāmapālikas, according to Buddhaghosa, gleaned cooked food; they were therefore agnipakvācins or aggipakkikas, but we do not at once gather as much from the Pāli designation. Asāmapālika must refer to those "living on food that had not ripened spontaneously (sāmam)," that is, to those who followed the livelihood called Siddhoñchā "gleaning cooked food."

Asāmapālika might possibly be an attempt to represent an older a-samaya-pālika = akālapālika applied to hermits "eating what had not been ripened by time." Compare the following passage from *Manu* vi. 17:

"Agnipakvācāno vasyāt kālapakvabhugevā vā Aymakuttobhāved vāpi dantolūkhaliropi vā."

"He may eat what is cooked by fire, or eat only what is ripened by time; he may either use a stone-pounder, or else make use of his teeth as a pestle."

5. The Asamanutthikas ate the bark of trees, which they broke off with a stone or piece of iron, used as a hammer.

The passage quoted above from *Manu* helps us to solve the crux in asamanutthika. We see that it answers to the Sanskrit aṣmakuttaka or aṣmakutta, so that the Pāli asama (asma) corresponds to Sk. aṣma, "stone." Childers has no such form, because the Sk. aṣman usually in Pāli becomes aṇha* (*Sutta-Nipāta*, p. 71). The word mutthika, from mutthi ("a hammer"†) = Sk. mṣthi ("a fist"), corresponds in meaning to Sk. kuttaka, kuttaka (cf. Pāli kotta, kottaka Jāt. i. 477; ii. 262; Sum. i. 252; kottana Sum. i. 296, "breaking, cutting, pounding").

6. The Dantavakkalikas, who stripped off the bark of trees with their teeth, are the same as the Dantamusalikas of Jāt. iv., p. 8. Dantavakkalika corresponds in sense to Sk. dantolūkhali, of which the second element is from ulūkhala (Pāli udūkhala for udūkhala; Bengali ōkkhali; Hindi and Marathi ukhal; Prakrit okkhala; or ulūhala), "a pestle." The form okkhala, referred to by Hemacandra and Vararuci (i. 21), seems to point to a Prakrit dantokkhali, which the later Buddhist scribes did not know what to make of. They probably imagined that the letter o represented the syllable ava (as it so often does as a prefix, but rarely in the body of a word), and

that vakkhalika stood for vakkalika, from vakkala, "bark."

These ascetics, who used their teeth for a pestle, or ate unground corn, were probably the same as the Mukhenādāyins, who took the food with their mouths, like brute beasts.

7. The Pavattaphalabhajins correspond to the Pravrittājins of the Hindu Law-books.

8. The Pandupalāsikas ate fallen or withered leaves (see *Manu* vi. 21), and correspond to the Īraparnājins.

The Law-books throw light upon other ancient usages alluded to in Pāli records, as, for instance, the Mosalla penance.

Mosalla, from an original *mausaliya or *mausalya, has the same meaning as the Sk. musalya, "deserving of death by beating with a club or by pounding with a pestle" (*Anguttara* iv. 242. 2). The culprit meriting this "pounding," clothed in black, with hair flying about, and with a club placed upon his shoulder, made public confession of his offence. There is an allusion to this in *Āpastamba* i. 9. 25. 4; *Gautama* xii. 43; *Manu* viii. 314-5; *Yaj.* iii. 257, where we learn that the offence was "stealing a Brahman's gold."

Buddhaghosa says nothing of the crime of theft.

The *Anguttara* (iv. 242. 3) makes mention of the Assa-puta punishment, where the culprit bore a basket of ashes (? stones) on his shoulder. From *Digha* (iii. 1. 26) we learn that this particular punishment was inflicted on a Brahman before he was expelled from the order, and banished from his native place. Buddhaghosa gives us no explanation of the punishment or of the offence.

The Hindu Law-books do not, we believe, contain any reference to the Assaputa penance.

In later Pāli works we have occasional allusions to ancient usages, as in the following passage relating to the consecration of a king:

"Atthattimsā ca rājapurisā nata-naccakā mukhamāṅgalikā soththivācakā samana brāhmaṇa sabbapāsāḍaṇa abhigacchanti, yam kiñci pathaviyā pattana-ratanākara-nagara-sūka/thānavaṇṇajaka-chejjabhajjajana-m-anusāsanaṃ sabbattha sāmiko bhavati" (*Milinda*, p. 359).

With the latter part of this extract compare Sum. i., p. 246.

In mukhamāṅgalika the first element has probably the meaning of Sk. mukhya, "a principal rite or ordinance." The mukhamāṅgalikā were Brahmins, who had to decide whether the day fixed upon for the ceremony of consecration was auspicious or no. It might be roughly translated by "soothsayers." We have no term corresponding etymologically to it in Sanskrit.

In the *Kalpa-sūtra* (*Jinacarita*, p. 113) we find the corresponding Jaina-prākṛit term muha-maṅgaliya, of which the commentator gives a very unsatisfactory explanation (mukhamāṅgalikā mukhe māṅgalini yeshāṃ te tathā cātukārīna ity artha).

The Soththivācaka or "angurs" were those who performed the soththivācana or svasti-vācana, "a religious rite preparatory to any important observance, in which the Brahmins strewed boiled rice on the ground, and invoked the blessings of the gods on the undertaking about to commence."

The Pāli ought, perhaps, to be soththivācanaka. Compare Sk. svastivācanika (fem.), Prakrit soththivā-anāka (*Chakuntala*, ed. Williams, p. 152), and soththivāana Mālat (ed. Sk. P. Pandit, p. 82. 4).

R. MORRIS.

* Compare Pāli pamha and pakhuma from Sk. pakṣman.

† A blacksmith's hammer; also a "fist."

‡ Cf. Hindi okhali, "a wooden mortar."

* Printed text reads anaggapakkikā.

† Printed on p. 271 asammutthikā.

* We find, in a different sense, danta-ndūkhala and danta-musala (Sum. i. 200). The upper teeth are danta-musala and the lower teeth danta-udūkhala.

THE EARLY CIVILISATION OF ARABIA.

Munich, Adalbertstrasse 62ii: Jan. 5, 1891.

The Minean inscription, Halévy No. 535, refers, as I stated in the last number of the ACADEMY, to a battle between the South Egyptian people Ma'doy and the Egyptians (inhabitants, or rulers, of the Delta). But this important Minean text tells us more. The authors of the inscription (the Minean governors of Tsar, Ashurim, and, as I believe, of "the Hebrews of the canal country") give thanks to the Minean gods and to the Minean King Abijeda 'Jeshi' for their escape from peril during a war "between the possessor (king) of the South and the possessor of the North," and for their escape from the middle (interior) of (Lower) Egypt to the Minean town Karnā-u when war broke out between Ma'doy and (Lower) Egypt.

It is evident that the king of the South cannot be other than the latest king of the XVIIIth Dynasty residing at Thebes—or, better, Amāsis, the first king of the XVIIIth Dynasty; and that the king of the North must be the latest king of the Hyksos, who was driven out by Amāsis. As the Mineans escaped to Karnā-u, which is very far from the Egyptian frontier (viz., between Mecca and Yemen), they had already lost Tsar and A-shur when they wrote the inscription. We learn also that the Mineans were driven out of Egypt and neighbouring countries at the same time as the Hyksos. For this reason the Mineans must be regarded either as a portion, or as an ally, of the Hyksos. But the kings of the Hyksos were not Mineans.

I am just now publishing in the *Ausland* an article on this interesting matter, which proves how ancient the Minean inscriptions must be. Halévy No. 535 is by no means the oldest; it belongs, on the contrary, to the decadence of the Minean empire. Older inscriptions, the only Minean stones actually in Europe, are in the British Museum, where I brought them three years ago. Nobody has studied them with energy, and they are half-forgotten. Perhaps these oldest monuments of Arabian civilisation will now find more attention among the scholars of all nations. I have also another collection of inscribed stones and monuments that I brought to Europe from Southern Arabia in 1888. There is no government and no museum in the world that will acquire this most important collection, because, I suppose, our scholars are not yet able to decipher the texts. But are we sure that the coming generation will not hold the same opinion about them as I did when I collected these monuments under a thousand perils and brought them into Europe?

EDWARD GLASER.

SCIENCE NOTES.

THE first meeting of the Institution of Electrical Engineers for the new year will be held on Thursday next, January 15, when the president, Mr. W. Crookes, will deliver his inaugural address. The Institution will shortly move to 28, Victoria-street, Westminster, but its meetings will still be held in the rooms of the Institution of Civil Engineers in Great George-street.

THE general meeting of the Association for the Improvement of Geometrical Teaching will be held at University College, Gower-street, on Saturday, January 17. At the morning sitting (10.30 a.m.), the reports of the council and the committees will be read, the new officers will be elected, and Miss Wood will read a paper on "The Use of the Term 'Abstract' in Arithmetic." At the afternoon sitting (2 p.m.),

papers will be read by Prof. Minchin, on "Another Voyage to Laputa"; by Mr. E. T. Dixon on "The Foundations of Geometry"; and by Mr. E. M. Langley on "Statics and Geometry." We regret to hear that Prof. Sylvester, who had promised to take the chair, will be unable to be present.

AT the next meeting of the Anthropological Institute, Mr. F. W. Rudler, the secretary, will read a paper on "The Source of the Jade used for Ancient Implements in Europe and America."

WE regret to announce the death of Mr. G. W. Ormerod, which occurred at Teignmouth, on Tuesday last, January 6, at the advanced age of eighty. Attached throughout life to geological studies, he wrote numerous papers on local subjects principally connected with the rocks of Devonshire and Cheshire, and was the compiler of a very useful Index to the publications of the Geological Society.

MEETINGS OF SOCIETIES.

CLIFTON SHAKSPEARE SOCIETY.—(Saturday, Dec. 20.)

MISS FLORENCE HERAPATH, president, in the chair.—Mr. S. L. Gwynn read a paper on "The Authorship of 'Pericles,'" saying that the astounding differences in style force us to give up any idea that Shakspeare wrote the whole play at any one time. There is no reason to dissent from the general views advanced by Mr. Fleay and Mr. Boyle (New Shakspeare Society's *Transactions*, 1874, Part I. and 1880-5, Part II.), which are endorsed by Mr. Round in his *Introductions* to the *Facsimile Quartos*, where he gives an excellent analysis of the earlier papers. With these we may admit that Shakspeare was attracted by Gower's story of Apollonius of Tyre and wrote the principal scenes, taking as his point of departure Pericles' journey to Tarsus. It will not do, however, to say with Mr. Fleay that the play might have begun here. This omits the first link which binds Cleon and Dionysa into the tale—the cause of gratitude to set over against their subsequent ingratitude. George Wilkins, as we know from the work which he wrote in 1608, was commissioned to supply the necessary scenes to complete the play; and he was aided in the coarser scenes by a third writer whom consent of opinion seems to identify as William Rowley. It is scarcely worth while to attempt to assign to Wilkins and his coadjutor their respective limits. In such an investigation, style must be the sign-post; metrical tests are of secondary importance. Now Shakspeare has a style; but it is scarcely possible to say that Wilkins has. At all events, at this distance of time it has lost all trace of individuality. Experts now might distinguish a page of Miss Braddon from one of Rita; could any one do so a century hence? But George Meredith and Thackeray are never likely to be confused. Therefore, although respectable commentators talk of Wilkins's style, or even Day's, or Middleton's, the argument must be put out of court. The decision must be reached on circumstantial evidence, evidence that the Philistine can appreciate as well as Mr. Swinburne. Mr. Boyle cites parallelisms in the first two Acts of "Pericles" with passages in Wilkins's only known play, "The Miseries of Enforced Marriage," and in "The Travels of Three English Brothers," a play in which Wilkins had a hand. But this course of proceeding is fraught with danger. "Pericles" I. i. 138 has a parallel, admissible by Mr. Boyle's canons, in *Sonnet* cxxix. 1-3; and I. iv. 26-7 in "2 Henry IV." II. iii. 21-2; and in "The Miseries of Enforced Marriage" (Dodsley, vol. ix. p. 475) there is a passage very similar to "Othello" II. i. 110-3 and in the same (p. 522) to "1 Henry IV." I. iv. 441-2. These close correspondencies between Wilkins's work (giving him the first act of "Pericles") and Shakspeare's are to be explained by the well-known fact that the Elizabethans freely copied one another's points, and all such parallelisms are to be regarded with much suspicion. No reasonable person will dispute Lord Tennyson's view, as quoted by Dr. Furnivall, as to the genuineness of certain scenes in this play. But as to the collaborators, the only valuable piece of evidence is Wilkins's own statement as to his share in the play, and the fact that

his novel reproduces more fully his own stuff than Shakspeare's part. And it would be no matter of surprise to learn further that Shakspeare wrote Act V., sc. iv. and some of Act IV.; but if he did, it must have been very early in his career. The rhyme-test shows this to demonstration. That he wrote any of the Gower doggerel cannot be believed; but he appears to have sanctioned its use, as the last scene makes no reference to the fate of Cleon and Dionysa. The whole mystery points out in strong light Shakspeare's extraordinary carelessness as to the fate of his work.—Mr. Cyril H. Walker, in some "Medical Notes on 'Pericles,'" commented on the medical and surgical allusions in the play. In making Cerimon refer to the immortality attending his attainments, Shakspeare may have derived the thought from Hippocrates, who regarded his work as an everlasting treasure to mankind. The idea does not occur in Gower, who dealt very fully with Cerimon. Surgeons for 100 years before Shakespeare's time used stones—usually the precious ones, but sometimes those of baser minerals—for rubbing painful spots, and in many cases the stone gained a higher repute for curing than the surgeon. The expression Cerimon uses about the Egyptian having "nine hours lien dead" must not be taken literally, as Solomon's *Praxis Medendi*, published in 1694, often uses the term "dead" for unconscious, and even speaks of a man stunned by a fall as a "corpse." The common-sense remedies used to restore Thaisa are much the same in Gower's story and in the play; in the former more details are given, and were required as there was no stage-acting. It is remarkable that no sort of prayer for recovery is mentioned (except "Aesculapius guide us"), as prayers were said before most operations till the middle of last century.—Mr. L. M. Griffiths read a paper on "Various Readings in 'Pericles,'" citing sufficient instances to show the frequent impossibility of saying what are Shakspeare's exact words, and the extreme difficulty an editor has in printing an approximately correct text. It is obvious that the work of emendation, which should be carried on with a scholarly restraint, is one that has not yet nearly reached finality.

FINE ART.

OLD MASTERS AT THE ROYAL ACADEMY.

I.

THERE are to be noticed in this, the twenty-second in unbroken succession of the exhibitions of works by the old masters at Burlington House, several features of peculiar interest, which more than suffice to give it a distinctive character, even if it be placed in comparison with the great displays which have preceded it. First, we note with sincere satisfaction the return to the practice of exhibiting Italian, Flemish, and German works of the fifteenth and early sixteenth centuries; among which the student finds this winter some difficult nuts to crack, and some few of them, too, well worth the cracking. The English and Dutch sections of the show are again extraordinarily rich, though we notice under both heads an unusual number of reappearances of old and valued friends, whose *rentrée* however, in so far as it does not exclude yet unseen works of importance, we rather applaud than deplore. Frans Hal has rarely been so copiously or so well represented at the Academy as on the present occasion; and no such fine example of the scarce Jan Vermeer of Delft has yet adorned the walls of Burlington House as "The Cavalier and the Laughing Girl," in the second gallery. Arranged in the so-called Water-colour and Black-and-White rooms is a special collection intended to illustrate the rise and progress of English water-colour, extending from Paul Sanby, on the one hand, to the late Frederick Walker, on the other. We shall return later on to this fairly complete series, comprising many choice examples of the chief masters included in the scheme. At present, we need only note the

absence from a collection professing to be representative of Copley Fielding, Cattermole, Rossetti, and Pinwell, and the presence, in their fullest perfection, of Cozens, Girtin, Barret, Cotman, William Hunt, John Frederick Lewis, and Frederick Walker.

The masterpieces of Italian art now in England—both those of the Quattrocento and the Cinquecento—have, with some few notable exceptions, already made their appearance at Burlington House; so that there is little room for astonishment if most of the examples now brought forward are of a class to interest the student rather than to astonish or charm the general public.

First may be mentioned a curious and interesting little "Virgin and Child" (152: J. Stirling Dyce, Esq.), ascribed to Mantegna. This is in dimensions, type, and in general style closely akin to two well-authenticated little "Madonnas" of the great Paduan, one in the Municipal Gallery of Bergamo, the other in the Poldi-Pezzoli collection at Milan—both of these latter being now very opportunely reproduced in the latest edition, or rather metamorphosis, of Giovanni Morelli's work on the galleries of Munich and Dresden. Mr. Dyce's picture has many of the characteristics of Mantegna in the conception, the minute folds of the draperies, the modelling, and especially in the car of the divine *Bambino*, as in the foreshortened head of the Madonna. On the other hand, her long nerveless hands, with their thin fingers, are inferior, and not of the true Mantegna type; while the glory of seraphim and cherubim, if not altogether a later addition, is also unworthy of the master. The panel has, however, been so extensively stippled over as to render a definitive judgment as to the correctness of the ascription difficult. Of exceptional importance is "The Salutation" (154: W. Cornwallis West, Esq.)—a panel of unusual dimensions, ascribed—and, on the whole, rightly ascribed—to Piero di Cosimo. In its present state the painting presents a somewhat rough and harsh appearance. But the central group, showing the Virgin and St. Elizabeth meeting, is not only incontestably Cosimo's, and worthy in its grandeur of conception of the best period of Florentine art; but, moreover, it recalls in the most striking way Albertinelli's famous "Salutation" in the Uffizi, and shows whence Piero's junior in the atelier of Cosimo Rosselli derived his first inspiration. Two life-size figures of St. Anthony and St. Nicholas, seated respectively in the right and left corners of the immediate foreground, are executed with an intense cutting hardness and rigidity which we are not accustomed to associate with Cosimo's own productions; and they may, like portions of the background—showing on the right the Massacre of the Innocents, and on the left the Nativity—be from the brush of an assistant. A picture which should not have been hung here at all is the "Virgin and Child" (153), attributed to Botticelli, but really nothing more than a poor copy after Lorenzo di Credi, as is clearly shown by comparison with a genuine if not very inviting example of that painter, the "Virgin and Child" (148: Right Hon. G. Cavendish Bentinck). A well preserved but second-rate performance of the Florentine school is another "Virgin and Child" (149: J. Stirling Dyce, Esq.), attributed with much temerity to the great Domenico Ghirlandajo, but clearly by a painter inclining to the manner of Credi, as is more particularly shown in the type of the infant Christ and in the landscape. Preposterous, too, is the attribution to Verrocchio of the large and inferior "St. Michael trampling on Satan," even though it is furnished forth with the extraordinary signature, "Verrocchio Andrea, 1475"! Yet again, the large "Virgin and Child, with Saints" (109:

Madame Baude), ascribed to Francia, is a lifeless and inferior performance, issuing—as the type of the virgin and the changing hues of some of the draperies show—from the *bottega* of the Bartolommeo-Albertinelli combination. It is refreshing to find in the "Holy Family" (101: Ludwig Mond, Esq.) a genuine example of Fra Bartolommeo himself—rarest of masters in English collections. True, it is not one of the Frate's most impressive performances, and is, we should say, much injured in the face of the Madonna and the body of the infant Christ. Nevertheless, the St. Joseph is a characteristic creation, and the whole bears a kind of family resemblance to Earl Cowper's famous "Vierge au Palmier" at Panshanger, though it is infinitely inferior to that masterpiece. The "Holy Family" (103: W. Cornwallis West, Esq.), ascribed to Albertinelli, appears to us to be a *pasticcio*; the St. Joseph being closely akin to the corresponding figure in the last-named picture, while in the strong hot colour and in the types of the Virgin and the unscarred *Bambino* there is something suggestive of Gaudenzio Ferrari. With questionable taste there has been allotted to the huge "Holy Family," ascribed to Perino del Vaga (102: W. Cornwallis West, Esq.), one of the places of honour of the whole display. This, notwithstanding a certain, at a first glance, imposing symmetry of arrangement, is an empty, washy production, which reminds us not so much of Raphael's young Florentine pupil and imitator as of one of those Post-Raphaelite painters of the Perugian School, of whom there is a depressing room-full in the Pinacoteca of Perugia. The treatment of the landscape, with its curious upright trees, favours this hypothesis. It will be seen from the preceding remarks that great names but by no means great works represent Florentine art in the exhibition. Let us, however, take a step backwards, and examine a beautiful little "Virgin and Child, with St. John," ascribed to Bartolommeo Montagna (156: Miss Henriette Hertz). The grouping of Madonna and child is unusually true, and free from conventionality, and the drawing of both heads is fine and accurate. The work is certainly from the brush of a painter of Vicenza nearly akin to Montagna; but many characteristics point rather to his contemporary and imitator, Giovanni Speranza, than to the *chef d'école* himself. The charmingly natural infant Christ is clearly taken from the same model as that in the picture by Speranza which is in the National Gallery (No. 802; under the name of Montagna). Again, it is our ungrateful task to point out that the "Virgin and Child with Angels," ascribed to Pinturicchio" (146: W. Cornwallis West, Esq.), is, though pure Umbrian, not good enough for that master. Quite genuine, and a fair, if uninspired, example of the artist, is Lord Wantage's signed "Virgin and Child," by Cima da Conegliano. A certain richness of colour, a certain characterless sweetness, and a manifest effort by a *Quattrocentista* to display the freedom of the newer manner are shown in Lady Alice Gaisford's "Virgin and Child" (155), attributed to Giovanni Bellini. It does not occur to us as necessary even to discuss the correctness of this attribution of an inferior, if not unpleasant, work to the incomparable master himself. The panel is evidently by a Venetian of the second or third order, who painted in the first years of the sixteenth century, and apparently received only at second-hand the rays radiating from the great art-centre of the Bellini studio. Among the most beautiful things here, though not free from injury, are the three predella panels with "The History of Three Martyrs," by Bernardino Luini (143-5: Charles Butler, Esq.). These amply reveal the qualities of suavity, grace, and true devotional spirit of the happier order, which

make amends in the works of the gentle Milanese for the absence of virility and true dramatic force. The large "Nativity" (140) belonging to the same collection is also a very representative Luini, with a full measure of the usual pensive delicate beauty in the heads, but almost too Luinesque in its rigid adherence to the few chosen types affected by the painter. Again, a genuine picture and a great rarity in England is the "St. Jerome" (110: Ludwig Mond, Esq.) by Sodoma. This large panel is evidently a production of the great painter's Lombard time, executed before he thoroughly identified himself with Siena and Rome. Probably always sombre, with a Leonardesque sombreness, the picture is now unfortunately still further darkened, so as to be almost monochromatic; but the figure of the saint in penitence is still very expressive, and the landscape is of unusual richness and variety. Singularly unattractive in its present condition is the large "Virgin and Child enthroned, with Saints" (147: Right Hon. G. Cavendish Bentinck), attributed to Moretto, and playing, indeed, some characteristics in common with the work of the great Brescian. This altar-piece is, however, interesting as being in all probability the only example in England showing the hand of Callisto Piazza, of Lodi, the pupil of Romanino, and probably the companion of Moretto, in his studio. Especially characteristic of this Piazza are the two angels placing a crown on the head of the Virgin.

Relatively, if not absolutely, the examples of Flemish and German art, gathered together in the fourth gallery, must be pronounced to attain a higher average of excellence than their Italian neighbours. Here also unduly ambitious and erroneous attributions abound. A very beautiful little work of the Van Eyck school is the "Virgin and Child, with Saints" (162: Stephenson Clarke, Esq.), attributed to Dierick Bouts. The gay hues of the red and blue robes of the Virgin, and the treatment of certain details in the landscape, give colour to this attribution. Yet the panel appears to us—especially in the type of the Virgin, in the rendering of the minute flowers and foliage, of the little figures in the middle distance, and of the slender pseudo-Romanesque architecture—nearer to Jan van Eyck than Bouts ever got. We put forward as a suggestion only that the picture may be by Petrus Cristus, the head of the Virgin bearing considerable resemblance to that in Cristus's signed picture at the Städel Institut of Frankfurt. Two other panels of the "Virgin and Child" belonging to the same collection are respectively ascribed to Hugo van der Goe (160) and to Hans Memline (167); both being, however, school pictures in the manner of the latter master. In the manner of Roger van der Weyden—but rather by a German than a Flemish imitator—is the very careful but extraordinarily harsh and exaggerated "St. Jerome" (139: Rev. G. F. Egan). Not to Hugo van der Goe, but, in our opinion, to a painter of the Lower Rhine, coming within Cologne influences, should be put down Mr. Chas. Butler's exceptionally interesting "Coronation of St. Augustine, and Scenes in his Life" (163), a most unusual subject for a Northern artist, and one of a type such as we are accustomed to associate rather with Siennese and Florentine art. To the School of Cologne of the first quarter of the sixteenth century has been ascribed the Rev. W. J. Strachey's large triptych (159), a piece which *en moins bien* somewhat resembles the productions of the still anonymous *Meister des Todes der Maria*, but which, in the landscape and certain types, rather suggests a follower of the Fleming Patinir. The quaint and characteristically elaborate "Solomon and the Queen of Sheba" (169: the Earl of Ashburnham)—a subject not unusual in the Dutch-Gothic art of the sixteenth

century—is put down to Lucas van Leyden; but its extraordinarily long, angular figures, and hard sharply-broken draperies, recall rather the style of Hendrik Bles. To this latter artist is erroneously ascribed a "Crucifixion" (166: Lady Alice Gaisford), which is in the manner of Patinir, but not precise enough in execution to be from his own hand. The Earl of Ashburnham's great "Adoration of the Magi" (161), a splendid and finely-preserved performance in the Dutch-Gothic style of the early sixteenth century, ascribed to Mabuse, merits a longer and more detailed analysis than we are here able to accord to it. It bears, no doubt, a certain vague and general resemblance to the famous masterpiece of Gossaert at Castle Howard, and also to the several renderings of the same subject by the *Meister des Todes der Maria* to be found at Dresden, Genoa, and Naples; but this resemblance is rather produced by similarities in the exaggerated fashion of the modish costumes, in the wealth of late Gothic ornaments, personal adornments, and vessels of curiously-wrought gold, than by really close affinities of type or style, going beyond those main characteristics which are, to an unusual degree, common to all painters of the Low Countries and of the Lower Rhine exercising their art between 1500 and 1530 or thereabouts. The name which occurs to us in connexion with Lord Ashburnham's "Adoration," and which we put forward tentatively only, is that of Jan van Scorel, the pupil first of Jacob Cornelissen at Amsterdam, and then for a while of Mabuse at Utrecht, before he started on his erratic peregrinations in Europe and Palestine. But little was known of the Gothic pre-Italian art of Scorel until there was identified some few years ago the important altarpiece at Ober-Vellach, in Carinthia, which is signed by him in full, and dated 1520. The present work, which is still more free from extraneous influences than that just referred to, must, if it, was executed by the painter of Alkmaar, have been produced even before that early date. Two remarkable works of the German school, both quite above question, are those correctly given to Hans Baldung Grün and Albrecht Altdorfer respectively—both of them to a certain extent independent masters, although well within the wide circle of Dürer influences. Baldung is represented by an earnest and pathetic "Pietà" (165: A. F. Payne, Esq.), signed and dated 1512; while Mr. Charles Butler's "Nativity" (158) is as exquisite and as well preserved a specimen of Altdorfer's peculiar-unbridled fancy and mannered, yet in its way masterly, execution as we remember to have seen. Most fascinating is here the little group of the Holy Family tended by infant angels, weirdly lighted and ensconced in the corner of a ruin; and not less so another group of these half-pagan *putti* in the clear dark sky. Of much charm, too, is the injured "Portrait of a Man" (168: W. Cornwallis West, Esq.), dated 1533, and described with unusual modesty as "Unknown;" but evidently by a painter, either of the Augsburg or the Nuremberg School, who had undergone—as did many of his tribe—the influence of Venice, or it may be in this case Brescia.

CLAUDE PHILLIPS.

OBITUARY.

CHARLES KEENE.

THE death of this distinguished artist and charming man—one of the most eminent comic draughtsmen of our time—occurred last Sunday. It was not unexpected, for Mr. Keene had for many months been mortally ill, and he had reached what a few years ago would have been accounted old age, for he was nearly seventy; at all events, seven and sixty. He was a bachelor, devoted to old friends

rather than to new acquaintances, and never afraid of loneliness. His delight was in the quiet practice of his art. As an artist his work was practically confined to black and white; but it was not wholly, or at all events it was not all of it, professedly comic.

In the good days of *Once a Week*—some seven and twenty years ago—Charles Keene was among its illustrators; but for about a generation his labours upon *Punch* had pretty well engrossed him. When his health permitted it, he contributed two cuts a week, or thereabouts; but latterly he had become a far less frequent contributor. It is stated that his last work in the accepted comic journal appeared in the middle of August in last year; but for months before that he had been—as we happen to know—using up old material, and employing sketches and suggestions of long ago. Indeed, he had been able to get about very little of late. His journeys to Scotland—where he had some attached friends—and his sojournings in Suffolk, which was the county of his boyhood (for he was educated at the Ipswich Grammar School) had become things of the past. He went, of course, very little into general society; and if one met him out at dinner—even at an artists' dinner, one may say, when he wore his short jacket and his pipe was not far from him—he had a *dépaycé* air, as if, amiable and charming though he was, he would rather have been at home. The appreciation of him by the big public was, we fancy, never very deep, and with the progress of years it had become slighter. Simple as were his subjects, and seemingly simple as were his methods of treating them, his appeal was chiefly to artistic folk. These understood the learned shorthand to which he had reduced the expression of his art. These saw variety enough, wonderful humour, wonderful force in the oft-repeated figures which may be spoken of as his familiar properties—the shrewd man, in the workings of whose countenance, as Mr. Keene depicts them, you trace the Aberdeen accent; the Suffolk parson, and the hedger and ditcher of his countryside; the London lodging-house keeper (a relative, generally, of the Mrs. Lillipier of Dickens), the cabby, the fattish elderly man who only with an effort can catch the omnibus; and, last, the umbrella which is not expected to open, but which somehow will never quite shut. With what astonishing veracity, with what apparent ease, with how much of nature, with how little of caricature did the great artist—the great creator of types who has gone from us—depict these people and these things!

Keene did nothing whatever to bring himself into notice. He detested the *réclame*. It had never dawned upon him that a comic draughtsman might perchance aspire to be a public man. He went on, therefore, to the end of his days, being neither strictly popular nor in any way fashionable. But he was gratified, one trusts, by the real recognition of his art among the better class of painters, art amateurs, and critics. Purely English as were his themes and his method, his work yet received appreciation from some of the best judges in France.

FREDERICK WEDMORE.

THE PRESERVATION OF THE MONUMENTS OF ANCIENT EGYPT.

THE following letter has been received by the Earl of Wharfedale, in answer to the memorial concerning the ancient monuments of Egypt presented by him to the Marquis of Salisbury:

"Foreign Office: Dec. 25, 1890.

"My Lord,—I am directed by the Marquis of Salisbury to acknowledge the receipt of your letter of the 10th inst., and to inform you that the memorial enclosed therein, praying for the appoint-

ment of an official inspector with a view to the better preservation of the ancient monuments in Egypt, will be forwarded to Her Majesty's Agent and Consul-General at Cairo for presentation to the Egyptian Government.

"Sir E. Baring will be instructed to state that Her Majesty's Government consider the question of the nationality of the official to be appointed to such a post to be a matter which lies wholly within the competence of the Egyptian Government, and that their only desire is that adequate steps should be taken to preserve the monuments from further destruction or mutilation.

"Sir E. Baring will also explain to the Egyptian Government how the memorial came to be signed in two different forms.

"P. W. CURRIE."

We further quote the following from the telegraphic correspondent of *The Times*:

"Cairo: Jan. 4.

"The Egyptian Government have decided to appoint two European inspectors to insure the preservation of ancient monuments. The inspection staff of the museum is also to be considerably increased."

"Cairo: Jan. 5.

"The Egyptian Government has just approved the following regulations for private persons and scientific societies desiring to excavate for antiquities:

"All demands are to be addressed to the Public Works Ministry, which can accept or reject them as it pleases. When permission to excavate is accorded, all unique objects found will belong, of right, to the Museum, disputes being settled by a commission of three persons, nominated, one by the excavator, one by the director of the Museum, and one by the Minister of Public Works. The surplus will then be handed to the excavator on the conditions that the greater part is given to some public museum, and that a description of the articles found is published within two years. If these conditions are not accepted, the surplus will be equally divided between the excavator and the Government. Gold and silver objects in all cases are to be equally divided, on the basis of the intrinsic value of the articles."

NOTES ON ART AND ARCHAEOLOGY.

AN exhibition will be opened next week, at Messrs. Dowdeswell's gallery in New Bond-street, of a series of "Sketches from a Caravan Window, from the North to the South of France," by Mr. Charles Sainton.

THE annual general meeting of the Royal Society of Antiquaries of Ireland will be held at Dublin on Tuesday next, January 13, when Lord Wolseley will be proposed for election as a fellow. Visits are to be paid to the antiquarian collection in the newly-opened Museum of Science and Art, and to the ancient charters and municipal documents in the City Hall. Among the papers to be read is one on "Ogham Inscriptions recently discovered at Ballyknock, County Cork," by Canon Barry.

THE late Andrew George Kurtz, a chemical manufacturer near Liverpool, has, by his will, directed his executors to offer for sale to the trustees of the National Gallery his collection of pictures at the original price he paid for them, and has also bequeathed his collection of autographs to the British Museum "for the benefit of the nation."

THE remains of Dr. Schliemann, having been removed from Naples to Athens, were buried on Sunday, January 4, in the Greek cemetery beyond the Ilissus. This place was chosen, and not the mound at Colonus, in accordance with his own testamentary wishes. Speeches were delivered over his grave by Mr. Kavadias, director of the government department of antiquities, and by Dr. C. Waldstein, head of the American School at Athens. The two friends to whom he has bequeathed legacies are Dr. Dörpfeld and Prof. Virchow.

THE STAGE.

STAGE NOTES.

WE shall speak later of Mr. Burnand's entertaining adaptation, produced at the Strand on Wednesday night; meanwhile, two important revivals are the events of the theatrical week. The first, in order of date, is that of "The Silver King," which Mr. Wilson Barrett, who has "Belphegor" in preparation, gave us a few nights since at the New Olympic, where, we are sorry to say, the well-balanced qualities of "The People's Idol"—its singular impartiality, for instance, in its treatment of the strike—told against its popular success. "The Silver King" does not deal with burning questions. It is frankly and *tout bonnement* a melodrama; but a melodrama with some originality of motive, and with much skill of treatment, and with a measure of humour. The cast is a good one, though it is hardly likely that Mr. Cooper Cliffe can make of the character of the Spider all that was made of it by Mr. Willard. Perhaps the only other change of importance in the cast, since the last or even since the first performance, is that by which Miss Winifred Emery succeeds to Miss Eastlake's part as the heroine. Now, Miss Eastlake's Nellie Denver we have always ranked as one of the very best of her performances in domestic drama. Here and in "The Lights o' London"—not to speak of her admittedly remarkable impersonations of Ophelia, and of Helle, in "Clito"—Miss Eastlake has been seen to singular advantage; and it says much for Miss Winifred Emery, who lacks Miss Eastlake's force and breadth of style, that she is acceptable in a part which we have never seen inadequately filled. Now Miss Emery is very acceptable. She has her own very gentle womanliness, her own order of simplicity, her own delicate perception of the needs of a particular moment. The revival of "The Silver King" affords once more to Mr. George Barrett a part that is worth his playing. His Jaikes—the typical faithful servant—a modern version of Adam in "As You Like It," with his "service of the antique world"—is as good and as popular as ever. We don't suppose Mr. Wilson Barrett has played any part quite so often as that of Wilfrid Denver; but he never seems to tire of it, and, what is more, his playing of it never becomes mechanical. The impersonation is a living one; the sufferings of the hero are true and vivid; his less frequent joys are as convincing. Here an actor justly admired in purely romantic characters, and never less than interesting and suggestive in the most poetic dramas that the stage affords, is seen in a part which he has most excellently created—conceived broadly, and filled in with many details appropriate and vivacious. It is one of his most sympathetic parts. "Belphegor"—whatever may be its qualities and its opportunities of interest—will not be wanted just yet.

THE second big revival—of which this week, at all events, we must speak more briefly—is that of "Much Ado about Nothing," at the Lyceum. Here the wonderful *mise en scène*—a *mise en scène*, if anything, only too elaborate—is an immense element of attraction. The groupings of colour and crowd show evidence of a master hand. The principal parts—those obviously of Benedick and Beatrice—remain naturally in the hands of Mr. Irving and Miss Ellen Terry; and they afford to each of these distinguished public favourites some of their finest opportunities. Any approach to a fresh analysis of their brilliant and long accepted performances we shall not to-day allow ourselves. The changes in the cast permit of the appearance of Mr. Mackintosh as Dogberry and Miss Annie Irish as Hero. Mr. Mackintosh is an actor we greatly esteem. He brings to each part that he performs an individual judgment,

and a mature method. Yet it is doubtful whether his Dogberry is perfectly satisfactory. In its self-consciousness, does it not travel a little too far upon lines hardly suggested by the Shakesperian text? The Hero of Miss Annie Irish—marred on the first night to some extent by nervousness apparently, for which there was really no cause—is bound to be agreeable and sympathetic. The personal qualities of the actress—her appearance and her voice and her sensitive intelligence—make that inevitable.

MUSIC.

MUSICAL PUBLICATIONS.

Wagner's Life and Works. By Gustav Kobbé. In 2 vols. (New York: Schirmer.) The writer in his preface tells us that these volumes are the outgrowth of a pamphlet on the "Ring of the Nibelungen." It is a very extensive outgrowth, for they contain a biography, descriptions of all Wagner's operas and music-dramas, and extracts from his literary writings. As the biography is based on Mr. Dannreuther's able article in Sir G. Grove's *Dictionary of Music and Musicians*, and as the analyses of the music-dramas have been prepared from the writings of Wolzogen and Heintz, there is no pretence to any originality, though here and there the author makes known his own opinions. In the "Biography" there is one little error, which is perhaps worth noting. We are told that the opera "Die Feen" has never been performed; yet it was produced at Munich in June, 1888. Mr. Kobbé remarks that, as children in the streets of Bayreuth whistled motives from Parsifal, Wagner's music "cannot be so terribly abstruse." But surely the motives might be simple, and yet the music abstruse. The author, under the title "Bayreuth Echoes," tells of his visit to that town in 1882. He describes the performance of "Parsifal," and explains some of the ingenious mechanical properties used in that work, and also in "Lohengrin" and "Siegfried." A very brief though interesting account is given of Wagner's literary writings, including a translation of the essay "Music in its Relations to the Drama," in which the reformer expresses his views in, for him, an unusually concise manner. M. Kobbé justifies Wagner's bitter remarks about his contemporaries by quoting many of the hard things said by them of him. The *Echo*, a Berlin journal, called the tetralogy "Bayreuth Cabbage"; an English critic described Wagner's compositions as "weeds growing on the grave of Beethoven"; and Hiller spoke of the riot scene in "Die Meistersinger" as "the most insane attempt to murder art, taste, poetry and music." We spoke of M. Kobbé's personal opinions. Here is an example: "Wotan, except in the noble scene with Brünnhilde in the finale of 'The Valkyr' is a bore." For an enthusiastic admirer of the master, this is indeed a candid confession.

Famous Musical Composers. By Lydia T. Morris. (Fisher Unwin.) This book is curiously described as "suitable for the use of girls and young people"; it is also addressed to the "public at large." Without singleness of aim it is difficult to produce satisfactory results. It is scarcely wise to tell young people that Mozart "did (*sic*) as was generally his habit—viz., put off writing the score (*sic*) ['Don Giovanni'] till the very last moment"; and surely the "public at large" will be puzzled to know why Hummel is included amongst the "famous" composers, seeing that it is said "he cannot by any means be regarded as a composer of the highest order." One might ask on what principle the composers were selected. Bennett and Benedict are there to represent England, but not Purcell. What

right has Kalkbrenner to a place? Why is Berlioz not mentioned? There are also many mistakes in the book. For example, under Wagner we are told that his opera "Die Feen" did not meet with much success. But it was never performed during the composer's lifetime; only excerpts were tried at Würzburg. The production of "Tannhäuser" is given with date 1844, instead of 1845. Wagner is said *not* to have visited London after 1855. Some of the sentences concerning the musicians are extraordinary, and the opinions are clumsily expressed. We can only quote a few. Of Dvorák is said that "his works chiefly consist of orchestral music, though he has written some very beautiful things for the piano." Chopin's compositions are "full of poetry and emotion, rather than of grandeur, or of anything ennobling." And this of Mendelssohn:

"The list of his compositions is a most extensive one, and embraces music for the piano, the organ, the orchestra, and the voice, both sacred and secular; it seemed as though his genius was equal to all sorts."

Brahms's chamber-music is mentioned, and it is also recorded that he has written "a number of pretty songs." We have dwelt at greater length on this volume than its merits deserve; but it is a duty to point out shortcomings in any work intended for the young.

MUSIC NOTES.

THE performance of the "Messiah," at the Albert Hall on New Year's Day attracted a very fair audience; the cheap places were full. The solo vocalists were Miss Macintyre, Mme. Belle Cole, and Messrs. E. Lloyd and Norman Selmond. Mr. Barnby's choir is, of course, well at home in the choruses.

THE Popular Concerts recommenced on Monday evening. Herr Stavenhagen was the pianist, and for his solos he chose Chopin's D flat Prelude and Liszt's Rhapsodie in C sharp minor. His reading of the former was good, though somewhat artificial. He plays Liszt remarkably well, but this composer's music is out of place at these concerts. Herr Stavenhagen was recalled three times and played a piece by Schubert. The programme also included Brahms's Sextet in G, led by Mme. Néruda. Mr. William Nicholl was the successful vocalist.

LITERATURE.

PRESBYTERIANISM AND THE LONG PARLIAMENT.

Minutes of the Manchester Presbyterian Classis.
Edited by William S. Shaw. Part I.
(Printed for the Chetham Society.)

IN this and the forthcoming volumes Mr. Shaw proposes to edit the minutes of the Manchester classis; and when this is accomplished, to do the same for other records of Long Parliament and Commonwealth Presbyterianism. With the modesty of a true historian, he refuses to sit in judgment on English Presbyterianism during its temporary exaltation until the whole of the available documents are before him. For the present he contents himself with reminding his readers that they will have to abandon the received opinion that Presbyterianism was established only in London and Lancashire.

In the meanwhile, till his larger subject is ready for him, Mr. Shaw presents us with a thoughtful and carefully prepared preface detailing the steps by which the Long Parliament was brought to adopt the Presbyterian system. If the facts which he adduces are for the most part already known, he often throws new light on an old story by his method of handling them, especially by bringing into prominence the indecision of the Long Parliament in its early days, before its detestation of the Laudian system had led to any clear conception of the constructive legislation needed to replace it. He then passes to the Root and Branch Bill, as instancing the kind of legislation which an English House of Commons of that day would, if left to itself, have been likely to propose; while he regards the acceptance of Presbyterianism in 1643 as a mere concession to a political necessity, and a capitulation to the Scots, necessitated by the military exigencies of the time.

Mr. Shaw's treatment of the subject has all the strength and some of the weakness of the specialist. The story of the ecclesiastical proceedings of the Long Parliament taken apart gains in interest, but it loses something in completeness. Mr. Shaw has a tendency to rely too much on his knowledge of the debates in the House, and to leave out of sight the course of political events by which those debates were influenced. In his account, indeed, of the ecclesiastical debates of February, 1641 (p. 13), he is, doubtless, right in arguing that I have written elsewhere rather too strongly of the actual formation of two parties at that date, though it still seems to me that the parties may fairly be described as in process of formation at the time. Where he fails to satisfy the inquirer is

in his sudden leap from the debates of February to the Root and Branch Bill in May. We want to know why the House of Commons—which was in so hesitating a mood in February that it could not make up its mind as to the abolition of episcopacy, because it knew not what system to substitute for it—nearly three months later agreed to a drastic measure for the entire overthrow of the bishops, and for giving the power of ordination to presbyters and the power of jurisdiction to lay commissioners.

The real cause of the change is undoubtedly to be found in political considerations from which Mr. Shaw shakes himself free. Nor is it only the general setting of this picture which is adversely affected by his mode of treatment. He objects to the statement—which he fathers on me—that the production of the Bill for restraining bishops and other persons in holy orders from intermeddling with secular affairs was a compromise between Falkland and Hampden. I am afraid that I must acknowledge that my own language (*Hist. of Eng.* ix. 347) is not so clear as it ought to have been; but Mr. Shaw misunderstands the point altogether. The compromise did not lie in the bringing in of the Bill; but, as he will see by my note at the foot of the page cited above, in Hampden's engagement that if the Bill passed "there would be nothing more attempted to the prejudice of the Church." This statement is Clarendon's, not mine; and Clarendon's authority, when he reports words of Falkland in the part of his History which he wrote in Seilly and Jersey, stands deservedly high. It looks as if Hampden had engaged not even to move in the matter of so-called primitive episcopacy, though it is quite possible that he really only promised to take no further step without Falkland's concurrence.

To turn to another matter, Mr. Shaw's account of the bringing in of the Root and Branch Bill can hardly be considered satisfactory. He rejects the notion that Dering brought it in with a view to frightening the Lords into passing the Bill for excluding the clergy from secular callings, without the omission of the clause forbidding the bishops from voting in the House of Lords, on the ground that the Root and Branch Bill was only brought in on May 27, whereas that clause had been rejected on May 24. This argument rests, I venture to think, on a mistaken view of parliamentary procedure. When the Lords reject a clause in a bill sent up from the Commons, that clause is not, as Mr. Shaw imagines, dead. Its rejection, unless the Lords subsequently, as they did in this case, throw out the Bill, is in the nature of an amendment. The amended Bill must return to the Commons; and if the Commons insist on rejecting the amendment, there will be a conference between the Houses, in which the Lords would be asked to reinstate the clause. Curiously enough this view of the case receives support from a passage in Dering's speech, which Mr. Shaw has printed without perceiving its significance.

"When this Bill is perfected," says Dering (p. xcii.), "I shall give a sad 'aye' unto it, and at the delivery in thereof I do now profess

beforehand that if my former hopes of a full reformation may yet revive and prosper, I will again divide my sense upon this Bill, and yield my shoulders to underprop the ancient, lawful, and just episcopacy," &c.

The italics are my own, and the words so printed seem to me to point to Dering's belief that the bishops' exclusion clause was not in Dering's opinion incapable of revival.

The criticisms which I have made do not in any way detract from my sense of the high level of excellence to which Mr. Shaw's work attains. It is much to be able to handle materials so admirably as he has for the most part done. And those who are best qualified to measure the value of his Introduction will be most ready to predict that he will, at no distant time, acquire the habit of keeping in mind all the influences bearing on the actors on the stage, even when they are excluded from the narrative by the limitations which the author has imposed on himself. Mr. Shaw has set himself to discover how it came about that an English Parliament adopted a foreign system of church-government. It is an interesting quest, and Mr. Shaw has shown himself worthy of undertaking it.

SAMUEL R. GARDINER.

Essays in English Literature, 1780-1860. By George Saintsbury. (Percival.)

IN the first essay in this volume Mr. Saintsbury has some sentences to the effect that the mere expression of liking or the reverse is not criticism, and that the distinguished man who said "J'aime mieux Alfred de Musset" could hardly claim to be considered a critic in virtue of that remark. The truth of this verdict is so obvious that we might be disposed to disparage it as a truism, were it not for the fact that much of what goes by the name of criticism is simply a translation into very literary English of those simple sentences "I like this" and "I don't like that." Still, true as it is that personal emotion must possess some sort of intellectual justification before the expression of it can have any critical value, enjoyment being one thing and intelligent admiration another, it is none the less true—so far, at any rate, as the ordinary human being is concerned—that, if one enjoys a book very heartily, one has not much difficulty in producing justifying reasons for such pleasant emotion. That these reasons will satisfy anybody but the reasoner is by no means certain. He, however, has done his best, and his best is all that the world has a right to expect from any man.

It follows, therefore, that as one person who has read this volume of essays with unmistakable gusto is called upon to appraise it, he is bound not merely to record, but to vindicate his experience—to provide for it that justification which is a *sine qua non* of criticism. Other things being equal, an object or quality which is intrinsically delightful or valuable gains an extrinsic delightfulness or value from the fact of its rarity; and perhaps the one quality which is rarest in the critical writing of the day is simple common sense. Mr. Goldwin Smith made a singularly happy hit in that gently scathing *obiter dictum*: "Criticism is be-

coming an art of saying fine things," the sting of the remark lying in what is implied rather than expressed—that the fine things are really things fantastic, far-fetched, paradoxical. In these delicacies Mr. Saintsbury's pages are mournfully deficient. He is clearly of opinion that a man of intelligence who loves literature and knows it, and whose love and knowledge have begotten a desire to say something about it, may trust his thought to produce the telling effect of freshness even if it be presented in its most simple form, and does not therefore think it necessary either to file it to the sharp angles of paradox or drape it in the vesture of oracular epigram. A living master of creative work, who would do well not to leave his last, once wrote of a distinguished brother novelist, "He is the greatest of the wits because he is greater than his wit." This is a noble example of the new criticism as Mr. Goldwin Smith conceives it; and it may be safely said that Mr. Saintsbury neither could if he would nor would if he could attain unto it. And this for two reasons—first that he always knows what he means; and, second, that he seems to consider it fitting so to write that other people shall know it too. One may agree with Mr. Saintsbury or one may disagree with him—I have had both experiences in reading his book—but one never has any difficulty either in understanding his thought or in seeing how he came by it; and it may be remarked that this latter knowledge is as essential to intelligent enjoyment as the former. For example, he seems to me to be rather unduly hard on the defects of Leigh Hunt and Jeffrey, and correspondingly lenient to the defects of Lockhart; but moderately careful readers will have no difficulty in finding Mr. Saintsbury's point of view, and when they have found it they will see how to anyone occupying it things must seem thus and thus. He thinks that Hunt was sometimes vulgar, and that Jeffrey was sometimes gushing; and his hatred of vulgarity and "gush" is so fervid that, though he praises the work of both men with generosity as well as discrimination, many people whose dislike of these defects is as genuine as his own will feel that on the whole Hunt and Jeffrey are treated with something less, and Lockhart (who was free from these sins) with something more, than absolute justice. Absolute justice, however, like Clough's *summum pulchrum*, "rests in heaven above": on earth we may well be content if judges will supply us with hints which enable us to discern the "relativity" and, therefore, the fullibility of the verdicts.

The word "judges" in the last sentence came spontaneously to the end of the pen. But it is a word which in a survey of Mr. Saintsbury's book must be paused upon for a moment; for there could be no better illustration of the saving common sense that gives his writing such a charm for simple folk than his vindication in the opening essay of the essentially judicial character of all criticism worthy of the name. It is unfortunate that it should be necessary, but as a matter of fact it is necessary, to remind the world that

"the most admirable discourses from th^o

merely literary point of view on taste, Shakspeare, and the musical glasses, with some parenthetic reference to the matter in hand, are not criticism. There must be at least some attempt to take in and render the whole virtue of the subjects considered, some effort to compare them with their likes in other as well as the same languages—some endeavour to class and value them."

"To compare them with their likes"—that must surely be the most fertile method of criticism; and any protest, though it may be valid as against certain kinds of comparison, is powerless against comparison in itself. Mr. Le Gallienne, in his recent book *George Meredith: Some Characteristics*, admits that "the comparative method has its uses," but goes on to lament that "latterly it has sadly overgrown them, and the critics are all too many who tell us who and what an author is like and not like, but leave us almost wholly in the dark as to what he *is*." By all means let the critic tell us what a literary work is; but is it not impossible to do this without some comparison expressed or understood? For if we analyse any positive characterisation we find that it is nothing but a disguised differentiation. When we say "negroes are black" we make no verbal comparison, but the representative value of the epithet "black" lies in our knowledge of other races who are brown or yellow or white. And when, to take an illustration from this volume, Mr. Saintsbury exhibits the presence of certain qualities in the work of Crabbe which make him a great writer, and the absence of other qualities necessary to make him a great poet, or, indeed, a poet at all, he can only make his view—which is a positive thing—realisable or even comprehensible to us by a series of sentences which, whatever they may be in form, are comparative in essence.

"As far as mere treatment goes, the fault of Crabbe is that he is pictorial rather than poetic, and photographic rather than pictorial. He sees his subject steadily, and even in a way he sees it whole; but he does not see it in the poetical way. You are bound in the shallows and miseries of the individual; never do you reach the large freedom of the poet who looks at the universal. The absence of selection, of the discarding of details that are not wanted, has no doubt a great deal to do with this—Hazlitt seems to have thought that it had everything to do. I do not quite agree with him there. Dante, I think, was sometimes quite as minute as Crabbe; and I do not know that anyone less hardy than Hazlitt would single out, as Hazlitt expressly does, the death-bed scene of Buckingham as a conquering instance in Pope to compare with Crabbe. . . . I think myself that a poet, if he is a poet, could be almost absolutely literal. Shakspeare is so in the picture of Gloucester's corpse. Is that not poetry?"

Here it will be seen that explicit comparison begins with the reference to Dante, and is continued by the references to Pope and Shakspeare. But the foregoing sentences are as essentially comparative; for the reader is compelled to think of Crabbe as distinguished from other great writers who are poetic but not pictorial, who, when pictorial are not photographic, who deal with the universal rather than with the individual, who select details instead of throwing them down pell-mell. How otherwise, the simple-minded person

must ask, could he have communicated intelligibly his view of Crabbe as he *is*?

Of course, what has been just said concerns Mr. Saintsbury's general method, not his particular opinion; and, indeed, it is obviously impossible in the course of a brief review to discuss his critical verdicts one by one. Many of them are so clearly just that it is impossible to imagine their being questioned by any intelligent person, and yet they are often expressed with such freshness that they have much of the stimulation of novelty. For example, the work of De Quincey has a certain charm which is felt by every cultivated reader; but the nature of that charm has never been so aptly described as in the sentence where Mr. Saintsbury characterises De Quincey as "a scholar of the best and rarest kind—the scholar who is exact as to language without failing to comprehend literature, and competent in literature without being slipshod as to language." Not less admirable are the passages devoted to Wilson's criticism and to Moore's songs, the analyses of the characters of Hogg and Jeffrey, and the defence of the early critics—often so fatuously abused—of Wordsworth and Tennyson.

Here and there agreement is less easy. It is impossible, even with the help of the note in the Appendix, to feel that Mr. Saintsbury establishes his charge brought against De Quincey of untrustworthiness as a narrator; and the statement that the style of Dickens exhibits marks of the influence of Hazlitt is one to which few students of either writer will yield ready assent. These things are, however, small matters; but at a time when criticism has become so largely irritating and sterile rather than instructive and fruitful, it is no small matter to have an opportunity of reading and profiting by such bright and brave common sense as is to be found in these essays of Mr. Saintsbury's.

JAMES ASHCROFT NOBLE.

Royal Edinburgh. By Mrs. Oliphant. (Macmillan.)

THERE are so many good things in this book that it would be ungracious—although it would not be unnatural—to cast about for its *raison d'être*. Edinburgh seems to stand in need of an *éloge* every ten years or so—much as Burns requires to be toasted once a year, on January 25; and Mrs. Oliphant is better qualified to pronounce the latest panegyric than any living Scotch writer, not even excepting Mr. Stevenson. For the east wind of Mr. Stevenson's native city has obviously entered into his soul and dashed sentiment with censoriousness. But there is no east wind in Mrs. Oliphant's love for the Scotch capital. She has done well, too—from the standpoint of mere picturesqueness—in looking at Edinburgh exclusively from the "Royal" point of view. The Edinburgh she confines her attention to is associated with tragedy and pathos, but never with squalor or pettiness: it is not the Edinburgh of the Cowgate or even of the purlieus of the Parliament House, but that Edinburgh which affects the visitor as no other city affects him

if he is fortunate enough to view it first on a moonlight night from Prince's Street. Mrs. Oliphant has not only taken Edinburgh at its best—or at least at its most picturesque and most dignified—but she has secured the aid, for purposes of illustration, of Mr. George Reid, one of the ablest of living Scotch artists. Mr. Reid has done very much better work than the realisations here given of Edinburgh as a whole under different aspects, and of its more truly "Royal" nooks and corners. He seems too fond of snow effects, which have suffered under the engraving process. But most of the illustrations are, nevertheless, very good.

Royal Edinburgh has been written on a special plan; but, perhaps because it has been so written, it is a good deal too long and a great deal too discursive. Mrs. Oliphant centres the narrative portion of her book round various personages of distinction, whom she classifies as saints, kings, prophets, and poets; and naturally enough she gives the first place to Queen Margaret, the wife of Malcolm Canmore, but for whom in all probability not Edinburgh, but St. Andrews, or Dunfermline, or Perth, would have become the capital of Scotland. Queen Margaret, as being not only a saint of a kind, but a capable woman eminently fitted to do the work of governing and helping to civilise a backward and semi-barbarous country, undoubtedly deserved a fair share of Mrs. Oliphant's attention—although is there not the echo of "that blessed word Mesopotamia" in such a description of her as that she "lived by love and died of grief, and reigned and rejoiced and triumphed as well as suffered and prayed?" At the best she is somewhat of a phantom, if not of a myth, and she hardly deserves so much as forty pages in a volume of this kind. After Margaret come the leading Stewart kings, who, unlike Robert Bruce, are associated with Edinburgh, and whose names suggest not a little of the romance and of the social anarchy of Scotch history during the pre-Reformation period. It is quite intelligible that James the First, as at once "poet and legislator," should have ample justice done to him—he was perhaps the one statesman of the dynasty to which he belonged, or, at all events, of the name which he bore—but James the Fourth, "knight-errant" though he was, is not such a remarkable personality, and in two senses he gets more than his due here. When, however, Mrs. Oliphant comes to the period of Edinburgh history during which Queen Mary and John Knox were the leading figures, she ceases to be diffuse. Indeed, it would be difficult to find anywhere a fairer or more picturesque account of the Reformation struggle in Scotland than in the chapters which deal with this subject. Mrs. Oliphant has no favourites or prejudices; or, if she has, she conceals them most effectually. Her sympathies, it might naturally be imagined, would not be with such an iconoclast as Knox—would rather, in fact, be with Mr. Skelton's hero, Maitland of Lethington. But she sees clearly that popular feeling has been right in regard to the character and relative importance of the men who took part in the struggle; and

that Knox was the true centre of what was after all a national and not merely an ecclesiastical movement, although he was "incapable of that crowning grace of the imagination and heart which enables a man to put himself in another's place, and do as he would be done by." Mrs. Oliphant also duly recognises the massive self-respect—it cannot properly be styled egotism—of Knox, more particularly in her description of his death. "He lay for about a fortnight dying, seeing everybody, leaving a charge with one, a prophecy with another, with a certain dignified consciousness that his death should not be merely as other men's, and that to show the reverential company of friends who went and came how to die was the one part of his mission which had yet to be accomplished."

In the concluding part of her book, to which she gives the title of "The Modern City," Mrs. Oliphant writes of Ramsay, Burns, and Scott under the titles of "A Burgher Poet," "The Guest of Edinburgh," and "The Shakspeare of Scotland." These chapters are neither more nor less than good magazine essays of a rather conventional kind. Mrs. Oliphant has a great deal to say of Scott and Burns that is interesting, but nothing that is new. Altogether, she may be congratulated on having, with the aid of Mr. Reid, produced what is likely to be regarded for many a day as *the Book of Edinburgh*.

WILLIAM WALLACE.

Edward VI. and the Book of Common Prayer: an Examination into its Origin and Early History, with an Appendix of Unpublished Documents. By F. A. Gasquet and E. Bishop. (John Hodges.)

THIS volume is one of the most interesting and valuable contributions to the study of the Reformation in England that has appeared for many a day. There will, of course, be among readers differences of opinion as to the justice of the judgments expressed from time to time by the writers upon the course of ecclesiastical affairs at the period treated of; but there can be no difference as to the importance and the interest of the documents now published for the first time.

It is certainly strange that, notwithstanding all the keen interest felt in the history of the Book of Common Prayer, liturgical documents bearing plain marks of Archbishop Cranmer's handiwork should have been allowed to lie hidden up to this time in so well-known and accessible a collection as the Royal MSS. in the British Museum. Dom Gasquet and Mr. Bishop have printed in this volume two schemes prepared or, at all events, revised by Cranmer for a reformed Breviary, including his attempts at construction of a Calendar and Lectionary. To these they have added "certain notes touching the disputations of the bishops in this last parliament assembled [*i.e.*, 1548-9] of the Lord's Supper." The interest of the last document is diminished by the meagreness of the notes, and by the fact that the theological views of the more eminent speakers and the character of their reasoning are, for the most part, known to us

otherwise. But still, the disputation having been referred to by more than one contemporary writer, it is satisfactory to get even a glimpse of so animated a discussion on the most sacred subjects as occupied the House of Lords on three successive days at the close of 1548.

The preparations (and they were carried a good way towards completion) for a reformed Breviary which are exhibited in this volume serve to illustrate, as the editors point out, the petition (Nov. 5, 1547) of the Lower House of Convocation of Canterbury "that the labours of the bishops and others, who by command of Convocation had been engaged in examining, revising, and setting forth (*et edendo*) the Divine Service, should be produced and should be submitted to the examination of this house."

The main influence that seems at work in this revision is that of Quignon's Breviary, which both in general construction and in detail is adopted as a model.

"The relation of the projected office to that of Sarum is more simple. The Archbishop appears to have used this [the Sarum] Breviary as a quarry from which to take his materials, when not quite satisfied with the new Roman office." (p. 25.)

In passing, I may say that, had I been translating the Latin of the resolution of the Lower House of Convocation, I would have translated *reformando* by the word "reforming" rather than "revising," which latter rendering seems to obscure the extent to which Convocation had committed itself. It was, in fact, no more than Quignon had done (with the approval of Paul III.) in his "Breviarium Reformatum." It was what had been contemplated by the Provincial Council of Cologne of 1536, as we find in the Canons (Tit. II., cap. xi.).

"Videbimur ergo operae precium facturi, si Missalia perinde atque Breviaria pervideri curemus, ut amputatis tantum superfluis et quae superstitionibus invecta videri possint, ea tantum quae dignitati ecclesiae et praeis institutis consentanea reliquantur."

The first scheme for the English reformed Breviary does not, in respect to the omission of antiphons, follow the first text of Quignon. Either Cranmer and his associates had learned that Quignon had, under pressure, in the later forms of his text restored antiphons, or independently they were loath to sacrifice this very beautiful feature of the mediaeval service books. It is to be deeply regretted that the Prayer Book of 1549 and its several descendants are lacking in this admirable device for sounding not only the musical key-note, but the key-note of devotional feeling. In this particular the second Breviary scheme, printed in the volume before us, set the unhappy example. This second scheme was much more radical in its changes. The canonical hours were reduced to matins and vespers, and the monthly recitation of the psalter is enjoined. In fact, it abounds in indications of the approaching form of the English matins and evensong of 1549. Its preface gives us the Latin original of several passages of the preface of 1549 not found in Quignon. The slight variations are often very instructive. The tone of the English preface is more moderate, and less

objurgatory in regard to the unreformed books and usages than the Latin. The evensong of 1549, with the beautiful features rescued from compline, is much superior to Cranmer's vespers.

In the second scheme three (and sometimes four) lessons are appointed for matins and two for vespers. They were to be read "non intra cancellos ut hodie sed foris e suggestu," and in the English tongue. The *Quicumque vult* was to be said every Sunday immediately after matins. It was not a substitute for the *Credo*; and this falls in, it will be remembered, with the soundest interpretation of the rubrics of 1549, relating to the use of the *Quicumque*. One learns from the study of these most interesting documents that even the acknowledged liturgical genius of Cranmer did not leap at one bound to his masterly construction of the English matins and evensong.

If Messrs. Gasquet and Bishop's volume contained no more than is indicated above, the book would, of necessity, have a place on the shelves of every student of the English Prayer Book. But besides the new material, the authors have exhibited in a very convenient form material already known as evidence on several moot points with historians of the English Church. Thus, the question whether the Prayer Book of 1549 ever received the sanction of Convocation is discussed with much ability, and the testimonies *pro* and *con* presented with an impartiality that is still too rare not to deserve a word of praise. The evidence is certainly very nicely balanced, though I hope that I am not unconsciously prejudiced when I say that the weight of testimony seems to me to lean rather in favour of the decision which our authors reject.

Among points of very real, though minor, interest may be mentioned our authors' contention that the form of the words of Institution is derived, not from the Mozarabic rite, as has been urged by some, but from the liturgy of "Brandenburg-Nuremberg" (1533). Our authors seem to me to have made good their contention, though they do not sufficiently recognise the intercourse that must have existed between Spain and England consequent on the marriages of Katherine. The benediction of the font is certainly from the Mozarabic; and if Cranmer were acquainted with the existence of a national, or at least non-Roman, rite in Spain, nothing is more probable than that he should have made enquiry as to its eucharistic formula of consecration. That a copy of the Mozarabic liturgy is not to be found among the books known to be Cranmer's is not more strange than that copies of Quignon's Breviary are also wanting. Mr. Edward Burbidge, in a communication to the *Guardian* (March 12, 1890), has put forward other reasons (though I must confess that those based on supposed resemblances between the collects do not seem to me very forcible) for supposing that the English reformers were acquainted with the Mozarabic rite. All this acknowledged, I still think that Messrs. Gasquet and Bishop have made good their case.

Dealing with the revision of 1552 (Edward VI.'s Second Prayer Book), Messrs. Gasquet and Bishop show in a most in-

teresting way that some of the most important changes in the Communion Service of that book were due to the desire to exclude the interpretations which divines of the "old learning" had put upon certain features of the first book. Thus, Gardiner, it will be remembered, signed a declaration that the First Prayer Book of Edward VI. was "godly and Christian." And (1) he argued that "adoration" is implied in the "Prayer of Humble Access" (where the priest and people were ordered to kneel) being placed *after* the consecration. Cranmer takes care that that feature shall not be relied on after 1552. Further (2), Gardiner argued that those whom Cranmer calls Papists agree with the teaching as to the presence expressed in the words of delivery. Cranmer alters these words in 1552. Again (3), Gardiner condemns Hooper's attack upon altars, and points to the use of the word in the Book of Common Prayer. Down comes Cranmer, at his first opportunity, and deliberately excises the word. Other examples of the influence of Gardiner's very effective dialectic are also given. It is plain that some of the changes of 1552 were due not necessarily to foreign influence, but to the exigence of the controversial position at home.

There is a school of recent writers in England that quite underrate the critical character of the English liturgical reform. Nothing was too minute to be weighed in the balance of the revisers' judgment. The criticism extended far beyond any particulars noticed in the volume before us. Even the venerated text of the Nicene-Constantinopolitan Creed in the Mass was subjected to a critical examination. Rightly or wrongly, the opening words of the *Gloria in excelsis* were brought into conformity with what was esteemed the correct Greek text of Luke ii. 14. The Athanasian Creed was certainly translated from a Greek text. If there was a conservative spirit in the English reformers' work, it was certainly not conservative through timidity.

There are a few points to which, did space permit, I should demur, but I must content myself for the present with one observation. Most students of history will form a different estimate, I think, from that of our authors as to the intelligibility of the Latin service to the people generally in times past. Even for people who could read (and that was a comparatively rare attainment) it was not infrequent to prefix English rubrics with the prescribed direction as to how the Latin prayer was to be used. This is surely a highly significant fact. Many examples will be found in the *Sarum Horae*. Nor do we think that the old German citizen, "pius quidem sed minime cultioris ingenii," using in Dr. Daniel's hearing the phrase (p. 238), *Plat voluntas tua*, or such like, in his talk, goes very far to establish the authors' opinion in regard to the present day.

We must not, however, delay over such minor and trifling particulars, in which a difference of view is perhaps inevitable. We gladly recognise in this book a very thorough and scholarly piece of work, written in a spirit of fairness that is worthy of all praise.

One's eye is often offended by peculiarities

of typography that suggest a foreign printer; and there are a good many errors of the press (as at pp. 3, 166, 169, 326, 351, 360, 376, &c.), which will doubtless be corrected in the new edition that must soon appear.

J. EDENBURGEN.

TWO BOOKS ABOUT MEXICO.

Face to Face with the Mexicans. By Fanny Chambers Gooch. With 200 Illustrations. (Sampson Low.)

"THE STORY OF THE NATIONS."—*Mexico.* By Susan Hale. (Fisher Unwin.)

NEITHER of these books can be praised from a literary point of view; but the faults of style have a very different result in each. The slipshod colloquial writing of Mrs. Gooch hardly mars the effect of her minute descriptions of the daily life, the manners, the housekeeping, the marketing, the cookery, which picture to us the population among whom she has lived. The very *naïveté* of her language gives the impression of greater sincerity. But in the more serious historical work of Mrs. (or Miss) Hale it is far otherwise—inexactitude of language, and careless composition, are there a real defect.

Mrs. Gooch, who apparently had never before left her native land, looks upon Spanish Mexico (we do not mean Aztec Mexico with its unknown past) as a land of vast antiquity. She speaks of it as an Englishman would speak of a visit to Greece or to Italy. In her eyes the churches are Gothic, and the houses Moorish; of the style of the Renaissance and its debasements she seems never to have heard. She tells of wonders which less enthusiastic visitors have never dreamt of; of "an emerald three quarters of a Spanish vara in length, which served as the *ara* or consecrated stone on the altar of the church"; and she adds, "This is historical." Yet, in spite of—perhaps by reason of—this simplicity, a true impression is left on the mind of the reader of the thoroughness of the work of the early Spaniards, and how vast and solid were their constructions.

Our authoress rarely distinguishes between what is Spanish and what is really Indian or Mexican, produced by the conditions of life and climate; but she looks on all with kindly eyes. She considers the Mestizos to be the handsomest race in Mexico, and is not shocked at a lady being proud of her Indian blood. Even when the *costumbres* jar most against her Yankee habits, she is not bitter nor irritated. She likes the gentle speech, the soft voice, the quiet, almost helpless, ways of the people. She enters into the poetry of their lives, delights in their songs, shares their love of flowers, disdains not their sensitive melancholy. She sometimes spoils the effect of her pictures by exaggerated praise. Daughter of a republic, to her all republicans are good. Treason, cruelty, assassination, wholesale public robbery, repudiation of debt, are recounted without a word of blame when done by patriots. Ithurbide is an object of admiration, but Juarez is her chief hero:

"Juarez seemed to have been born to redress the wrongs of his times. The memory of Juarez

is undimmed by the shadow of aught that would detract from his glory. Had he never done another act save that of divorcing Church and State, his name would for ever remain embalmed in the hearts of his people."

So, too, in social life she can see nothing wrong in those who have been personally kind to her; their houses, the furniture, the management of their estates, all is perfect. She seems to have learnt Spanish colloquially and fluently, and makes good use of her knowledge in noting the cries, the nursery rhymes, the songs of the people; but she commits the oddest blunders where something more than car-knowledge is required. There is too much padding, almost of the advertisement kind, in the book. Yet, after all, with its copious and useful illustrations, its *naïveté*, its unconscious ignorance, its blind partiality, its transparent sincerity, we are constrained to admit that this volume is better worth reading than many an one of far higher literary pretensions.

We are sorry not to be able to give equal praise to Mrs. Hale's *Mexico*. She has evidently undertaken a task beyond her strength. In her earlier chapters she gives a fair epitome of two of the traditions of the Mexican tribes or nations, and of the theories of their origin—viz., from the submerged Atlantis, or from the mound-builders of the North; but she seems unaware of the strong arguments there are for the recent erections of these mounds, and for the theory which would derive the Mexican races from South-Eastern Asia passing through the islands. The story of the conquest of Cortés, the deductions to be made from the exaggerated accounts of the early Spaniards, the extent to which they were helped by divisions and by alliances with some of the native tribes, are well indicated; but the period of Spanish rule is very badly told. Justice is indeed done to the Franciscans and to the good intentions of some of the Viceroy; but it is difficult to gather from this sketch what were the grounds of the dissatisfaction with the Spanish rule, unless it arose from a vague feeling for independence. The revolutionary period that follows is even worse narrated; some pages are almost unintelligible. The war with the United States and the episode of Maximilian are dealt with in somewhat better guise; and the concluding chapters, on the physical advantages and on the future of Mexico, contrast favourably with the rest. In historical narrative our authoress wholly fails; nor does she distinguish clearly between the different populations and races in Mexico. Whether "Mexican" means in any given case, Indian, Mestizo, Creole, or Spaniard, is left to the perspicacity of the reader to determine. The map is exceedingly poor, but that is probably not her fault; the illustrations are better. But certainly the story of Mexico should be told in different fashion from this.

WENTWORTH WEBSTER.

NEW NOVELS.

A Life Sentence. By Adeline Sergeant. In 3 vols. (Hurst & Blackett.)

Homburg Beauty. By Mrs. Edward Kennard. In 3 vols. (White.)

Handfasted. By A. C. Bickley and G. S. Curryer. In 3 vols. (Ward & Downey.)

The Little One. By Eleanor C. Price. In 2 vols. (Bentley.)

The Flowing Tide. By John Littlejohns. (S. J. Kilby.)

Hadassah; or, from Captivity to the Persian Throne. By E. Leuty Collins. (Fisher Unwin.)

A Life Journey from Mannheim to Inkerman. Edited by Edward Barrington de Fonblanque. (Ward & Downey.)

F. R. S. and other Stories. By William H. Staepoole. (Dean.)

MISS SERGEANT'S new novel, *A Life Sentence*, is the story of the expiation of a crime. If there are times when a few sentences put into the mouth of one of the characters would have cleared up the mystery, on the whole the interest is well sustained. Hubert Lepel has a sister, Constance, who has formed a *liaison* with Sydney Vane, a country squire. The latter is already married, but to escape his bond she and Constance decide to elope. On the night before the flight, however, Vane is murdered, and one Westwood is arrested for the crime. The circumstantial evidence against him is irresistible, and he is condemned to death. But a life sentence of penal servitude is substituted as the result of a reprieve, and after some years of convict life Westwood escapes and appears under another name. He discovers his daughter under the disguise of a popular singer, Miss Cynthia West, who—to complicate matters—is engaged to Hubert Lepel. Hubert, to save his sister's honour, had shot Vane in a duel; but he was afraid to give himself up, and very despicably allowed Westwood to bear the shame and punishment of his deed. Miss Enid Vane, the daughter of General Vane, bears a great part in the unravelment of the plot. Constance, who had married Enid's father for his property, foists a son upon him, and endeavours to poison Enid. It would be unfair to trace all the steps of the avenging Nemesis, as described by the author; but it may suffice to state that righteous judgment is at length executed all round, with the minimum of retribution for the chief culprits. There are several touching scenes in the course of the three volumes, the saddest being that in which General Vane becomes aware of the deceptions of which he has been made the victim, and which are so insupportable to a man of honour that he falls, stricken with death, on the spot. Miss Sergeant has written a novel that is notable if not brilliant, and readable if not profound.

A Homburg Beauty is very vivaciously written, with life and movement all through it. The "beauty" in question is Hetty Davidson, the daughter of a Manchester manufacturer. Mr. and Mrs. Davidson are very material creatures, and the latter has a perfect mania for the aristocracy. An

English lord can make her tremble with delight when he addresses her, while she is ready with positive worship for a German prince or princess. Between her father and mother Hetty is almost bored to death; and at the opening of the novel she threatens either to die of dullness, or run away with the first masculine creature who should be good enough to propose to her. However, the family visit Homburg on account of the father's health, and at that fashionable place of resort Miss Davidson finds pleasure and excitement enough. Her beauty makes quite a sensation, and all the male residents are mad after her. She rejects the love of an honest man, however, and marries six feet of masculine beauty in the person of a penniless German officer, only to repent it ever afterwards. Her heartless husband deserts her for a public singer; and she returns to England hoping to be received by her father, who angrily cast her off upon her marriage. Tragic indeed is her end. It is powerfully depicted by Mrs. Kennard, and comes upon the reader like a shock after the scenes of simple gaiety and frivolity which have preceded it. The author is known for her cleverness in describing sporting scenes; and her picture of the great steeple-chase, in which the heavy German officer wins against the most famous English rider, is extremely graphic. With all its faults—and it is certainly not without them—*A Homburg Beauty* is unquestionably entertaining.

A curious Wessex custom forms the basis of *Handfasted*. By a brief ceremony known as "handfasting" young couples were united for a twelvemonth and a day; and if after that they were mutually agreeable, the ceremony of marriage was solemnised in church. Such an illegal union took place between Arthur Crosby, afterwards Earl of Grass-thorpe, a Jacobite peer, and Elsie Steele, a pretty village maiden of Winterbourne, the heroine of this story. Poor Elsie was under the impression that the ceremony was as good as a marriage, and a great deal of trouble ensues when the union is repudiated. All, however, comes right at last, after much suffering on both sides; and we take our last glimpse of hero and heroine as a happy couple actually married. The novel has many pleasant points, and the incidents are well told. The various characters also are very fairly drawn. Mrs. Tyler is amusing. When reminded that "we be all sinners, as parson says," she remarks, "That wor his funnin'." *Handfasted* has several strong situations, in addition to many humorous ones.

The story of *A Little One*, by Miss Price, is tender and touching. In a peaceful Yorkshire village, not far from the sea, resides Mr. d'Alby, with his two grandchildren, Nora and Agnes. Mr. d'Alby is a dispossessed French count, though the strange ways of Fate have made him an English clergyman. Into this happy home one Gilbert Wolfe obtrudes himself. He is handsome, but has a past that must not be investigated; and he proves a veritable wolf in sheep's clothing. We are not sure from the narrative that both the girls did not fall in love with him; but it was Agnes, "the

little one," who became his victim. Easily persuaded to elope with one whom she regarded as everything that was good and noble, it was only when travelling in Italy that she learnt the terrible truth, that her paragon had another wife living in some distant part of the world. The frail human flower withered from that moment, and returned home to die. Miss Price's novel is charmingly written, and is far above the average in literary merit.

The Flowing Tide is the most foolish and bombastic story it has ever been our lot to read. It is a political novel, in which Mr. Littlejohns, alone and unaided, stands forth to repel

"the attacks now being made on our country's religion by the Radical party, which, like a rising flood, are sapping the foundations of England's institutions, obliterating the landmarks of her national faith, and threatening to overthrow her in the whirlpool of atheism."

Mr. Littlejohns saves England through his hero, Aubrey Langton, who is sixteen years of age when we make his acquaintance, and twenty-one when the story closes. But never was such a David seen for grappling with the Goliaths of evil. During this brief period of five years he practically dethrones atheism, undoes all the evil Mr. Gladstone has wrought through his protracted career, shatters the revolutionary and infidel party, and places Conservatism on a durable basis, such as it had never seen since the days of Pitt. Having executed this large order in all its fulness, Mr. Langton prepares to go to the university to complete his education. This is an astounding work, and the Recording Angel plays the same part in it that Charles I. did in Mr. Dick's memorial. On p. 44 the Recording Angel is engaged in "writing up the decrees of human history"; on p. 59 he threatens to inscribe upon an imperishable tablet the "stupendous record of England's shame," if Parliament supports the cause of the atheist (Mr. Bradlaugh); on p. 73 Langton pledges himself to study a certain great political question "under the tuition of the Recording Angel"; on p. 110 it is prophesied that the Recording Angel is to blow a trumpet that shall wake the dead; on p. 144, we read: "Must this abominable Radicalism climb the heights of conquest, and only be arrested by the commission of the Recording Angel?" Passing next from the rôle of a policeman, the celestial dignitary is to appear as the great roller-up of the monuments of human history. Finally, in the closing chapter, the Recording Angel rides on a cloud of purple and gold, accompanied by the records of human history; and in this, which is positively his last appearance, he accomplishes an enormous amount of valedictory work in the winding up of empires, &c.

It is *Hadassah* Mr. Leuty Collins has practically rewritten the story of the Book of Esther, in the light of Mr. Rider Haggard's *She*. After a dispassionate study of both works, we prefer the original. It may be a little antiquated, but it will yet outlive any number of *Hadassahs*. And what shall be said for the designer of the illustrations facing pp. 84 and 324?

A Life Journey from Mannheim to Inkerman is a volume constructed from the reminiscences of an army surgeon. Though many of the anecdotes are of little value, a few are so striking as to justify Mr. de Fonblanque in acting as editor, and presenting the volume to the public.

A similar observation applies to Mr. Staepoole's *F. R. S., and other Stories*. If one or two of them fall below the average, it would, on the other hand, be difficult to find short stories excelling "Nellie Hales" and "Seratched Out" in originality of incident.

G. BARNETT SMITH.

RECENT LITERATURE.

The Freytag Reminiscences. In 2 vols. Translated by Katherine Chetwynd. (White.) It has become a general fashion, as often honoured in the breach as in the observance, to write Reminiscences; but there is ample excuse in the case of Gustav Freytag, whose recollections extending over a long life are now presented to the English public in a graceful and sympathetic translation. For the veteran novelist not only has a good deal to say about the literary and academical circles in which he has moved, but has also had the good fortune to have been in contact with several of the statesmen and generals who have been among the foremost makers of modern Germany. His observation, however, has been genial rather than piercing. The reader must not look for new light upon historic characters or new insight into great events. Freytag, although he took some part in politics himself and warmly supported the movement organised in the National Liberal party, appears to have always occupied the rôle rather of a spectator than of an actor in the struggle or of a trusted counsellor. The consciousness of constitutional incapacity for taking an active part was keen with him, and he was never happier than when he could fall back upon the musings of his childhood and the recollection of the simple life and surroundings of his forefathers. And it is in the description of his early life and of the character of his immediate ancestors that the principal interest of these volumes lies. As in many other German families of the same class, the records of the Freytags—who were prosperous farmers on the Polish border—were carefully handed down and passed from one generation to another. The excellent material which this reverent tradition gave the novelist proved a rich quarry, and has been shrewdly worked. The small frontier town, with the old wooden church hard by an ancient heathen circle, the melancholy forest and waste around, and the simple and devout life of its inhabitants, have given the local colouring to the most popular of his works, *Aus einer Kleinen Stadt*, which has touched a deep chord in the German heart. More ambitious attempts in a more distant past have not the same distinctness. The figures and events have lost their outline in the haze of historical and philosophical theorising which has confused so many German novels in late years. But there are pages in *Aus einer Kleinen Stadt* which are excellent in their genre, and in connexion with them the novelist's recollections will be read with special interest.

"HISTORIC TOWNS."—*Carlisle*. By Prof. Mandell Creighton. (Longmans.) Mr. Creighton's compact volume is not only a history of the city of Rufus, but also in a great degree a sketch of life on the North-Western border. Romance and ballad poetry have thrown such a halo around the petty wars between England and Scotland that it is with a sense of something

like disappointment that we involve ourselves in the study of what really did occur in those wild days when cattle-stealing was one of the principal employments of a Cumbrian gentleman. Carlisle, as the great western fortress against the incursions of the Scotch, was often the scene of fierce combat. From the days of Henry II. down to the Forty-five there was never a turmoil in the Scottish Lowlands which did not arouse the burgers of Carlisle. The author has, one would fancy, an affection for the Border people. His chapters on "Border Life" and "Border Warfare" could never have been written by a mere antiquarian plodder. He is thoroughly at home in the mediæval history of the North, and his account of the reigns of the Tudor sovereigns is well executed. When, however, we arrive at the seventeenth century, Mr. Creighton's interest seems to relax. He makes, so far as we can test him, no mistakes; but he has not grasped his subject with all the firmness required. It was not only the time of the great struggle between the King and the Parliament, but also the era when the heads of the great Border families dwindled from petty despots into mere country squires. The change was noiseless. Its victims probably were not themselves aware of what was going on. It is, however, certain that by the time of William III. the existing notions as to rights of property and the power of the lord over his people had become fixed in the popular mind. The recent growth of our towns is generally left by historians pretty much to the imagination. It requires very different faculties to tell of steam engines and railways, lighting, paving, house-building, and the vulgar plots and counter-plots of election agents, to those called into play when men settled their differences by cold steel. Modern days have, however, an interest of their own, and we are never content when we find them slurred over. Mr. Creighton has devoted the last chapter of his book to the period between 1747 and 1881. It was obviously impossible to make such a chronicle picturesque; but he has done his best, though we think more might have been told of Parliamentary contests and the Lowthers.

Homes of Taste: Economical Hints. By J. E. Panton. (Sampson Low.) Mrs. Panton is certainly indefatigable in her efforts to introduce tasteful decoration into commonplace dwellings. She takes a gloomy view of the future condition—mental and moral—of the child brought up in the midst of "hideous surroundings, vulgar pictures nailed up against an ugly common paper, blinds which are never drawn up straight, things provided more on the grounds of their use than their beauty." But she does not waste her strength in mere denunciation of what is vulgar and inartistic. Her little book contains a large amount of information as to the best and most economical way of rising out of that monotonous or meretricious treatment of walls and furniture from which such disastrous consequences are to be apprehended. "Nothing," she says, gives one so much joy as the sight of admirably-arranged colours; and if she could only get her readers to see with her eyes, and neither trust their own uneducated judgment or the interested suggestions of the shopkeepers, life within doors would soon assume a brighter aspect.

A Book about London. By W. H. Davenport Adams. (Henry.) This is a book-made book, but readable. The author would scarcely himself dispute the fact that his stories have been told a hundred times before, and that his seasoning is not more novel than the distress. Still any book that is written on our great metropolis can hardly fail to be interesting, unless written in the spirit of a Dryasdust, which this is not. Mr. Adams divides his volume into three parts—stories about historic

scenes, stories of famous localities, and stories of crime and misadventure. The work before us would have been more suitable for the young, had these last been omitted, though in the opinion of the general reader this part of the book will probably be the most attractive. Short as must be our notice, we can not pass over one remark of the author without comment. In telling the story of Miss Reay's murder, by Mr. Hackman (her clerical lover), Mr. Adams mentions the well-known fact that Miss Reay was the mistress of Lord Sandwich and the mother of six children. No exception can be taken to this, but Mr. Adams need not have added the little known fact that one of these six children was a well-known barrister and literary contemporary of Lord Macaulay, who only died in 1851. It surely served no good purpose to name this gentleman as a son of the worthless Lord Sandwich and the unfortunate Miss Reay.

A Manual of Bibliography. By Walter Thomas Rogers. (Grevel.) A good manual of bibliography is greatly needed, but it has not been the fate of Mr. Rogers to fill this considerable void in English literature. His book is prettily printed; it has a coloured frontispiece, representing one of Zaehndorff's buildings, and also a number of woodcuts, most of them familiar to readers of books in typography. There is nothing fresh in the treatment, and Mr. Rogers's ideas of the boundaries of his subject are indefinite. He devotes a chapter to the invention and progress of printing, a chapter which is of the very slightest, for instance, omitting all reference to the important Avignon documents recently discussed in the ACADEMY; then there is a chapter on "The Book"; another on "The Ornamentation of a Book," while the third and last deals with "The Library and its Catalogue." In one of these we are told, "the father of the celebrated James Fox caused a copy of his historical works to be bound in the skin of a fox"—a curiously slipshod statement for a work of scholarship. In dealing with practical library details, Mr. Rogers passes over the "decimal classification" of Mr. Dewey in absolute silence. The list of books of reference is meagre. Altogether, the book is an example of a lost opportunity.

To the handsome volume of *Lord Chesterfield's Worldly Wisdom* (Oxford: Clarendon Press), which Dr. Birkbeck Hill has arranged and edited, is prefixed a critical introduction, setting out the main principles of the teaching which the peer wished to inculcate in the mind of his natural son; and there is an appendix containing the characters of his contemporaries in the political world. Dissimulation towards male friends, and dishonourable conduct towards the ladies whom he met in society were, of course, the principal notes in the teaching of Chesterfield. But outside these degrading passages—and there is no evidence that they injured the moral tone of the youth to whom they were addressed—there was much in the instruction that could not fail to improve. Witness, for example, the manner in which Chesterfield desired that servants should be treated, and the earnestness with which he dilated on the misery caused by excess in drinking. Many of his aphorisms are exceedingly terse and pointed; but the amount of his reading would in these days be considered far below the level of an educated statesman, and his quotations are repeated again and again with wearisome iteration. Considering the temper of the age and the shifting alliances of the politicians of the last century, Chesterfield's estimates of the men with whom he came in contact in the cabinet or in debate have always seemed to us to be penned by a man not unduly partial in his bias. When he wrote the maxim "Whoever

is in a hurry shows that the thing he is about is too big for him," the figure and manners of the Duke of Newcastle must have been in his mind.

THE authorities of the Clarendon Press have, with fairness which all must commend, printed, in a form suitable for preservation with the first edition of *Lord Chesterfield's Letters to his Godson*, that peer's correspondence with the godson's father, which was appended as an additional attraction to the cheaper issue of the *Letters to the Godson*. It opens with dramatic effect with a notification from Lord Chesterfield that his brother is about to marry a young woman who is capable of bearing children, and that the godson may therefore lose his chance of succession to the family peerage and the family property. Fortunately for this youth, husband and wife were only too glad to separate after a short experience of domestic happiness and without the birth of any children. The letters now reprinted add but little to the character of the statesman or of the child whom he undoubtedly loved, but they serve to strengthen still more the current impression of the old man's failings and merits.

A Good Start. By J. Thain Davidson. (Hodder & Stoughton.) Books which are confessedly and designedly "improving," without being dull, are not very common. Such books Dr. Davidson has already proved his capacity to write, and these "homely talks" to young men are not inferior to his previous efforts. Earnest and plain, and strictly adapted to the understanding of the ordinary man, they are never careless or meaningless. The author takes the trouble to get up the subjects of his papers thoroughly, and his moral energy enables him to express himself upon them with strong and genuine feeling. Books of this sort are used too generally as table-ornaments rather than as literature, but if anyone will give Dr. Davidson a fair chance he will find that he can be read with pleasure as well as with profit. The papers which deal with incidents of Old Testament history strike us as unusually good.

The Way to Win. By John T. Dale. (Griffith, Farran & Co.) "How to Succeed in Life" is the secondary title of Mr. Dale's book. It is an elaborate compilation of extracts and anecdotes which are worked into a series of short essays, all more or less connected with the problem of succeeding in life. We recognise the care and industry which have been spent upon the book, but yet cannot pronounce it a success. It is, on the whole, commonplace in style and in thought, nor does it quite succeed in rising above the sordidness, the respectable selfishness, which too often taints the gospel of "getting on." The anecdotes and illustrative incidents are of unusual merit: they have been chosen at first hand, being obviously the result of many years' reading, and form the redeeming feature of an otherwise dull book.

Old Thoughts for Young Brains. By Athol Maudslay. (Snupkin, Marshall & Co.) It has been asked by one who has read this book whether anything so dull and sententious has been offered to boys since the days of *Sandford and Merton*, and we are unable to reply in the direct negative to the question. In fact, the author himself seems, while deprecating it, to have anticipated the verdict of his youthful readers:

"By Jove! I never read such a book, it's as dry as saw-dust, and the old chap who wrote it is as long-winded as a sea-serpent engaged in a swimming race round the world."

No doubt there are boys and boys, and it may be possible to find among them some who will appreciate at a higher value than we can the "preaching and teaching," wherewith Mr. Maudslay seeks to temper the too festive character of the season. If it be a virtue in a

boy to be priggish, then this well-meaning book (with its sometimes appropriate anecdotes) will be found invaluable.

MESSRS. A. & C. BLACK—formerly of Edinburgh, but now of Scho-square, London—have just issued the fourteenth and final volume of the new edition of the *Collected Writings of De Quincey*, edited by Prof. David Masson. It consists of *Miscellanea*, of considerable bibliographical interest, for some of them are now claimed for De Quincey for the first time. Among these we may mention—three new translations from Kant; a review of the Hazlewood system of education, practised near Birmingham by Mr. T. W. Hill, the father of Sir Rowland and Commissioner Hill, and the grandfather of ladies well known to the present generation; a contemporary article on the Scotch "disruption" of 1843; and De Quincey's own account of the part he played in early days in the forgery of a pseudo-Waverley novel, translated from the German under the title of "Walladmor." After some minor waifs and strays, an Appendix follows, giving a chronology of all De Quincey's known writings, and an Epilogue, in which Prof. Masson incidentally estimates the average of De Quincey's literary earnings at only £100 a year. Finally, we have an Index to the whole set of fourteen volumes, compiled by Mr. H. B. Wheatley. Thus is worthily brought to conclusion a work of which the truest praise is that it has so stimulated the popularity of De Quincey that it has necessarily become incomplete before it was finished. As editor of Milton, and now of De Quincey, Prof. Masson may be assured that his name will remain associated with two authors, who are both classics, though in a different measure.

NOTES AND NEWS.

THE materials left by the late Prof. Thorold Rogers for the concluding volumes of his *History of Prices and Agriculture in England*, will shortly be published by the Clarendon Press, in a single volume, under the editorship of his son, Mr. Arthur G. L. Rogers. The tables of figures, which are almost complete, include, besides the usual lists of prices of grain, labour, and general native and imported produce, the daily quotations of bank stock, the Three per cent. Stock, and the South Sea Stock. The previous volumes dealt with the years 1259-1702, and vol. vii. will bring the history down to 1793. Unfortunately, Prof. Thorold Rogers had not been able to prepare his commentary on the figures tabulated in this volume; but many of his deductions are to be found in his writings of the last three years, and he has left ready for publication the MS. of five lectures in which some of his conclusions are summarised. These deal with the parliaments of 1710 and 1713; the South Sea scheme; the events of 1745; bimetalism and corn bounties in the eighteenth century.

MESSRS. GEORGE BELL & SONS will publish immediately an entirely new edition of Webster's Dictionary, under the title of the "International Dictionary," which is the result of ten years' labour expended upon the revision of this standard work. In addition to the dictionary of words, with their pronunciation, etymology, and various meanings, illustrated by quotations and numerous woodcuts, there are several appendices, comprising a gazetteer of the world; vocabularies of Biblical, Greek, Latin, and English proper names; the noted names of fiction; a brief history of the language; a dictionary of quotations, phrases, proverbs, &c.; and a biographical dictionary, with 10,000 names.

MESSRS. CASSELL & Co. will shortly publish a Dictionary of the English Language in handy

form, based on their Encyclopaedic Dictionary. This new work will extend to about 1100 pages, demy octavo size, and will give definitions of more than 100,000 words. It will be especially complete as regards words and phrases employed in the language as spoken and written to-day. Scientific words, Americanisms, provincialisms, and archaic words will be largely introduced; and in an appendix will be given a short history of the language, with some specimens of its literature at various periods.

MR. T. FISHER UNWIN is able to announce that, partly owing to the success attending the issue of the first three volumes of the *Century Dictionary*, the promoters of this work have somewhat extended its scope, while the price remains the same. This extension will increase the number of pages of matter from 6500 to 7000. Over the remaining three volumes thousands of carefully-wrought illustrations will be distributed. The fourth volume will be published at the end of this month, and the sixth and last in the autumn.

MESSRS. MACMILLAN will publish in the course of the present month a new edition of Mr. T. L. Kingdon Oliphant's *Old and Middle English*, very carefully revised and brought down to date. Like the same author's *The New English*, this book is a remarkable contribution to the history of the language, though it has recently called down the wrath of Dr. Fitzedward Hall.

MESSRS. LONGMANS will publish in a few days *Political Americanisms: a Glossary of Terms and Phrases current at Different Periods in American Politics*, compiled by Mr. Charles Ledyard Norton.

A WORK shortly to be published by Mr. T. Fisher Unwin, *Baboo English as 'Tis Writ*, is the same as that recently announced under the title of "Curiosities in Indian Journalism." The author, Mr. Arnold Wright, who has been connected for several years with the Indian press, has got together many amusing examples of native English as illustrated by quaint editorial announcements, specimens of descriptive writing and poetry, quack advertisements, and begging letters.

MR. W. HEINEMANN will publish Mr. Gosse's translation of Henrik Ibsen's new drama, *Hedda Gabler*, on Monday next. It will have a photogravure from the latest portrait of the author. An edition of 100 large-paper copies will also be issued.

MR. T. R. R. STERLING's Life of his friend David Robertson, the Naturalist of Cumbrae, is on the point of publication by Messrs. Kegan Paul, Trench, Trübner, & Co.

THE same publishers will issue immediately, in their "English and Foreign Philosophical Library," *Lion's Philosophy of Right*, translated from the Italian by Mr. W. Hastie, with the sanction of the author.

SOME little while ago a wish was expressed in the ACADEMY that the work in mental philosophy of Prof. Harald Höffding, of Copenhagen, might be rendered accessible to the English public, as being specially in harmony with English modes of thought. We now hear that his *Outlines of Psychology* has been translated by Mr. M. G. Lowndes, and will shortly be published by Messrs. Macmillan in their series of Manuals for Students.

THE late Mr. J. E. Bailey, author of *The Life of Fuller*, had, before his death, made considerable progress in preparing a collected edition of Fuller's Sermons. By arrangement with his widow, the completion of the work was entrusted to the hands of his friend, Mr. W. E. A. Axon, of Manchester. The work is now nearly completed, and will very shortly be issued in a limited edition in two handsome

octavo volumes, printed and bound in old style. There will also be 100 large-paper copies, printed on royal octavo and bound in parchment.

MESSRS. BLACKWOOD & SONS announce for immediate publication a volume entitled *British Work in India*, by Mr. R. Carstairs.

MESSRS. CHAPMAN & HALL have in the press a second volume of Dr. William Junker's *Travels in Central Africa*, covering the period from 1879 to 1883. Like the first volume, it is translated by Prof. A. H. Keane, and will contain numerous illustrations.

MISS VIRGINIA W. JOHNSON's new novel will be published next week by Mr. T. Fisher Unwin in one-volume form. It is entitled *A Royal Physician*, after Duke Charles of Bavaria.

MESSRS. F. V. WHITE & Co. will publish immediately *April's Lady*, in 3 vols., by Mrs. Hungerford, author of "Molly Bawn."

MESSRS. WARD & DOWNY will publish in February a new novel entitled *Kilmallie*, by Mr. H. Johnston, the author of "Chronicles of Glenbuckie." The scene is again laid in an Ayrshire village.

MESSRS. HUTCHINSON & Co. have in the press a series of volumes of "Famous Women of the French Court," written by M. Imbert-de-Saint-Amand and translated by Mr. T. Sergeant Perry, with portraits. The first volumes to appear will deal with Marie Antoinette, Josephine, wife of the First Consul, and Marie Louise.

MESSRS. P. T. KING & SON will next week publish the first volume of the *Transactions of the National Liberal Club Political Economy Circle*. The volume will contain the inaugural address by Mr. Leonard H. Courtney, on "The Economic Principles which should guide Legislation with regard to the Occupation of Land"; and essays on "International Migration and Political Economy," by Mr. J. T. Mann; on "The Report of the Gold and Silver Commission," by Mr. Alfred Milner; on "The Rate of Interest," by Mr. Sidney Webb; on "Distribution as a Branch of Economics," by Mr. J. H. Levy; and on "The Migration of Labour," by Dr. Hubert Llewellyn Smith. The book will also contain a short sketch of the history and constitution of the Circle, and will be edited by Mr. J. H. Levy, its hon. secretary.

MESSRS. JOHN LENG & Co., of Dundee, have in the press a pamphlet which claims to be a "true narrative" of the Majuba disaster. It is based on written statements supplied by officers of the 92nd Highlanders who survived the engagement, and is a protest against the charge of cowardice which several writers have made against the British force engaged. The work has been edited by Mr. James Cromb, author of "The Highland Brigade: Its Battles and Its Heroes."

MESSRS. HOWE & Co. will publish, in a few days, *General Booth and His Critics*, being an analysis of General Booth's scheme and an inquiry into the value of the criticisms of Prof. Huxley, Mr. C. S. Loch, the *Times* newspaper, and others. The book is written by Dr. H. Greenwood, and will contain a summary of the new trust deed in connexion with General Booth's scheme.

A REVISED edition of Mr. J. W. Crombie's *Some Poets of the People in Foreign Lands* is announced for early publication by Mr. Elliot Stock.

MISS MAGGIE BROWNE's fairy story, *Wanted—a King*, illustrated by Mr. Harry Furniss, has already reached a third edition.

PROF. VICTOR HORSLEY, fullorian Professor of physiology, will on Tuesday next, January

20, begin a course of nine lectures, at the Royal Institution, on "The Structure and Functions of the Nervous System. Part I: The Spinal Cord and Ganglia." Mr. Hall Caine (author of *The Bondman*), will on Thursday, January 22, begin a course of three lectures on "The Little Manx Nation"; and Mr. W. Martin Conway will on Saturday, January 24, begin a course of three lectures on "Pre-Greek Schools of Art." The Friday evening meetings will begin on January 23, when Lord Rayleigh will give a discourse on "Some Applications of Photography."

MR. W. E. H. LECKY will deliver an address on "The Message of Carlyle to his Age" on Sunday afternoon, January 25, at 3.30 p.m., at the Lambeth Polytechnic, Ferndale-road, Clapham. Tickets can be obtained from the hon. secretary, the Rev. Freeman Wills.

MR. W. R. MORFILL, reader in Russian at Oxford, will deliver a lecture on "Old Slavonic Religions" at South-place Institute, Finsbury, on Sunday next, January 18, at 4 p.m.

It is stated that as many as 213 Polish papers are published in Europe, and 13 in North America. Forty-eight of these appear daily.

UNIVERSITY JOTTINGS.

TERM begins at both Oxford and Cambridge at the end of the current week.

THE Rev. Andrew Clark, of Lincoln College, the chief worker in the Oxford Historical Society, has been collecting all the scattered autobiographical material which is dispersed about Antony Wood's printed books and papers, and has nearly finished the first volume of the collection. This newly gathered material adds greatly to the details of Wood's life and opinions, and brings out with remarkable distinctness the effect of the Restoration in Oxford. Wood, in his private papers, is nothing if not plain-spoken, and he calls a spade a spade with frankness and zest.

PROF. EWING, Mr. Stuart's successor in the chair of engineering at Cambridge, will deliver his inaugural lecture on Tuesday next, January 21, his subject being "The University Training of Engineers."

THE Rev. G. F. Browne, Disney professor of archaeology at Cambridge, has been nominated to a canonry at St. Paul's.

MANSFIELD College, Oxford, has received a bequest of £2000, under the will of the late Mr. Walter Howorth, of Manchester.

IN continuation of the course on "Homer's Greece," given at the Chelsea Town Hall before Christmas, in connexion with the London University Extension Society, Dr. Walter Leaf proposes to deliver a course of ten lectures on "The *Iliad*," beginning on Wednesday next, January 21, at 5.15 p.m. The poem will be discussed from the literary point of view; and it is intended to take, at each lecture after the first, two or more books of the *Iliad*, and to go through them in such detail as the time will permit, pointing out their chief beauties and difficulties. Admission to the first lecture of the course, at which Lord Justice Bowen will preside, is free.

THE Grillpazzer *Säcularfeier* will not pass quite unnoticed in this country. Prof. Buchheim will devote the first lecture of his German literature course at the King's College department for ladies in Kensington-square, to a comparative estimate of Goethe, Schiller, and Grillpazzer, as dramatists. The remainder of the course, which begins on Friday next, January 23, will consist of a study of Goethe's works.

MR. WILFRID GILL, of Magdalen College, Cambridge, will begin a course of lectures on "Kant and Comte" at 13 Kensington-square, in connexion with King's College, on Tuesday next, January 20.

THE following appointments have been made at the University College of North Wales, Bangor:—Assistant lecturer in English, Mr. W. Lewis Jones, of Queen's College, Cambridge; assistant lecturer in mathematics, Mr. J. J. Alexander, of St. John's College, Cambridge.

DURING the past year the total number of matriculated students in the University of Edinburgh was 3503, as compared with 3602 in 1889. Of this total 940 were enrolled in the faculty of Arts, 116 in Divinity, 468 in Law, and 1979 in Medicine. Of the students of Medicine, 814 (or over 41 per cent.) belong to Scotland, 687 (or nearly 35 per cent.) were from England and Wales, 58 from Ireland, 99 from India, 270 (or 13 per cent.) from various British colonies, and 51 from foreign countries. From the graduation lists of 1890, it appears that 103 students took the degree of M.A., 5 that of D.Sc., 28 that of B.Sc., and 20 that of B.D. In the faculty of Law, 10 took the degree of LL.B., and 3 that of B.L. In the faculty of Medicine, 54 took the degree of M.D., and 210 the conjoined degrees of M.B. and C.M. The general council of the university now numbers 6622 members. The aggregate value of the fellowships, scholarships, bursaries, and prizes, now amounts to about £14,000 a year, viz.: In the faculty of Arts, £9235, in Divinity, £1545; in Law, £410; in Medicine, £2560; and in Science, £250.

ORIGINAL VERSE.

SWEET PEGGIE—A SOUTH-AFRICAN DITTY.

'NEATH other stars than ours,
Amidst strange herbs and flowers,
On the high veldt or waste karoo,
He thinks of you,
Sweet Peggie!

Upon the frontier's edge,
He keeps our English pledge,
Facing swift hordes, strong, brave, and true,
For home and you,
Sweet Peggie!

When camp-fire embers glow
Flameless and crumple low,
He cheers the gloom, musing the while
On your bright smile,
Sweet Peggie!

And when the far patrol
Brings weariness of soul,
He flags not, drinking in a bit
Old letters writ
By Peggie

Seeing the glorious dyes
Of Afric's sunset skies,
Purple and red and gold, he sighs
For pure blue eyes
Of Peggie.

When thunder volleys loud,
And from the tropic cloud
The prompt rain falls, he doth rejoice,
In swift low voice,
Of Peggie.

Watching the river swift,
Swirl broad'ning on the drift,
He longs to flow down to the sea,
Round Cape and be
Near Peggie.

The wily crocodile
He shoots in splendid style,
Making believe he was the wight
Who danced last night
With Peggie.

And from the ostrich fleet
He beats a quick retreat,
Saying, "It is your chaperon,
Let us dance on,
Sweet Peggie!"

The meerkat in the brake
Stirs him, for it would make,
Could it be snared in silken net,
A pretty pet
For Peggie.

The kopje on the plain,
With boulders piled amain,
By contrast hints the cushioned ease
That most doth please
Sweet Peggie.

Amongst the exotic bloom,
Rich flowers without perfume,
Better, he thinks, than this proud dower
My wee Scotch flower,
Sweet Peggie.

When prickly pears cause pain,
And "wait-a-bits" detain,
Smiling, from thorns his coat he frees,
"These bushes tease,
Like Peggie."

On transport journeys long,
All waggons and bultong,
With glee he sings, "My heart and hand
I have inspanned
To Peggie."

And wheresoe'er he fare,
In sunshine's cruel glare
Or moonlight cool, this is his theme
"I think and dream
Of Peggie."

J. C.-B.

MAGAZINES AND REVIEWS.

THE *Expositor* for January opens with the first of a series of articles by Prof. Marshall, of Manchester, designed "to prove the existence of an Aramaic Gospel embedded in our present Gospels, and to unveil its contents." He thinks that the discourses of Christ were for the most part delivered in Aramaic, but that some of his sayings were uttered in the very words of our Gospels. It will certainly be a fine proof of scholarship to show that the variations in the common matter of the Synoptic Gospels are due to a variant translation of a common Aramaic original. Prof. Sanday's essay on the title, "Son of Man," has a twofold object—to give the author's personal conclusions on the origin and meaning of this title, and to warn readers against Mr. Carpenter's recent little work on the first three Gospels. Any chips which Prof. Sanday can give us from his workshop will be eagerly welcomed, and his criticism on Mr. Carpenter's appendix, dealing with the title referred to, cannot fail to be valuable. But is it fair to prejudice readers against a book by telling them that the author writes as a Unitarian? A cultivated student must be presumed to have the historical spirit, and to be free from a controversial bias. Prof. Sanday proposes a "self-denying ordinance," binding critics to exclude alike supernaturalistic and anti-supernaturalistic theories, but does not say what he means by the supernatural. An interesting lecture on Hosea at the close of this number contains the statement that "God speaks to you and to me as directly and as supernaturally as He spoke to those Old Testament prophets"; this would be called by many "anti-supernaturalistic," but it breathes the historical spirit. Dean Perowne communicates statements by Sir G. G. Stokes and Prof. Pritchard on the relation between Gen. i. and the sure results of modern science.

In the *Antiquary* for January the Rev. Charles Kerry continues his account of the discovery of

the Register and Chartulary of the Mercers Company of York. The volume is evidently one of great interest, which ought to be printed in full. This is just such a work as the *Surtees Society* ought to undertake. Mr. R. C. Hope continues his valuable series of papers on Holy Wells, dealing with those of Westmorland, Worcestershire, and York. The paper entitled "Out in the Forty-Five" is amusing; authentic information concerning an outbreak which has been "smothered by romance" is much wanted. Mr. T. C. Smith gives an account, far too short, of the Ribchester Parish Church library. Many of the volumes have been lost. It is much to be desired that a specialist should catalogue those which remain.

SLAVICA.

UNTIL comparatively recent times little had been done to facilitate the study of the English language and literature among Slavonic peoples. The first to make the attempt among the Bohemians was the late J. Maly, who published an English Grammar. Since his time Prof. Mourek, of Prague, has been an indefatigable worker in this field. We have seldom seen anything more complete than his sketch of English literature, which, having first appeared in the *Slovnik Naučný* ("Bohemian Encyclopaedia"), has just been issued in a separate form (*Pichled Dejiny Literatury Anglické* ("Survey of the History of English Literature")). We have been greatly struck by its accuracy and fulness. The author does not confine himself to the literature of the United Kingdom, but devotes many pages to that of America. Prof. Mourek is also the author of a very useful Bohemian-English Dictionary, of which the first volume has appeared, and the second is in course of publication. It is a compact little work. Its only rival in the field is a Dictionary issued at Racine in Wisconsin (U.S.) in 1876, which seems, from the great prominence given to the technical words of various trades, to have been primarily intended for the many Bohemian artisans in America. In 1889 Prof. Mourek published a useful book to help his countrymen in the acquirement of colloquial English (*Čeebné Listy Jazyka Anglického pro Samouky*), in which he gives amusing anecdotes, a tale from Dickens and other extracts, with dialogues somewhat on the Robertsonian method. But Prof. Mourek is not merely a writer of popular books on English. He has recently published, under the sanction of the Bohemian Society of Arts (Prague) a scientific work entitled *Syntaxis Gotských Predložek* ("Syntax of the Gothic Prepositions"). This is a profound study, in which the use of each preposition is carefully traced in the remains of the Gothic language which have come down to us, with constant references to the original Greek.

M. M. Philippov has published (St. Petersburg) a work in vindication of the rights of the Croats against Austria and Hungary, *Khorvati i Borba yikh s' Austrii* ("The Croats and their Struggle with Austria"). His book shows a great deal of learning, but will hardly be welcome to our many western Russophobes, for he advocates a close union between the Croatian population and Russia, and is as Pan-Slavistic in his tendencies as Yuri Krizanić, the Croat, was in the days of the Emperor Alexis of Russia. It seems to us that the natural development of Croatia, Serbia, Bosnia, and Herzegovina, and even of the Slovenes of Southern Austria, would be to form at some future period an independent nationality, such as was finely dreamed of by the patriotic Ljudevit Gaj and others some forty years ago.

CORRESPONDENCE.

GLOSSES FROM ROME AND PARIS.

Rome: Dec. 3, 1890.

The glosses which I have recently found in the Vatican Library and in the Bibliothèque Nationale fall under four heads: I. Latin, II. Old-High-German, III. Old-Breton, and IV. Old-Irish. Of the Latin and Old-Irish I give only selections.

1. LATIN GLOSSES.

Vat. MS. lat. 1339 (Canons).

Fo. 27^a 1, pastelli .i. xenii. Pro ordinatione ergo uel pallii seu cartae (.i. decreti uel precepti uel mundiburdii) atque pastelli. 27^a 2, scenicam .i. meretricem. 45^a 2, tonsorandus .i. clericandus, multata .i. damnata. 56^b 1, boni pastoris est pecus tondere non deglomerare* .i. non scorticare. 56^b 2, phitonum [i.] phitones [leg. pythones] dicuntur qui falsa diuinant. 75^a 1, rumigeruli .i. namiloqui: in marg. Rumigeruli dicuntur qui falsos rumores, id est uanas laudes, portant. 80^b, cancer. uulgo dicitur grancus.†

Fo. 112^a 1, ampullas .i. ammulas‡ l. lecithos. 114^a 1, negotia uectigalia .i. seruilia. 116^a 1, ballando .i. iocando. 116^a 2, choros .i. rotas. 122^a 1, in loculo .i. in fuscilo uel sacco [so in 238^b 2, loculos .i. sacculos l. fiscos]. 132^a 2, tragoediorum .i. iocularium. 132^b 1, scenam .i. domum meretricum l. cantionum. 140^b 1, pallas .i. sindones. 143^b 2, scurriles .i. ioculatores. 158^a 2, sortilogos .i. pithones. 158^b 1, filacteria .i. pictaciola [leg. pittaciola and cf. πικτάκιον] l. ligaturas. 168^a 2, diocesi .i. parrochia. 168^b 2 and 180^a 2, camo .i. curcuma. 174^b 1, carice .i. fici carotii. 175^a 2, contagia .i. crimina. 191^a 1, uitricum .i. patrinium. nouercam .i. matriniam§. nurum .i. noram. 193^b 2, aborsum .i. morticinum. 203^b 2, sublatum .i. tultum. 222^a 2, in laqueo .i. in laciolo. 231^a 1, pinguodo .i. sugina [leg. sagina?].

* A scribal error for deglubere?

† Cf. Ital. *granchio*, *granchio*.‡ See Ducange s.v. *ama*.§ A similar gloss occurs in ff. 307^a 2, 305^a and 308^b. Cf. Fr. *marraïne*.

238^b 1, sub scabello .i. sub pedaneo. 245^a 2, hylarescit .i. letatur. 256^b 1, a communione suspendi .i. separari l. substolli. 280^b 1, immoderatione .i. inrefrenatione. 291^b 1, iurgatrix .i. rixatrix. 295^b 2, ornatus .i. circumfultus l. circumdatus. 308^a 2, fructeetis [i.] spinis l. sentibus.

Vat. MS. lat. 1347 (Canons).

Fo. 77^a 1, Biberes .i. potiones. 77^a 2, Eulogias responsiones uel salutationes. fomitem occasionem. subministrationem. Fomes origo. Fomenta solatia. Sinaxis [συναξις] oratio assidua.

Vat. MS. lat. 341 (Jerome's Epistles, &c.).

Fo. 33^a, effutire .i. depromere. alias autem est effutire uel infutire stulte loqui est. 48^b, ut moriatur in taphnis* in marg. Taphnis interpretatur mandatum humile. 54^a, in marg. Oratores rabullare dicuntur rethores quando multum declamant.

To these may be added the following three glosses from a tenth-century copy of Arator, *De Vita et Actibus Apostolorum*, in the Biblioteca Vallicelliana, at the beginning of a codex marked F. 65:

Fo. 1^b, loriam asbergum†. acies‡ sceras§. 4^a, externas stranias.

II. OLD-HIGH-GERMAN GLOSSES.

Vat. MS. lat. 1347 is a tenth or eleventh century copy of Cresconius's *Concordia Canonum*, in quarto, now containing 180 leaves. Its beginning is lost. Ff. 77, 78, are in a handwriting different from, but contemporaneous with, that of the rest of the codex. They contain about 208 Latin glosses, intermingled with which are the following twenty-three Old-High-German. I have added references to similar glosses in the second volume of Steinmeyer and Sievers' collection, *Die Althochdeutschen Glossen* (Berlin, 1882).

Fo. 77^a, col. 1, Affectum .i. muotscaf [A.G. 52, 21].

„ „ 2, Grauitas modestia .i. uuisduom [A.G. 52, 22].

Indigeries id est frosmelzunga [A.G. 52, 23].

Rebellio uidaruuinneo [A.G. 52, 43].

Recreare gilabon [A.G. 52, 44].

„ 77^b, „ 1, Uilicationes ambantes|| [A.G. 52, 45].

Alea gula [A.G. 87, 1].

Resciso contractu froslizanero githinsungu [A.G. 86, 10].

Reditus heimbrung [A.G. 82, 19: 86, 14: 96, 8].

Amplioiem summam meron scaz [A.G. 86, 16].

Seditionem ungareh oto fara [A.G. 82, 32: 86, 17: 99, 47].

Exp[i]andi zihelisonoe¶ [A.G. 82, 35: 85, 19: 86, 19: 87, 35: 94, 34: 99, 44: 109, 76].

Raritate fohlogi [A.G. 82, 38: 85, 21: 86, 21: 96, 11].

Fo. 78^a, col. 1, Practextu occasione uel piunange [A.G. 83, 1: 86, 24].

In pulpitu In lectar [A.G. 86, 27: 112, 60: 147, 35].

Filacteria zaubargiscriv [A.G. 83, 7: 85, 29: 86, 39: 92, 53: 95, 61].

* For *tapinis*: cf. *ταπινός* and the Fr. *en tapinois*.† Cf. Ital. *usbergo*, *osbergo*, O.H.G. *halsberc*.

‡ The context is ferratas acies atque agmina uincunt.

§ Cf. Ital. *schiera*.

|| This and the preceding five glosses seem to have been taken from a copy of the Rule of S. Benedict.

¶ Read *zihelisonne*.

Fo. 78^a, col. 1, Plebeios psalmos saeculares psalmos aut uuinleod [A.G. 83, 11: 85, 33: 92, 55: 96, 1: 100, 60: 113, 29: 140, 42].

„ col. 2, Conductor meuir [A.G. 113, 54: 118, 19].

Portentuose unghiuuro [A.G. 83, 18: 85, 43: 86, 46: 101, 56].

„ 78^b, „ 1, Delerantes tobonte [A.G. 83, 22: 86, 50: 87, 24: 115, 18: 138, 43: 139, 30: 140, 11].

„ „ 2, Inretitus bifangan odo bisaget [A.G. 83, 42: 85, 43].

Non obis uiindar ni si [A.G. 85, 65: 86, 53: 103, 3].

Spectacula einautigi odo slaptispil [= slaptispil, A.G. 85, 68: 86, 55].

III. OLD-BRETON GLOSSES.

These I found in Vat. MS. lat. 1974—a twelfth-century copy of Orosius, and in Vat. MS. lat. 1480, a Priscian of the tenth or eleventh century. The first, third, and fourth are identical with the Breton glosses in Regina 691, which were published in the ACADEMY of January 18, 1890, p. 46, col. 2. The Breton glosses in Vat. MS. lat. 1480, are in a hand different from, and perhaps a century later than, that of the text.

Vat. MS. Lat. 1974.

Fo. 47^b, impensis .i. impeneticion.

48^b, in foro boario (proprium nomen loci .i. osuin.)*

gestatorum .i. eusouion.

49^b, corbem i. cayuel.

Vat. MS. Lat. 1480.

Fo. 35^b, left margin, Strigilis .i. scristl.†

36^a, right margin Trutina .i. bulans.‡

48^a, fiber (nomen bestiae) fibri beuer.

IV. OLD-IRISH GLOSSES.

The following glosses are from the tenth-century copy of the shorter Servian commentary on the Bucolics and Georgics preserved in the Bibliothèque Nationale, and marked MS. lat. 7960. The text and glosses have obviously been copied from an Irish MS. by a continental scribe, who was, of course, ignorant of the Irish language. Hence some of the glosses are so corrupt as to be unintelligible. They may perhaps be corrected by comparison with the glosses in a MS. at Florence (Laurent. plut. 45, cod. 14), which seems to be derived from the same source as the Paris MS. See *Rheinisches Museum*, Neue Folge, xv. 133, where G. Thilo prints six of these glosses, reprinted by Zimmer in p. 5 of the Supplement to his *Glossae Hibernicae* (Berlin, 1881).

MS. lat. 7960.

Fo. 3^a, l. 9, dumosa .i. drisidi.§

l. 31, cicades cailig [leg. cicadis cailig, and cf. Welsh *ceiliog rhedyn*.]

5^a, last line, fraga .i. subi.||

6^b, l. 4, flauescet blifithir [leg. bláfithir].

8^a, l. 19, ansa .i. dorn.

l. 22, moris .i. merib [leg. smérib].

frontem .i. grode. tempora a aru [leg. aracha].

* Does this mean (nomen) de sono (factum)? The following gloss, in which the word *bosonorio* is obscure to me, occurs in the margin: .i. ubi immolabant diis suis boues .i. bosonorio [= bosonorio, Reg. 691, fo. 51^b] quia boo fit .i. ubi poete laudes regibus l. praefatos cauebant.

† Perhaps *stristil*, but cf. O.Ir. *scrissid* (gl. ratorium), ML. 72^b 8.

‡ The s and the right half of the n are cut off; cf. Mid. Br. *balance*.

§ Derived from *dris* (gl. dumus).

|| Cf. W. *syff* "strawberry."

- Fo. 8^b, l. 34, alnos i. *ferna*.
 9^a, l. 1, apio i. *luib serbh*.
 l. 17, arguta i. *dresactach* i. pro sonanti
 uento.
 l. 18, arcades i. *sulbari*.
 l. 23, examina i. *saithe*.^{*}
 9^b, l. 10, rusco i. *aittun*; 17^a, l. 11, rusco i.
aittin. [Read in both places
aittun, and cf. W. *eithen*
 "furze"].
 muscosi i. *coen* [leg. *coenaig*].
 l. 12, turgent i. *astoid* [leg. *attait*].[†]
 l. 13, tede i. *cuindia* [leg. *taedae* i.
cuindle].
 l. 21, fraxinus *umnus* [leg. *umnus*] †
pinus oetgag . habies *oetgach*
as ardu alailiu . populus i.
fid.
 10^b, bacula i. *bonat* [leg. *bucula* i.
bónat].
 corripuit i. *adrech*.
 11^b, l. 8, subulei i. *muicbi* [leg. *muccidi*].
 l. 12, ferulas i. *flesca*.
 bacis i. *ciraib* [leg. *baccis* i. *cai-*
raib].
 nenabor i. *adcichlus*.[§]
 spicula i. *fogan* || l. *gaan*.
 13^a, ua[c]eina i. *niolo pu[r]poreae* l.
subi l. *certe* [leg. *caera*] *derce*
[f]roich.
 13^b, l. 16, pruna i. *airni draigin*.
 14^a, l. 21, stipula i. *cuissen*.
 15^a, bachare i. *bo ob bethin* [leg. *boo-*
bethiu].
 15^b, l. 27, viola i. *fobuirge* [leg. *sobairge*].[¶]
 paliurus i. *gle elge* [leg. *geldely*
 "whitethorn"].
 calat[h]is i. *cathalaib*.

The following two glosses quoted by Thilo I did not find in the Paris MS. He doubtless took them from the Laurentian: *arista broth vitta snathae*. Here *broth* may be cognate with *Lat. frutex*, while *snathae* [leg. *snithe* = Corn. *snod*] is certainly related to *neo, véa, vñas, vñua*. A trace of the initials of the root is in *εὐνη* (from *ἐ-σνη*) *nebat*. See Curtius G.E. 5, No. 436.

WHITLEY STOKES.

TUNIP AND THE LAND OF NAHARINA.

Bentcliffe, Eccles : Dec. 29, 1890.

In the Egyptian accounts of the wars of the kings of the XVIIIth and XIXth Dynasties against the Khita, mention is several times made of a town Tunip, whose exact locality is a puzzle. Wiedemann in more than one place says it was near Damascus. Brugsch, on the other hand, identifies it with Daphne, close to Antioch. I cannot think that either of these sites, which are a considerable distance apart, satisfies the conditions of the problem.

In the friezes preserving a version of the epic story describing Rameses II.'s battle at Kadesh, a town which is admitted to have been situated on some enlargement of the Orontes, and probably on the lake of Homs, the two spies are made to tell Rameses that the king of the Khita had withdrawn from Kadesh, and was then "in the land of Khilibu [*i.e.* Aleppo] to the north of Tunip."

It seems to me that this phrase necessitates our putting Tunip somewhere between Kadesh and Aleppo. Now it is a curious fact that, in the inscriptions describing the campaigns of this period, I cannot find the name of Hamath at all; and it seems to me that

Tunip was in all probability the Khita name of Hamath, where several inscriptions have occurred proving it to have been a seat of Khita power. This identification would satisfy, I believe, all the conditions necessitated by both the Egyptian and the Assyrian texts where the name Tunip occurs.

This is not all. Tunip in one place is called "Tunip in the land of Naharina." It has been usual to identify the Naharina of the Egyptian texts with the Mesopotamia between the Tigris and the Euphrates. I believe this to be an entire mistake. Naharina is no doubt the Naharain of the Old Testament, and means the land of the rivers; but the rivers which bounded it were not the Euphrates and the Tigris, but the Euphrates and the Orontes. Brugsch reports that a learned traveller, a friend of his, informed him that the Arabs are still accustomed to call the fertile country to the west of Damascus which is watered by many rivers by the very same name of Naharain (Brugsch, *History of Egypt*, i. 292).

The name was in fact generic; but I have no doubt that the Egyptians applied it themselves specifically to the country (of which Tunip was the capital) bounding Syria on the north and intervening between it and the proper country of the Khita.

I believe also that it is here, and not in Mesopotamia, that we must put the Aram Naharain of the Bible narrative. This clears up a difficulty. Aram Naharain was also called Padan Aram in the Bible narrative. Now in the inscriptions of Shalmaneser (900-860 B.C.) a tribe Patena is placed in the Orontes valley and the watershed separating it from the Euphrates; and these Patena have been identified as the people of Padan Aram and of Batanaea or Bashan by Rawlinson (see *Herodotus*, i. 463, and *Dictionary of the Bible*, sub voce "Aram").

The whole argument, therefore, hangs together very reasonably; and, if sustained, it enables us to clear up and to set right somewhat the geography of the country of the early Hebrew patriarchs, as well as to better understand the Egyptian texts.

HENRY H. HOWORTH.

WHY WAS THE HORSE DRIVEN BEFORE IT WAS RIDDEN?

Queen's College, Cork : Jan. 13, 1891.

If Mr. McClure's objections to my theory are only those stated in his letter, I have every hope of making him a convert. His argument is, that because the horses under chariots appear of full size on the monuments of Assyria and Egypt, the reason why men did not ride them cannot be that they were too small to carry a rider with ease. But it by no means follows that the moment the horse became sufficiently developed men would abandon the chariot, consecrated by use of generations, and employ the horse solely for riding. It would involve a great change in the weapons and mode of warfare. For instance, the Assyrians were a nation of archers, accustomed to shoot from the chariot. Take the archer from the chariot and put him on horseback, and he would be helpless. (The Parthians seem to have been almost the only people who used the bow on horseback.) The horseman, to be effective, must be armed with a strong lance (instead of mere javelins for throwing) or a long sword suited for cutting; for the short bronze swords of the ancients were only available for thrusting in close encounter. Moreover, the addition of scythes to the axles of the wheels probably prolonged the use of the chariot, as such scythe-bearing chariots became a formidable weapon when driven against bodies of footmen. Although, owing

to "villainous saltpetre," the mediaeval knights with lance in rest has long departed, lancer regiments still linger on in the armies of modern Europe, partly as a "survival," and partly because they are found useful in certain conditions of modern warfare. The horse has been able to draw the plough for many centuries, but he has not yet succeeded in dislodging the ox from his ancient office as tiller of the soil. The steam-plough, in turn, is superior to the horse-plough; but it will be long before it will supersede the latter. Changes in institutions do not go *per saltum*. First came the chariot, then we hear of "chariots and horsemen" side by side; finally, the chariot disappears, and the horseman has finally triumphed.

It is almost certain that the horse originally came from the plains of Northern Asia and Europe to the peoples of Asia Minor and Egypt. The Turko-Tataric and Indo-European races have each a common name for it, whilst the Semites (from some of whom the Egyptians borrowed their name) have no common term (Schrader, p. 261). The horse, when once in the hands of people who fed him on corn, and exercised care in the choice of their breeding studs, would rapidly develop. That such was the practice in Asia Minor is made clear from several passages in the Homeric poems—*e.g.*, the well-known description of the stallion "well fed at the manger" (*Il.*, vi. 505); and that other (*Il.*, v. 200)—where Pandarus describes his horses, which he had left at home, lest, owing to the siege, they should come short of provender at Troy, as feeding on "white barley and spelts." Whilst the curious story told (*Il.*, v. 234) of how Anchises managed to get somewhat dishonestly the breed of the horses of Troy shows to what lengths the ancient horse-breeder would go to obtain the service of a good sire for his mares.

The fact that the ass was ridden at an early period in Egypt was a good reason for their not riding the horse when they got him. If the ass was as lazy and stubborn in Egypt as he is represented in Homer (*παῖς ὄνος*, *Il.*, xi. 668), he certainly would not have been much use for war or long journeys; he might do well enough, as he still does in Egypt, for carrying elderly gentlemen, like Balaam, short distances when pace and docility for management made no difference. The Egyptians, regarding the ass as the proper beast for riding, as the ox was for ploughing, would all the more keep the noble horse (when they obtained him) for the purposes of war, the chariot being regarded as the noblest implement of warfare.

I am sorry to have drawn down the ire of Prof. Max Müller by omitting to mention *l'île Veda*, v. 62 (which is relegated by Grassman to the limbo of his appendix as of late date), quoted in the note to Schrader (*E. T.*, p. 262), as well as the reference there given to Prof. Max Müller's *Biographies of Words*. However, as he affixes his *imprimatur* to my general statements, my position remains secure.

WILLIAM RIDGEWAY.

Hampstead : Jan. 12, 1891.

With reference to Mr. McClure's letter in the ACADEMY of January 10, it should be remembered that "the relatively small size of the Greek horses on the frieze of the Parthenon" is due not only "to the desire of the sculptor to give greater prominence to his heroes than to his animal forms," but also to his desire to keep the heads of the riders at the same level as the heads of the men on foot, thus avoiding blank spaces in the upper part of the frieze. This principle of "isokephalism" runs through the various stages of Greek art, and in earlier work often involves absurd disproportion, as in the Assos frieze.

* Pl. of *saithe* = W. *haid*.

† The act. b. fut. sg. 3 of this verb occurs in the Bible, Numbers vi. 27: *atfaihd* a *bolg*.

‡ = *huinnus*, Sg. 67^a 11.

§ Redupl. s. fut. sg. 1 of *adclaidim*.

¶ O.Br. *gungoion* (gl. *spiculis* i. *telis*), Regium 296, fo. 38^a.

¶ Cf. *barr bairche*, L.U. p. 131, l. 30.

As to the main question, it was no doubt easier to learn driving than riding, and on horseback a chief could not carry his heavy defensive armour. At the same time, the horse may have improved as much through selection, greater comfort, and better food, as (according to Prof. Rolleston) women have improved in physique relatively to men since the days of the long-barrow people.

TALFOURD ELY.

ODYSSEUS AND THE CYCLOPS.

London: Jan. 12, 1891.

It appears that I have myself to defend now, Homer's position being admitted to be unassailable. I have verified my own references, as I am fairly challenged to do, and find that I have verified my previous inferences also. In Mr. A. Lang's paragraph, which I cited, I find, as I found before, that he wrote with respect to the adventure of Ulysses with the Cyclops: "his conduct was out of character indeed"; and that he agrees to the possibility that Homer, in the interest of his plot, was capable of making "Ulysses inconsistent, with his eyes open and knowingly."

These were the propositions I challenged, and how is my challenge responded to? Mr. Lang now turns round upon himself—a creditable course enough when avowedly due to standing corrected—and writes: "I do not think Odysseus inconsistent"—"I do not myself think this [the taunt of the Cyclops] out of character in a man of spirit." Well and good; Homer may accept the palinode so far, but has still a right to grumble at what is taken back with the left hand in the qualification, "even if he was inconsistent, his conduct was necessary to the story."

As to the subject—I will not say the question—of the unity of each poem as a most artful composition, and the essential interdependence of the pair, I do not think that any illustration of importance has been added to what Col. Mure gave in detail long ago; nor do I believe that the *Cosmos* is the result of a fortuitous concurrence of atoms uniform or other.

W. WATKISS LLOYD.

"WIDERSHINS."

Christ's College, Cambridge: Jan. 12, 1891.

"Semasiologically," I account for the specialised meaning of "widershins" by instancing the Icelandic phrase, *Vir solar sinnis*, "contrary to the sun's course;" "phonetically," for the aspirated sibilant by seeing in the word the influence of Middle English *schin*, A.S. *scēn*, "shine," used also in the sense of "magic," e.p. *deafet-shine*, devilish magic; *Ormulum*, 8110.

Had I for one moment imagined that Mr. Jacobs actually derived this old English word from the High German *wider Schein*, I should most certainly have described his etymology as "a learned etymology." I, of course, regarded his German analogue as merely a learned corroboration of an obvious "folk-etymology," which connected the latter half of the word with the English "shine." I carefully stated this in my note: "The disguised 'westerners' has strictly no more to do with 'west' than 'widershins' has with 'shine,' though in the one case 'learned etymology,' and in the other 'folk-etymology,' has been at work."

With all due deference for one of the greatest of our English folk-loreists, I must say I am not convinced that Burd Ellen's capture by the Elf-King was the result of her going round the church "widershins." The only extant document of that eventful episode says nothing about it; the little tailor to whom we owe the Childe Rowland tradition did not attempt to satisfy his hearers as to why the lady was

captured—but he was only an "amateur" folk-loreist.

It is, however, best for me perhaps to take Mr. Jacobs's advice to heart and "beware of widershins," least the grim thing should still exercise its power of evil and change a grateful admirer of *English Fairy Tales* into a graceless and pedantic critic.

I. GOLLANZ.

APPOINTMENTS FOR NEXT WEEK.

- SUNDAY, Jan. 18, 4 p.m. South Place Institute: "Old Slavonic Religions," by Mr. W. R. Morfill.
7.30 p.m. Ethical: "Woman's Ideal," by Miss M. S. Gilliland.
- MONDAY, Jan. 19, 5 p.m. London Institution: "Social Questions in the Middle Ages," by Mr. E. L. S. Horsburgh.
8 p.m. Royal Academy: Lecture on Painting, V., by Mr. J. E. Hodgson.
8 p.m. Aristotelian: "Clifford's Philosophy," by Mr. F. C. Conybeare.
8 p.m. Richmond Athenaeum: "Fables and Fairy Tales," by the Rev. S. Goldney.
8.30 p.m. Geographical: "The Meteorological Results of the Challenger Expedition in relation to Physical Geography," by Mr. Alexander Buchanan.
TUESDAY, Jan. 20, 3 p.m. Royal Institution: "The Spinal Cord and Ganglia," I., by Prof. Victor Horsley.
7.30 p.m. Statistical: "The Operation of the Contagious Diseases Acts, from their Introduction in 1861 to their Ultimate Repeal in 1886," by Dr. R. Lawson.
8 p.m. Civil Engineers: Discussion, "Auxiliary Engines in connexion with the Modern Marine Engine," by Mr. W. H. Allen.
8.30 p.m. Zoological: "A Species of Earthworms of the Genus *Siphonogaster* from West Africa," by Mr. F. E. Beddard; "Anodon and *Unio*," by Mr. Oswald H. Latter; "Butterflies collected in Tropical South-western Africa by Mr. A. W. Eriksson," by Mr. Roland Trimen; "A Specimen of the White Bream (*Abramis blicca*, Bloch), without Pelvic Fins," by Mr. H. H. Brindley.
- WEDNESDAY, Jan. 21, 8 p.m. Microscopical: Annual Meeting; President's Address; Election of Council and Officers.
8 p.m. Society of Arts: "Photography in Aniline Colours," by Messrs. A. G. Green, C. F. Cross, and E. J. Bevan.
8 p.m. Geological: "*Agrasaurus Macgillivrayi* (Seeley), a Saurischian Reptile from the N.E. Coast of Australia," and "*Sauroides Robertsoni*, a Crocodilian Reptile from the Trias of Linkfield in Elgin," by Prof. H. G. Seeley; "The Age, Formation, and successive Drift-Stages of the Valley of the Darent, with Remarks on the Palaeolithic Implements of the district, and on the Origin of the Chalk Escarpment," by Prof. J. Prestwich.
8 p.m. Cymrodorion: "Celtic Ornament," with Illustrations, by Mr. T. H. Thomas.
- THURSDAY, Jan. 22, 3 p.m. Royal Institution: "The Little Manx Nation," I., by Mr. Hall Caine.
6 p.m. London Institution: "Animal Life on a Coral Reef," by Mr. Sydney J. Hickson.
8 p.m. Royal Academy: Lecture on Painting, VI., by Mr. J. E. Hodgson.
8 p.m. Society of Arts: "Hall-marking of Silver Plate, with special Reference to India," by Mr. E. J. Watherston.
8 p.m. Electrical Engineers: "The Distribution of Electricity, with special Reference to the Chelsea System," by Gen. C. E. Webber.
8.30 p.m. Antiquaries.
- FRIDAY, Jan. 23, 8 p.m. Philological: "A Dictionary Evening," by Dr. J. A. H. Murray.
8 p.m. London Amateur Scientific Society: "Fruits, their Classification and Terminology," by Prof. Boulger.
9 p.m. Royal Institution: "Some Applications of Photography," by Lord Rayleigh.
- SATURDAY, Jan. 24, 3 p.m. Royal Institution: "Pre-Greek Schools of Art," I., by Mr. W. M. Conway.
3.45 p.m. Botanic: General Fortnightly Meeting.

SCIENCE.

THE ORIGIN OF THE MEDIAN EMPIRE.

Medien und das Haus des Kyaxares. By J. V. Prásek. (Berlin: Calvary.)

EVER since the discovery of the cuneiform inscriptions of Nabonidos and Kyros, which have cast so new and unexpected a light on the rise of the Persian Empire, an active discussion has been going on between those who would unreservedly follow the statements of these contemporaneous documents and those who would harmonise them with the accounts left us by the Greek authors. The history of the Median empire and the invasion of Western Asia by the Skyths have especially attracted the attention of scholars. The Medes, indeed, have formed the subject of a learned monograph by M.

Delattre. Unfortunately, the want of critical judgment the latter has shown in estimating his authorities led him to more than one unacceptable conclusion. It has, however, induced Dr. Prásek to publish a book which is full of original views and critical acumen, and which I warmly recommend to the notice of historians.

Dr. Prásek begins by an analysis of the sources of the Median history found in the pages of Herodotos. He shows that the narrative in I. 95-104, 106-122, forms a single whole, divided into two parts by the story of the Skythian invasion, which has been derived "partly from the tradition of the temple of Ashkelon, partly from a North Pontine source." The author of the narrative was not acquainted with Media, and his description of Ebbatana is therefore incorrect. His comparison of the Median capital with Athens (I. 98) points to his Greek or Graeco-Lyidian origin, a conclusion which is confirmed by the use he makes of the spurious Delphic oracles about Kroesos and Kyros. His information, however, was derived from Median sources, as is indicated by his partiality for the Medes, and by the leading position assigned to Harpagos. When we remember that Asia Minor was conquered by Harpagos, it is natural to infer that the ultimate source of the narrative is to be sought in the family traditions of the Median general.

A second narrative is given by Herodotos in chaps. 123-130, which is inconsistent with the first. It is clearly of Persian derivation, and is unfavourable to the Medes. The relationship of Kyros to the Median King is unknown to it; Harpagos figures as an insolent traitor; and Astyagès, instead of being an old man, is in the prime of life. But we may gather from the earlier portion of it that, although in its present form it has come to Herodotos through Persian hands, it contains "a valuable relic of Median popular tradition." Just as in the first narrative the traditions of the family of Harpagos have been coloured by a Greek of Lydia, so in the second narrative we have a Median tradition which has received a Persian colouring.

Dr. Prásek passes a very just judgment upon the rival of Herodotos, Ktésias. As he remarks, the long sojourn of the Knidian physician at the Persian court must have made him well acquainted with Persian, and so able to make full use of the royal archives, as he claims to have done. But he lacked critical capacity, and was biassed by his jealousy of Herodotos. It must be remembered, however, in fairness to Ktésias, that fragments only of his work remain, and that even these fragments are sometimes of doubtful authenticity.

The greater part of Dr. Prásek's book is naturally devoted to the materials furnished us by the cuneiform inscriptions. Here I am compelled to dissent from his conclusions in more than one particular. I doubt the identification of Pasargada with Anzan, the city and country over which Kyros and his immediate ancestors ruled. The Babylonian inscriptions prove that Anzan was not far from the frontiers of Chaldaea, and the recent attempt of Dr. Winckler to disprove the evidence of the Susian inscriptions in

regard to its position and character is founded on a mistake. The Susian kings, not only at Susa, but also at Bushire in the south of their dominions, call themselves "ruler(s) of Anzan, Susian(s)." Dr. Winckler maintains that in this title the word Anzan does not denote a district, but has some general signification, like that of "plain," since it is not preceded by the determinative of "country." It is, however, only where the determinative is omitted before *Susunga*, "Susian," that it is omitted before Anzan; where it precedes the word *Susunga*, as on the bricks of Silkhak, it also precedes the word Anzan. If, therefore, "Susa" is a geographical name, Anzan must be one too; and the title shows plainly that the Assyrian scribe was right when he tells us in a tablet that Anzan or Ansan was synonymous with Elam. Elam is, of course, used here in a general sense, and is not to be confined to Susa and its immediate neighbourhood. Sir Henry Rawlinson has long ago pointed out that the site of the city of Anzan should be sought in the vicinity of Shuster, since Assan, according to Ibn en-Nadim, was a district of Shuster.

There is another point on which Dr. Prášek and myself are at variance. The tablets relating to the invasion of Assyria by Kastarit of Kar-Kassi, the Gimirra or Kimmerians, the Medes and the Minni, which I first brought to light in 1877, belong, I believe, to the closing days of the Assyrian Empire, and not, as Dr. Prášek assumes, to the reign of Esarhaddon, the son of Sennacherib. The enemy overthrown by this Esarhaddon consisted of the Kimmerians alone; and their leader was Touspa, not Kastarit. The war with the Medes was a later and separate event; and it was the Assyrian king and not the Medes that was the aggressor. The Medes, moreover, were at that time under the government of more than one chief, neither of whom bore the name of Mamitarsu, the sole leader of the Medes according to the tablets which I have published. I must, therefore, adhere to my original conclusion that these tablets belong to the latest period of Assyrian history, and that the Assyrian king Esarhaddon whom they record was a descendant of Esarhaddon I. The conclusion is confirmed by a curious tablet (*W. A. I. III. 16, 2*), the historical significance of which has been indicated by M. Amiaud. Here we have an "Esarhaddon king of Assyria" who seems to have reigned after Assur-etil-ilani-yukinni, the son and successor of Assur-bani-pal.

The close of Assyrian history is still shrouded in obscurity. We now know that Assur-etil-ilani-yukinni was acknowledged as king in Northern Babylonia as late as the fourth year of his reign, and consequently that the revolt of that country from Assyria could not have taken place immediately after the death of Assur-bani-pal. We also know that Sin-sar-iskun corresponds to Sarakos, the last king of Assyria according to the Greek writers. A tablet (*K. 195*) further makes us acquainted with a certain Sin-iddina-pal, whose name reminds us of the Greek Sardanapallos, and who was raised to the government by his father, Esar-haddon, "king of Assyria." As the tablet is of the same peculiar style as those

which relate to the invasion of Kastarit, it must belong to the age of Esar-haddon II. We shall, therefore, have to find room for the four following princes between the death of Assur-bani-pal and the fall of Nineveh: Assur-etil-ilani-yukinni, Esar-haddon II., Sin-iddina-pal, and Sin-sar-iskun.

Kastarit, I still believe, must be the Kyaxarés of the Greeks. The two names agree phonetically. At all events, Kyaxarés cannot be represented by the Uvakhshatara of the Belistun inscription, as this is phonetically impossible. On the other hand, Kastarit is identical with Khshathrita, the Persian form of the name assumed by the pretender who in the time of Darius claimed to be "king in Media." But it must be remembered that Kyaxarés was reputed to have been the predecessor of Astyagés, and Astyagés was king of the Manda, or "nomads," not of the Medes. How came the Medes to take the place of the Manda?

A. H. SAYCE.

CORRESPONDENCE.

SANSKRIT PLAYS PRESERVED AS INSCRIPTIONS.

Göttingen: Jan. 3, 1891.

Sanskrit scholars will be interested to learn that among the papers of General Sir A. Cunningham, sent to me by Mr. Fleet, I have found rubbings of two unique stone inscriptions, the originals of which are at the famous Arhai-din-kā Jhonpra at Ajmere, in Rājputānā. For these inscriptions contain large portions of two unknown plays, by the King Vigharā-jadeva, of Sākambhari, whose Delhi Siwalik pillar inscriptions I re-edited last year in the *Indian Antiquary*. A full account of the inscriptions, together with the texts thus discovered, will be published in the same journal. Here I would only state that one of the inscriptions gives a large part of the fifth act of a play called "Harakeli-nātaka," in which the royal author has evidently followed Bhāravi's "Kīrātārjunīya"; and the other, the end of the third act and a large portion of the fourth act of another play, which has reference to Vigharājadeva's wars with the Muhammadan invaders of India. It is clear that the king had both plays carefully engraved and put up in public; and I venture to hope that we shall soon hear from India of the existence of more stones with other portions of the same plays.

F. KIELHORN.

THE BABYLONIAN LEGEND OF ETANA.

Leipzig University: Dec. 23, 1890.

During my visit to the British Museum last October, with the kind assistance of Mr. Pinches, I collected and copied many fragments of Babylonian legends, among them considerable portions of the Etana series, which is mentioned in the list of legends S. 699, next after that of Gilgames (the true reading, according to Mr. Pinches's discovery, of the name of Gisdhubar). I recognised among the fragments the Greek myth of Ganyasde; and Mr. Pinches directed my attention to the engraving on the Babylonian cylinder, No. 18 of Sir Henry Peek's collection of cylinders, which we at once decided to belong to the same legend. Mr. A. H. Sayce has since then connected the name Gilgames with the Gilgames of the Babylonian legend referred to by Aelian (*Hist. Anim.* xii. 21); and Dr. William Hayes Ward, in the *ACADEMY* of Dec. 18, connects this story with the picture on the cylinder. It may be of interest, therefore, to

publish the translation of some fragments of the Etana legend before I have completed the study of them.

I give a literal translation of the more connected portions of the legend, so far as I at present comprehend their contents:

The serpent on [his arrival said to Samas]
I will give the account
Against the eagle [I complain (?)]
Now my nest [he has robbed]
My nest is broken up
My young are destroyed,
He came down, he ate
The punishment which he has put upon me do thou
O Samas [repay]
Surround (?) O Samas with thy net the earth
With thy snare the heaven [compass]
Who can escape out of thy net?
Even the evil-doer, the storm-bird, the lifter up of
the wicked head [did not escape (?)]
Samas the complaint of the serpent [heard]
Samas opened his mouth and addressed the
serpent.
Go the road, push forward to the mountain
Let the carcass of a wild ox cover you,
Open its inside, slit up its stomach.
Take up your abode in its stomach.
All the birds of heaven will come down,
The eagle among them will come.
The bait (?) of flesh he will perceive.
Into the hiding-place of the inside he will tear (?)
When he comes into the midst
Do thou catch him by the wings,
Cut off his wings, his pinions, and his claws.
Tear him and throw him down in an out-of-the-
way place (?)
Let him die a death from hunger and thirst,
According to the bidding of Samas the hero.
The serpent went, pushed forward to the mountain.
The serpent arrived at the carcass of the wild ox.
He opened his inside and slit up his stomach.
His abode he took up in his stomach.
All the birds of heaven fly down to eat the flesh.
The eagle the mischief
With the birds of heaven he does not eat flesh.
The eagle opened his mouth and spoke to his
young—
Come, let us leave and not trouble ourselves about
the flesh of this wild ox.
A young eaglet with extreme keenness of mind
. . . . A word spake
. . . . In the flesh of this wild ox a serpent lies
hid.
. . . . A word speaks.
The reverse of this tablet, after many lines are
lost, contains a prayer for a son.
My offerings are finished. . . .
My sacrificial lambs to the satisfaction of the gods
are complete.
O! Lord, let the command go forth from thy
mouth,
And give me the plant that assists bearing.
Show me the plant that assists bearing; take away
my and grant me a son.
Samas opened his mouth and spoke to Etana
Go the road, push forward to the mountain.

The largest tablet contains the ride of Etana to heaven on the back of an eagle. After some broken lines it reads:

The throne fell over
Under the throne
I came
I was frightened, I trembled sore
The eagle to him to Etana speaks.
My friend cheer up
Come, I will carry you to heaven.
Upon my breast place your breast;
In the feathers of my wings fasten your hands.
Upon my side place your side.
Upon his breast he placed his breast.
In the feathers of his wings he fastened his hands.
Upon his side he placed his side.
He was large and the weight was great.
One two hours' distance he takes him up.
The eagle to him to Etana speaks,
Look, my friend, how the land is.
See the sea; its boundaries are vast (?)
Here the land is described as a mountain sur-
rounded with water, and then follow two more

stages of the journey, each introduced in the same manner. After the third stage we read:

See, my friend, how the land is.
The sea has changed to a gardener's ditch.
When they came to the heaven of Anu,
Into the regions of Anu Bel and Ea
The eagle and Etana together

Many lines are here missing, but the journey continues on the reverse of the tablet:

The eagle, the bird
It is not
Come, my friend, I will carry you
With Istar the Queen [you will be?]
At the home of Istar the Queen
Upon my side place your side.

The description is completed as before, and the stages of the journey follow. After the first, the land looks like a yard; after the second, like a garden-bed; and, finally, the vast sea is so small that no plant could satisfy itself with it. Then follows:

My friend, go no higher to heaven.
Retrace the course
One two hours' distance he retraced the course (?)
The eagle plunged down and there met him

This is repeated for the three stages of their fall, and the tablet breaks off.

The last fragment I shall mention appears to contain an apotheosis of Etana, but there are no complete lines. It begins:

And the gods founded [for him a sanctuary]
. . . . exalted, exalted
Before him the gods lay down
May they place his dwelling
May he be their shepherd
May Etana be their
A sceptre
In the seventh place came the spirits of earth
And held a council
May the lands

Further down it reads:

At that time
And a sceptre of lapis lazuli stone
Embracing the regions of the world

The last word of this tablet is, "he exalted him." And the first line of the next tablet, "The eagle opened his mouth and spoke to Samas his lord."

As will be seen, the fragments begin with a complaint of the serpent to Samas concerning the eagle who has torn up his nest and eaten his young. He begs Samas to catch the eagle for him; but Samas suggests to him a plan by which he can catch the bird himself. He directs the serpent to go to the mountain, find the carcass of a wild ox, and set a bait for the bird. He is then to crawl into the stomach of the ox and wait for the eagle. When the birds, attracted by the flesh, gather around, he is to catch the eagle, cut off his wings and claws, and leave him to his fate. The serpent carries out these directions to the letter; but the eagle seems to suspect something, and admonishes his young birds to avoid that carcass. One young eaglet is especially sharp-sighted, and suggests that a snake lies hidden there. As so often happens, the tablet breaks off in the most interesting part, and we are left in the dark as to whether the cunningly-laid scheme was a success or not.

The prayer for a son is addressed by Etana to Samas. The word omitted in the last line reads *piltu*, but its meaning is unknown to me.

The account of Etana's ride on the eagle begins with an address of Etana to the eagle, in which he tells of confusion and fright. The eagle cheers him up, and requests him to take a ride to heaven, and tells him to nestle closely on his back and hold fast. Etana is heavy; but the eagle carries him up. The journey is divided into three stages of two hours' distance each. At each stage of the trip the eagle addresses Etana, and calls his attention to the appearance of the land and sea. The descrip-

tion is very vivid, and it is unfortunate that the ends of the lines are broken off. We have before us a literal bird's-eye view of the world as the ancient Babylonians imagined it, and a single glance teaches us much of their cosmology. At the end of the first stage upward the vast sea stretches away on all sides, and in the midst stands what they called the mountain of the earth surrounded with water. As they mount higher the picture grows smaller, till, finally, the land looks like one of the small garden-beds with the irrigating ditch around it, which were so common in old Babylon, and the vast sea appears like the encircling ditch. Some of the words used in the comparisons are obscure, but they all express the same general idea. The earth is surrounded with water as with a girdle; the vast sea is like the yard around a castle, &c.

The apotheosis tablet is much mutilated, and only suggestive words give us a clue to its contents.

There seem to be some curious points of agreement between these tablets and those of the Creation series, especially the fourth tablet. There also the god Ea, whose usual abode is in the ocean, is found dwelling above in the heaven of Anu and Bel.

It may be interesting, in conclusion, to refer to the Babylonian legend mentioned by Aelian. The outline of the story is as follows:

When Sakkharos was king of the Babylonians, the Magi predicted that the son born from his daughter would deprive his grandfather of the kingdom. To prevent this, the king shut her up in a tower; but the precautions were in vain, and she bore a son from an unknown man. The guards threw the child from the tower. An eagle perceived its fall, darted under, and received the child on its back, carried it to a garden, and laid it gently down. It was brought up by the gardener, called Gilgames, and ruled over the Babylonians.

We could easily pick out agreements between the stories. The prayer is that of the captive daughter in the tower; the frightened child falls on the back of the eagle. But such points are probably delusive. The name here is Etana not Gilgames; and Etana himself makes the prayer. Then, too, the myth of a man borne by an eagle is very widespread, though it undoubtedly lies before us in the legend of Etana in one of its most ancient forms.

All these bits give us tantalising glimpses of the riches of the old Babylonian literature. It is to be hoped that before long the rest of the legends which lie buried under the mounds will be brought to light.

EDWARD T. HARPER.

British Museum: Jan. 12, 1891.

The texts which Dr. Harper translates here are in the highest degree interesting. One cannot help thinking, however, that the Greek writer has reproduced these remarkable legends of the ancient Babylonians in a very distorted way—unless, indeed, he copied from an entirely different version.

The cylinder referred to by Dr. Harper and Dr. W. Hayes Ward (who first published a reproduction of it) will be found in the Catalogue written by me, entitled *Babylonian and Assyrian Cylinder-Seals and Signets in the Possession of Sir Henry Peck*. The man is shown (No. 18) riding astride on the bird, whose neck he holds. Beneath are two dogs looking up at them, and, to the right, a man carrying what is apparently a basket. This last is followed by a herdsman driving three goats. Above are a man carrying a rectangular object, apparently intended for a letter, and two men seated, one on each side of a large vase which stands between them. The man carrying the

rectangular object seems to be kneeling on one knee. It is not unlikely that the two upper groups are intended for distant objects, visible to the man on the bird from his elevated position. If this design be an illustration of the legend of Etana, the engraver or designer has not attempted to represent him as described on the tablet; for, according to Dr. Harper's translation, Etana was to place his breast against the eagle's breast, to fasten his hands in the feathers of the eagle's wings, and to place his side against the eagle's side. This description is not over clear, but it seems certain that the writer of the legend thought that Etana hung on to the bird rather than rode astride on its back. This difference may, however, be due to a variation in the legend.

THEO. G. PINCHES.

SCIENCE NOTES.

THE medals and funds to be given at the anniversary meeting of the Geological Society of London on February 20, have been awarded by the council as follows:—The Wollaston Medal to Prof. J. W. Judd; The Murchison Medal to Prof. W. C. Brogger, of Christiania; the Lyell Medal to Prof. T. McKenny Hughes; and the Bigsby Medal to Dr. G. M. Dawson; the balance of the Wollaston Fund to Mr. R. Lydekker; that of the Murchison Fund to Mr. R. Baron; and portions of the Lyell Fund to Messrs. C. J. Forsyth Major and G. W. Lamplugh.

PHILOLOGY NOTES.

THE meeting of the Philological Society on Friday next, January 23, will be a "Dictionary evening," when Dr. J. A. H. Murray has promised to come from Oxford and report on the progress of his great undertaking. His coadjutor, Mr. Henry Bradley, happens to be president of the society for the current year.

M. JULES OPPERT has been elected president of the Académie des Inscriptions for the current year; and Prof. Kern of Leyden, Prof. Wattenbach of Berlin, and Prof. Schuchardt of Göttingen, have been elected foreign correspondents.

MR. SAYCE'S little book on the Hittite Empire has been translated into French, with a preface and appendices by M. J. Menant, and published as a volume in the "Bibliothèque de Vulgarisation" of the Musée Guimet.

COURT PUBLISHER Friedrich, of Leipzig, is about to issue a pamphlet by Prof. Carl Abel, entitled *Offener Brief an Professor Gustav Meyer*, discussing controversial points connected with the question of Egypto-Aryan linguistic affinity and Indogermanic etymology.

MEETINGS OF SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, Dec. 9.)

FRANCIS GALTON, Esq., vice-president, in the chair. —A paper on "An Apparent Paradox in Mental Evolution," by the Hon. Lady Welby, was read. —Mr. Francis Galton exhibited a large number of impressions of the bulbs of the thumb and fingers of human hands, showing the curves of the papillary ridges on the skin. These impressions are an unfailing mark of the identity of a person, since they do not vary from youth to age, and are different in different individuals. There is a statement that the Chinese—who seem to be credited with every new discovery—had used thumb-impressions as proofs of identity for a long time; but Mr. Galton pronounced it to be an egregious error. Impressions of the thumb formed, indeed, a kind of oath or signature among the Chinese, but nothing more. Sir W. J. Herschell, however, when in the Bengal Civil Service, introduced the practice of imprinting finger-marks as a check on personation. Mr. Galton's impressions were taken from more than 2000 persons, by spreading a thin film of printers'

ink on a plate of glass; then pressing the thumb or finger carefully on the plate to ink the papillary ridges, and afterwards printing the latter on a sheet of white paper. Typical forms can be discerned and traced, of which the individual forms are mere varieties. Wide departures from the typical form are very rare.

ARISTOTELIAN SOCIETY.—(Monday, Jan. 5.)

S. H. HODGSON, Esq., president, in the chair.—The Rev. Thomas B. Strong read a paper on "Dr. Martineau's *Seat of Authority* and *Lux Mundi* compared." The point of contact in the two books lies in the theory of authority expressed or involved in them. Dr. Martineau's theory is that of pure individualism—the soul receives revelation immediately through the moral sense. It is constructive, aiming at describing the impact of Revelation upon the soul. The theory of the authors of *Lux Mundi* starts with faith as a primary quality, at any rate, for religion. The authority of the Creeds lies in their being exact expressions of facts, which are apprehended by faith; thus authority is in their substance rather than in their form. This position rests upon a philosophy of being, summed up in the phrase, "reason cannot prove existence," and, therefore, is chiefly dependent upon historical evidence.—The paper was followed by a discussion.

EDINBURGH MATHEMATICAL SOCIETY.—(Friday, Jan. 9.)

R. E. ALLARDICE, Esq., president, in the chair.—Mr. John McCowan, of University College, Dundee, read a paper on the heating of conductors by electric currents and the electric distribution in conductors so heated; and Mr. J. D. Hamilton Dickson, of Peterhouse, Cambridge, discussed the solution of a certain algebraic equation.

FINE ART.

My Life. By T. Sidney Cooper, R.A. In 2 vols. (Bentley.)

Mr. COOPER's autobiography will be read with somewhat mixed feelings, at least by those who are alive to any marked want of delicacy and good taste in works of this sort. For one thing, a full and authentic record of the career of so distinguished a painter could hardly be without interest, especially as he affords an instance of genius developing itself under extremely unfavourable conditions, and as he has had a close acquaintance with many of the principal artists of the last fifty or sixty years. On the other hand, his volumes have a fault from which nine-tenths of the personal memoirs produced in recent times are commendably free. He is outspoken where a little tact and kindness of heart might have counselled him to be silent. His piety, of which we are often reminded by fervent ejaculations of thankfulness to Providence for his gifts and success in the world, is decidedly more conspicuous than his charity. He has an unamiable weakness for drawing the frailties of his friends from their dread abode. He shows but slight respect for the good name of the dead or the susceptibilities of the living. Perhaps the most repelling example of this is to be found in his treatment of Sir Edwin Landseer, who, as he indirectly shows, had many claims to his gratitude, esteem, and even affection. It is known to a few that the painter of "The Shepherd's Chief Mourner" was afflicted in his later years with dementia, accompanied by a terrible craving for stimulants. Mr. Cooper, while professing to hold him in

"sincere" regard, does not shrink from exposing him to contemptuous pity:

"It was near Carshalton that he lived, and we went down together on a Sunday. I was indeed shocked when I saw him so changed. He was always crying out for more drink, and was to all appearance half out of his mind. He said to me, 'Oh, Cooper, you do not know how ill I have been and still am! And they don't care anything about me: they leave me alone and do nothing to help me; they will not even give me anything to drink when I am dying of thirst.' I tried to console him, but it was of no use. He did not seem to understand what I said. . . . The whole place was in dire disorder—beer and porter bottles, dishes, pipes, cigars, newspapers strewn about the room; but no Bible, nothing to calm his mind or to lead him to think about death and eternity. How I desired to draw their attention to this, and to try if poor Sir Edwin could not be persuaded to think of his soul and of his God! . . .

He was walking about more than half boozey, his nose of a purple brown colour, and looking altogether repulsive, like all men who are habitually intoxicated."

Samuel Cousins, too, is exhibited lying in a drunken state on the floor of the Star and Garter, Richmond, after a dinner there. But, Mr. Cooper adds, "it is not a habit with him; I never heard of his again indulging in excess, and he lived to a good old age." It does not seem to have occurred to Mr. Cooper that this is an aggravation of his offence against decency in mentioning the incident at all. He is also careful to inform us that an eminent country banker (one of his earliest patrons) abruptly left a dinner table soon after the removal of the cloth, having drunk what an inquisitive guest ascertained to be the larger portion of a bottle of brandy; and that Douglas Jerrold, becoming "quite helpless" after a convivial gathering, was sent home in a cab, with a card bearing his name and address tied to his neck. In fact, for chronicling instances of insobriety among his associates Mr. Cooper has a craze which the tenderest memories are apparently unable to check.

It is a relief to turn from matters like these to the account he gives us of his long and busy life. Of humble parentage, he was born at Canterbury in the autumn of 1803. In his early years he became familiar with poverty in almost its direst aspect. The elder Cooper deserted his wife, leaving her to support herself and five young children as best she might. By dint of sheer hard work she just managed to keep their heads above water, though all the necessities of existence were then at famine price. In such circumstances the future painter could receive only a meagre education, but a sense of his deficiencies induced him to make up for them in part by self-teaching. He soon took a fancy to drawing, and in default of paper and pencils, which he could not afford to buy, would make sketches upon his school slate. Canterbury cathedral, he tells us, was his invariable model. His mother, satisfied that he would never earn his bread in this way, urged him to pursue a trade; and eventually, as a sort of compromise, he went to a coachbuilder's in the place to help in painting panels. Provided with pencils and paper, he produced more sketches of the Great Church, for one of which the Archbishop gave him £5.

Subsequently he painted scenery in a few Kentish theatres, meeting Edmund Kean, Elliston, and other histrionic celebrities. He next accepted an invitation to stay with some relatives in London, and, thanks to nothing but his own ability and energy, was admitted a student of the Royal Academy. "You draw correctly," said Fuseli to the young artist, tapping him on the head; "you will do something." His friends not being able to keep him long, he sat up as a drawing master, first at Canterbury, where he was beginning to be known, and then at Brussels, where he married Miss Pearson, daughter of a learned mathematician. It is worthy of note that he did not admire Paul Potter's famous "Bull" without a good deal of reserve. The Belgian revolution, which occurred a few months later, necessarily brought his affairs to a sad condition, and he returned with his wife to London. For a year or two he found it no easy matter to obtain a livelihood; but his "Landscape and Cattle," exhibited at the Suffolk Street Gallery in 1833, at once placed him on the high road to distinction. For this task he had fortified himself by careful studies of the animals in Smithfield, Regent's Park, and elsewhere. *The Times* said that there were parts of the picture which might "challenge comparison with the works of some of those who were acknowledged to be the best living painters." His first picture at the Academy was the "Study for a Farm near Canterbury," now in the Vernon collection at the National Gallery. From the day it appeared his path was strewn with roses; the *cognoscenti* treated him as another Cuyp, and in the fulness of time he became an Academician.

On one of his recollections he may be pardoned for dwelling at some length. The Queen asked him to go to Osborne to paint a picture of a cow which had been sent to her from Guernsey. Before the work was finished, the Prince Consort induced him to give her a sight of it.

"As soon as the Queen saw my picture she exclaimed, 'Oh yes, that is my Buffie.' That was the name she had given to the cow on account of its having a very largely developed 'dewlap,' and being considered in that respect to resemble a buffalo; or rather, I should say, that was the pet name given to the animal by the Queen, its proper name being the 'Victoria.' So much interest did Her Majesty manifest in the picture that I held it for fully a quarter of an hour while she was examining all the different points and making most intelligent and pertinent remarks as to the execution of the work. I have painted for many persons of distinction, but I never came across anyone who showed a more comprehensive appreciation of artistic excellence generally, or a more perfect and simple reliance upon my powers than in this particular instance as to the execution of the work. . . . The Prince suddenly said, 'How about those dock leaves that you are introducing into the foreground, Mr. Cooper?' I answered, 'The privilege of my branch of art, your royal highness, is to take advantage of objects of still life, to assist the composition of a work, and for pictorial combination; and such accessories as dock leaves are considered allowable to avoid the monotony as much as possible of grass and earth.' 'Well,' said the Prince jocosely, 'they are beautifully painted, and doubtless assist the composition; but they do not give evidence of good farming.' Her

Majesty smiled appreciatively, and, shaking her finger at the Prince, said, 'How about the little pool of water in which the heifer's hind legs are standing?' 'Oh,' said his royal highness, laughing, 'I think it is a beautiful artistic idea, and gives a stamp of nature to the scene.' 'Yes, Albert,' said the Queen, 'and I like its introduction much; but it is not evidence of good draining.' Upon this they both laughed heartily, and I confess I could not help joining in myself. I could see then, and afterwards heard as a fact, that Her Majesty was very fond of farming, and that the Prince was endeavouring to make a complete work of the drainage throughout the whole estate."

More than once does Turner appear before us in these pages. Here, for example, is a sketch of his strangely squalid home at the height of his power and prosperity:

"I called upon Turner at his house in Queen Anne-street, and a dirty-looking house it was. There was no evidence of its having been painted for a great many years. I knocked and knocked again, when at last the door was opened by a most frightful looking creature—a short woman, with a very large head, wearing a dirty white gown, and with a ragged dirty thing tied round her head and throat, making her already large head twice its natural size. She looked just like those ogres one sees in the pantomime before the transformation scene, and was altogether a most appalling vision. I told her that I wished to see Mr. Turner if he was within. She said he was in, but she did not think he would see anyone. 'But I will go and see if he will,' she added, and showed me into a small room by the entrance, where she left me. I shall never forget the damp, dirty smell of the inside of the house. It was dreadful—as if it had never been washed or cleaned, or even dusted; and I am sure no window was ever opened to let in any fresh air. The atmosphere was quite sickening. However, Turner did come in to see me."

In connexion with "A Mountain Group," painted in 1846, we have the following anecdote:

"On the varnishing day, when I went to the rooms to touch up my picture, I found it hung next to one of Stanfield's. He came in shortly; and, after looking carefully at my work, he advised me to lower the tone of the ground upon which a group of sheep were lying, as he thought the whole was too much the same colour. I felt that his suggestion was a good one, and was acting upon it when Turner came by, who, having just entered the rooms, was taking a look round before beginning his own work. He had four pictures in the Academy that year, and was continually passing us as he went from one to the other. Some of his work was, as usual, only just rubbed in; and it was a common practice of his, when he saw how his pictures were placed, to paint first a little on one, then on another, and so on till all were finished to his satisfaction. On the second day, when passing us, palette in hand, and while I was still engaged on my picture, he stopped to look at it, and then, saying 'Put it out; it destroys the breadth,' he put a dot of colour over the part on which I had been painting and then walked away again. Stanfield saw him do it as well as myself, and immediately said, 'Don't you touch it again; he has done in one moment all that it wanted.' So I left it; and when Turner passed again, I went up to him and thanked him, showing by my manner that I meant it; whereupon he nodded, and gave a sort of grunt, but vouchsafed never a word."

Gillott, the dealer, no sooner heard of this

"touch" than he bought the picture at the painter's own price.

Many interesting reminiscences of other masters of the pencil are to be found in Mr. Cooper's book. With Landseer, as we have seen, he became rather intimate:

"Independently of his talent and very high reputation as a painter, he was an extremely clever man, and distinguished himself in a variety of ways. He had a great store of anecdotes, which he was fond of relating; and he was altogether a most agreeable member of society, and much sought after in the highest circles. My friendship for him was sincere, and we frequently met. He dined several times with us, and was always cheerful and courteous; drank but little wine, and after dinner, in winter, he would sit by the fireside with a cigar, entertaining my daughters with stories of fun and venture. This was while they were still quite young. On one occasion he kept them in attention and amusement by describing deer-stalking—a sport to which he was very devoted, and in which he was a great adept. . . . Little did I think in those days in what a shocking manner his life was to end."

Little, too, could Sir Edwin have thought of what was to be done for his memory by this very friend. Maclise's modesty is rather happily illustrated. He had finished "The Sleep of Duncan"; and Mr. Cooper, who was on the hanging committee, rightly gave it the place of honour in the exhibition. When Maclise saw this—

"he was quite vexed with us, and told us that he particularly disliked his picture being hung in that position. 'I don't want it there, my dear Cooper,' he said; 'you must take it down and find some other place for it. Hang it anywhere else that you please.' I was obliged to comply with his demand, or I feared that he might be seriously offended, though I knew that it was only his modesty that made him raise this objection to the position we had selected for his work. 'Some one else will like to be so placed better than I do,' he added, after a pause. And that was true enough!"

Creswick appears in a less favourable light; in addition to being of dirty habits (his friends called him the "great unwashed"), he was "ignorant, vindictive, and unsociable." It would be well, however, to take this description with a grain of salt, as for some reason unexplained he did all he could to prevent Mr. Cooper from attaining the full honours of the Academy.

Of those who rose to distinction in other walks of life we have many glimpses. At Charles Knight's house Mr. Cooper met Thomas Campbell.

"Another most amusing man, full of jokes and anecdotes, and as bright and sharp as a needle. He was a peculiar-looking man, with sharp blue eyes, a long and tapering nose that would go through a keyhole, of fresh colour, and, I think, marked with the small-pox. He was a man of keen observation, and was always delightful company—a man who impressed and singularly attracted me; but I could never think of him as the author of that beautiful ode, 'The Evening Star,' or of 'The Last Man,' and other serious productions. They did not seem to belong to his character or nature, and I could not understand the apparent anomaly. His manner of expressing himself was insinuating, cheerful, and bland; and there was great and pointed humour in his conversation, his fun being always full of vigour and real wit, but never in the slightest degree coarse or vulgar."

Next comes Southey when his mind was giving way:

"One year, when I was up in the Lake country, I was sketching at Rydal Water, when a gentleman came up behind me, and after watching me, as I painted, for some time, said, 'The man who can do that should have a name.' I answered, just as he moved away, 'The man who can see that ought to have a name too.' He looked very peculiar, and I asked some men, who were working in a stone quarry close by, if they knew who he was. 'Oh, yes,' they said; 'why, that's Southey, the poet. He's a funny fellow.' 'How funny?' I asked. 'Why, he's mad,' they answered."

Douglas Jerrold, with Mr. Cooper, was a member of the old Museum Club:

"His countenance was open and bright (when sober!) and showed nothing of that satirical bitterness for which he was so eminent. Leigh Hunt, in proposing his health on one occasion, called him 'the bitter Jerrold, with honey under him.' I once ventured to tell him that several of the members of the club were afraid of him and his bitter tongue, and shunned conversation with him on that account, when he said to me with great energy, 'Sidney, I have never in my life said or written a bitter thing of anyone who did not deserve it.' And I must say that I have frequently heard him speak of persons and things in the most courteous and beautiful and even feeling language—metaphor following metaphor, quaint conceits, graceful images, beautiful ideas and thoughts, all expressed in one continual flow of eloquence from a fountain inexhaustible. . . . In the winter Jerrold always took a chair close to the fireside, where he sat with his cigar, and whence he issued his witticisms in his dry and amusing manner, keeping us all in a continuous state of uproarious laughter."

Slighter reminiscences in the book relate to the Keans, Albert Smith, Samuel Lover, Buckstone, Lord Beaconsfield, and Mr. Gladstone.

Mr. Cooper, it must be added, is often inaccurate where a very little care would have sufficed to put him right. If it was necessary for him to retail afresh some hackneyed stories, such as the "rowing in the same boat with very different skulls," he ought at least to have seen that they were given according to the authentic versions. Some of them are spoilt in the retelling, while one of Thackeray's best known jokes, "The Reach and the Peach," is ascribed without any apparent misgiving to Jerrold. The latter, in addition to being described as "fine looking," which was true only of his countenance, is stated to have been editor of *Punch* since its commencement, whereas he never occupied that onerous position. And this reminds me that Mr. Cooper's good-natured readiness to speak of any undue fondness for the bottle has involved him in a serious exaggeration. He says that, after the weekly *Punch* dinners of old, Jerrold, as well as "many other members" of the staff, "was sure to be inebriated." How far this assertion is true may be gathered from the fact that the company consisted almost exclusively of Thackeray, Leech, Gilbert à Beckett, Richard Doyle, Percival Leigh, and Tom Taylor. Still more astonishing is another of Mr. Cooper's assertions. According to him, "Dickens undertook the editorship of the *Daily Telegraph* from the time that that paper was first established, and carried it

on in a very efficient manner for some years." In an account of his old age, again, he tells us that he has taken the *Daily Telegraph* "ever since it was first published, with Charles Dickens as its editor." Mr. Cooper here gets into a curious and unfortunate muddle. Are we to assume that for the space of thirty-five years he has patronised the *Telegraph* under a false impression? Or does he mean another journal altogether? For, as everybody is aware, the only daily paper edited by Dickens was the *Daily News* at the outset of its career, and his connexion with it came to an end about a decade before the *Telegraph* made its appearance.

With the art-criticism of the present time Mr. Cooper is profoundly dissatisfied. According to him, most of its votaries are prone to extol some painters at the expense of others perhaps equally good, to ignore or disparage the productions of new or comparatively unknown men, and, above all, to be guided less by their own judgment than by the dictates of mere fashion. How far these charges are justified I leave the readers of our daily and weekly papers to determine for themselves. Mr. Cooper, after unctuously quoting the well-known dictum in *Lothair*, suggests that disappointed artists would at times make better critics. They would have the advantage of technical knowledge, while those without that knowledge have merely their taste to depend upon. Of course, he adds, the artist must be of a sufficiently magnanimous character to sink all bitterness and littleness of feeling before he attempts to criticise others. Does it not occur to Mr. Cooper that such magnanimity might be a marked exception to a very general rule? Perhaps the only valid argument he brings forward against the work of the art critics is based upon the unfavourable conditions under which it is done. He condemns their judgments as hastily formed and hastily expressed. Allowing that men of refined taste and a wide acquaintance with the best sort of art might perceive the general worth of a picture if they had the time to examine it carefully, he asks whether this is possible in the few hours during which the critics are admitted to the exhibitions before they are opened. Obviously enough, the evil here complained of might be remedied by the simple expedient of extending press views over several days instead of one, upon the understanding that nothing should be printed until a specified date; but Mr. Cooper, unless I do him a grievous injustice, has not thought it necessary to propose an alteration to this effect in the practice of the body of which he is so important and influential a member. By the way, as he himself shows, it scarcely lies in the mouth of one of the council of the Royal Academy to reproach the critics with hasty and insufficient observation. From an ingenuous description he gives us of the method of selecting pictures for exhibition at Burlington House I take the following passages, the italics, of course, being my own:—

"Everything is admitted, and is passed in review before the council. These sit in a semi-circle, the president being in the centre, with a stand opposite to them, on which each picture

is placed by the attendants in quick rotation, except those of the full members, which are accepted as a matter of course, and are not seen till afterwards. . . . The stand on which the paintings are rested is placed *some distance away from the semi-circle of judges*. . . . Every aspirant to Academy honours may rest assured that all his works are seen, and receive full notice and mature consideration."

Possibly, however, the young artist, far from accepting the last statement as correct, may be disposed to think that in all the circumstances his merits are less likely to be overlooked by the needlessly-hurried critics than by the more leisured council of the Academy.

FREDERICK HAWKINS.

CORRESPONDENCE.

AN UNPUBLISHED GREEK INSCRIPTION IN ASIA MINOR.

Alascheir (= Philadelphia), Asia Minor :
Dec. 29, 1890.

Yesterday my host showed me a dark stone slab, about two feet in length and thirteen inches in breadth, bearing the following inscription in characters of the second century, A.D. :

ΠΡΕΙΣΚΙΑΑΑ
ΤΗΑΤΙΚΗΘΥ
ΓΑΤΗΡΔΗΜΟΥΣ

The remainder of the stone is blank; the letters are about one inch and a quarter in length. I hear that no copy or impression of the inscription had been taken already. It is built sideways into an inner wall of Kourschoun Han in the Belladiah quarter of the city of Alascheir.

S. S. LEWIS.

THE SILCHESTER EXCAVATION FUND.

Southampton : Jan. 9, 1891.

Will you allow me to appeal, with the concurrence of Mr. G. E. Fox and Mr. W. H. St. John Hope, for aid on behalf of the Silchester Excavation Fund?

The committee of the Hampshire Field Club have made a donation of five guineas to this fund, and hope that other provincial archaeological societies will assist the systematic excavation of Silchester by similar contributions. Although Silchester is in Hampshire, its exploration is a matter not of local but of national concern. The archaeologists of this county have long felt a great desire to see such an exploration at Silchester as that which the Society of Antiquaries has now undertaken; but they have recognised that the magnitude of the work of excavation over a hundred acres, which must occupy a series of years, was beyond the power of a provincial society.

It is much to be hoped that local archaeological societies in all parts of the kingdom will do what they can to assist this undertaking, which will be recommenced in the spring. So good an opportunity of learning all that can be learnt of Roman city life in Britain has never yet occurred.

THOMAS W. SHORE.

Hon. Organising Secretary of the Hampshire Field Club.

NOTES ON ART AND ARCHAEOLOGY.

THE committee of the Palestine Exploration Fund have obtained from the Porte a renewal of the firman, giving them authority to excavate in the Holy Land; and Mr. F. J. Bliss, son of the president of the American College at Beirut, has been appointed to continue the

work begun last spring by Mr. Flinders Petrie at Tell el Hesry, the site of Lachish.

MESSRS. KEGAN PAUL, TRENCH, TRÜBNER, & Co. will very shortly publish a book by Mrs. Tirard (Miss Helen Beloe), well known by her lectures on Egyptology at the British Museum. It is entitled *Sketches from a Nile Steamer*; and, in light diary form, it is intended to serve as a readable and trustworthy guide to the tombs and temples between Cairo and the Second Cataract. It will consist entirely of notes taken during a recent visit to Egypt, and, in addition to numerous sketches, it will contain plans of the principal temples.

MESSRS. WARD & DOWNEY will publish, in March, a *Life of Linnell*, the painter, in two volumes, by Mr. Story. The work will contain reproductions of many of the artist's characteristic paintings. Mr. Story has had the advantage of access to Linnell's journal and private papers.

DR. MARTIN CONWAY will begin on Saturday next a course of three lectures at the Royal Institution upon "Pre-Greek Schools of Art." He proposes to deal in order with the contributions of pre-historic man, of Egypt, and of the East (including Babylonia, Phoenicia, the Hittites, and the Etruscans) to the art traditions of the world. In the first lecture, he will treat of the decorative instinct, the genealogy of ornament, and the origin of architecture.

ON Monday next, January 19, Mrs. Ernest Hart will deliver a lecture, at Princes' Hall, on "The West Coast of Ireland : How the People Live, and how they can be Helped," in aid of the technical school of the Donegal Industrial Fund. Sir Lyon Playfair has promised to take the chair.

A CONFERENCE was held, on December 28, in the university library at Heidelberg, between representatives of Prussia, Bavaria, Württemberg, Baden, and Hesse, and also of the Academies at Berlin and Munich, for the purpose of agreeing to some plan of united action for the exploration of the *Lines Romanus*, or frontier line of the Roman dominion in Germany, and to settle the proportion of the expense of the undertaking to be borne by the several States. Major von Leszczynski, of the general staff of the German army, was deputed by the Emperor to represent the topographical interests concerned. It was agreed to recommend that a commission be appointed, consisting of representatives of the five States and the two Academies; that there be two superintendents of the work of exploration, one of whom should be an archaeologist or architect and the other a military officer, under whose superintendence several persons should be charged with carrying out the work in series of comparatively short lengths. It is expected that the whole track, including the remains of the various military stations or camps, will be laid bare within five years.

THE new Part of the *American Journal of Archaeology* (London: Kegan Paul & Co.) opens with an important article by the Passionist Father, Germano di S. Stanislao, giving a detailed description of the excavations commenced by him some four years ago on the Coelian Hill at Rome, which resulted in the discovery of the house of the Saints John and Paul, who suffered martyrdom under Julian the Apostate. On the second page, we notice a curious mistranslation, which is perhaps not to be found in the original Italian. "The Coelian Hill, though now a desert, was in Roman [? ancient] times densely peopled, and was called by Frontinus a *famous (sic)* hill: *Coelius et Aveninus celeberrimi colles*." Of course, *celeberrimi* has here its primitive meaning of "very densely peopled." Among the other articles are: an architectural description of the

monastery of San Martino al Cimino, near Viterbo, by Prof. A. S. Frothingham, junior; and some notes on Babylonian cylinders, by Dr. W. Hayes Ward. The record of recent archaeological investigations is rendered yet more useful by a general summary prefixed to it; and the analysis of the contents of archaeological publications is as elaborate as ever.

THE STAGE.

STAGE NOTES.

MR. SAVILE CLARKE'S adaptation of Mr. Thackeray's story *The Rose and the Ring*, is played at the Prince of Wales's every afternoon. It is an adaptation executed with real skill; and though it is not very frequently actually witty in dialogue, it is all exceedingly telling. Mr. Savile Clarke being evidently in the fullest possession of the requirements of the stage. And, as we shall explain in detail a little later on, it is very well acted. Mr. Slaughter's music is as tuneful as possible. The spectacle, which, in the first act, assumes no remarkable proportions, becomes, in the second, very noteworthy. The piece is "staged"—as the ugly term now goes—by Mr. Charles Harris, who is only second to the great "Augustus Druriolanus" himself in his aptitude for conjuring up a sight that is delightful and imposing. The piece has the advantage of being played and sung by some of the leading lights of the stage of comic opera; and in the performance there are engaged two extraordinarily clever children: Isa Bowman, "the fairy black-stick," who is grace itself; and a yet younger child, full of aplomb and effectiveness, Emispie Bowman. Mr. Harry Monkhouse, as Valoroso, King of Pallagonia, gives a performance that is ripe and dry; in reality, nothing is more laughable than the measure in which he endows that monarch with the querulous tones and the little ugly, vulgarish, and familiar gestures of the lower bourgeoisie. Later on, Mr. Monkhouse—when the monarch is in love with Rosalba—assumes burlesque heroism. There are ways of dethroning his wife and exalting the newer lady; for, as he suggestively remarks, "Am I not a king, and does not a river flow under my palace wall?" Mr. Le Hay, partly in virtue of his physique and of a very dexterous make-up, is not less admirable as Bulbo, Crown Prince of Trim Tartary. His face, broad and ingenuous, suggests a vision of Mr. Pickwick in his youth; and his sigh is like a westerly gale. The other actors do, all of them, useful service. Then, in regard to the ladies—those ladies who are quite grown up—in Miss Attalie Claire we have a sympathetic singer and a sympathetic presence; and in Miss Violet Cameron all that is handsome and spirited. It will not be the fault of players, or managers, or of Mr. Slaughter, or of Mr. Savile Clarke, if this very pretty version of *The Rose and the Ring*—which Mr. Thackeray, we take it, would have enjoyed to see—does not run at the Prince of Wales's beyond the extent of the holidays.

A NEW joke in several acts, and lasting from two to three hours, has been produced at the Strand. Mr. F. C. Burnand—improving in certain respects upon M. Vallobrigue's invention—has turned "La Sécurité des Familles" into "Private Enquiry"; and "Private Enquiry," in its smartness of dialogue, in its intrigues and mystifications, in its wealth of entertaining incident, is at least a worthy successor to "Our Flat." Mr. Burnand has done his work thoroughly well—with the cunning hand that comes of long practice, and with his natural gift of wit, his delightful faculty of seeing the funniest side of a thing. The private enquiry agent, whose not un-

remunerated activity brings something more than discord and distrust amongst the people who are silly enough to suffer his presence, is played by Mr. Willie Edouin, with full appreciation of the character of the professional busy-body, the modern Paul Pry, whose motives are self-interest rather than curiosity. Mr. Edouin, in look and gesture and speech, is at point after point exceedingly droll. In parts that are of secondary importance, but yet are distinctly telling, Messrs. Maltby and Beauchant contribute to the entertainment. Miss Whitty is really a comedian; Miss Marie Linden is graceful as well as skilled—the Strand stage is fairly provided with people who may be called decorative, as well as with comic artists. If we do not profess to tell the story itself—but confine ourselves, instead, to a few words of comment—that is because stories of the kind to which "Private Enquiry" belongs require for their due effect the elucidation of action. The main intrigue is ingenious; but the piece from end to end—and it is indeed no discredit to it—is essentially for the boards. And in regard to it we should invite the reader of these lines by no means to imitate the prudenece of Sir William Harcourt—by no means to "continue to cultivate his own fireside, in this seasonable weather"—but, on the other hand, to venture bravely forth, and, in regard always to "Private Enquiry," to form an opinion of his own, and to express it.

"BEAU AUSTIN," by Messrs. Stevenson and Henley, held its place but for a few nights in the Haymarket bill. The theatre was closed for the first part of the present week, and was to re-open on Thursday for the production of Mr. Henry Arthur Jones's "Dancing Girl," which will be duly noticed in our next week's issue.

Of the re-opening of the Vaudeville, we shall also shortly afford some notice. This favourite and convenient little playhouse—about the size that a house ought to be for the performance of comedy—has for months been in the hands of builders and decorators, and Mr. Thorne and his company have been wanderers. Not much required to be done in the auditorium of the Vaudeville, which indeed was always agreeable; but there was very considerable room for improvement in what we may speak of as the avenues of approach, which have to-day been both widened and beautified.

At the Birkbeck Institute, a night or two ago, Mr. Frederick Moy Thomas—whose utterances receive consideration not solely in virtue of his father's eminence as a critic—accomplished that which is a rare feat for an Englishman. He delivered a discourse in French. But the thing that makes the discourse noteworthy to readers of the ACADEMY is that it was concerned with Molière and the "Misanthrope." Mr. Frederick Moy Thomas very sensibly holding, in opposition to a view put forward not long since, that the "Misanthrope" is not to be linked with "Tartuffe" as a satire and attack upon hypocrisy, but rather that it must be regarded as a demonstration of the impracticability of absolute frankness. Mr. Thomas further interested his audience by assuring them that what has been reckoned an excuse for plagiarism—the oft-quoted words, "*Je prends mon bien où je le trouve*"—is really nothing of the sort. Grimarest, Molière's original biographer, could never, Mr. Thomas contended, have given sanction to the supposition that Molière was a plagiarist; and "*Je reprends mon bien où je le trouve*" is the true reading of Molière's saying. Cyrans de Bergerac had appropriated some intellectual goods of Molière's, and it was of his own goods alone that Molière would fain have re-possessioned himself.

On Friday of this week, the association now

known as the Théâtre d'Art were to give a representation of Shelley's "Cenci," in M. Félix Rabbe's version, at the Théâtre Montparnasse. M. Prad, of the Odéon, takes the part of the Count, and Mlle. Georgette Camée that of Beatrice.

THE *Neue Theater Almanach* for 1891 contains tables showing the frequency of the performance of certain classes of plays in the German theatres during the last nine years. From these it appears that altogether Shakspearean plays were performed 822 times in the year 1889, 751 times in 1888, 717 times in 1887, and 679 times in 1886. In 1881 they were performed 795 times, which is attributed to the influence of the Meiningen troupe. Of late years especially the most popular play seems to have been "Othello," which during the nine years 1881-1889 was performed 837 times; next come "Hamlet" with 816 performances, and "The Merchant of Venice" with 695 performances. The plays most rarely performed were "All's Well that Ends Well" and "The Merry Wives of Windsor," each of which had only a single performance during the nine years.

MUSIC.

MUSIC NOTES.

MIDLE. ILONA EIBENSCHÜTZ, a young pianist, made her first appearance at the Popular Concerts on Monday evening. She came out as a prodigy at the age of eight, but was wisely soon withdrawn from the concert platform, and put for several years under Mme. Schumann. Her rendering of the Etudes Symphoniques at once proclaimed her a pupil of that lady; but she was exceedingly nervous, and could do justice neither to herself nor to her teacher. We must be content for the present to say that she shows intelligence, and that she has been well trained; for this nervousness spoiled both tone and technique. She is to play Beethoven's Sonata (Op. 111) next Saturday, and that work is a splendid though severe test. Miss Marguerite Hall sang with great taste two lovely *Lieder* of Schubert's, and Bizet's "Adieu de l'Hôtesse Arabe," in which she was admirably accompanied by Miss M. Carmichael. The programme included Beethoven's "Harp" Quartet, and his Sonata for pianoforte and 'cello in A (Op. 69).

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186, Strand.

Copies of the ACADEMY can be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. EASON & SON, 40, Sackville-street; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

SATURDAY, JANUARY 24, 1891.

No. 977, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

George Meredith: Some Characteristics. By Richard Le Gallienne. With a Bibliography by John Lane. (Elkin Matthews.)

"The following essays," Mr. Le Gallienne tells us in his Preface, "make no attempt either to 'place' Mr. Meredith or to be a kind of critical microcosm of his work, nor do they presume to speak with any air of finality thereon. . . . My whole attempt is that of a lover of the works to give expression to the faith that is in him; and I have written rather for those who are already spending their lives in a vain endeavour to convert masculinity to *The Egoist*, than in the hope of being myself an instrument of conversion. . . . My attempt is just that: to say some things which, doubtless, no few lovers of George Meredith could have said better, but which, as yet, they have kept to themselves."

It is, indeed, only too true that the people who care most for Mr. Meredith's work, and whose opinion would carry most weight, have, with some slight exceptions, made no attempt to put their views on record. Why has not Mr. Stevenson given us a really adequate essay instead of some tantalising fragments? Why has not Mr. John Morley written a convincing study? Why has not Mr. Pater said the right word on a greater than Mérimée? Even Mr. Henley, who has written so much and so well on the subject, has contented himself with making a series of sketches instead of painting a full-length portrait. Other and lesser critics have been praiseworthy—have expressed enthusiasm, or cleverly analysed certain characteristics; but as yet the adequate criticism has not been written. Mr. Le Gallienne has told us, in the passage I have quoted, that he has not presumed even to aim at anything like a final judgment. Perhaps it would have been better if he had aimed at it. Such an endeavour would have had a bracing effect upon a style which is apt to become limp and as if out of breath; it would have taught him conciseness—that is, the nearest road to an end kept steadily in view; it would have suggested to him that without unity there can be no culminating effect. The book should have been launched at the British Philistine, like David's one convincing pebble, straight to the forehead. It must be likened rather to a shower of small shots falling more or less casually on the resounding armour. Some effect it will no doubt have; for a great deal of what Mr. Le Gallienne says is excellent, has the warmth of conviction, and may even be persuasive. His manner of saying it is not always quite what one would desire. On occasion he can say admirable things—he can be witty, adroit, a phrase-maker; but he is rarely content to be

simple, and he forces alike his humour, which is limited, and the English language, which it is wise to limit. One cannot see quite the relation to English of such a phrase as that already quoted, "to convert masculinity to *The Egoist*." Mr. Le Gallienne is so fond of the word "masculinity" that he uses it twice in two pages. At times he tries to write like Mr. Meredith at his wilful worst. That is not surprising, if it is unfortunate; for everyone must have felt, at one time or another, the fatal attraction of a style about which one is writing. To write about Carlyle, Mr. Meredith, or Mr. Swinburne, without unconsciously reproducing some trick of manner, is a feat of which any man might be proud.

Mr. Le Gallienne's first chapter deals with "Style and Aim," and is a good introduction. The second chapter is devoted mainly to *Richard Feverel* and *The Egoist*, which are taken, not quite justly, as representative of the novels as a whole. Mr. Le Gallienne tells us that in his opinion *The Egoist* is Mr. Meredith's greatest novel, and "may be taken to stand for the one thing he can pre-eminently do." Opinion against opinion, I can but say that to my mind such a statement is far from true. *The Egoist* is a wonderful book—no doubt the most wonderful book, literally speaking, that Mr. Meredith has written. But that does not make it his greatest novel, nor prove that it is "the one thing he can pre-eminently do." In the elemental comedy of such a novel as *The Egoist*, Mr. Meredith challenges Congreve, or even Molière; but in the elemental tragedy of certain parts of *Rhoda Fleming* and *Richard Feverel* he challenges Webster, or almost Shakspeare. Mr. Le Gallienne has some interesting pages on the "idea of comedy," in the course of which he notes acutely the difference between the ordinary humorist, who "has to make his comedy," and Mr. Meredith, for whom "it inheres in all things as vitally as poetry and as diffused as sunshine." But he has no such pages on the yet more essential "idea of tragedy," to which we owe what is most profoundly human, most intimate and penetrating, in these novels.

In regard to style, Mr. Le Gallienne says much that is acute and sensible; but is it true that *Richard Feverel* shows us Mr. Meredith's style "as mature in his twenty-seventh year" as at a later period? Mr. Meredith was not in his twenty-seventh but his thirty-second year when *Richard Feverel* was published; but that is a mere detail. I question if Mr. Le Gallienne has read *Richard Feverel* in its original form. He would see that Mr. Meredith had by 1878 so far matured as to weed out from that particular novel a great deal of very irrelevant and very badly written stuff—whole chapters near the beginning, paragraphs and passages throughout. Then, while I quite agree with Mr. Le Gallienne that *Richard Feverel* is fuller of fine things than any single one of the later novels, I cannot think that, even in its revised form, it is so mature and masterly in style as some of the middle period work. Mr. Meredith's style has always been, as I think he has himself said, "experimental," but the experiment has been carried out at different

times with somewhat varying success. The uncouthnesses which disfigure *Richard Feverel* were the mere shavings, so to speak, of *Shagpat*—a mere aftertaste of Arabian extravagance. It is a new kind of uncouthness that comes into prominence in *The Egoist*—that exaggeration of qualities which one sees in the later works of most men who have a pronounced style, as, in our own days, we see it in Carlyle and in Browning. Rough and ready judgments about Mr. Meredith's style are, or should be, impossible. No prose writer of our time has written finer or viler English. It is a mistake to treat him as if he were stylist first, and novelist afterwards, as Flaubert might almost be said to be. But it is a greater mistake to compare his troubled intensity of phrase with Balzac's hopeless incapacity for writing sustained good French, or Dickens's hopeless incapacity for writing sustained good English. He is a conscious artist always—as conscious as Goncourt, with whom he may be compared for his experimental treatment of language, his attempt to express what has never been expressed before by forcing words to say more than they are accustomed to say. Sometimes they give his message, but ungraciously, like beaten slaves; sometimes the message seems to go astray. That is why Englishmen, forgetting triumph after splendid triumph of style, will sometimes tell you that Mr. Meredith cannot write English, just as Frenchmen gravely assure one another that the novels of the Goncourts are written in any language but French.

The most novel, the most needed, part of Mr. Le Gallienne's book is the section in which he deals with Mr. Meredith's poetry. That astonishing little volume, *Modern Love*, and *Poems of the English Roadside*, published nearly thirty years ago, has never received anything like justice, except at the hands of such fellow-craftsmen as Mr. Swinburne and James Thomson. Mr. Le Gallienne seems inclined to place the title-poem at the very head of Mr. Meredith's work, above even the novels. He is in good company, for that, too, was Mr. Browning's opinion. But while I for one cannot but feel that Mr. Meredith works more naturally, with a freer hand, in prose than in verse, that poem of "Modern Love," and at least one or two of the smaller pieces, seem to me among the masterpieces of contemporary poetry. As I have said elsewhere, in a very inadequate article on Mr. Meredith's poetry, "Modern Love" is the most distinctly modern poem ever written. There had been nothing like it in English poetry: it brings into our literature something fundamentally new, essentially modern. Side by side with this super-subtle study of passion and sensation, we have the homely realism of "Juggling Jerry"—a poem which can only be compared with Burns's "Jolly Beggars" for triumphant success in perhaps the most difficult kind of literature. Mr. Meredith's later poetry is sometimes very wonderful, sometimes very dreadful; and the dreadful part of it has unduly, but not unnaturally, prejudiced people against what is really wonderful in it. Mr. Le Gallienne's pages on this curious individual nature-poetry, with its searching vision, its troubled and tumultuous form,

have considerable interest, and are certainly very sympathetic.

A bibliography of Mr. Meredith's work, and of the main criticisms upon it, fills the last seventy pages of the volume. In this bibliography, Mr. John Lane has brought together material of permanent value, and has done a real service alike to collectors and to students. Mr. W. Morton Fullerton contributes a pleasant note on the recent American discovery of George Meredith.

ARTHUR SYMONS.

The Adventures of Count George Albert of Erbach. Translated from the German by H.R.H. Princess Beatrice. (John Murray.)

It would be fortunate for the world if the records of other families yielded as interesting a picture of adventures and manners as the archives of the Erbach-Schönhausen house. The history of Count George Albert of Erbach, which has been compiled from family documents by Emil Kraus, and translated into graceful English by the Princess Beatrice, gives us a vivid insight into a great European romance—the defence of Malta and the fate of captives among the Moorish corsairs. That no familiar touch may be wanting to the story, we have even the Moorish princess pitying her father's prisoner, and not obscurely hinting at her love. The Bey of Tunis readily gave permission to Selima to play chess with his noble captive. His own object was to elicit from the Count an admission of his identity in some unguarded moment, and this very interested motive appears to have actuated the lady herself to some extent. But Selima was playing with dangerous fire, and ran the risk of surrendering to more tender feelings. The Count, however, though grateful and chivalrous, was proof against her blandishments, and persevered in preserving his secret in order to save his family from paying the heavy ransom which a knowledge of his true quality would have enabled the Bey to exact.

Our hero started in life as the youngest son of a German family of distinguished position and important connections, although destined by the death of his elder brothers eventually to become the head of the house and the ancestor of the present Counts of Erbach. Accompanied by a "governor" and a "principal," or courier, he was sent out in 1614 on a protracted tour of foreign travel. Admission to the best society of the day was everywhere open to him, partly through the introductions he carried, and partly through his fine manners and a handsome person, which we can realise from a silver relief made at Nuremberg during his lifetime. We find him at Strassburg, Grenoble, and Paris, and eventually at Rome. It was impossible to return home from the Eternal City without visiting Naples, although his courier was receiving sharp remonstrances from the family steward for his extravagance. Accordingly the Count made his way south with a company of German fellow-travellers well equipped for the road, and was hospitably entertained at Naples by a German noble resident in that city. The conversation naturally turned from time to time

upon the Knights of Malta and their valiant deeds against the corsairs who infested the Calabrian and Sicilian coasts. An ardent wish sprang up in Count George's breast to pay a visit to the isle of heroes. He was momentarily deterred by a summons home, and by the serious warnings which his host addressed to him. But the promptings of a fellow-traveller, who appears to have been a curious mixture of cupidity and venturesomeness, redoubled his first longings. His companions determined to share the adventure, and they started for Valetta on a galley of the Order rowed by slaves whose hard work and scanty fare had reduced them to the semblance of bronzed skeletons. The voyage was a success, and the readers of to-day owe to it a graphic account by an eye-witness of the way of living of the famous knights. Up to that time, at any rate, the religious fervour and crusading zeal of the Hospitallers was unimpaired. Discipline and austerity prevailed everywhere, and their martial ardour was reinforced by religious enthusiasm.

The Count, albeit a Lutheran, was received with a fine hospitality and tolerance by the Grand-Master Alosius de Vignacourt, although some of the Spanish knights, in the true spirit of St. Dominic, were tempted to try a little coercion on the heretics. The party were shown the arsenal and equipments of the Order, and witnessed a solemn investiture of new knights. But the misfortune which had been predicted at Naples, and of which the Count's mother had been warned in an ominous dream, was destined to befall them on their return. They trusted themselves to a hired frigate, but the captain had been observed before their departure to have secret colloquies with a mysterious stranger. He had, in fact—and the occurrence was not infrequent among the rascally traders of the day—arranged to sell them to the corsairs. Under the coast of Sicily, and almost in sight of haven, they were attacked by a galley of Tunisian rovers, which shot out from a cove where it had been waiting. It is gratifying to learn that the treacherous captain was killed by one of the party, an event which was welcomed by the corsairs, who were thus released from paying him his stipulated fee. But he had made a successful resistance impossible by abstracting the ammunition of his passengers. Handicapped as they were, the Germans made a desperate fight; but the poisoned arrows of the corsairs were too much for them, and they were eventually overpowered.

The prisoners were treated with considerable humanity by the pirate captain, and were agreeably surprised to find similar treatment extended to them at first at Tunis. But the Bey suspected that his prisoners were persons of rank; probably their betrayer would not have sold them otherwise. Count George, however, was determined to represent himself as a student, and apprised his family of the fact in a letter which he contrived to send them. The Bey, disappointed and suspicious, left no means untried to entrap his prisoner, whose birth was plainly evinced by his noble mien and manner, into an admission of his rank, and finally had resort to torture and

privation. The Count held out pluckily; but meanwhile the story of his captivity was bruited about in Europe by his family, who made every effort to procure his release. But when an inkling of the truth at length reached Tunis, the prize had almost slipped through the fingers of the hard taskmaster. Malignant small-pox had brought the Count into the last extremity; and the Moors hastily determined to close with the Knights of Malta, who were acting as intermediaries, while they still had a live man to traffic with. Accordingly a bargain was knocked up out of which the Count's companion, who had prompted the voyage, tried unhand-somely to make something for himself, true to his principle of sponging on his noble friend; and the ransomed prisoner was shipped, more dead than alive, to Malta. The careful nursing of the Hospitallers, however, succeeded in restoring him to health; and he lived to take an active part in the Thirty Years' War, and to continue a line which was in danger of disappearance.

C. E. DAWKINS.

The Life of Philip Henry Gosse, F.R.S. By his Son, Edmund Gosse. (Kegan Paul & Co.)

In that very excellent little volume, *Glaucus*; or, the Wonders of the Shore, Charles Kingsley observes:

"Happy, truly, is the naturalist. He has no time for melancholy dreams. The earth becomes to him transparent; everywhere he sees significances, harmonies, laws, chains of cause and effect endlessly interlinked, which draw him out of the narrow sphere of self-interest and self-pleasing into a pure and wholesome region of solemn joy and wonder."

It is not improbable that Kingsley was thinking of his friend Philip Gosse when he wrote these words, for they are thoroughly applicable to the latter, when regarded from that side of his character with which the author of *Glaucus* was principally familiar. How applicable they are may easily be perceived while reading many pleasant passages in the interesting volume which forms the subject of this notice. Of such passages the following brief extract from a letter written by Gosse in 1833 may be quoted as an example.

"How I love to recall every little incident connected with that first morning excursion!—the poor brown crane-fly, which was the first English insect I caught; the little grey moth under the oaks at the end of the last field; the meadow where the *Satyride* were sporting on the sunny bank; the heavy fat *Musca* in Heckford-field hedge, which I in my ignorance called a *Bombylius*, and the consequent display of entomological lore manifested all that day by the family, who frequently repeated the sounding words '*Bombylius bee-fly*.'"

But, unfortunately, there was another side to his character, which was of a gloomy and morbid tendency, probably due to some latent bodily ailment, some organic disease eating away the roots of life and joy and happiness. Mr. Edmund Gosse has taken a very proper and sensible view of the matter; and, referring to a private diary kept by his father while living in Alabama, he observes:

"His diary is full of self-upbraidings, penitential

cries, vows of greater watchfulness in the future; and it is downright pathetic to read these effusions, and to know that it was quinine that the poor soul wanted in its innocent darkness."

In his youth he had suffered from a serious attack of water on the brain, and throughout the larger portion of this volume reference is continually made to periodic visitations of headache and depression. It is not, therefore, improbable, as the biographer himself seems to suggest, that the religious melancholia from which Philip Gosse suffered was really due to some defect in his physical constitution.

As might be expected in the life of a naturalist, those chapters will be found the most interesting which are, as it were, pages torn from the book of Nature, and which carry us away through the vast and varied fields of life, disclosing the hidden wonders of the shore or the forest. Very excellent, also, are the graphic descriptions with which these chapters are adorned, depicting the wild scenery, and the manners and customs, of Newfoundland, Canada, Alabama, and Jamaica, some fifty years ago. This is not surprising when we remember that Gosse was not only a naturalist, but was also, as all his writings plainly indicate, a poet—possessing the rich imagination, and the love of strange or sonorous words, fantastic phrases, and florid epithets, which so many writers of verse endeavour to cultivate. Those who are familiar with his various works—*A Naturalist's Sojourn in Jamaica, Tenby, The Aquarium, Devonshire Coast, A Year at the Shore*, &c.—know that as an observer of all the details of natural objects, and as a writer of flowery and romantic descriptions, Philip Gosse had a talent that deserved the success which it eventually secured. But those who have also read his volume entitled *Omphalos* will agree with the writer of the biography that that volume was "fatal to the advance of his reputation as a man of science"; for it proved that as a thinker or philosopher "he was fitted neither by training, nor by native aptitude, nor by the possession of a mind clear from prejudice." It is, indeed, surprising that a naturalist who was through life the contemporary of such writers as Darwin, Huxley, and Herbert Spencer, should have so utterly failed to apprehend the cogency of their arguments on the subject of evolution that he remained quite unaware that a new era in the history of science had commenced and was rapidly advancing.

In reading the chapters of the biography dealing with the portions of his life spent in America, we are reminded of the wanderings of another famous naturalist, Charles Waterton, to whose character his own bore some slight resemblance. As, for instance, when we are told that while residing in Jamaica he was

"frequently accustomed to rise two hours before dawn and, sitting loosely in the saddle, to ride slowly up a romantic ascent by the light of the stars, listening to the rich melodies poured forth by dozens of mocking-birds from the fruit-trees and groves of the lower hills, managing to arrive at the brow of the mountain at sunrise."

Here, we read,

"was the haunt of several rare birds of peculiar interest—of the eccentric jabbering crow, of the solitary, and of the long-tailed humming-bird."

It was fascinating, in intervals of labour,

"to sit on a fallen log in the cool shadow, surrounded by beauty and fragrance, listening to the broken hymns of the solitaires and watching the humming-birds that sip [*sic*] fearlessly around your head and ever and anon come and peep close under the brim of your broad Panama hat—as if to say, 'Who are you that come intruding into our peculiar domain?'"

It is in such passages and amid such scenes as these that the character of Philip Gosse appears to advantage, and the volume before us contains many poetic descriptions similar to that which we have just quoted.

The naturalist has been fortunate in having so skilful a biographer, for Mr. Gosse has given us a very interesting and, for the most part, pleasant volume. It is an ungracious duty which requires us to add that we notice a number of oversights and ill-constructed sentences, due probably to over-pressure of work. We give a few examples which it may be deemed advisable to alter in a second edition—the italics are ours:

"Their neighbours, few and far *between*, were vulgar and sordid, sharp and *mean*" (p. 96).

"Perhaps if he *had* more perseverance, or a little capital, he might have turned this into meadow" (p. 97).

"—which they would have been obliged to fell even before they *could build* a hut to cover their heads" (p. 97).

"Cahawba had *then until lately* been," &c. (p. 132).

"who, *possessing* no intellectual resources herself, looked with suspicion on those who *did*" (p. 221).

But these are slight defects in a volume which will interest and entertain many readers.

SAMUEL WADDINGTON.

Longinus on the Sublime. Translated into English by H. L. Havell. With an Introduction by Andrew Lang. (Macmillan.)

THE treatise on the Sublime has been described by Prof. Jebb as one of the best pieces of literary criticism in the Greek language. Its authorship and date are both uncertain; but it is usually ascribed to Longinus, "the friend of Plotinus, the tutor of Porphyry, the victim of Aurelian;" the date of its composition being about 213 A.D.—nearly five hundred years after Greece had been subjugated by Macedon and one hundred after it had become a Roman province. It is thus the offspring of a critical age, which had superseded the creative age of Greek letters. Longinus admits that contemporary literature is bad; "all its glowing improprieties of language may be traced to one common root—the pursuit of novelty in thought. It is this that has turned the brain of nearly all the learned world of to-day." And without citing names, which would be invidious, we may easily see the same spirit at work in our own time. Longinus hoped

to correct these faults, by turning the attention of contemporary authors to the great writers of the past—to Homer, to Demosthenes, to the tragedians, for "a just judgment of style is the final fruit of long experience." The student of ancient literature will read eagerly the criticisms of Longinus, written at the beginning of the Christian era, upon his favourite writers. Although, out of complacency apparently, Longinus does refer to the oratory of Cicero, he makes no allusion to the great poets of Rome, who had drawn their inspirations from Greece, much as Longinus wished the writers of his own day to do. We shall read these criticisms of Longinus with interest, much as we read Addison's Essays upon Milton, although we are now, in some ways, in a better position to judge of the English and Greek poets than either of their earlier critics. For Longinus based his criticism upon a belief, now exploded, in a personal Homer, while Addison was shackled by the pseudo-classicism of the eighteenth century.

Of the present translation the English is sufficiently fluent. Mr. Havell has given us a readable book, and none will grudge the hour and a half devoted to its perusal. Yet the treatise on the Sublime cannot be regarded as a work of art. It is avowedly fragmentary, and its discussion of ancient oratory will not appeal to the general reader, while with scholars it will not stand beside the more comprehensive Rhetoric of Aristotle. Yet it is not oratory, but the sublime in oratory, that Longinus discusses; and the sublime for us of the Victorian era has as potent an interest as on those living in the days of Aurelian. Often in the Crimean speeches of John Bright, as where he hears the wings of the angel of death passing through the land, we, too, acknowledge the presence of sublimity, such as Longinus felt in the Philippics of Demosthenes.

"A sublime thought," he says, "if happily timed, illumines an entire subject with the vividness of a lightning flash." And again, "the sublime, whenever it occurs, consists in a certain loftiness and excellence of language; and it is by this, and this only, that the greatest poets and prose writers have gained eminence and won themselves a lasting place in the Temple of Fame. . . . To believe or not is usually in our own power; but the sublime, acting with an imperious and irresistible force, sways every reader whether he will or no."

The main interest and value of the work are to be found in the opening sections, from which the foregoing passages are taken; but in the main body of the treatise, devoted to an investigation of the sources of sublimity, occur two interesting passages, which have served perhaps better than anything else to keep Longinus's name in memory.

"The law giver of the Jews, no ordinary man, having formed an adequate conception of the Supreme Being, gave it adequate expression in the opening words of his Laws; God said—what?—Let there be light, and there was light; let there be land, and there was."

—a passage of curious interest, which finds its parallel from the other side in St. Paul's quotation from Euripides, "Evil communications corrupt good manners."

In illustration of the sources of sublimity, Longinus quotes instances from older writers. Here is one:

“ I deem that man divinely blest
Who sits, and, gazing on thy face,
Hears thee discourse with eloquent lips,
And marks thy lovely smile.

“ This, this it is that made my heart
So wildly flutter in my breast;
Whene’er I look on thee my voice
Falters, and faints, and fails;

“ My tongue’s benumbed, a subtle fire
Through all my body inly steals;
Mine eyes in darkness reel and swim;
Strange murmurs drown my ears;

“ With dewy damps my limbs are chilled;
An icy shiver shakes my frame;
Paler than ashes grows my cheek;
And Death seems nigh at hand.”

Is it not wonderful how, at the same moment, soul, body, ears, tongue, eyes, colour, all fail her, and are lost to her as completely as if they were not her own? Observe, too, how her sensations contradict one another—she freezes, she burns, she raves, she reasons, and all at the same instant. And this description is designed to show that she is assailed, not by any particular emotion, but by a tumult of different emotions. All these tokens belong to the passion of love; but it is in the choice, as I said, of the most striking features and in the combination of them into one picture, that the perfection of this ode of Sappho’s lies.”

—a criticism which forecasts those of Lessing and Coleridge. Thus has been preserved to the modern world a fragment which Mr. Lang, in the admirable Introduction prefixed to the volume, justly terms “priceless and not to be translated.” “Beautiful words,” says our author, “are the very light of thought.” If Mr. Havell’s rendering is not Sappho, it is at least scholarly and metrically sufficient. We think that he has done wisely in not attempting to follow the metre of the original, and also in adopting the unrhymed stanza.

ROBINSON KAY LEATHER.

“RULERS OF INDIA.”—*The Marquess Cornwallis*. By W. S. Seton-Karr. (Oxford: Clarendon Press.)

THE last volume of Sir W. Hunter’s interesting series is a departure from the usual character of the “Rulers of India.” It is less a monograph on Cornwallis than a sketch of the land-revenue system of British India, interspersed with notices of the character and career of the founder of the Permanent Settlement. On Cornwallis as Viceroy of Ireland and his share in the Union the reader, inspired by contemporary interest, will find nothing, or next to nothing. This omission might be put down to unwillingness to include in the book anything that did not bear upon the subject of the memoir as a “Ruler of India,” if it were not that the book contains a chapter on the Peace of Amiens, which is as irrelevant as an account of the Irish viceroyalty would have been. And there is other matter which, though certainly pertinent to India, has not much connexion with Cornwallis, such as revenue-proceedings in Benares and Madras which took place after Cornwallis’s time.

Mr. Seton-Karr writes with fulness of knowledge, however, upon the Settlement

in Bengal, and shows what were the good and the evil of that much-debated measure. It undoubtedly tended to strengthen and define the position of the territorial aristocracy, which had sprung up, fungus-like, on the wreck of the Mughal empire. But it sacrificed the interests of the actual agricultural community, whose protection has only been accomplished in our own days, after three generations have gone to their graves in oppressed and helpless pauperism. And it has done more, by depriving the Indian tax-payer in general of his legitimate share in the “unearned increment” of the soil’s produce. It may be that—as the author says—“it has committed the British nation to pledges from which no viceroy can think of drawing back.” But what is to be said for the statesmanship which could thus fetter a remote posterity? The Provinces of Bengal have an area equal to that of France, with a population almost double. The land-revenue—substantially what it was ten years ago—is three and a quarter *krors* of rupees. Meanwhile the land-revenue of the adjoining Provinces—about half the size—has advanced in ten years from over five and a half *krors* to five *krors* and sixty-five *lakhs*. Surely there is something wrong here; for the difference is not compensated by other forms of taxation.

The broad fact is that the tenures on which the Bengal Settlement was based were in hopeless confusion; and a wise statesman would have considered this, especially when it was so clearly put before him by such experts as John Shore, afterwards Lord Teignmouth. The Muhammadan government—to which the British succeeded—regarded the surplus produce of the land as the rightful profit of the community, to be gathered by the State as its steward and representative. The State might collect this produce—as well as it could have it estimated—in a variety of ways. In one estate—or group of estates—it might be farmed to contractors; in another, the collection might be assigned to agents, often called *zamindars*—from the Persian words *zamin* “land,” and *dār* “holder.” These *détenteurs*—to use a French word for which our language has no exact equivalent—availed themselves of the increasing debility of the Delhi empire to create out of their status a heritable and transferable interest, as happened in the growth of the feudal system. Thus the *zamindars* in Bengal were, in Cornwallis’s time, much in the position of usurping *seigneurs*, or lords of the manor. But, beneath them, there still remained the actual occupants of the soil, whose possession—subject to the dues of the State—had once been little less than allodial. They had now become something analogous to the English copy-holders, cultivating portions of the estate at customary rates and certain fixed services. Of course, it was not an exact counterpart of the feudal system that had thus grown up. But similar causes had led to similar effects; and the analogy might have been perceived, as experience deepened, if Cornwallis had suspended final and irrevocable action. The relation between the cultivators and the *zamindars*, and the duty of providing for the protection of the former, escaped attention at the time for another

reason. Agriculture and population had been diminished by a long succession of anarchy and war; consequently cultivators were few, and it was the interest of the *zamindars* to treat them well and attach them to their estates. In a charming passage Mr. Seton-Karr has shown the way in which the confiding agriculturists had accepted this state of things, and built their homes on the volcanic basis of aristocratic selfishness.

“He erected two, three, or four houses, neatly built of bamboos and wattles, well-thatched, with a verandah on more than one side, and the whole raised on a firm foundation of well-beaten clay. The space between the houses ensures privacy. The courtyard and the dwellings are scrupulously clean. They are shaded by fine trees, and the garden adjoining is dense with foliage and heavy with fruit. Many of this class, if not rich, are independent and comfortable; and in spite of the antagonism between *Zamindar* and *Ryot*—which has been the normal state of the country for some two or three generations—many of this useful class have maintained their position.”

Evidently homesteads of this kind must have been numerous in the time of Cornwallis. But as population increased, after many years of peace, the competition for cultivators among *zamindars* gave way to a competition for land among cultivators. Then arose rack-renting and illegal cesses—against which the Settlement had made no due provision; and a tenant, such as the cultivator had now become, was liable to eviction from some or all of his holdings when another offered better terms. There was a general prohibition of such doings, but the prohibition was without sanction, save what might be obtained from costly litigation, in which a poor man was sure to be defeated by a rich man; and there were no local officials, nor was there any field survey or record of rights such as might make a true copyhold. It was not until 1859—more than sixty years after the Permanent Settlement—that the increasing misery of the tenantry led to measures of legislative relief, which were only completed in the Viceroyship of Lord Ripon, after keen and angry opposition on the part of the *zamindars*.

If, however, Cornwallis was led into all this grave error, it was by benevolence and a wish to do his duty. The same characteristics marked his whole career. When laying down the charge of Ireland, he wrote: “I am leaving a people who love me, and whose happiness I had nearly secured in a state of progressive misery.” And again, of his recall, he says that it would not give him much concern;

“but [for] the reflection of the misery to which a people are doomed who have shown me every mark of gratitude and affection, and the ultimate danger to which . . . Ireland will expose the British Empire.”

This is the language of an amiable and just man, by no means likely to sacrifice the mass of any nation to aristocratic oppression—if he knew what he was doing.

The author does ample justice to these qualities, remarking on the “sound sense and right feeling” of his hero, and his “almost uninterrupted devotion to duty.” Cornwallis surrendered his ease and health

at the age of sixty-seven, to return to India, when he conceived that by so doing he could serve his king and country. He died, on his way up the Ganges, less than three months after his landing in Calcutta; and his statue by Bacon is fitly placed in the town hall there. The peerage has become extinct; but he is represented—which Mr. Seton-Karr does not mention — by Mr. F. S. W. Cornwallis, who still holds Linton—the *zamindari* of Galfridus, brother of Sir H. Mann, whose daughter and coheirress was Cornwallis's mother.

It only remains to say that the book is a clear explanation of an obscure and thorny subject; and that the style is always scholar-like and often excellent.

H. G. KEENE.

Sonnets and Reveries. By Marcus S. C. Rickards. (Clifton: Baker.)

THERE are poets who write chiefly for the ear, and whose readers are so well pleased with melodious measures that they are not too curious about the sense which ought to accompany the sound. There are others who are perhaps too indifferent to the graces of expression, but who are careful to compress into their verse all the thought and reflection it can be made to convey. Mr. Rickards belongs rather to the second than to the first of these classes. Not that his verse is marred by want of smoothness. It scans well, and offends against none of the laws of metre. But its first merit consists in its thoughtfulness, and in the fact that it obliges the reader to think. It is not ambitious. The thoughts it suggests and the truths it teaches are perfectly simple. They owe nothing to philosophy or science, except in so far as both philosophy and science are involved in the simplest observations of nature. Mr. Rickards's subjects are found among those natural objects which gave Wordsworth his best inspiration. He addresses a poem "To a Swarm of Gnats"; he writes a sonnet on that pleasant aspect of the weather which is called "Clearing Up"; another owes its origin, as well as its title, to "A Distant View of Gloucester Cathedral"; he indites a long poem to "A Late Swallow"—though the freaks and delaying flight of the swallow are made to indicate the ways of men; while "The Glow-worm" suggests to him reflections that are well worth the half-dozen pages he devotes to them. This humble little "woodland star" reminds him of woman's mission in the world:

"Wedded or single, she may learn from thee:
Wingless thou art, not hers to roam too far,
Her realm is home—a home-light let her be."

But he would have her glow with intellectual as well as domestic light:

"Daughters of brightness, shine! This is your lot,
Your being's end. They play you false who
keep
The mists of falsehood round you. Heed them
not.

Bid knowledge welcome, let her glory steep
Your minds that they may radiate some light
Over earth's sickly gloom. In this be bright,

Ay! and in this—excel in every gift;
Besiege Parnassus: borrow from each Muse
Some ray of splendour."

There are other poems in the volume which also point to the place of woman in human affairs. The following sonnet, with its apt but curious comparison of woman to a wheel and man to an axle, is one of them:

"UNITED OR APART.

"I am the axle, Dearest! Thou, the wheel.
Around my soul is nought but thee; while thou
Art pivoted on me, if our true vow
Be fully kept. Till we are one, I feel
We miss self-rapture, nor find play for zeal.
United, we might help to drag the world
And circle through eternity entwined
In love's ecstatic maze our bliss to seal!

Ah, blind complaint!—unless both parts be fit,
The whole lacks needful balance: each requires
Due finish, and is wrought alone: the fires
That forge the iron, scorch the wood. The wit
Of a great Master fashions all. Be still!
He knows the hour to join us—wait His Will."

The lines which I have italicised are singularly forcible. The first of the two italicised passages shows how capable of exalted treatment is a somewhat commonplace image; the second pithily expresses the difference between the discipline necessary for a man and that suited to a woman.

Mr. Rickards is at his best in descriptions of purely natural objects; and, true as the lessons are which he draws from these, one would now and then prefer the picture without the pendant moral. Here, for instance, detached from the attendant lesson, is an account of what happens in "May's sweet moon" (the poet's May, for when, alas! was the month of east winds sweet?), when "Earth is all a-flutter":

"This wild sport,
This gay coquetry everywhere to-day—
The greenfinch's short rapturous accent,
The pipit's ecstasy on stiffened wing,
The wood wren's shivering fall, the lifted tail
Of the hedge bird with pinions all adroop,
The archings, toyings, twists, and gambollings
That charm the stealthy eye, if it should rest
On any wedded pair of sylvan things—
Is just the shifting play of the love-light
Upon the happy face of mother earth.
Mark her expression! Constant restlessness,
And yet complete repose: as various
The movement is as are the ways and turns
Of creature wooing; while from out her lips
Uprises a melodious burst of song,
All shades of note, all subtleties of tone,
Blending in symphony."

No one who reads this book can doubt that Mr. Rickards has the making of a poet in him; but if he would really woo the Muse, he must make up his mind occasionally to leave the moralist and the homilist behind.

GEORGE COTTERELL.

NEW NOVELS.

Virginie. By Val Prinsep. In 3 vols. (Longmans.)

A Colonial Reformer. By Rolf Boldrewood. In 3 vols. (Macmillan.)

A Line of Her Own. By Mrs. Conney. In 3 vols. (Hurst & Blackett.)

The Secret of the Princess. By Mrs. Sutherland Edwards. In 2 vols. (Chapman & Hall.)

Romance by Proxy. By Evans Comyn. (Eden, Remington & Co.)

Otho. By Mrs. J. L. Brown. (Digby & Long.)

Lad and Lass. By Jón Thóróddsen. Translated by Arthur M. Reeves. (Sampson Low.)

Aniwee. By Lady Florence Dixie (Henry.)

It would be difficult for a novel-writer possessing the smallest eye for dramatic effect not to find in the Reign of Terror a subject provocative of sustained excitement as well as replete with historical interest. Mr. Val Prinsep, who places the incidents of his novel, *Virginie*, in the French Revolutionary period, has, as may naturally be supposed, no lack of eye for effect; and, though his first volume reads rather heavily, owing to its laborious minuteness of detail, there is a fairly good supply of stirring incident in the remainder of the work. Enormous pains are taken in describing how Valerie, daughter of the *chef* and *aubergiste*, Jacques le Blanc, left her home secretly, and eloped with the Comte de la Beauce, who honourably married her, though of this fact her father long remained in ignorance; and comparatively little interest is aroused until we come to the arrest and imprisonment of la Beauce as a suspect, at the information of Le Blanc and his friend Rousselet, who believe him to be merely her seducer. Many of Mr. Prinsep's characters are decidedly well drawn: the fat, warm-hearted, fussy, hot-tempered, and chivalrous Le Blanc, his gaunt, solemn, philosophical friend, Rousselet, together with Virginie and her husband, their faithful follower, Jean Durand, and their deadly enemy, Captain Pinard, are all studies of more than common merit. As already hinted, the chief defect of the book arises from excess of painstaking. Though correct and cultured, the language is by no means sparkling, nor is the narrative relieved by many of those lighter episodes, or flashes of humour, or other subtle touches that entitle a novel to high rank. It is doubtful whether the author has done well in relinquishing the brush for the pen, and he is certainly unfortunate in having chosen ground already traversed by first-rate novelists.

In the pages of *A Colonial Reformer* we are introduced to Ernest Neuchamp, a younger son from an English county family, who starts for Australia with £5000 in his pocket and in his teeming brain a plan for the complete regeneration, under his own apostolic influence and example, of colonial manhood. His scheme includes "the reign of abstract justice and the dethronement of shams. He saw afar a general refinement in manners, pervading culture, which was harmoniously to fuse classes now so unhappily divided; the co-operation of labour with capital, and the equal partition of the public lands." Of course, he is—at the outset, at all events—an arrant prig, brimming over with assertive self-sufficiency, and absorbed in "all the fair visions of the higher life," which, according to the rather florid language of the writer, "commend themselves to ardent youth and generous manhood in that springtime of the heart when beautiful emanations are evolved in multiform glory." It may be re-

marked in passing that the writer's methods of expression would be none the worse for a little gentle pruning. Much may be allowed to a hero and heroine of onlightened views; but when Aymer Brandon, a rough squatter, comes to relate a story in the same sesquipedalian verbiage and gorgeous metaphor as are used by the more pretentious characters, the result is—well, anything but sublime. Apart from this, the book has many merits. It is a quiet and not unfriendly satire upon the attitude of superiority often assumed by youthful immigrants from the Old Country on arriving in the colonies; and it amusingly describes the gradual process by which Ernest Neuchamp is brought to his senses. The writer, moreover, is thoroughly conversant with Australian life, and his descriptions of every sort of farming occupation seem exhaustive enough to serve as a complete guide to any intending immigrant.

To classify a work of fiction as "a hunting novel" is half way on the road to reviewing it. One knows in a moment that the *personnel* of the story will be county families, army men, and grooms; the name is instantly suggestive of spinneys and coverts, of bullfinches, stone walls, double posts and rails, and nasty bits of water. And for all true lovers of sport these details have an irresistible fascination, so that when a really well-told love story is combined with them, a solid popularity may be predicted for the book. With the exception of Mrs. Edward Kennard, no lady writer has hitherto made any serious effort to challenge the position long held by Capt. Hawley Smart in this department of fiction. However, in *A Line of Her Own* Mrs. Conney has produced an excellent book of its kind. In her cross-country runs she always manages to be lively and interesting, and her talents for constructing an elaborate tale of intrigue are indisputable.

The Secret of the Princess has one remarkable peculiarity about it, in the fact that it totally differs from the ordinary tales of Russian life we are accustomed to read. The latter depend, as a rule, for their interest upon portrayal of the more savage side of Slavonic régime, and the barbarities that still mark an imperfect civilisation. Mrs. Edwards, in her story of the Princess Volhonsky and her three children, has avoided all such unpleasant topics; and though the secret police and Siberian exile are features which must of necessity crop up in a narrative of this kind, the writer has managed to diffuse such a rose-water aroma over her allusions to them, that one scarcely discerns any atrocious element in the scenes she describes. In fact, if it were not for the nomenclature, and the elaborate descriptions of fur clothing, the adventures of Prince Sergius and the Princesses Marie and Nellie Volhonsky might have been supposed to take place almost anywhere. Though guiltless of any sensational surprises, the story is not an altogether dull one, and will be acceptable to readers who are interested in court life and millinery.

By the help of a good deal of excision, *Romance by Proxy* might manage to pass muster as a popular handbook to Cairo and

the Thebaid; as a novel it is intolerably dull. Descriptive sketches of the monuments of antiquity have a special interest of their own which compels attention; and explanatory theories of primeval religions, even when illustrated with nothing better than the lights of a second-hand philosophy, may be made at least readable. But chapter after chapter devoted to the vacuous gossip and frivolities of garrison society become, after a while, appallingly wearisome. Mr. Comyn is vastly more interesting as an antiquary and a dilettante philosopher than as a writer of romance. After some 300 pages of his book have been passed, matters become a trifle more exciting; but it is doubtful whether many readers will get as far.

Unquestionably it is the duty of every reviewer who reads *Otho* to dissuade Mrs. J. L. Brown, if he possibly can, from ever writing another novel. Mere orthographical mistakes, of which there are many in the book, do not usually count for much in one's estimate of the literary value of a work; but when, as in the present instance, a good deal of the mystery and interest of the tale are connected with the so-called Greek word "Plaino" engraved upon a ring, and you keep wondering all along what in the world "Plaino" can mean, until just at the end you discover that it ought to have been "Phaino," there seems legitimate room for complaint. Grammatical errors also—e.g., "both *him* and Gwendolynes" seemed to prefer their own home in Wales"—are of trivial importance, for they can easily be rectified by a friend. And even gross ignorance of commonplace facts, such as is exhibited by this author, who, among other errors, appears to think that all the country clergy are styled "Very Rev." and that members of the House of Lords are elected to their seats by popular vote, may be concealed from view by the simple expedient of submitting the proof-sheets to the judgment of a competent critic before publication. What really makes Mrs. Brown's chance of success hopeless is her total lack of any eye for artistic effect, combined with an infinite capacity for sentimental gush and vapid twaddle. Her book—of which it is scarcely possible to give an outline—is marked by the continual introduction upon the scene of characters who have no connexion whatever with the plot, nor has the plot itself much scope allowed it for development except at the beginning and the end. From the constant occurrence of such phrases as "I guess," "just perfectly delightful," and suchlike, we should conjecture the writer to be an American.

Readers of Icelandic literature are better acquainted with Thóróddsen as a poet than as a novelist. *Lads and Lasses* is a translation of his "Piltur og Stúlka," the only romance (with one exception) which bears his name. It is interesting not so much for any startling features of plot or incident as for primitive simplicity of style, and as exhibiting the quaint peculiarities of custom and observance that exist among a remote and little known people.

Lady Florence Dixie has made herself well known to the world as an advocate of

the right of woman to be ranked, not only intellectually but also physically, on a par with man. This does not prevent her from being a fascinating recounter of perilous adventures among wild and barbarous tribes. *Aniwee*; or, *The Warrior Queen*, is a sequel to a previous story entitled *The Castaways*, dealing with life among the Patagonians and other savage races of the South American continent. One of the great charms of the book, apart from its bright and spirited style, is that it introduces us to peoples and customs of which we know next to nothing. Of course, the story is written more especially for the amusement of younger readers.

J. BARROW ALLEN.

RECENT THEOLOGY.

The Quakers: a Study, Historical and Critical. By Frederick Storrs Turner. (Son-nensehein). Mr. Turner must be congratulated on the achievement of a work which fills up very efficiently a gap in our religious literature. Of histories of Quakers we have, it is true, no lack; but they all, without scarce an exception, treat the subject from within. That such a mode of estimating the rise of a religious movement has advantages—especially on the score of truth and reliability—we should not dream of denying any more than we should think of questioning its peculiar appropriateness in the case of the Quakers. Probably no religious sect ever possessed a more vivid and authentic representation of its origin than the Quakers possess in the Journal of George Fox. It is a revelation, absolutely honest and straightforward, of the weakness as well as the strength of the Quaker movement, regarded from its inner standpoint and source of inspiration; and the line laid down by Fox's immortal work has been that adopted by his successors, e.g., by Barclay, Woolman, &c. But it is one thing to know the life of an organism or the motive power of a machine from within, and another to estimate it from without—carefully discriminating the relation between the initial force and its varied outcomes. This is precisely the task Mr. Turner has set himself with regard to Quakerism. He analyses the movement from its first crude starting-point to its incipient decay during the last century. It seems a pity that he should have stopped short at this point, and declined to consider the motive forces which have not only brought down the sect to our own time, but which at present seem likely to give it a renewed lease of popularity in the immediate future. Mr. Turner finds in the central doctrine of Quakerism—the self-evidence of the truth of Christianity, which is only the objective form of what the Quakers, from a subjective point of view, called "The Newer Light"—the antidote to much of the disbelief and negation of our own time. The book is attractively written, and may be commended either to those interested in the Quakers or to those who delight to ponder the less obtrusive among the religious problems of our time.

Quaker Strongholds, by C. E. Stephen (Kegan Paul & Co.), is, in our opinion, a contribution equally suggestive and important to the religious thought of to-day. The gifted authoress—a sister of Mr. Justice Stephen—narrates her conversion from the National Church to the Society of Friends. It is impossible not to sympathise with the reasons of such a change, which may briefly be defined as a need of freedom, elasticity, and spiritual expansion which the liturgy of the Church, so far from ministering to, seems intended to thwart and

stifle. The objection is well founded, and is as old as it is true. It is not an incidental outcome; it is the design of every liturgy to embody the general devotional feelings of those who join in it, and thereby not so much to suppress as to bring into subjection the occasionally vague but oftentimes wild and eccentric emotions of undisciplined individual piety. It may not be an ideally high form of human devotion that its embodied utterances should be provided already manufactured and packed like the wares in a grocer's shop, and that not the least change or readmixture should be permitted to any article thus authoritatively retailed; but we must unfortunately bear in mind the attributes and exigencies, not of individuals rarely gifted both intellectually and spiritually, but of average humanity. We cannot doubt that Miss Stephen finds in the freer worship of the Friends an atmosphere and aliment much more suited to her wants and susceptibilities than those provided by the Church of England; but what proportion does she suppose of individuals, gifted like herself, exists among the ordinary worshippers in the National Church? Still, it must, in fairness, be admitted—and Miss Stephen's book is useful as an opportune reminder of the truth—that liturgical forms are not the highest conceivable mode of worship; they are rather condescensions to average human frailty and mediocrity. Besides the autobiographical element in the book, Miss Stephen gives an account of what she regards as the strong points of Quakerism. Here, as elsewhere, she seems, however, open to the criticism of generalising too widely and indiscriminately from her own personal tastes and feelings. Notwithstanding these drawbacks, the book may fairly claim to be the most important contribution to the apologetics of Quakerism since the celebrated Apology of Robert Barclay.

Selected Sermons of Schleiermacher. Translated by Mary T. Wilson. (Hodder & Stoughton.) This volume deserves what we hope it is destined to receive, a warm welcome. Schleiermacher is probably better known in England as a philosophical and semi-rationalistic thinker than as an evangelical preacher, endowed with all the pietistic fervour and unction of Charles Simeon, or Hugh McNeile among ourselves, though with infinitely greater breadth and comprehension. We suspect, therefore, that those who take up this volume as the first of Schleiermacher's works they have been able to peruse will confess to an agreeable surprise. They will find in these Selected Sermons nothing to shock the most vigilant and fastidious orthodox, while they will discover much evangelical teaching of the tender mystical kind that we identify with the best traditions of evangelicalism. It is not easy to determine the principle on which the selection has been made. The sermons seem chosen in a happy-go-lucky way from the four volumes of the Berlin edition, perhaps with a due care that nothing in them might shock the orthodox susceptibilities of the English reader. The translation seems well done. We have tested it occasionally, and have found it not only accurate but happy. We may add, by way of recommendation to the translator, that she might worthily devote her powers in another volume to the "Predigten über den Christlichen Hausstand," in the first volume of the Berlin collection, from which she has taken the seventh, eighth, and ninth in her present selection, and give English readers a translation of the whole in one volume. We have no sermons in English on the family life approaching them for Christian wisdom, beauty, and tenderness. The interest of this selection is considerably enhanced by a brief but accurate memoir of the great theologian.

Where is Christ? By H. B. Chapman. (Sonnenschein.) This book is a continuation

of the author's former volume, entitled *The Religion of the Cross*. It may be described as a plea generally forcible and incisive, oftentimes startlingly quaint and original, for practical Christianity. The book abounds with apophthegms and epigrams, and keen, shrewd remarks on various aspects of Christian thought and duty. Here is a remark on Free Thought worth noting:

"The teaching of centuries, which has tabooed Free Thought until it has now become appropriated by the enemies of the Cross, has thus incurred a very grave charge, not to be explained away easily."

And this is how Mr. Chapman comments on the cold charity of the rich:

"Hunting goes on all right, balls are advertised, dinners are given, the *Morning Post* reads very much the same; and at night the streets are alive with poor tempted women, driven to sell their virtue to gain their bread. And yet men can refuse five pounds while their stables are full of horses, and the price of a single night's amusement would open the gate of heaven to several of their sisters who are now in hell."

To those who like plain speaking on the subject of Christian teaching and duty, the book may be strongly recommended.

The Living Christ and the Four Gospels. By R. W. Dale. (Hodder & Stoughton.) Dr. Dale is so well known as a preacher and writer on popular theology that every production of his is certain to find a large and sympathising audience. This book, however, differs from all his previous writings. It consists of a number of lectures on the history of the Early Church. As, however, they only repeat the general results of well-known church histories, they cannot be said to have the importance which belongs to Dr. Dale's original work. It goes without saying that, in the account which he gives of Early Church polity, Congregationalism is mostly in the ascendant. This is, however, of less importance, inasmuch as most ingenious writers, even when their own sympathies are ecclesiastical, admit that the Churches were at first mainly separate, and in many respects wholly independent of each other. The title of the book is intended to mark one of its chief objects—viz., the superiority of the evidence of experience and intuition to that of external authority in respect of the Gospels. This is well brought out in lectures two and three, and again in lecture fourteen. Dr. Dale finds in this immediate spiritual apprehension the cause why Christians are not appreciably affected by attacks on religion or destructive criticisms of its sacred books. His own large experience as a preacher gives him the right to speak with authority on the point.

Spiritual Law in the Natural World. By E. Swift. (Elliot Stock.) Though the tone of this little book is much less presumptuous and dogmatic than that of the *Natural Law in the Spiritual World* of Prof. Drummond, its object is not wholly dissimilar. It may be described roughly as an attempt to effect a union, generally by the method of analogy, between religion and physical science. "Theology and science," says the author, "have become like two fondly-attached friends, whose friendship has, through divergence of sentiment, died out; and when they meet, neither of them dare look the other straight in the face." In order to re-establish this broken friendship, he purposes "to show that true science is in perfect harmony with all the grand fundamental doctrines of the Christian religion." The author manifests some acquaintance with various departments of physical science, as well as considerable dexterity in utilising his knowledge for the apologetic purpose above mentioned. That he succeeds in his design is, however, in our opinion, doubtful.

The Spiritual Development of St. Paul. By G. Matheson. (Blackwood.) To every student of early Christianity it must be obvious that St. Paul had not one sole but several distinct developments. It is, therefore, of importance to understand the meaning which Dr. Matheson desires to give to the title of his book. He tells us in the Preface:

"The problem I set before myself was this: assuming that the thirteen Epistles of St. Paul are genuine, and waiving for the present all questions of Biblical criticism, is it possible to regard these as marking the stages of a progress in development? Is it possible out of these alone, and without the aid of any foreign materials, to construct a fairly correct picture of the successive phases of Paul's Christian experience?"

Dr. Matheson answers these questions in the affirmative, and his book is worth reading. At the same time, it is open to the objections: (1) That the scope of his inquiry is needlessly narrowed, being limited to the Pauline Epistles; (2) That his plan is not always consistent with itself, and that his results are largely obtained by a dexterous manipulation of certain texts, and an ignoring just as dexterous of other inconvenient texts. This, however, does not seem to us to affect the substantial probability of the conclusions arrived at, with most of which we are disposed to agree.

Puritanism in Power. By Clement Wise. (Kegan Paul & Co.) We dare not suppose that Mr. Clement Wise, in the plenitude of his wisdom, deliberately designed this volume in order to prove and illustrate the foolishness of reviewing, but his book is undoubtedly capable of that or some equally bewildering explanation. To baffle the conscientious reviewer—to render a succinct account of the design of his book a sheer impossibility—might not unfairly stand for the final cause of his volume. With a warning, therefore, that we are about attempting a difficult, if not hopeless, task, we may say that *Puritanism in Power* is a diatribe or vehement invective directed against most of our English traditions, whether political, social, or religious. The standpoint from which the attack is made is so various that it might not unfairly be summed up as universal dissidence. Mr. Clement Wise seems to possess the characteristics immortalised in the hero of Cervantes. With more than Quixotic courage and boisterous energy, he not only arrays himself against every belief or institution which wears the aspect of stability or general acceptance, but he continually mistakes the phantasies of his own imagination for actual oppugnable realities. Let us add that the book, besides being thoroughly original and independent, is enlivened by a considerable amount of wit, and abounds with suggestions as amusing as they are impracticable. As a specimen, we may quote his plan for the transformation of St. Paul's Cathedral by chromatic mural decoration, to be effected by idle young ladies, in memorial of of which he hopes to read the following inscription on a mural tablet:

"Done in attempted expiation of the previous worthlessness of their lives by 4000 young women of what are called the upper and middle classes whose fathers paid for the paint. They subscribed the cost of a new bonnet and one year's pocket money to the benefit funds of the Painters' and Decorators' Trades Union of London."

After this evidence of what may be termed Acute Meliorism, it seems superfluous to record our conviction that Mr. Clement Wise is a person of sanguineous temperament—as the medical men of the beginning of this century would phrase it. It seems equally needless to add that he is a devout believer in a forthcoming millennium.

Some Central Points of our Lord's Ministry. By Henry Wace. (Hodder & Stoughton.) This

is a republication of certain papers or expositions originally printed in the *Clergyman's Magazine*. How far they merited republication is a question in which Dr. Wace and his admirers are primarily concerned. Certainly the expositions are learned, and are written in a clear if somewhat dry and pedantic style. But they seem to us to lack originality and animation. Most critics would, indeed, pronounce them dull, but this would not be a courteous description of the effect they are nevertheless calculated to produce. The third sermon, on "Our Lord's Education," touches the fringe of the question which has recently been so much discussed in reference to *Lux Mundi*; but it does not throw any appreciable light on it.

The Churchman's Theological Dictionary. By R. Eden. (Elliot Stock.) This republication of a well-known Dictionary does not seem to merit more than a passing acknowledgment. It is a re-cast, with certain additions, bringing the book up to date in matters of religious controversy. The author does not seem to be very successful in determining the limits of his work. Sometimes the terms defined seem to belong to a Biblical Dictionary; occasionally they are definitions of words employed in church architecture, for which we should refer to "Parker's Glossary." The author frankly avows that his book is intended not only for churchmen, but for Protestant churchmen; but though it is thus written ostensibly from a party point of view, the definitions, even when they touch upon burning questions, are commendably free from bias. Indeed, they claim to give in every case both sides of the question, with, of course, a little leaning to the author's own school. The book is distinctly honest, and may, in the circle to which it especially appeals, claim no small measure of utility.

NOTES AND NEWS.

SIR EDWIN ARNOLD left Japan by the P. and O. steamer on January 13, and will arrive in London early in March.

THE first instalment of the texts of the Petrie Papyri—the fragments of Euripides' "Antiope"—will appear on February 1 in the new number of *Hermathena*, which will also contain other articles of great interest. Prof. Mahaffy is preparing a monograph on the other classical texts and legal documents in the collection for publication in the *Transactions* of the Royal Irish Academy, with facsimiles.

MR. GOLLANCZ has undertaken to prepare for the Chaucer Society an account of Chaucer's "Philosophical Strode," with a reprint of his philosophical writings. As yet, Mr. Gollancz is unwilling to commit himself on the subject of Strode's possible authorship of "The Pearl," suggested by him in the *ACADEMY* of Jan. 10.

THE series of articles which have been appearing in the *Times* on the Negro Question in the United States are from the pen of Mr. W. Laird Clowes, who paid a special visit to America in order to prepare them. These papers will be revised by the author, and published in a few days by Messrs. Cassell & Co. under the title of *Black America*.

MESSRS. MACMILLAN & Co. will shortly publish a volume of Literary Essays by the Bishop of Durham, and new volumes of Sermons by the Bishop of Meath, and by the Rev. Phillips Brooks, of Boston.

MESSRS. NISBET will publish immediately a new work by the Rev. Dr. Paton J. Gloag, entitled *An Introduction to the Johannine Writings*; and also a volume of *Reflections Exegetical and Experimental on St. Paul's Epistle to the Romans*, by the Rev. J. G. Heisch.

The next volume in the series of "Canterbury Poets" will be an anthology of *Love Lyrics*, edited by Mr. Percy Hulburd.

A POPULAR edition of Prof. Henry Drummond's *Tropical Africa* is announced by Messrs. Hodder & Stoughton. It will contain a new preface, in which the author replies to Mr. H. M. Stanley.

MESSRS. FREDERICK WARNE & Co. will issue in a few days an entirely revised and much enlarged edition of Sir Henry Thompson's work on *Food and Feeding*, originally published in 1880.

MISS BETHAM-EDWARDS's novel, *The Parting of the Ways*, will shortly be added to Bentley's "Favourite Novel Series." A revised edition of *Disarmed*, by the same writer, is in the press; and we may add that *Dr. Jacob*, which originally appeared twenty-four years ago, has recently been reissued in a cheap form.

A NEW edition of the entire Bible in Pitman's Shorthand, at a popular price, is promised on February 1, after the work has been out of print nearly twenty years.

MESSRS. CHARLES SCRIBNER'S SONS and Scribner & Welford, of New York, announce that the branch of their business heretofore conducted under the name of Scribner & Welford will, after January 31, be carried on under the name of Charles Scribner's Sons, which title will thus include all departments of their business.

THE Teachers' Guild of Great Britain and Ireland, which has been established for seven years, has taken up its headquarters at 74, Gower-street. The council are beginning to organise an educational museum, at present confined to two departments—(1) a classified collection of text-books of all kinds; (2) a collection of mechanical appliances of use in historical and geographical teaching. As the nucleus of the latter, the Royal Geographical Society have consented to lend their educational collection, selected from the exhibition held by the society a few years ago. This consists of text-books, atlases, wall and other maps, globes, relief maps, models, geographical and historical pictures, and various other appliances of use in geographical teaching. The guild now consists of over 4000 members, with branches all over the kingdom. The council are promoting a Bill for the compulsory registration of teachers.

THE Association of Assistant Mistresses in Public Schools, which now numbers more than 400 members, held its seventh annual meeting at Bedford College last Saturday. The chief subjects of discussion were technical education, the teaching of science, and the registration of teachers—to which last, in all forms at present proposed, the association was strongly adverse. Miss C. E. Collet, M.A. Lond., was elected president for the ensuing year. At the end of the meeting the members of the association inspected the new science laboratories at Bedford College, which are now in working order.

MR. EDMUND GOSSE will give a lecture on Monday next, January 26, at the Royal Institution, on "British Ballads."

At the monthly meeting of the Browning Society, to be held at University College, Gower-street, on Friday next, January 30, a paper will be read by Prof. Jones, of Bangor, entitled "Browning's Proof of Optimism: a Statement and a Criticism."

THE *Wednesday Journal* has been reprinting some of John Strange Winter's earliest stories, written fifteen to twenty years ago, and afterwards issued in her first book "Cavalry Life," over ten years ago. Mrs. Stannard is, not unnaturally, very indignant at seeing her old

crude work advertised in huge letters on the numerous posters; but having sold the entire copyright she is powerless to prevent it.

IF the present season has not been rich in new poetry, it is at any rate notable for the number of single volumes containing the collected work of old favourites. After Tennyson (in a pocket edition), Shelley, Matthew Arnold, William Morris's *Earthly Paradise*, and Miss Christina Rossetti, we now have the original poems of Dante Gabriel Rossetti, edited by his brother (Ellis & Elvey). We are careful to say "original poems"; because not only are the lyrics omitted which were contained in *Dante and his Circle*, but also the versions from the Old French of Villon, &c., for which room might easily have been found. Moreover, as students of Rossetti know, at least one sonnet has never been reprinted since the first edition of 1870. For frontispiece is given what we believe to be a new etching, after a photograph taken in the garden of Cheyne Walk in 1854. The typography leaves not a little to be desired, even in a cheap book.

Corrigenda.—In Mr. Whitley Stokes's letter in the *ACADEMY* for January 17, 1891, p. 64, col. 3, last line but two, for *smérib* read *merennib*; p. 65, col. 1, l. 33, for *bethin* read *ethin*; p. 65, col. 1, last note, for *bairche* read *sobairche*.

FORTHCOMING MAGAZINES.

"THE Life and Labours of Schliemann" will be the subject of an article in the February number of *The National Review*, by Dr. Karl Blind, who for fourteen years was connected with the late explorer by intimate friendship, and who possesses more than 120 letters from him on his discoveries and plans—mostly written in German, some of them in English or Greek.

THE February number of *Scribner's* will contain—a poem by Sir Edwin Arnold, entitled "The Musmee"; an article on Africa, by Mr. J. Scott Keltie, illustrated with some rare portraits of explorers from Mr. John Murray's collection; and a defence of autograph collecting, by Mr. A. H. Stoddard, the poet.

The Century for February will contain the first chapter of Dr. Edward Eggleston's new novel, "The Faith Doctor." In a paper on "The Anglo-Saxon in the Southern Hemisphere," Mr. George R. Parkin will discuss the position of the working man in Australia.

THE February issue of the *Newbery House Magazine* will contain some letters of the late M. Chatrian, with an introduction by the Rev. F. A. Malleon; and also the final instalment of Mr. Charles Welsh's "Notes on the History of Books for Children," giving an account of the work done between 1830 and 1840 by Joseph Cundall in improving the "get-up" of books for the young, together with some interesting letters from well-known people on the books they read in childhood.

MR. FREDERICK DOLMAN will contribute an article on Edna Lyall's novels to the February number of *Sylvia's Home Journal*.

MR. CLEMENT SCOTT contributes an article on the Scott-Grundy Controversy to the February number of the *Theatre*.

EARLY in February will appear the first number of a new monthly entitled the *Fancy Goods and Toy Trades Journal*, edited by Mr. J. S. Morris, and published by Messrs. J. G. Smith & Co. at 165, Queen Victoria-street.

WITH the March issue *Literary Opinion* will be permanently enlarged to thirty-two pages, bound with a fancy cover, at the price of threepence instead of twopence.

UNIVERSITY JOTTINGS.

THE late Dean Church has bequeathed his valuable library to Oriel College, Oxford.

QUEEN'S COLLEGE, Oxford, celebrated last Monday the five hundred and fiftieth anniversary of its foundation. It was on January 18, 1340-41, that Edward III. sealed, in the Tower of London, a licence to Robert de Eglesfield, chaplain to Queen Philippa, to found in the parish of St. Peter-in-the-East a collegiate hall of scholars, chaplains, and others, under the name of the Queen's Hall of Oxford.

PROF. SWETE, Bishop Westcott's successor in the chair of divinity at Cambridge, will deliver his first course of lectures this term, on "The Acts of the Apostles."

THE Rev. F. Wallis, of Caius, has been appointed to lecture during the current term as deputy for the Lady Margaret's professor of divinity at Cambridge.

THE university of Cambridge has conferred the degree of M.A., *honoris causa*, upon Prof. J. A. Ewing, Mr. Stuart's successor in the chair of engineering.

PROF. J. W. HALES, Clark Lecturer in English Literature at Trinity College, will begin on Saturday of this week a course of six lectures on "The Romances of Chivalry from Chaucer to Tennyson."

MR. J. H. MIDDLETON, Slade professor of fine art at Cambridge, announces a course of six lectures on "Verrocchio and Michelangelo."

MR. J. BASS MULLINGER will deliver a course of ten lectures this term at Cambridge on "The History of Education."

AT the annual meeting of the Cambridge Philological Society, held on Thursday of this week, Mr. F. W. Thomas was to read a paper on "The Representation of the Indo-European Long and Short Liquid and Long Nasal Sonants in Greek and Latin." Dr. Sandys is proposed for re-election as president.

THE Oxford University Dramatic Society hope to have the play of "King John" ready for performance by the end of the first week of February. The part of King John will be played by Mr. Irving, junior, and that of Constance by Mrs. Sim. Mr. Mackinnon—who, as before, is responsible for all the arrangements—will be Faulconbridge; Miss Mabel Hoare, of Miss Mary Anderson's Lyceum company, Arthur; and Miss Ffytche, Queen Eleanor. The orchestra will be supplied by Lady Radnor's string-band, conducted by herself.

THE *Oxford Magazine* for January 21 prints an interesting list of the winners and "runners up" of the Hertford and Ireland scholarships since 1835 and 1825 respectively, together with the schools at which they were educated.

THE controversy concerning the right of colonial universities to confer degrees of examination in this country, which was raised by the action of Trinity College, Toronto, in regard to the musical faculty, has for the moment been settled by the Toronto authorities withdrawing from the right they had asserted, and which they still assert in the preamble of the resolution announcing their decision. The question therefore still remains open, whether any colonial universities with the right of conferring degrees could exercise that right by examining, say in Oxford or Cambridge, and conferring all the degrees with a lower standard and by mere examination. Probably an Act of Parliament will yet be required to settle this question.

THE council of University College, London, have arranged for a series of free popular

lectures to be delivered on Wednesdays, at 8.30 p.m., during the present term. The following is a list of the dates and subjects: February 11, "The Difficulties of Socialism," by Mr. Leonard Courtney; February 18, "Samuel Richardson," by Mr. Augustine Birrell; February 25, "St. Paul's Cathedral," by Prof. Roger Smith; March 4, "The Art of Legislation," by Mr. T. Raleigh; March 11, "Ice, Water, and Steam," by Prof. W. Ramsay; March 18, "Sir Henry Vane," by Prof. Beesly; and March 25, "The Universities of Egypt, Heliopolis, Alexandria and Cairo," by Prof. Stuart Poole.

ORIGINAL VERSE.

CAMBRIDGE IN SUNSET.

THE trees stood bare and cold on every side,
The earth about her bosom closelier drew
Her ragged dress of green, and—woman true—
Smil'd back to the smiling sun, as in yore-tide;
And the dear flow'rs that on her breast had died
And gone to heav'n, as all good flowers do—
White lily, and red rose, and violet blue—
Pansy, and poppy, and daisy golden-eyed—

These all came out to look on earth adown,
And made the sky a garden overhead,
Aglow with colour—blue and yellow and red—
And (was it poet or bird?) a small thing brown
Did sing about it in a leafless tree,
And chirp'd—Look, look! this only hue you'll
see!

ELSA D'ESTERRE KEELING.

OBITUARY.

GEORGE BANCROFT.

WE have to record the death of George Bancroft, the veteran historian of the United States, which took place at Washington on Saturday, January 17, in the ninety-first year of his age.

He was born at Worcester, Massachusetts, in 1800, being the son of a Unitarian minister, who is himself known as the author of a *Life of Washington*. After graduating at Harvard before he was seventeen, he spent the next five years of his life in Europe, visiting the chief centres of culture and making the acquaintance of many eminent men. On returning to America in 1822, he taught for a short time at Harvard and elsewhere, and wrote poems and magazine articles. The bent of his mind and the result of his continental studies was shown by his translation of Heeren's classical work on *The Political System of Europe and its Colonies*; and henceforth he devoted himself to compiling a history of the United States, which should be marked alike by laborious research and by philosophical insight. The first volume was published in 1834; the tenth and last of the original plan, which ended with the recognition of American independence, did not appear till 1874. Shortly afterwards the whole was revised in six volumes; and two more volumes were ultimately added (1882), describing the formation of the constitution.

Bancroft's literary activity thus extended over a period of fifty years. But it formed only part of his services to his country. As a faithful member of the Democratic party, he held successively the posts of collector of the port of Boston (when Hawthorne was his subordinate at Salem), Secretary of the Navy in the cabinet of President Polk, minister at the court of St. James's (when Oxford conferred upon him the hon. degree of D.C.L. at the Encenia of 1849), and again minister at Berlin for seven years. He was also called upon to pronounce funeral orations upon Prescott, Washington Irving, and Lincoln. Altogether, no contemporary occupied a higher place in the esteem of his countrymen. His history like-

wise received special recognition in Germany, though it must be admitted that it is not so much read in England as the more brilliant works of Prescott and Motley.

MAGAZINES AND REVIEWS.

THE current number of *Mind* opens with a clear and instructive article by Prof. A. Bain, entitled "On Physiological Expression in Psychology." The writer seeks to show how far it is desirable for the psychologist, in the present imperfect state of our knowledge respecting the workings of the nervous system, to attempt a detailed and largely hypothetical statement of the nervous concomitants of psychical processes. While contending that the reference to these physiological concomitants should be as thoroughgoing as possible, and much more distinct and frequent than is the case in some recent English psychological writings, he warns us against the futility of trying to find a physiological expression for all psychical processes, more particularly the complicated workings of mind in the higher operations of intellect. A second psychological article of considerable importance is a study on "Apperception and the Movement of Attention," by Mr. G. F. Stout. The essayist has been a careful student of the Herbartian psychology, and in the present paper he gives an interesting and, in some respects, new presentation of the theory of apperception or intellectual assimilation as held by the Herbartian school. Mr. Stout explicitly aims in this paper at showing the insufficiency of the Laws of Association or Suggestion as relied on by English psychologists for explaining our thought processes, and more particularly the operation by which new impressions, facts, and ideas are assimilated and woven into the texture of pre-existing knowledge. The account of apperceptive systems, with their conflicts and co-operations, which he here gives us will probably strike the critical reader as a doubtful improvement on English doctrine. It seems to be hardly less cumbersome and less hypothetical than the well-known doctrine of conflict of presentations, arrest, &c., of Herbart himself. It is curious, perhaps, that, at a moment when German psychology is clearly divesting itself of Herbartian methods, and substituting for them the simpler methods of the English Associationists, an English writer should be introducing Herbartian conceptions. One may venture to think that all the processes which Mr. Stout here describes and illustrates in so clear and interesting a way can be explained by Laws of Association fully and accurately formulated, aided by references to those physiological concomitants of which Prof. Bain reminds us, and which Mr. Stout completely ignores. The historical fact that the Laws of Association have often been stated in a crude and unsatisfactory way does not, it may be urged, justify us in condemning the principle itself as inadequate. Mr. Stout's thoughtful essay, which is to prepare the way for an account of the function of language in thought, will do good service to English students by bringing into view aspects of mental activity which our associational psychology has been apt to overlook, and so compelling them to reconsider the common statement of the doctrine of Association. The remaining contents of the number, each interesting in its own way, are a criticism of Helmholtz's Theory of Space-Perception, by Mr. J. H. Hyslop; an inquiry into the fundamental principle or axiom of induction, by Mr. L. T. Hobbhouse; and a translation of a curious speculation by a German savant, Herr von Lendenfeld, on "The Undying Germ-Plasm and the Immortal Soul."

In the *Jewish Quarterly Review* for January, Dr. D. Rosin discusses the proper place of Solomon Ibn Gebirol in the history of ethics. Our respected contributor, Mr. Owen, describes optimism and pessimism as exhibited in Jewish philosophy in connexion with a monograph by Dr. H. Goitein. Prof. Grätz gives two Biblical studies on the last chapter of Zechariah and the Central Sanctuary of Deuteronomy. Dr. A. Kohut continues his comparison of Parsic and Jewish traditions on the First Man. Prof. Kaufmann gives a sketch of Jair Chayim Bacharach. Dr. Schechter surveys the Jewish literature of the year 1890. There are also interesting historical notes by Prof. Bacher, Mr. Simmons, and Dr. Neubauer; and critical notices of Steinthal's Essays by Mr. Joseph Jacobs, and of M. Renan's last historical volume by Mr. C. G. Montefiore. To the latter writer we are also indebted for a lucid and thorough article called "Recent Criticism upon Moses and the Pentateuchal Narratives of the Decalogue."

THE *Theologische Tijdschrift* for January contains a sequel to Dr. Meyboom's study on Marcion, in which the Clementine Homilies and "Recognitiones" were too hastily treated. The author now repairs his omission, with much fulness of detail. Dr. Berlage discusses the meaning of Gal. vi. 2. Among the notices of books, that of Buhl's new book on the Old Testament Canon and Text, by H. O., deserves attention; the work is highly praised, but a fuller examination is desired of the factors of the Massoretic vocalisation. Dillmann's *Isaiah*, naturally enough, does not suit his extremely critical reviewer. W. C. v. M. gives a full notice of Werner's treatise on the Paulinism of Irenaeus.

CORRESPONDENCE.

"LIVES OF SAINTS FROM THE BOOK OF LISMORE."

Youghal: Jan. 7, 1891.

This book is similar in structure to the editor's *Tripartite Life*. Two new features are a list of loan-words and an index of first lines of poems. A decided change for the worse, for those who require to use the volume, is the deviation from the Rolls system of placing the text and translation face to face, with the variants and notes underneath. The illustrative material occurs first to be considered. The following comments, which are not exhaustive, will show to what extent it has attained facility.

Viriliter age et confortetur cor tuum is said (p. evi.) to be a quotation from the Vulgate. Read *agite* (with the MS.) and *vestrum*. "Three chapters of the *Beati*" are mentioned (p. 32). The sole information supplied consists (pp. ex., 406) of calling *Beati* the 119th Psalm. The expression is the most valuable Scripture item in the work. It proves that the octonary divisions of Ps. cxviii. were known in the early Irish Church. The "chapters" in question were, no doubt, Aleph, Beth and Ghimel (vv. 1-22) inclusive. A passage in the panegyric of St. Columba, we are informed (p. 169), is a paraphrase of Ps. xlix. 15. But in Lebar Brece (p. 30a) the text is quoted in full from Ps. evi. 6. *Misericordias [Dei]* is annotated (p. 173) "Ps. 82?" Elsewhere (p. 303) it becomes "the 100th Psalm." It is: *Misericordias [Domini]*. Ps. lxxxviii.]

The subject of pilgrimage, we learn (p. eviii.), "is handled with singular good sense." But the "sense" is not Irish, except by adoption. The Latin original will be found in L. B. (p. 30a b.). *Potius dicendus est evangelista quam propheta*, a dictum attributed to St. Jerome, the reader will have to verify for himself. (In five Biblical places he must do likewise.) *Non legam Marcum quo usque compleveram Mattheum* is given (p. 269) as a saying that was deemed worthy to be sent to Rome. But the countrymen of Columbanus knew their Priscian better than to send the aphorism in that form. The MS. has *complevera*. Replace a by e and you rectify the reading.

Of the numerous persons and events mentioned in the text, only a few have dates assigned to them. Some of this incidental work is noteworthy. For instance, the Annals of Innisfallen are quoted at first hand, "ad a. 886" (p. ex.) and "A.D. 892" (p. xlii). It will be time enough to discuss these numerals when we know whether they occur in the MS. (Rawl. B. 503); or, if not, how they have been arrived at. From the Annals of Ulster, to take two test cases, we have A.D. 783 and A.D. 890 (pp. 405, xlii.). Has the editor noted that in the new edition the former year is marked Bissextile on the margin and the latter has the alias 891?

With respect to personal identification, novel results are not wanting. "As to the death (A.D. 604) of Aed Slane, otherwise called Aed mac Ainmirech, see Reeves' *Columba*, p. 42" (p. 306). Ad Caesarem ibis! At "p. 42" you will see that Aed Slane became joint-king on the death of Aed mac Ainmirech. Similarly, "Cairpre Crom. xvi., 244=Cairbre Find, 245" (p. 370). But C. C. was a king

in Connaught; C. F., a king in Munster. Contrariwise, "Congall" and "Congall of Bennechor" (ib.) are one; "Echaid Tirmacharna" and "Eochaid T." (p. 371), the same Eochu.

In like manner, regarding places and tribes there is some remarkable work. "Hui Neill . . in Meath, which was divided among the sons of Niall of the Nine Hostages and possessed by their descendants until the English invasion; Four MM. A.M. 3510, note a" (p. 379). In "note a" O'Donovan accurately describes the Southern Ui Neill. But, with submission, Niall had other sons; to wit, Eogan (*a quo* Tir-Eogain, co. Tyrone), Conall (*a quo* Tir-Conaill, co. Donegal), Enda (sixth son of Conall, according to the editor, p. 381) and others. Their posterity were collectively called the Northern Ui Neill. But see what we have got here. Of the eight Index references, five belong to the northern branch. Nay more, in the very first (p. xxviii.) the "northern Húi Neill" are expressly named! Loch Silenn of the text is said (p. 380) to be on the borders of Cavan, Longford, and Meath. But, as the editor doubtless knows, the Annals of Innisfallen place this L. S. in Magh Femín, a plain which he himself has located in Tipperary. The district of Mogh Ruith is equated (p. 232) with the half of Mogh, i.e., the southern moiety of Ireland. According to the Index (p. 380), however, the latter M. had the agnomen Nuadat. And, if you rely on the Book of Lismore as cited here (p. xxxvi.), the territory of M. R. comprised the two Fermoy (not the "barony of Fermoy" (p. 378), but Condons and Clangibbons, the next barony to the east) co. Cork.

In reference to the transcription, as the facsimile shows that the letters are as plain as capitals, with ordinary care no error ought to appear in the portions that are unabbreviated in the MS. Furthermore, the extension of contractions is, as a rule, devoid of difficulty. Nevertheless, the lengthy list of errata (in which corrigenda like *comdhi* for *co mo dhá*, *betho* for *báis*, *intsamhail* for *in tsamtha*, can scarcely be charged to the printer) forbids implicit reliance to be placed on the text. An innovation not to be commended is the retention of the contraction *et* for *ocus* (and). Similarly, we get *vel* (l. 507) for *no* (or), and (l. 3048) *et reliqua* for *ocus araile* (and so forth). An instance of want of uniformity is *bliadan* (n. s.) 4745, *bliadain* (n. s.), 4747. *B* of the facsimile (col. b, l. 38) is read *Buiri* in one place (p. vii.) and *Baidhi* in another (p. 98). The textual revision is still incomplete. For *Feilimí* read *Fei[d]limthe* (808); for *episcopus*, *episcopus* (1785); for *Imlech*, *Imlecha* (2831); for *Imliuch*, *Imlech* (2880); for *n-ainiadh*, *n-veiniadh* (3253); fac. col. b, l. 38); for *Feidlimid*, *Feidlimthe* (3978).

With regard to textual emendation, the editor seems unaware of the extent to which it is needed. *Na huili riagla [naob] Eireanacha*, "all the rules of the Irish saints" (p. 104). This, of course, is not Irish, unless the intruded word is removed. The reading being thus restored, the meaning is "all the Irish rules." The editor's English would require *na huili riagla na naob Eireanach*. As *i sin mil-sin*, "that is the honey" (p. 120). The Irish words, as they stand here, are void of sense. Read *as i sin in mil* ("that is the honey"), or *as i in mil-sin* ("it is that honey"). *Ind eclais bic*, "into the little church" (p. 132). Rather "into a little church." Read *Isind eclais bic*. The omission was a scribal oversight.

Omissions like the following are more serious. *Dorairngert . . Mochta . . Colum Cille bliadain riana gheineamain*, M. foretold C. C. a year before his birth (p. 23). M., namely, in reply to a query (ib.), said C. would come after one hundred years. Yet the contradiction suggested nothing to the editor.

His function, it would seem, is to take the text as he finds it. The copyist, L. B. (p. 30a) proves; left out a c. Read *cēt bliadan*, "a hundred years." Again, *alu bliadna do inn Alpain*, 45 years was he (Columba) in Scotland (p. 30). The editor is still unsuspicious. Supply from L. B. (p. 33a), *xliv. a deis intan dochuaid, xxxiiii. d. i n-Albain*, 42 his age the time he went (to Scotland), 34 (were passed) by him in Scotland. Hereby, likewise, the *alu* of the Book of Lismore is to be corrected into *xliv*. (*u* and *ii* being frequently mistaken for each other).

In one case somebody has blundered sadly. St. Brigit (p. 38) once visited her mother, and, finding that she was ill, took her place in making butter. After a time, the herdsman went to report to the owner, who lived elsewhere. The (printed) text then goes on: "*Rofhiafraig in drai ocus a ben: 'In maith leasaighius an ingen?' Tainie ann na bu,*" "The wizard and his wife asked, 'Hath the virgin cared well for the dairy?' Then he came to the kine." Well, in the first place, there is no "dairy" in the original. Secondly, *Tainie ann na bu* will excite a smile. Thirdly, the sole difficulty is to discover how any perplexity can have arisen in connection with a construction so obvious. Put "?" after "bu"; for *Tainie* read *tainie*, and translate: The druid and his wife asked, "Does the maiden that came there care the cows well?" *Tainie ann*, a minimum of native knowledge shows, is a relative clause referring to *ingen*; *na bu* being the object of *leasaighius*.

In other instances the MS. is certainly right. St. Mochua cured persons of the Yellow Plague and transferred the colour to his crozier (p. 143): *Conuadh dia fothugud sin asbert in senchaid*, "whereof of that colouring spake the poet." At foot (p. 287) is a note: "For the *fothugud* 'founding' of the MS. we should probably read *dathugud*." But there are two fatal objections. The proposed lection cannot signify "of that colouring," but "to colour that." Moreover, "of that colouring" is in Irish (not *dia dathugud sin*, but) *do'n dathugud sin*. No emendation is required. The meaning is that the poet made verses to "establish," or perpetuate, the fact of the miraculous cure and the consequent promise of service by those who were healed.

"Ferna, gen. Fernann, now Ferns, co. Wexford" (p. 378). In the text (p. 62) the gen. is the only case employed. It occurs twice, and is correctly given as *Ferna*, not *Fernann*. Confirmation is found in an unexpected quarter. Perhaps the earliest extant example is contained in the "unintelligible (!) verse" (Hampson: *Med. Aer. Kal.*, p. 398) of the *Kalendar in Galba and Tiberius*:

(II. Kal. Feb.) Ast Iani fines signat Aed famine Ferna.*

The translation requires a separate notice for adequate discussion.

B. MACCARTHY.

"IN TAPHNIS."

London: Jan. 17, 1891.

In a footnote to his letter printed in the ACADEMY of to-day, Mr. Whitley Stokes suggests that the word *taphnis* (in the passage *ut moriatur in taphnis*, quoted from a Vatican MS.), is a mistake for *tapinis*, and compares this with Greek *ταπινός* and French *en tapinois*. It is, however, unquestionably the name of the

* The MSS. (according to Hampson) have *sigat* and *famina*: *Aed* by designation "of Ferns," so-called to distinguish him from others of the name. The homonymous lists in L. L. (p. 366c, f) have twenty-one saints under *Aed*. In L. Be. (p. 225d) "*xxi. sunt*" stands at foot, but only eighteen are given; thus proving the scribe's oversight.

Egyptian city Tahpanhes (see Ezek. xxx., Jer. xliii.). The interpretation *mandatum humile*, which is St. Jerome's (*Comm. in Ezech. xxx.*), is very puzzling—it does not seem possible to account for it by a reference to Hebrew. Some of the Church Fathers seem to have had sufficient knowledge of Egyptians to make blunders in it; is there any conceivable combination of words in that language that might have suggested this extraordinary explanation?

HENRY BRADLEY.

TUNIP AND THE LAND OF NAHARINA.

Rochester: Jan. 17, 1891.

Writing at a distance from good libraries, I do not know what has been said about Tunip. But Mr. Howorth's very plausible theory respecting Aran Naharina is surely a very old friend. At least, some fifteen years ago one heard of it in connexion with the names of M. Halévy (*Mélanges*) and Dr. Beke. The tribe Patina are also, of course, very old friends. But the new suggestion of Mr. Howorth about Tunip certainly helps the theory if it can be made out.

T. K. CHEYNE.

There is one difficulty in the way of Mr. Howorth's suggestion in the ACADEMY of January 17 with regard to the name Naharain. The two rivers which he proposes as the boundaries of the land so called do not unite, but flow into different seas. They do not enclose a tract of country in the same sense as two rivers which join.

The analogy of the Indian use of a similar term will be helpful. The familiar word *do-áb* "two rivers" (the equivalent of Naharain), is applied to "a tract between two confluent rivers" (Yule and Burnell's Glossary). It may seem that this still leaves undefined the area to which the word is applied, as two confluent rivers cannot really enclose it. There can only be two sides of the figure; but a third side is supplied by the mountain range from which the two confluent rivers come, and it is to the roughly triangular space thus enclosed that the name *do-áb* is given. Thus, the tracts between the several rivers which unite and ultimately join the Indus are called *do-ábs*, each with its own distinctive name. So also the great tract between the Ganges and the Jumna is known as the *Doáb*, without any further name. But to the broad strip of country between the Sutlej and the Jumna, which rivers do not unite but flow into different seas, the term *do-áb* is not applied. Is it not probable that the use of the term Naharain is similar, and that it is only applicable to a Mesopotamia, in the ordinary sense of a *do-áb*?

R. MACLAGAN.

WHY WAS THE HORSE DRIVEN BEFORE IT WAS RIDDEN?

Queen's College, Cork: Jan. 19, 1891.

Mr. Talfourd Ely says that "it was no doubt easier to learn driving than riding." Is this true? Under modern conditions it may be so, when a person's first essay in driving is made on some old and steady animal, tightly embraced in harness and shafts. But when primitive man first subdued the little wild horse, was it easier for him to learn to drive two of these animals when simply attached by means of a yoke and pole, with free play for their hind quarters and heels, their first instinct being to kick to pieces the rattling, creaking wheels and axle which formed the primitive car, or to learn to sit firmly on his back—an art which the South American Indians found no difficulty in acquiring when they obtained the horse from the Spaniards?

WILLIAM RIDGEWAY.

"COCK'S EGGS."

King's College, London: Jan. 14, 1891.

As Dr. Murray's derivation of the word "cockney" has lately called special attention to the curious phrase, "a cock's egg," the following extract may, perhaps, be worth making. It is a note in Souvestre's *Le Foyer Breton*, apropos of the phrase *race née de l'œuf du coq*:

"On croit en Bretagne que certains œufs, recouverts seulement d'une pellicule, sont pondus par les coqs et proviennent du démon comme tout ce qui sort de l'ordre naturel. Ces œufs sont, dit on, couvés par des couleuvres et produisent des monstres. *Race née de l'œuf du coq* est donc une injure qui exprime l'origine diabolique de l'être auquel on l'adresse."

JOHN W. HALES.

"ARERAGE" IN THE NEW ENGLISH DICTIONARY.

London: Jan. 20, 1891.

I should be glad to correct an error which occurs in a note of mine to "Some English Documents temp. Henry VII.," printed in the ACADEMY of Jan. 3. It is there stated that the word "aravage" is not given in the New English Dictionary. As a matter of fact it appears under the head "arrears," of which four senses are given, including that mentioned in my note. There is, however, no cross-reference "aravage" to "arrears," though there is from "arere" to "arrear"; this it seems is intended to imply all the related words.

PACOT TOYNBEE.

APPOINTMENTS FOR NEXT WEEK.

- SUNDAY, Jan. 25, 4 p.m. South Place Institute: "Presbyterianism," by the Rev. David Fotheringham.
7.30 p.m. Ethical: "Am I my Brother's Keeper?" by Dr. Stanton Coit.
- MONDAY, Jan. 26, 4 p.m. Asiatic: "Pāṇini, Poet and Grammarian, with some Remarks on the Age of Indian Classical Poetry," by Prof. Peterson.
5 p.m. London Institution: "British Ballads," by Mr. Edmund Gosse.
8 p.m. Royal Academy: "Byzantine Architecture," I., by Mr. G. Aitchison.
8 p.m. Society of Arts: Cantor Lecture, "The Construction and Capabilities of Musical Instruments," I., by Mr. A. J. Hipkins.
8 p.m. Richmond Athenæum: "Evidences for the Ether," with Experiments, by Mr. A. T. Hare.
- TUESDAY, Jan. 27, 3 p.m. Royal Institution: "The Spinal Cord and Ganglia," II., by Prof. Victor Horsley.
8 p.m. Society of Arts: "Lithography: A Finished Chapter of Illustrative Art," by Mr. William Simpson.
8 p.m. Civil Engineers: "Machine Stoking," by Mr. J. F. Spencer.
8 p.m. Anthropological Institute: Annual General Meeting; Presidential Address, by Dr. John Beddoe.
- WEDNESDAY, Jan. 28, 8 p.m. Society of Literature: "Dr. Samuel Parr," by Mr. Arthur Benson.
8 p.m. Society of Arts: "Illustrated Journalism," by Mr. Carmichael Thomas.
- THURSDAY, Jan. 29, 3 p.m. Royal Institution: "The Little Manx Nation," II., by Mr. Hall Gaike.
4 p.m. Society for Preserving Memorials of the Dead: General Meeting.
6 p.m. London Institution: "The History of Medicine in London," by Dr. Norman Moore.
8 p.m. Royal Academy: "Byzantine Architecture," II., by Mr. G. Aitchison.
8.30 p.m. Antiquaries.
- FRIDAY, Jan. 30, 7.30 p.m. Civil Engineers: Students' Meeting; "The Counterbalancing of Locomotive Engines," by Mr. E. L. Hill.
8 p.m. Browning: "Browning's Proof of Optimism: a Statement and a Criticism," by Prof. Jones.
9 p.m. Royal Institution: "British Mosses," by Lord Justice Fry.
- SATURDAY, Jan. 31, 3 p.m. Royal Institution: "Pre-Greek Schools of Art," II., by Mr. W. M. Conway.

SCIENCE.

THE GREEK MSS. IN THE VATICAN.

La Vaticane de Paul III. a Paul IV. d'après des documents nouveaux. Par Pierre Batiffol. (Paris: Leroux.)

THIS charming little book may well be commended to the notice of all who are interested in the history of libraries and of MSS. It belongs to a series of which the

outward get-up is somewhat similar to that of our own "Parchment Library," but even more elegant and refined; and the price is trifling. All scholars nowadays who take their work seriously are concerned in the external, as well as the internal, history of MSS.; and to these the Abbé Batiffol offers a pleasant and interesting sketch of an important period in the history of the most important library in the world.

It is needless to open our account with a review of the work that has recently been done, or is now doing, at the history of the Vatican, for all this will be found concisely stated in the Preface. It may, however, be as well to mention that M. Batiffol's researches are practically confined to Greek MSS., so that the title would have been a little more correct if it had been *La Vaticane Grecque*, &c. The distinction is important, because the Greek collection in the Vatican has a separate history, and is more modern than the Latin. In 1443, under Eugenius IV., there were only two Greek MSS. (a Boethius and a Graeco-Latin Psalter) in the library. From that time to the death of Sixtus IV. in 1484 it increased rapidly; but here M. Batiffol leaves us rather in a mystery, for he himself can only ask the question what became of the 900 volumes which were there at that date. And he goes on to say in the next sentence that the nucleus of the present collection is formed by the 450 MSS. catalogued in 1519-1521 under Leo X. The landmarks in the history of the library from that time onwards are the catalogues: first an alphabetical subject-list, made under Paul III., in 1545; and then, about 1620, a new catalogue, made by the Rainaldi, which established the order in use to the present day.

It is this period, 1545-1620, which M. Batiffol has undertaken to chronicle. During a great part of the time the library was in the hands of three cardinal librarians: Cervini (1548-1555), Sirleto (1570-1585), and Carafa, who appears to have succeeded Sirleto at once and died in 1591. All three were keenly interested in Greek letters, and it was through them that the principal accessions were made to the collection. Cervini added about 143 Greek MSS. From the private library of Sirleto thirty-five were bought for the Vatican at his death, and the rest also found their way ultimately into the Vatican with the Ottoboni collection, with which they had been incorporated. This was under Benedict XIII., in 1740. Carafa bequeathed to the Vatican, as it would seem, sixty-nine Greek MSS. (No. 31 *bis*) of rather less importance, but including some of the material for the Roman edition of the Septuagint, which had been entrusted to him and was published in 1586.

The central figure in M. Batiffol's book is Sirleto, a genuine scholar, of mild and simple character, tutor at one time of Carlo Borromeo, who had been charged with the collecting of the patristic authorities for the discussions in the Council of Trent, especially in its first and most important period, 1545-1552. In this capacity Cardinal Seripando said of him that he had "done more service to the Council while at Rome than fifty prelates more would have done at Trent."

Of his predecessor and successor we also get a graphic impression, the vigorous, impatient, and imperious Cervini—first of the librarians who belonged to the Sacred College, and afterwards Pope for twenty-two days as Marcellus II.—who promptly set to work and brought the library into better order than it had ever been; and the stern, severe Carata, a characteristic figure of the reaction of the latter part of the century, of whose temper we have a melancholy monument in the shape of a page and a half of exultation over the Massacre of St. Bartholomew.

M. Batiffol touches, by the way, upon a number of interesting points: the two great markets for MSS. at Rome and Venice; the shifty Greeks, who brought over their packages of books for sale or were employed as copyists; the method of constructing Renaissance texts, in which the scribe has usually two copies at his side, and chooses the most readable text, now from one and now from the other; the worthlessness of the greater number of these sixteenth century MSS., where along with some twenty replicas we often possess the original from which they were copied. We have besides many details about the price of books; some interesting illustrations of the Tridentine doctrine of the inspiration of the Vulgate; and a sketch of the origin of the Roman edition of the LXX. In the course of this M. Batiffol comes to speak of the famous Codex Vaticanus 1209 (B). The earliest reference to this is in 1533. He can find no mention of it in the catalogues before that date; and he is himself of opinion that it was brought to Rome by Cardinal Bessarion, after resting somewhere in the South of Italy from the tenth or eleventh century, but he is not prepared to say that it was written there. On this point the reader may consult especially De Rossi, *De Origine Bibliothecae Apostolicae*, pp. xxxvi.-xxxviii. We may observe in passing that it is perhaps a little in excess of the facts to say that "modern criticism is unanimous in considering the text of Cod. B. as the oldest form which we possess of the text of the Septuagint." This hardly does justice to the qualifying phrases ("on the whole" and "relatively") in the quotation given just before from Dr. Swete; and there is still some dissent—e.g., in Dr. Hatch's *Essays in Biblical Greek* (p. 281), for the Book of Ecclesiastics, and I believe also on the part of Dr. de Lagarde.

At the end of his treatise, M. Batiffol turns to a subject which he has made specially his own—the history of a small, but compact and valuable, collection of MSS., which Paul V. carried off in high-handed fashion from Grotta Ferrata. What M. Batiffol has to say about these MSS. has the further interest that it is at issue with the opinion of Dom A. Rocchi, to whom we owe the excellent catalogue of the MSS. still at Grotta Ferrata. Dom Rocchi affirms, and M. Batiffol denies, that the collection in question formed part of the original stock of the abbey. He finds, first, a statement by Ambrose of Camalduli that the volumes in the library when he visited it in 1432 were *dissipata, disrupta, conscissa, putrida*, which does not agree with the

present condition of the greater number of them. He finds, also, two lists of Grotta Ferrata MSS.—one of sixty volumes, dated 1462, and another of fifty-three volumes, drawn up in 1575; only a few of these latter volumes are included in the earlier list. Lastly, out of the forty-one MSS. now in the Vatican, but one can be proved to have been at Grotta Ferrata at the beginning of the fifteenth century, while several, the origin of which can be traced, belonged to other monasteries. One would be glad to know what Mr. T. W. Allen had to say about these MSS. from a palaeographical point of view; but I do not gather that they were included among the data for his *Notes on the Abbreviations in Greek MSS.* M. Batiffol himself may throw more light upon them in his forthcoming volume on Rossano.

W. SANDAY.

CORRESPONDENCE.

SHAMBALA.

Dedham School, Essex: Jan. 18, 1891.

In the ACADEMY for October 18, 1890 (pp. 344-5) it was shown that in the Jātaka book *Seruma* and *Simbali* were in some way connected as the abode of the Supannas. There is an Avesta *Sairima* which appears in the Pahlavi texts (Bund. xx. 12) as *Salmān* (the source of the Tigris). The Sanskrit *Cālmala*, as the name of a *Dvīpa* is not very ancient, and may after all be a corruption of some proper name like *Salmān*.

The second element in *Ka-serumant* may be compared with the Avesta *Haētūmat* *Haētūmat*, Pahlavi *Hētūmand*, which in Bund. xx. 34 is said to be identical with the spring *Zarīnmand*. There is another *Haētūmat*, the modern *Helmend*, the *Ἐρμάνδος* or *Ἐρμάνδος* of Arrian.

With regard to the *Cālmala* groves the old tradition* respecting this delightful abode is still current in Thibet. The author of an article in the *Edinburgh Review* (No. 352, p. 405), October, 1890, speaks of a most popular Thibetan work entitled "A Guide for the Journey to *Shambala*."

"Shambala," he says, "is a supernal city supposed to exist on the borders of Mongolia; and every Mongol pilgrim visiting Lha-sā prays the great deities and the living celebrities of the place to grant that at his next re-birth he may be born in the blessed groves of Shambala."

R. MORRIS.

SCIENCE NOTES.

MESSRS. MACMILLAN & Co. are about to publish *Outlines of Psychology*, by Prof. Harald Höffding, of Copenhagen, translated by Miss Mary E. Lowndes. The translation is from the German edition, which the author has accepted as an adequate rendering of the original. The work is well known on the continent, and, in its German form, is familiar to many English psychologists. Dr. Höffding sharply distinguishes psychology from metaphysics, treating it in the strictest sense as the science of mental phenomena. The greater part of the book is occupied with an exposition of the psychology of cognition, of feeling, and of the will; but there are also chapters on the subject and method of psychology, on the relation between mind and body, on the conscious and the unconscious, and on the classification of the psychological elements. The author is as

* The Jains knew something of this tradition—"Rukhesu nāte jaha sāmālied jassim ratim veyayanti suvannā" (Sāy. I. 6, 18, p. 315).

strongly opposed to materialism as to spiritualism, but is at great pains to show what light has been thrown by physiology on psychological problems.

THE seventeenth general meeting of the Association for the Improvement of Geometrical Teaching was held at University College, London, on January 17. Unfortunately both the president-elect (Prof. J. J. Sylvester) and the retiring president (Prof. G. M. Minchin), were prevented by illness from being present. The chair was taken by Mr. R. B. Hayward, of Harrow. The following officers were elected for 1891: president, Prof. J. J. Sylvester; vice-presidents, R. B. Hayward, R. Levett, Prof. G. M. Minchin, R. Tucker; treasurer, Prof. A. Lodge; hon. secs., E. M. Langley, C. Pendlebury; other members of council, Mrs. Bryant, C. V. Coates, E. T. Dixon, A. S. Eve, G. Heppel, Prof. W. H. H. Hudson, Rev. J. J. Milne, Prof. W. N. Stocker; auditor, G. Heppel. The following were elected members of the association: Prof. T. M. Blakslee, Messrs. H. G. Bell, J. C. Iles, C. Legg, A. A. Lintern, J. S. Norman, A. Wheatley, T. Wilson. Papers were read by Miss Wood (on "The Use of the term 'Abstract' in Arithmetic"), by Mr. E. T. Dixon (on "The Foundations of Geometry"), and by Mr. E. M. Langley (on "Statics and Geometry"). Mr. H. Perigal showed some ingenious models and diagrams in illustration of Euclid's proofs. A petition prepared by the Decimal Association, urging the prompt introduction into the United Kingdom of a decimal system of coinage, weights, and measures, was signed almost without exception by the members present.

PHILOLOGY NOTES.

THE president and council of the Royal Asiatic Society have made arrangements for the delivery in future, during the course of each session, of evening lectures on Oriental subjects: that is to say, on the history, customs, religions, and literature of Eastern nations, ancient and modern. The lectures are intended to be such as will appeal generally to educated men and women, and not of a character to interest specialists only. The inaugural lecture will be delivered by Prof. Max Müller, on Wednesday, March 4, at 8.30 p.m., in the lecture-hall of the University of London, Burlington-gardens. Two tickets will be at the disposal of each member of the society, on application. Unappropriated space will, after February 15, be held to be available for the use of the general public.

At the usual meeting of the Asiatic Society, on Monday next, January 26, Prof. Peterson, of Bombay—who is now at home on leave—will read a paper entitled "Pāṇini, Poet and Grammarian, with some Remarks on the Age of Indian Classical Poetry."

MR. JOSEPH MASSEL, of Manchester, has just issued, in a limited number of copies, a version into Hebrew of Milton's *Samson Agonistes*. The excellence of the translation is vouched for by Dr. Mandelkern, of Leipzig; and for Western readers the neatly printed little volume has the advantage of being supplied throughout with the Masoretic vowel points. It would be difficult to find a literary composition better suited for rendering into Hebrew than Milton's grand scriptural poem. The translator prints and publishes his own book.

WE have much pleasure in announcing the fourth part of Jastrow's Dictionary of the Targumim, the Talmud Babli and Yerushalmi, and the Midrashic Literature (New York: G. P. Putnam's; London: Kegan Paul & Co.). Condensation and excellent typography con-

tinues to distinguish this work; and though Fleischer's contributions to Levy's Lexicon will for long render that book indispensable to the full study of late Hebrew, we cordially recommend Dr. Jastrow's Lexicon to English students. May health and strength be given him for the conclusion of so laborious an undertaking!

MEETINGS OF SOCIETIES.

RUSKIN SOCIETY.—(Friday Jan. 5.)

KINETON PARKES, Esq., in the chair.—The Rev. J. P. Fauntorpe read a paper on "*Fors Clavigera*." The paper drew attention to the meaning of the term, pointed out some resemblances to the *Spectator*, and asserted that *Fors* contained some of the most valuable of Mr. Ruskin's teaching. It contains much bitter satire, many sharp antitheses, much profound reverence for Scripture, and many anticipations of the solution of political and economical problems. The satire is directed against Stuart Mill, the clergy, the British squire, commercial immorality, and ironclads. The Scripture references take up nine pages in the Index with double columns, and there are many other adaptations of Biblical words not given in the Index. Every one may learn reverence from Mr. Ruskin. Its object is again and again stated to be to explain the nature and the intention of St. George's Guild, which in its main design has not succeeded. The main design was to buy land and have it cultivated under certain rules and in certain ways somewhat after the fashion of Mr. Booth's "Farm Colony," but with laws more nearly approaching monastic regulations. The secondary design of a museum of art and natural treasures is now an accomplished fact at the Meersbrook Park, Sheffield, and in a less degree in various colleges and schools in England and Ireland. The land courts in Ireland and Scotland are now doing exactly what *Fors* advised years ago. Technical education, the brotherhoods in the Church, and other good things are anticipated in *Fors*; and from its pages a valuable treatise on education may, and probably will, be compiled. Perhaps, after all, its greatest value is not so much in what it has accomplished, but, like the writings of Bacon and Coleridge, in what it will cause by way of suggestion.—A brief discussion followed.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, Jan. 13.)

E. W. BRABROOK, Esq., vice-president, in the chair.—Mr. Lewis exhibited a specimen of the stone used by Admiral Tremlett to cut marks on the granite of which the Breton dolmens are composed.—Mr. R. B. Martin exhibited a fire-syringe from Bornco.—Mr. C. H. Read exhibited some specimens of worked jade from British Columbia, and a bored stone from San Juan Teotihuacan.—Mr. J. Edge-Partington and Mr. C. Heape exhibited an ethnographical album of the Pacific Islands.—Mr. F. W. Rüdler read a paper on "The Source of the Jade used for Ancient Implements in Europe and America." Its object was to call the attention of anthropologists to certain mineralogical discoveries which have been made within the last few years, and which tend to overthrow the well-known theory that suggested early intercourse with the East as the source of the jade objects found in the lake-dwellings of Switzerland, the prehistoric burial places of France and Germany, and the ancient Indian graves on the north-western coast of America. Herr Taube, of Breslau, first recorded the occurrence of jade *in situ* at Jordans Mihe, in Silesia, and afterwards discovered it at the arsenals-pyrites workings at Reichenstein. Rough pebbles have also been found in the valleys of the Sann and the Mur in Styria. Dr. G. M. Dawson has described the occurrence of boulders of jade partly seen through, at Lytton and Yale on the Fraser River; and Lieutenant Stoney has actually found the mineral *in situ* at the Jade Mountains, north of the Kowak River in Alaska. These discoveries prove that, contrary to general belief, jade does occur in the rocks of Europe and of North America, thus supporting the views so long held by Dr. A. B. Meyer, of the Royal Zoological Museum in Dresden, and accepted in America not only by Dr. Dawson, but by Prof. F. W. Clarke and Mr.

Merrill, Mr. Kunz, and others. In England, most anthropologists have hitherto inclined to the exotic rather than to the indigenous origin of the prehistoric jades.

FINE ART.

OLD MASTERS AT THE ROYAL ACADEMY.

II.

THE schools of Spain, though more modestly represented this year than on the last occasion, still constitute an interesting, if not a dazzling, series. The little "Pieta," ascribed to Juan Juanes, is a work still based entirely on Flemish-Gothic traditions, although it belongs to the full sixteenth century. Francisco de Ribalta—a Spanish painter who, like most of his *confrères* of the latter half of the sixteenth century, acquired the better part of his artistic education in Italy—is credited with a pleasing, if by no means masterly, double portrait, called "Portraits of the Painter and his Wife" (Sir Wm. Eden Bart). The "Simeon and the Infant Saviour" (Marquis of Bristol), though not wanting in a certain characteristic intensity of religious sentiment, marred by the undue self-consciousness of the time to which it belongs, is not firm enough in draughtsmanship or searching enough in modelling for Spagnoletto, to whom it is ascribed.

Three canvases of important dimensions bear the magic name of Velasquez; but of these it is only the "Portrait of the Conde-Duke de Olivarez" (Earl of Elgin) to which it is possible conscientiously to leave that attribution. This is an original replica, on a much smaller scale, of the great equestrian portrait of Philip IV.'s all-powerful minister; or, as Herr Justi thinks possible, an earlier version of the subject. We deem the former hypothesis far more likely to be the true one; because, with all its unusual sparkle and splendour of colour, Lord Elgin's canvas lacks, to a great extent, the intense vitality which is the unique characteristic of Don Diego's art. Still, the surprising force, when seen at the proper distance, of the white war-charger on which the Count Duke is mounted, and above all the masterly sweep of the brush in the barren yet beautiful landscape background, half veiled by the smoke of an unseen combat, prevent us from thinking of any other name in connexion with this fine performance. Quite otherwise is it with the "Infanta Maria Theresa" (Mrs. Lyne Stephens), to which Herr Justi—usually so discerning and impartial a critic—has unaccountably given his *imprimatur*. This, showing in childhood the future spouse of Louis XIV., may be a repetition of an original by Velasquez; but it is so pasty and timid in execution, that it is not possible, for a single moment, to regard it as an original work of Velasquez. It reveals a painter who has undergone Flemish as well as Spanish influences, and may therefore, as has been suggested, be by Carreño de Miranda. The full-length, "Philip IV. of Spain" (Mrs. Lyne Stephens), is simply a copy, and by no means a very excellent one, of the superb portrait of that monarch in the Dulwich Gallery. From the same collection comes, however, a very large and important Murillo, awkwardly described in the catalogue as "Allegorical Subject: Faith Elevating the Eucharist." This great canvas is, as to execution, on the confines between the second and the third or *vaporoso* manner; a splendid group of portrait-like male figures in adoration before the figure of Faith is its most attractive portion. The picture came originally from the same church of Santa Maria la Blanca in Seville which contained at one time the famous "Immaculate Conception" of the Louvre.

Very rarely at Burlington House has the

Flemish section of the art of the Low Countries been so weakly represented as on the present occasion. To a Fleming of the latter half of the sixteenth century belongs unquestionably the quaint "Saint in the Desert," ascribed to Bronzino, and signed *en toutes lettres* "Alessandro Bronzino Allori"! The leaden flesh-tints in the nude figure of the still youthful saint—apparently St. Francis of Assisi—who lies prone, in self-imposed penance, in the brambles; the crude freshness and peculiar detail of the green landscape in which he is framed, both point to a northern hand. The "Queen Henrietta Maria" (Miss Chambers), ascribed to Van Dyck, is a net very convincing replica of a well-known type; while the "James Stuart, Duke of Richmond," holding a fruit, is a repetition of the well-known portrait, of which the best example is in the Long Gallery of the Louvre. A brilliant piece of decorative art, from the Flemish standpoint, is the "Peasants Going to Market" (Sir E. C. Guinness, Bart.), ascribed to Rubens and Snyders. The figures of a male and female peasant carrying game and fruit, which constitute the portion of the picture assigned to Rubens, show, with all their brilliancy, a certain harshness of colour and execution—especially in the red of the woman's jacket—which excites the suspicion that Snyders alone may be responsible for the work. That Italianised Lowlander, Sustermans (or Suttermans according to the *Iconographie* of Van Dyck), who became, and remained during a considerable part of the seventeenth century, the painter-in-ordinary of the Grand Dukes of Florence, is characteristically represented by a charming, if somewhat mannered and conventional, "Head of a Girl" (W. Cornwallis West, Esq.); but there is no reason for ascribing to him the huge, and in its way very imposing, "Portrait of Cardinal Capponi," which, in a grandiose *barocco* frame, occupies a central position at one end of the large gallery. This is a work of the Roman school of the seventeenth century, suggestive rather of the style of Carlo Maratta. That charming painter of portraits in miniature, Gonzales Coques—in his breadth of style, however, far removed from the miniature painter proper—has often better deserved his appellation of "The Little Vandeyk" than in "A Lady Playing the Lute" (A. J. Roberts, Esq.). Teniers the younger, in "A Butcher's Shop" (Right Hon. G. Cavendish Bentinck, M.P.), though he has taken extraordinary pains with the wonderfully-accurate carcass of a calf, hanging up in approved fashion, and not less with the brilliantly rendered calf's head placed on a wooden block in front, has not this time—even with the aid of his girl in a bright red bodice, and of his favourite brazen pans and utensils—succeeded in producing a picture. We think regretfully of what Rembrandt, with his all-penetrating and transfusing power, has succeeded in making out of an almost identical subject in his well-known study in the Louvre.

Dutch art is on the whole as splendidly illustrated as on former occasions, although Rembrandt, the hero of the two last displays, is unrepresented, except in so far as his commanding influence reveals itself in the work of pupils and followers. It is very difficult to accept as the work of Van der Helst the admirable "Portrait of a Dutch Lady" (Sir E. Bunbury, Bart.), although it bears his signature in full, together with the date 1647. Van der Helst's manner, in this his early middle time, is already, in its sobriety of diffused light and its silveriness of colour and general tone, diametrically opposed to the Rembrandt school, to a very accomplished painter of which this canvas should, we think, belong. The head—upon which, in accordance with the Rembrandt canon, the light is chiefly concentrated—is, if somewhat over-smoothly

painted, drawn and modelled with consummate skill, while the conception is pathetic in its very simplicity. We must leave to some such specialist as Dr. Abraham Bredius the agreeable task of finding in Rembrandt's following a name for this very fine work. Three portraits which represent Nicholas Maes in his later and more modish phase need not detain us, although at least one of them, the "Portrait of a Young Prince," is a finished example of this style. He is seen at his very best, on the other hand, in the luminous and beautiful, "Old Woman Reading," so nearly akin to a picture of like motive in the Amsterdam Museum. One comes to the conclusion that a Maes of this quality can almost compare on equal terms with Rembrandt himself, audacious as such a proposition may appear. Frans Hals is one of the few great masters who are not seen at their very best in English collections, and it is rarely indeed that such an opportunity as the present one is afforded for judging him. Supreme in intuition as in executive skill, where he sets himself the congenial task of presenting on a human countenance a fugitive, a momentary expression—especially one of jollity or sensuous delight—he betrays a certain emptiness, and an incapacity for penetrating into the depths of a personality or summing up its abiding characteristics, when, as in the broadly and grandly modelled "Portrait of Johann van Loo" (M. H. Colnaghi, Esq.), he is compelled to present a sitter in complete gravity and repose of feature. Of his more favourite mood, Sir E. C. Guinness's famous "L'Homme à la Canne"—from the Secrétan collection—is a splendid and Mr. Cuthbert Quilter's "Pierre Tiarc" a fair specimen. The unusually solid modelling of the "Portrait of a Lady" (G. Salting, Esq.) shows it to be somewhat earlier in date than any of these; while the "Joyeux Buveur" (M. Jules Porgès) is a life-size study of a young toper, in which the surprising brilliancy of the absolutely living head contrasts strangely with the bad execution of the hands and accessories—a badness, too, which is hardly the audacious carelessness of Hals, but rather suggests the co-operation of an assistant. We do not remember to have seen on the walls of the Royal Academy so fine an example of the scarce Vermeer of Delft as "The Soldier and the Laughing Girl" (S. S. Joseph, Esq.), a panel which once adorned the famous Double Collection in Paris, and when there was cleverly etched by the late Jules Jacquemart. Surely never was the full splendour of sunlight, never was the subtle delicacy of reflected beams more wonderfully suggested than in this study, which is at the same time a naïve and truthful piece of *genre*. It is in the human side of his art that Vermeer surpasses the, in other respects, unsurpassable Pieter de Hooch, who is seen at his very best in the famous "Card Players" (Her Majesty the Queen), a canvas in which sunlight seems to be actually captured and detained in perpetuity. The only other Dutch picture here which can claim to take equal rank with these is Terburg's splendid conversation-piece, "The Letter" (Her Majesty the Queen). It is unfortunate that this consummate master never succeeds in connecting his cleverly observed and surprisingly painted single figures by that indefinable yet all-important bond of dramatic union, which would make of his works true and complete studies of life as, from a technical point of view, they are complete pictures. In this respect he is far behind Metsu, whose colouring and execution, however excellent, cannot, for *finesse*, be compared to his. Of the latter master, very fine specimens—marked, however, by his characteristic hotness of colour—are "The Breakfast" and "Dutch Interior," both of which were, we believe, acquired by Sir E. Guinness at the

Secrétan sale. Fuller in colour, and yet not less silvery than usual, are two exquisite Van Goyens, both styled "On the Maas near Dordrecht" (S. S. Joseph, Esq.), showing the familiar scene with a pictorial charm which Cuyp himself does not always attain. On the other hand, the less subtle, but still excellent, "Landscape" (H. W. B. Davis, Esq., R.A.) appears to us rather as the work of Van Goyen's imitator, Salmon van Ruysdael, than as being from his own brush. The greys and greens are less delicate than those of the master himself, and the execution more detailed, and, in its greater deliberation, less effective. Three magnificent examples of Cuyp—to whose works of fine quality in English collections there would appear to be no end—are Mr. A. J. Roberts's "View on the Maas: Evening," and his two pictures, both styled "Cattle on the Maas"; while a less engaging phase of the master's style is shown in a "View of Dort" from the same collection, which is both over-crowded, and, as it were, ill-digested. Of several specimens of the art of Jacob van Ruysdael, the most interesting, because the most closely founded upon natural truth, are a "View from the Ruins of Brederode Castle" (S. S. Joseph, Esq.), and a "Wooded Landscape" (George Salting, Esq.). The large "Landscape," by Hobbema (A. J. Roberts, Esq.), is technically of fine quality; but somehow it is more prosaic in sentiment than are usually the woodland scenes of this admirable but a trifle over-rated landscapist—perhaps because he has this time chosen to enliven his sylvan solitude with a waggon and horses and various figures. We may further call attention to a "Sea-piece," by Willem van de Velde (A. J. Roberts, Esq.)—wonderfully accurate in detail and wonderfully hard—and to "The Little Farm" (G. Salting, Esq.), by Adrian van de Velde—a finished example of a finished and unemotional master.

There have been very wisely placed in the gallery with the Dutch and Flemish paintings three examples of Antoine Watteau, from the celebrated collection of the lately deceased Miss James. Of these, an "Interior"—showing an old woman spinning, a young one seated in an armchair sewing, and near them two children, one with a cat in its arms—though carried less far than many similar works of the Valenciennes master, is unmistakably his in drawing and execution. As still more unmistakably from his brush reveals itself the wonderfully sparkling and rich "Garden Party," which, save in the darkening of the leafy background, appears to an unusual degree uninjured. It is one of those characteristic but, all the same, not easily describable scenes of poetical dalliance of which there are so many fine examples in the collection of the late Sir Richard Wallace. Such a picture as this "Garden Party," should it come into the market, would admirably fill the gap in the too-limited series of French pictures at the National Gallery, created by the lack of even the least specimen showing the handiwork of France's greatest colourist. The charming "Encampment," a little *bambochade*, suggested no doubt by the art of Philip Wouwerman, is much less obviously Watteau's own. Its delicate grey tone and mannered exquisiteness of execution are akin to the style of Pater at his best; but we must own that the little piece is more skilfully done than any by the last-named painter with which we are acquainted.

CLAUDE PHILLIPS.

EXCAVATION IN EGYPT.

Medum, Wasta, Egypt: Jan. 10, 1891.

AN important step has lately been taken in recognition of scientific work which will, I am sure, be gratifying to readers of the ACADEMY.

Some weeks ago an obstructive party in Egypt succeeded in forcing forward an entirely new regulation. By this the government were to take from excavators, firstly, all that was unique, and then half of the remainder. These terms would practically stop archaeological work, which always needs much unremunerative expenditure; as on such conditions a loss would only be avoided when roughly plundering rich cemeteries. As I was waiting to commence work, I at once protested; and the subject was reconsidered. Sir Evelyn Baring's attention having been called to it, he made active representations on the subject; and, in consequence of his care and intervention, the cordial co-operation of the Anglo-Egyptian officials, and the goodwill of Riaz Pasha, a reasonable arrangement has been passed by the ministry, on trial for two years.

The essential terms are that the Ministry of Public Works will authorise suitable applications. That the Ghizeh Museum may take all objects found that are *sans pareil* in that collection; the decision, if disputed, to be by arbitration, the Public Works turning the scale. That all the remainder belongs to the finder if he will present the major part to public museums, and publish his results in two years; if he will not do so, the government require half of the remainder. Gold and silver remain as before, half to the finder, by intrinsic value.* Thus a clear preference is given to scientific exploration on behalf of public museums. This is not a personal or a national gain, but a benefit to Egyptology in all countries; and I am sure that it will be a satisfaction that this liberal policy should have been brought about by English influence and work. There has been enough of exclusive action in past time to make this public-spirited and impartial settlement a welcome change.

In consequence of the previously impossible terms, I am only just beginning on this most interesting place. I have made a complete facsimile copy, full size, of the tombs, about eight hundred square feet, and coloured copies of special signs. We learn much from these very early sculptures. *An* is not an obelisk, but an octagonal fluted column, with square tenon on top. *Aa* is not a spear, but a papyrus column with bell top and a long tenon at the end. *Hotepe* is a reed-mat in plan view, with a dish of offerings upon it, in elevation. *Ma* (sickle) always has teeth inserted, like the flint-saw sickles which I found. *Men* is the ganning-board, of 3 × 10 squares, in plan view; with a row of ten pieces, alternately tall and short, in elevation on the top. *Menkh* is a chisel in a wooden handle. *Net*, supposed to be a bag, and to mean "chancellor," is an object suspended from a string of red and green beads. The object appears to be a green cylinder with gold end-caps, and if so it means "sealbearer." *Shed* is a raw-stripped skin, rolled up, fur out, with raw red flaps of the limbs and neck showing at the ends, and tied round ends and middle. *Ur* is the common wagtail. Many other points of great interest occur in the splendidly carved and painted tomb of Rahotep. But, owing to the lack of inspection in this country, this tomb has been left open of late years, and every face within reach is smashed. The pyramid of Rikka has disappeared altogether; and the pyramid of Medum has lost some 100,000 tons in the last half century, and is still the quarry of the neighbourhood. Perhaps it will hardly be believed that the anti-English party here are determinedly opposing the appointment of inspectors. The monuments may go to pieces

if some miserable political end can be gained. We may hope that, the excavation difficulty being settled, the inspection question will be likewise firmly solved.

I bought in Cairo the oldest weight known, bearing the name of Khufu. It is marked "ten units," weighs 2060 grains, and so shows the Aeginetan standard at an earlier date than any example of the Egyptian *Kat*.

W. M. FLINDERS PETRIE.

DISCOVERIES AT THEBES.

Luxor: Jan. 8, 1891.

WITH the aid of the new tourist tax the excavation of the Theban temples is proceeding apace, and new discoveries are daily being made. The great hall of the Palace-Temple of Rameses III. at Medinet Habu has been cleared of about fifteen feet of rubbish. Three days ago the staircase ascending to the top of the great northern pylon was discovered. The summit of this pylon commands a magnificent view, probably the best of the whole plain of Thebes—the colossal statues of Amenhotep III. in the foreground, the Ramesseum in the middle distance, and, across the river, the temples of Luxor and Karnak.

Still more interesting results have been yielded by the excavation of the Temple of Rameses II. at Luxor. Thirteen colossal granite statues of Rameses have now been discovered, and there must be three more beneath the mosque. Built into a wall, probably of late Roman date, which runs across the floor of this temple, are cartouches of Khunaten and his wife, proving that before the heretic king abandoned Thebes he must have erected a temple, which was destroyed by his successors. Close by, at a level below the floor of the temple, the workmen found, yesterday, an uncompleted granite statue. The greater part is only roughly chiselled out; the nose is finished, but the eyes and mouth have not been commenced, the block of granite having split in two while under the sculptor's hands.

Two days ago a still more important discovery was made. On the western wall there is a picture, about six feet by four, of Rameses II. dedicating his temple to Amun-Ra. In this picture there is a capital representation of the completed temple as seen from outside the western pylons. Both the obelisks are shown, and the four great masts, with their flags displayed. There are now only three colossi outside the pylons; but the picture of the temple shows that there must originally have been six, two seated, and four in a standing position. The portal between the pylons, of which no vestige now remains, is also shown, as well as the entrances to the two staircases which led to the summit of the pylons. With the aid of this representation there will be no difficulty in discovering the staircases themselves, as their position is exactly indicated. The entrance to the southern staircase is, however, now buried under some twenty feet of soil and rubbish, which will have to be removed. When this is done, and access is gained to the roof of the pylons, another attractive feature will be added to Luxor, as the view from the summit will doubtless be superb. I may add that, in the little granite temple, a cartouche of the XIIth Dynasty has been discovered, as well as one of Thothmes III.

ISAAC TAYLOR.

NOTES ON ART AND ARCHAEOLOGY.

THE Council of the Palestine Exploration Fund has received information that the famous Siloam inscription has been cut out of its place in the rock and carried away. It was broken in removal, and the fragments are reported to

have been sold to a Greek in Jerusalem. Fortunately we possess an accurate copy of this inscription, made (we believe) by Mr. Sayce.

At a general Assembly of members of the Royal Academy, held on January 21, Mr. T. Brock and Mr. A. C. Gow were elected Academicians, and Mr. David Murray was elected Associate.

THREE exhibitions will open next week: a collection of water-colour drawings by Mr. G. S. Elgood, entitled "A Summer among the Flowers," at the Fine Art Society's; a series of pictures of North Cambria by Mr. Anderson Hague, and of sketches in Hampshire, Surrey, and Holland by Mr. Claude Hayes, at Messrs. Dowdeswell's, in New Bond-street; and an exhibition of water-colour drawings illustrative of the English school, at Messrs. J. & W. Vekins's, in Great Portland-street.

On Monday next, January 26, Mr. G. Aitchison, professor of architecture in the Royal Academy, will begin a course of six lectures on "Byzantine Architecture."

THE second volume of *Architectural Antiquities* in the "Gentleman's Magazine Library" is nearly ready for publication. It completes the papers contributed by John Carter, and contains also miscellaneous architectural subjects.

A GENERAL meeting of the Society for Preserving Memorials of the Dead will be held on Thursday next, January 29, at 4 p.m., at 17 Oxford-mansions, W.

MANY of our readers will be interested to know that Mr. C. J. Tomkins has just completed a mezzotint engraving of the late Canon Liddon, from the photograph taken some years ago for *Men of Mark*, which was the only portrait of himself that Dr. Liddon ever permitted to be published. As a likeness, it admirably reproduces the charm of his countenance in private life, though not the fire which he displayed in the pulpit. The engraving is published by Messrs. Henry Graves, of Pall Mall, on behalf of Mr. George C. Whitfield, the editor of *Men of Mark*, who owns the copyright.

THE STAGE.

"THE DANCING GIRL."

MR. JONES's new play—brought out at the Haymarket last week, with every air of success—does not, like "The Middleman," deal, even at a distance and, as it were, indirectly, with a social problem, and has not, as its main motive and most obvious source of interest, any such *fin de siècle* sensation as the supposed experiment of Vashti Dethic, whom Miss Olga Brandon impersonated at the Shaftesbury. But "The Dancing Girl" has as one of its interests, and as almost its chief feature, that it deals with a world of sharp contrasts—more or less, indeed, with three phases of life: the world of good society; the world of the *déclassée*; the world of old-fashioned Quakers in an island off the Cornish coast. The Duke of Guisebury is the link between these three worlds. He gives a party, on the Haymarket stage, which is so well managed that it is really very much more like an important social function than the somewhat conventional representation of the same which the theatre usually affords. The Oriental visitor is a very good touch; and with the arrival of the Brislington interest culminates. (Far are we from the days of "Adelphi guests," who came in hired dress-suits and in cotton gloves!) The Duke gets his kinswoman, Lady

* I may say that I always give my workmen the whole intrinsic value of what they find, as the only true way of securing it; so that finding precious metals entails a loss of half the value to me, without any gain.

Bawtry, to bring half of the most desirable people in London to a *fête*, at which a dancer (who happens to be his mistress) is to bewitch the town with measured steps, taken discreetly, in long skirts, and with the ankles' background of accordion pleats. He builds a break-water, down in Cornwall, in order that some members of the Society of Friends, who chance to be his tenants, may carry on their maritime commerce without undue risk of life. A man of wide sympathies, you see—essentially modern. Mr. Jones's sketch of him shows boldness, observation, and good draughtsmanship.

The character of the Dancing Girl herself is the result of as bold a study—though not quite so fresh an one—as is that of the Duke. She is an instance of revolt. The child of a Puritanical world—for it is as such that Mr. Jones conceives Quakerism—the child of a Puritanical world that never understood her, Drusilla Ives, sent away to London from the little provincial port, takes the opportunity of doing violence, by her behaviour, to the whole of her teaching. Puritans don't dance. Drusilla must learn dancing. Puritans discourage public entertainment. Drusilla must entertain not only herself but the world, by her dainty steps and her adroitly-whisked petticoats. Puritans measure the value of affection by its durability. Drusilla could love a perfect man for the whole of a summer day. Puritans hold that absence of chastity is worse than absence of charm, absence of energy, absence of kindness. Chastity is not the particular virtue Drusilla would give the most to save.

These characters, the character of the Duke and the character of the young woman who is cheerfully led astray, Mr. Henry Arthur Jones treats as they could have been treated only by a really dramatic writer—by a writer of flexible mind, who can shift his point of view; who knows that humanity is not made according to one pattern; who observes and chronicles and does not condemn. And several minor characters, particularly those who are in Society, are drawn with as firm a hand: one Reginald Slingsby, for instance, who, if you are one of his chums, is always wishing you to let him know if there is anything he can do for you, and always forgetting—if it is a thing that costs him anything—that you have asked him to do it. And again, another minor character—that of Lady Bawtry, kindly, genial, admirably tolerant. The good young man of the piece—one John Christison—is nobody in particular. He is almost blameless, but does not profoundly touch you. Sybil Crake is a good young woman, with a shattered ankle and plenty of brains. The interest that she takes in the Duke—whom she finally saves—is sincere and romantic; but that part of guardian angel which she plays is perhaps a little conventional. Still, on the whole, all these people are well drawn. And they talk eloquently or wittily as may fairly be expected of them; and they serve their purpose, and go far towards making a very good play. If they do not succeed altogether, and make a good play from end to end, that is because of two weak points, in one of which only have they any concern, and that one—which I men-

tion first—is the conduct of the fourth act.

The piece has practically come to an end when the curtain falls upon the third act. The Duke is saved by Sybil Crake—she has turned aside the poison from his lips, and his gratitude is the result of her success, and we know what will be the result of his gratitude. They have got to come together, these two—not because they would have done so in real life, but because the ordinary playgoer wishes it. As for Drusilla—an analysis of whose character would present, I think, more devil than Quaker—that wilful but agreeable young person has by this time gone hopelessly wrong. The good John Christison may well be believed to have finished attending to the break-water. The colourless Faith Ives may marry almost anybody with reasonable prospect of continued peace. The play is practically finished. Then we are taken down to the Cornish coast again, that we may be the actual witnesses of what, with a spark of imagination, we may have become aware of already—the Duke's repentance, the break-water's completion. An idyllic fourth act, presenting us with little which we did not know before, save the information conveyed by a certain picturesque Sister Beatrice, that Drusilla, after dancing in the States, has died at New Orleans in the odour of sanctity. The young woman was taken ill, and made, not a rapid cure, but a rapid repentance. It is a piece of information I could, for my own part, have dispensed with. But it may have comforted some.

And now for the second weak point. That is the treatment of Quakerism. Mr. Jones's play is strictly contemporary: it deals with people and events that are supposed to be probable in *le jour où nous sommes*. But Mr. Jones's Quakers, of the island of St. Endellion, are in no respect—not even in externals, still less in their ideas—representative of the Quakers of to-day. Their talk is not indeed the talk of the old-fashioned Quakers; but neither is it the talk of the new. I could show this in some detail, if it entertained or edified anybody; but as it is, I will be brief about it. Only at one single moment of the play do I recognise any real reference to the life of the Society of Friends; and that is where Mr. Jones, dealing with the misfortunes which have overtaken the district of which he treats, makes one of his characters inform an outsider that, while the fate of those who were not "Friends" was such or such a one, those of the district who were "Friends" were provided for by the society. That is a little bit of real knowledge of the matter, mentioned quite incidentally, and so in all probability escaping ordinary notice. The poor "Friend" is never, and never has been, permitted to go "upon the parish": he is invariably relieved, and his necessities supplied, out of the funds at the disposal of the particular Meeting to which he belongs. But here the truth ends. At every other point Mr. Jones's Quakers might be the Methodists of two generations since, or of to-day, for all that I know, in the outlying districts; or the Puritans of two hundred years ago. Quakers they are not. Drusilla—the rebellious one—the "dancing girl"—com-

plaining of the utter dullness of the life at St. Endellion, gives, as an instance of it, the Sunday afternoons and the eternal harmonium. That has to do with orthodox Dissent, very likely—it has nothing to do with Quakerism. Quakers are not, and never were, strict Sabbatarians. The very strict observance of a particular day would be reckoned by them one of those formalities to which they have always objected. As for Drusilla's harmonium, the Quaker of the old style would have had none of it. It was music—to be tabooed, therefore, as much as a banjo or a military band. And the Quaker of the new style, who admits music frankly, what has he got to do with the harmonium and with hymn tunes? He is an educated person; his taste in music is not rudimentary. He is as likely as not to have a Steinway piano, and, on Sunday afternoons, to play you the last things of Grieg, or Schumann's "Kriesleriana."

Another point—this time a little detail, purely indicative. Drusilla is represented as having gone to London, with her father's sanction, professedly to a situation, but actually, and of course without his knowledge, to dance for money. She could never have done so. A born Quaker, and one who has not left the Society, she was of necessity, in Cornwall, a member of her "Monthly Meeting." On her proceeding to London, her Monthly Meeting would have forwarded to that London Monthly Meeting "within the compass of which"—as the phrase goes—she was about to sojourn, a certificate, transferring her for the time being; and I believe two "weighty friends" in that London Monthly Meeting would have been appointed as a "committee," to call upon her, and to exercise a watchfulness over the young woman's movements, in her interest. I do not say she could not have gone wrong, but I do say she could not have gone wrong in the way she did without its being thoroughly well known. The Quakers come into the piece so much that these inaccuracies in regard to them affect, not perhaps the piece's present popularity, but its lasting value. An opportunity has been lost to treat, with something different from the common ignorance, the Quaker life and thought. May I refer Mr. Jones, and the more thoughtful of those spectators whom he unwittingly misleads, to the remarkable volume called *Quaker Strongholds*, written—within the last twelve months, I think—by Miss Caroline Stephen, the sister of Mr. Justice Stephen and of Mr. Leslie Stephen?

And now, with a word or two of brief but very cordial praise for the imagination with which Mr. Jones perceives a situation that is really dramatic—the young man's almost frightened, "What art thou?" for instance, when, on coming out of the meeting-house, he finds Drusilla dancing—and for the lusty and charming English in which much of the play is written, and for the original humour which not seldom brightens it. With a word of cordial praise of these things, which in the contemporary stage one has the opportunity to praise so seldom, let us pass on to the acting. This is not a one-part piece. Mr. Tree requires the ability which he in truth possesses—he cannot rely merely, or even mainly, on the opportunities

afforded by the prominence of a character—to bring, as he does bring, into strong relief, the personage of the Duke. The Duke's remorse and his *insouciance*, the Duke's good nature and his fatalism, the Duke's good breeding and his cynical indifference (while prosperity lasts, at least) to a moral ideal—these things Mr. Tree, by look and tone and bearing, brings out with true dramatic intelligence and a most finished skill. In the big part of the Dancing Girl—for whose representative are splendid opportunities—Miss Julia Neilson is handsome and earnest and interesting. But *figurez-vous* Miss Janet Achurch—banished to Australia—*figurez-vous* Miss Janet Achurch in such a part as that. With its wilfulness, its devilry, its subtlety, it might have been made for her. None the less is Miss Neilson acceptable and charming; and satisfactory, even artistically, within the limits her personality imposes. She rises to poetry—or rose to it on the first night—in the *clan* with which she describes herself as “the topmost rose upon the topmost bough.” Mr. Fernandez, as David Ives—Drusilla's Quaker father—is not so good as usual. He has almost nothing of the gait or utterance of the Friend: neither he nor his fellow actors touch in any way or seem to be aware of the restraint and “inwardness” which are “notes” of the Quakers. But when, in the third act, Mr. Fernandez only needs to be dramatic—when he tears from his daughter, on the staircase of Guisebury House, the flowers she was decked in—then indeed he is forcible as usual, and in command of all his means. Mr. Fred Terry is an honest and graceful and sympathetic John Christisson. Mr. Kerr's Reginald Slingsby—an egotist of a companionable kind, and a very good fellow indeed so long as no one makes demands upon him—is a bright and admirable sketch. Miss Norreys plays tastefully enough the part of the humble young woman who is very much “gone on” the Duke, and who—thanks to the Providence of what for a moment is melodrama—is eventually his saviour. Miss Horlock is sincere but tame; Miss Ayrton, as a crazed woman who has lost her beloved, is discreet and capable. And Miss Rose Leclercq, as Lady Bawtry, a genial member of society, is all that a genial member of society ought to be.

The reality of the piece far outweighs its two bad faults, and a long run is in store for it. Save once or twice—when it demands of us a credulity we cannot accord it—the piece is unconventional, really interesting, a stimulant to merriment, and a stimulant to thought.

FREDERICK WEDMORE.

“THE CENCI” IN PARIS.

Paris: Jan. 17, 1891.

THE Théâtre d'Art owes its existence to a group of young literary men, who have hired a theatre in the far-off Montparnasse quarter, with the object of giving a limited number of representations of the works of rising poets who cannot get their productions played elsewhere; it is also their intention to produce, in the course of the season, works of foreign dramatists which “able managers” consider “unplayable.” Several interesting novelties have already been produced—M. Grandmougin's

“Cain”; M. Gayda's “Kallisto”; and, most interesting of all, M. Félix Rabbe's translation of “The Cenci,” which was given with success last night before an audience rather heterogeneous in its composition, but of undeniable artistic culture.

As English Shelleyites know by past experience, “The Cenci” is not a “playable” tragedy—it is not *scénique*; and this for reasons which have been already too ably explained in the ACADEMY to need any further explanatory criticism on my part. M. Rabbe's translation is in prose, and follows the original text line by line; it is in five acts, divided into fifteen tableaux. Last night's performance began at a quarter to nine, and was not over until close on 1 a.m. A long evening, but a highly interesting one. Notwithstanding the continuous horrors of the plot, the repulsiveness of the subject, and certain flaws in the dramatic action, the play was listened to with deep interest. During the fourth act certain passages, badly interpreted by the actors and misunderstood by the audience, gave rise to interruptions and laughter, which, for a time, threatened to bring the dark tragedy to an untimely end; but the storm was soon quelled, and the prison scene made a marked impression on the spectators.

The acting was fairly good, allowance being made for the difficulties the actors experienced in portraying characters and thoughts so different from the personages and ideas of the conventional modern drama. M. Prad, of the Odéon, as Count Cenci, achieved great success in this most difficult and ungrateful part. In speech and bearing he was a faithful personator of the imperious, sensual, and utterly unscrupulous Italian nobleman of the fifteenth century, as portrayed by Shelley in the preface to “The Cenci.” The Beatrice of Mlle. Camée was a very talented and artistic performance, in the third act particularly; while her rendering of the judgment and prison scenes was most pathetic, and she sang with heartrending plaintiveness the song:

“False friend, wilt thou smile or weep
When my life is laid asleep?”

The part of Orsino fell to the lot of M. Fort, the able young manager of the Art Theatre. Of the other parts, we may courteously say that they were acted with the best intentions.

As an artistic venture, the performance of the latest French version* of “The Cenci” reflects the greatest credit on M. Rabbe, on the actors, and the manager. Honour is also due to the five hundred and odd spectators who, for the love of art and literature, came so far on one of the coldest nights we have had this winter to sit through a tragedy which lasted over four hours, the work of a foreigner, so different in style and action from what they consider dramatic perfection. Among the other novelties to be given at the Théâtre d'Art, is Marlowe's “Doctor Faustus,” another literary treat in store for us.

CECIL NICHOLSON.

STAGE NOTES.

THE New Olympic is showing much activity. Mr. Barrett promises us, almost immediately, a performance of “The Stranger.” He is to be the Stranger, and Miss Winifred Emery Mrs. Haller. This will probably be the first time for many years that the play has been done in London. When “The Silver King” is withdrawn at night there is to be a revival of “The Lights o' London,” which is certainly one of the most admirable melodramas produced under Mr. Barrett's management at the Princess's.

* “The Cenci” was also translated by Mme. Doriau some years ago.

So soon as the present performances of “London Assurance” shall have ceased to be attractive at the Criterion, Mr. Wyndham will have a revival of “The School for Scandal.” In this, the most popular of eighteenth-century comedies—which has not yet, to our recollection, been given in the subterranean theatre—Mr. Wyndham will himself appear as Charles Surface, while the part of Lady Teazle will be allotted, it is said, to Mrs. Bernard Beere.

VERA BERINGER took a farewell benefit at Terry's Theatre on Thursday week with every demonstration of appreciation. This clever child—whose art is charming in part because she is so well-bred—now goes into retirement, and pursues her education. It is, of course, quite possible that when she is grown up she will again be seen before the footlights.

We regret to record the death of Mrs. Gaston Murray, who has been described as “a great actress of little parts.” The phrase has much truth in it. Had we a Théâtre Français in England, the excellent artist and charming elderly lady whose loss we lament would unquestionably have belonged to it. She did the very most with small opportunities. She had a rich and well-modulated voice, a mature and most finished method, and a satisfying sense of style. We could have better have afforded to lose many more celebrated people. Firmly established in the second rank, where alone a “first old woman” may hope to be—her charm of manner never absolutely making amends for the superabundance of her years—Mrs. Gaston Murray was a unique artist; a person whom it is impossible to quite replace.

MUSIC.

MUSICAL PUBLICATIONS.

Charles Gounod: His Life and Works. By Marie Anne de Bovet. (Sampson Low.)

THE author, in her preface, remarks: “The present work is neither a biography nor a criticism.” Yet there is something of both in the volume. Gounod has exceeded the number of years allotted to man by the palmist; and it is not likely that he will produce anything to equal, much less surpass, the works by which he has become famous. As his artistic career is practically ended, it can therefore be reviewed. In the introduction the writer distinguishes between “genius” and “talent.” Haydn, Mendelssohn, and Schumann are called “men of talent,” bearing the banner of the ideal after Bach, Beethoven, and Mozart. The classification of names is open to criticism; but surely Haydn, even though he wrote after Mozart's death, should scarcely be spoken of as coming “after” that composer. We have in this volume descriptions of Gounod's early life, of his travels, of his home in Paris, and other personal matters which will be read with interest; but we shall only touch upon a few matters connected with his art work, and the opinions expressed by him with regard to other composers.

Referring to the meeting of Mendelssohn and Gounod at Leipzig in 1842 or 1843, we are told that “Gounod has ever retained an affectionate memory of Mendelssohn, and pays a just tribute of admiration to his genius, but he never was in any way influenced by him.” It may be noted that Mendelssohn, the preface notwithstanding, is here ranked as a genius; and we fancy musicians would agree rather with M. Louis Pagnerre, who, in his *Charles Gounod: sa vie et ses œuvres*, which appeared last year, writes: “Il [Gounod] s'identifia sur bien des points à Mendelssohn qu'il a imité souvent et auquel il a beaucoup emprunté.”

Mme. de Bovet passes in brief review Gounod's operatic career from his *succès d'estime* with

"Sapho" in 1851 to his failure with "Le Tribut de Zamora" in 1881. "Faust," of course, occupies a prominent position. In mentioning previous settings of Goethe's poem, Spohr's opera of "Faust" is given with date 1810 instead of 1818. Of Schumann's and Berlioz's "Faust," we are informed "neither was fitted for the stage." This is true, but neither was intended for the stage. It appears that Rossini and A. Dumas once intended to produce an opera based on Goethe's "Faust," and Mme. de Bovet ventures to say that the non-carrying out of this plan "is not much to be deplored"—a perfectly safe remark. In mentioning the criticisms on "Faust," she quotes extensively from "the very conscientious and detailed report written by this prince of critics," Seudo, for the *Revue des Deux Mondes*, but gives not a word from Berlioz's important article in the *Journal des Débats*. "Faust" is generally considered Gounod's masterpiece, but Mme. de Bovet looks upon "Roméo et Juliette" as the one "which indisputably consecrated his genius and sealed his fame"; and for this opinion she has, she says, the authority of the composer.

A chapter is devoted to Gounod's views on music and musicians. His adoration of Mozart is well known, and his special admiration for "Don Giovanni," which he names "the most brilliant star that has ever shone in the musical firmament." Beethoven's "Pastoral" is "a profession of pantheistic faith," and the "Choral Symphony" a "musical gospel of Socialism." Epigrams of this kind are in accordance with French taste. Meyerbeer is "a master, but not a genius"; Berlioz "an incomplete genius." When conversation turned on the Wagnerian question, "this vexed tropic," as, by slip of pen, it is not inappropriately named, Gounod replied, "I know what I think, but I would rather not say it."

The author's estimate of Gounod, both as artist and man, may possibly be considered too favourable; but books of this kind are only written by enthusiastic persons who ignore, as much as they can, the tares which grow up with the wheat. Mme. de Bovet is an intelligent if not altogether impartial critic. The volume contains a good portrait and some facsimiles.

J. S. SHEDLOCK.

RECENT CONCERTS.

MR. HENSCHEL resumed his orchestral concerts at St. James's Hall last Thursday week. The programme opened with the "Ossian" overture in memory of Niels Gade. This was followed by a "Funeral March" by Mr. E. Germán, played for the first time under the direction of the composer. The work is well written, but lacks contrast—even the Trio is in minor. Mr. Arthur Friedheim gave a correct, though cold, reading of Liszt's E flat Concerto. Mme. Nordica sang the "Greeting to the Hall of Song" from "Tannhäuser" in an impressive manner. The concert closed with Beethoven's C minor Symphony, which was well rendered.

Mlle. Eilona Eibenschütz made her second appearance at the Popular Concerts on Saturday afternoon last, and played Beethoven's Sonata in C minor (Op. 111). The young lady had almost recovered from her nervousness, and her performance showed skill, intelligence, and feeling. She has certainly profited by Mme. Schumann's instruction, and she may, in the future, take high rank as a pianist. But prudence is the better part of valour; and, for the present, she would do well to avoid Beethoven's greatest tone-poem for the piano-forte. It needs age and experience to do it full justice. The slightest flurry takes from the grandeur and passion of the Allegro, and interferes with the nobility of the Adagio and with its ethereal variations. Mlle. Eibenschütz was well received, and, as an encore, played a

Scarlatti piece. The programme included Schubert's great Quintet in C for strings, magnificently interpreted by Mme. Neruda, and Messrs. Ries, Straus, Whitehouse, and Piatti; and also Mendelssohn's pianoforte Trio in C minor. For the first time, we believe, since these concerts were established, there was no vocal music; Mr. Reginald Groome was, at the last moment, unable to appear, and Mr. Chappell could find no one to take his place.

Great enthusiasm prevailed on Monday evening. Mr. Santley, who has been absent from England for nearly two years, made his *réentrée*, and was received with overwhelming applause. The English public never forgets its favourites. Mr. Santley was rather hoarse, but sang with all his old skill and feeling Gounod's "Maid of Athens," and for an encore a setting of Shelley's "Love's Philosophy." His second song was Schubert's "Erl King," followed by Hatton's "To Anthea." The programme included four "Romantic Pieces" for violin with pianoforte accompaniment by Dvorák. They are recent compositions, and are both quaint and expressive. They are all of moderate compass, and in each one mood prevails. The first is an *Allegro moderato* with a soft delicate theme; the second number is bright and bustling; the third has again an expressive melody with an effective accompaniment in triplets; the last, a *Larghetto*, is peculiarly mournful. They were admirably rendered by Mme. and Mlle. Olga Neruda. The second one was repeated by way of encore. Herr Stavenhagen played Beethoven's Sonata in E minor. The first movement was given in a rough, jerky manner; the Allegretto, however, was rendered with taste and charm. The pianist also obtained his encore, and played a small trifle of his own. The number of encores at this concert was somewhat alarming, but it may be regarded as an exceptional evening.

"Israel in Egypt" was given at the Albert Hall on Wednesday evening. The basses and tenors were flat at the beginning of the performance, and "He sent a thick darkness" suffered in consequence. But afterwards the choruses went, as usual, extremely well. Mr. Barnby repeated the "Hailstone" chorus, and yet he firmly resisted the demand for an encore after "The Lord is a man of war." Why so firm in the one case, so weak in the other? We know not, unless it was that he lacked the courage to repeat the sin of giving Handel's duet with "four hundred tenors and basses." By the way, will Handel's trombone parts ever be played? They are not only persistently ignored, but parts for those instruments are put in where the composer did not employ them. Mr. E. Lloyd had an immense success with "The enemy said," but firmly declined the encore. The other vocalists were Miss A. Williams, Mr. K. Finn, and Mme. Sviatlovsky.

SCHOOLS, COLLEGES, &c.

UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE.

ASSISTANT LECTURER IN ENGLISH.

The Council is prepared to receive APPLICATIONS from Candidates for the post of ASSISTANT LECTURER IN ENGLISH. His duties will be to assist the Professor of English, to Lecture on Geography, and to direct tutorially the English work of the Normal Students. The stipend is £120 per annum.

Applications, together with testimonials and references, must be in the hands of the REGISTRAR on or before the 23RD of JANUARY, 1891. Further particulars can be obtained from

Cardiff, Dec. 22nd, 1890.

IVOR JAMES, Registrar.

UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE.

MISTRESS OF METHOD.

The Council as the Local Committee of the Cardiff Day Training College invites APPLICATIONS for the post of MISTRESS OF METHOD. The stipend will not be less than £160 per annum. A statement of duties can be obtained on application to the REGISTRAR.

Applications, with testimonials and references, must be sent in on or before JANUARY 31st, 1891.

Cardiff, December 22nd, 1890.

IVOR JAMES, Registrar.

ELLIOT STOCK'S NEW LIST.

SECOND EDITION, Revised, tastefully printed and bound in cloth, price 3s. 6d.

Poets of the People in Foreign Lands.

By J. W. CROMBIE.

"A genuine and substantial contribution to the *belles-lettres*, it really is calculated to add to the general knowledge and appreciation of literary work. His verse is neat and accurate, his power is flowing and pleasant."—*Globe*.

"A singularly well written and charming little volume... Every line will be found well worth reading."

Literary World.

"A very pleasant little book in which unhackneyed and interesting subjects are discussed by a sound scholar and intelligent critic without a touch of affectation."

Scots Observer.

In handsome 4to, price £2 10s. net.

Vestiges of Old Newcastle and Gateshead.

By the Rev. J. R. BOYLE, F.S.A.,

Editor of "Memoirs of Master John Shawe," and Author of "The Lost Towns of the Humber."

Illustrated by W. H. Knowles, Architect.

"Mr. Boyle has done his work well."—*Saturday Review*.

"The work is full of curious information on the past records of the town, which, while interesting the reader of the present generation, may help to prepare the way for the future more complete history."—*Builder*.

Now ready, demy 8vo, tastefully printed and bound, 11s.

Market Harborough Parish Records.

Edited, with Introduction and Notes, by the Rev. J. E. STOCKS,

Vicar of St. Saviour's, Leicester, formerly (1871-1884)

Vicar of Market Harborough, and another of the Trustees of the Market Harborough Town Estate.

"This volume has more than local interest, and will lead antiquaries to look forward, with some anticipation, for the volume which is to succeed it."—*Saturday Review*.

"All antiquaries and many general readers will be able to form a very fair idea of the course of life in that quiet corner of the world during the Middle Ages.... We trust that we have said enough of this interesting and instructive work to induce many readers to obtain both the pleasure and profit that it can afford them."—*Church Times*.

"There is much in the work which should be of service to those working on the remains of the past, and who are doing something to make the English people understand better the life and manners of their forefathers. To many it will be quite a treasury of reference."—*Public Opinion*.

Now ready, the FIFTH PART, tastefully printed and bound, 9s.

History of the Deanery of Bicester, Oxfordshire.

By J. C. BLOMFIELD, M.A.,

Rector of Launton and Rural Dean.

"The whole work is valuable, not only to those interested in, or especially acquainted with, the particular district of which it treats, as it affords a vivid glimpse of the process by which our English institutions, especially those connected with the Church, grew up into their present shape."—*Guardian*.

"Every page shows the result of labour in the study and in the library, and in reiterated examinations made throughout the Deanery."—*Literary Churchman*.

"If anyone doubts the value and interest of local histories, we would ask them to procure and read the third part of Mr. Blomfield's History of the Deanery of Bicester, which in our opinion is more instructive than any of its predecessors."—*Oxford University Herald*.

"His book is as genuine a piece of topographical history as any of the goodly quartos or folios with which we are acquainted.... Will prove a valuable addition to our topographical and county histories."—*John Bull*.

LITERATURE.

The History of the Reformation in England and on the Continent. By Aubrey Moore. (Kegan Paul & Co.)

MR. MOORE'S volume is made up of lectures, which he delivered at Oxford, as deputy to the regius professor of ecclesiastical history. The lectures are divided into four courses: three of them are about the history of the English Church; the fourth is devoted to the Reformation upon the continent. To these are added some genealogies and tables, as well as a few miscellaneous papers, collected out of the reviews or delivered before particular societies. Mr. Moore's work was never revised for publication by himself: indeed, it is always unfinished, and often imperfect; but the whole has been prepared and edited by Mr. W. A. B. Coolidge, whose qualification is, that he has "often talked with Mr. Moore about Reformation matters," and has himself "paid some attention to the subject." The editor has been obliged to supply omissions and to supplement the meagre headings of Mr. Moore from the note-books of several pupils; and he has taken advantage of the occasion, he tells us, to insert "a *Guardian* article of my own on Cardinal Allen."

Mr. Moore's lectures are intended, in the first place, to give an history of the English Church. In that history, the Reformation of the sixteenth century is, to say the least, a striking and a prominent event: an event, too, which has been most variously explained. Mr. Moore's attention, therefore, is directed continually to the affairs of that period. His attitude is logical and consistent; and he expresses that view which has always been maintained by the most wise and learned of the Anglican divines. Mr. Moore quotes with great approval the Hibbert Lectures of 1883, where it is said that the English Reformation is,

"both in its method and in its result, a thing by itself, taking its place in no historical succession, and altogether refusing to be classified; and that which differentiates the English Reformation is the continuity of the Anglican Church. There is no point at which it can be said, 'Here the old Church ends; here the new begins.' . . . It is an obvious historical fact that Parker was the successor of Augustine, just as clearly as Lanfranc, and Becket. Warham, Cranmer, Pole, Parker; there is no break in the line, though the first and third are claimed as Catholic, the second and fourth as Protestant."

There is no break in the line, it is true; but there is a break in the tradition, and some variety in the doctrines which these prelates represent. It has never been

denied that in a succession of bishops some of them may be orthodox, others unorthodox: a mere succession does not make a true and apostolic church. Mr. Moore's reasoning appears to be weak and inconclusive when he rests it upon this poor foundation; and the argument for the Church of England is given in a finer and a more convincing way in Palmer's *Treatise on the Church of Christ*.

"It is as certain as the truth of Christianity itself," says this grave authority, "that the Churches have always continued as visible societies, in unbroken succession from the very earliest ages of Christianity. They may be called heretical, schismatical, apostate, or anything else; but their perpetuity is a matter of fact so absolutely certain that he who denies it must be prepared to deny all historical truths whatever."

Mr. Moore's arguments all rest upon what he calls "the continuity of the Anglican Church," and on what William Palmer describes in a finer way as "the perpetuity" of the Churches in these islands; and, from this point of view, Mr. Moore's position is impregnable and firm.

"The repudiation of the Pope's power in England," he says, "was a vindication of the historical independence of the English Church." If we leave the English Church for a moment, and turn to the history of the Universal Church, we find that its early constitution shows us a polity of bishops, metropolitans, and patriarchs. The term patriarch was slow to obtain its technical meaning; and Saint Gregory Nazianzen applies it to "venerable" bishops, the fathers of their people. In the process of time, however, four great patriarchates were recognised: Rome, Constantinople, Alexandria, Antioch. It was only in 451 that Jerusalem became a patriarchate; and then it was reckoned the last in order, which serves to show that the patriarchs, like the metropolitans, took their order from the civil importance of their sees. This form of constitution left no room for the modern papacy; yet it prevailed in those ages to which theologians appeal as the ages beyond all others when the Church was pure and undivided. Among these patriarchs, the bishop of Rome had a vague and traditional precedence; but the important figures in early history are the patriarchs of Constantinople and of Alexandria. "Genuine history," says Dr. Döllinger, "has nothing to tell us of the Popes before the age of Constantine;" and the thirty-eighth canon of the Council of Chalcedon, which promoted Constantinople into a patriarchate, says, "the fathers properly gave the primacy to the throne of the elder Rome because that was the imperial city;" and they speak in another place of "the elder royal Rome." To the bishops of the fifth century the history of Rome, and not the history of Saint Peter, gave dignity and precedence to the Roman see. This patriarchal order was the constitution of the Church in the first age of its alliance with the State; and it was to this order that conservative reformers, like Cranmer, wished the Church of England to return.

Through the schism of the Empire, the irruption of the barbarians, and the victories of Islam, this patriarchal confederation was

destroyed. Alexandria and Antioch were lost to Christianity; the Roman world was divided into East and West; the Church was separated into Greeks and Latins. In this new order of things the Roman bishops began to exercise temporal authority; and through causes which were not solely ecclesiastical, the Latin patriarch obtained a growing political influence over the nations of the West. It was the influence which civilisation obtains over barbarians, order over disorder, a mother church over her missionary children. In the centuries when Franks and Germans were being gained to Christianity, the Latin patriarch was laying the foundations of the papacy. This was the age of Saint Gregory the Great; and, certainly, in his time, the Roman pontiff had not claimed the position of universal bishop. But the Roman bishop was the only patriarch known to the western nations; the old constitution of the Church had been forgotten; and it was forgotten, too, that in a healthier and a more vigorous age the Roman patriarch had been only "primus inter pares," that he had had his equals and his peers.

During the seventh and eighth centuries, the Western peoples were preparing to revive the Imperial authority; and in the two centuries which preceded Charlemagne, the papal claims began to assume a vague and shadowy form. The courtesies of this age became the customs of the next; and these, in their turn, grew into absolute rights, through forged but still infallible precedents, when at length the Latin Church had reached its full development. The age of Saint Gregory the Great marks a definite period in the development of the papacy. Those who plead in favour of Rome, as well as those who plead against it, speak of the papacy too commonly as though it were an unchanging institution, homogeneous and primeval; but few assumptions in history are more uncritical, and there is none which has led to more unhistorical conclusions. When the empire was re-founded, the Popes were not the masters, they were hardly the equals, of Charlemagne, of Otho the Great, or of Henry III. Jurisdiction, supremacy, and the priestly functions, had not then been confused. If the Pope were Vicar of Christ in spiritual things, the Emperor was none the less his Vicar in things temporal, and in the civil order. This position, again, may be justified by the practice of the older constitution. If the Church history of the period of the first four Councils be studied impartially, and without reading into it the practice and the theories of a later time, it will be found that the spiritual jurisdiction of metropolitans and patriarchs depended upon the imperial supremacy. It requires a good deal of ingenuity to prove that the patriarch of "Old Rome" presided at, or summoned, the Councils of Nicaea, of Constantinople, of Ephesus; but it is a simple matter to determine the share of the emperors in convoking them, and in promulgating their decrees.

It was when these relations between Church and State were still held to be orthodox and catholic, that Christianity was re-established within the English kingdoms, and it was upon these terms that the Church

of England was founded and maintained. The sovereign is constantly described as "Christi Vicarius." His supremacy was acknowledged in theory and in practice: he held within his realms the place of Caesar, and owned no foreign lord; and even as late as the age of Anselm, the archbishop is described as "*Papa alterius orbis*." In saying this, the Pope of Saint Anselm's day was but repeating the words of Saint Gregory the Great. Through the policy of Gregory VII., of Innocent III., and of Boniface VIII., the Roman Church "developed" fast and furiously from the ancient standard. It has been the design of Mr. Moore to prove that the English Church was conservative; that it maintained its old position; and that its present liberties are not an innovation, but are a lawful continuity of the ancient practice. The attitude of William I., the laws of Henry II., show the conservative spirit of the English government, and the continual resistance of English churchmen to foreign innovations. Mr. Moore makes an ingenious and, I believe, an original criticism when he says that the first clause of the Magna Charta was a protest, not only against the King, but against papal novelties and encroachments. He is upon surer ground when he argues from the anti-papal statutes of the fourteenth and fifteenth centuries; and he proves his case when he asserts that Henry VIII. obtained nothing more than had been held by his predecessors before the Norman Conquest, and claimed by the sovereigns between the Conquest and the Reformation.

As far as the outward polity of the Church is treated, Mr. Moore vindicates his position. Whether he apologises for its doctrines with equal success is a more dubious question; but he argues with perfect truth, that Henry VIII. had no intention to deviate from Catholic orthodoxy; that Protestantism was not popular in England; and that it has never been officially accepted by the free consent of the Church herself. It is, surely, a strong argument that the Blessed Sir Thomas Moore should require some years of study to decide whether the papal authority were of divine institution, or only a matter of human custom and expediency. The Province of York did not hesitate to answer the question in an anti-papal sense; and both the Universities agreed with the Northern Convocation. The Blessed John of Rochester, as Cardinal Fisher is now to be described, signed a declaration that Councils were superior to Popes. These great personages undoubtedly recorded the old opinions of the English Church. It is possible that some anxious modern Anglican might approach the question of the Pope's authority in the dubious manner of Sir Thomas Moore; it is inconceivable that any modern Romanist should thus approach it. The attitude no less than the proceeding of Sir Thomas Moore serves to bring out the infinite difference between a mediæval English churchman and a modern English papist. Moore, it should be remembered, suffered at last, not for denying the royal supremacy, not for disputing Elizabeth's succession, but for doubting whether Henry's divorce were legal. That is to say, he differed from the

Elizabethan Romanists about the deposing power, just as he differed from the modern Romanists about the limits of the papal authority itself, or as Fisher differed from them about the relative position of Popes and Councils. It is when general beliefs can be challenged and tested in individuals that the full meaning of the theory of "development" stands revealed. Moore and Fisher have been chosen to represent the doctrines of the modern papacy: in genuine history they represent, rather, the very different attitude of mediæval catholicism, and they serve admirably to mark the difference between that and the "developments" of Trent and of the Vatican. The great poem of catholicism is called "*The Divine Comedy*"; to an historian, the great drama of Roman Catholicism, and the part assigned to those who play it, is often a comedy, too; but more comic than divine. The Church used to be described as the body of Christ, and the comparison was beautiful and true; but if the "*Praise of Folly*" were to be written now, Erasmus would surely describe the Roman Church as a body with nothing but a head. To its inflated visage, to its insatiable and unwholesome appetite, he would apply the words of Horace:

"*Creseit indulgens sibi dirus hydrops;
Nec sitim pellit, nisi causa morbi
Fugerit venis.*"

Mr. Moore's book is full of interesting information: too full to be treated justly in a small review; and I have been obliged to content myself with indicating broadly his argument for the Anglican position; and with strengthening his argument, as I hope, by showing that the Anglican position was primitive, was historical, and in the best ages was universal. Strong as it may have been when the Archbishop was "pope of this other world" of the British islands, it is stronger now, when the throne of Canterbury is in some sense a patriarchal power in the universal confederation of the English race.

Mr. Moore, I am glad to notice, pays a just tribute to the greatness of Cardinal Wolsey as ecclesiastic and statesman. Not the least interesting part of his book is where he shows that by the fourteenth century almshouses, hospitals, and schools were being founded in the place of monasteries. Under William I. 45 monasteries were founded; under Henry I., 150; under Henry III., 74 monasteries and 83 friaries; under Richard II., only four of each; and in the whole fifteenth century there were established eight religious houses, but 60 foundations for charity and education. It is important to remember that Wykeham, Waynesflete, and Chichele all preceded Wolsey in dissolving monasteries, and in devoting their revenues to education. It is a pity that Father Gasquet has eluded this instructive side of the monastic history.

The conditions under which Mr. Moore's book was produced render it, naturally, exposed to many faults; but with all its faults it is most valuable. Though some of them are due to the author, others must be imputed to the editor. Upon him lies the responsibility of grammar, of punctuation, and of some unhappy phrases. The good

style of the old divines is famous: in their volumes are some of the best and soundest examples of English prose. They would never talk of being "*out of rapport*" with anything. Mr. Moore's view of art and literature are often less good than his theology: though he has read Mr. Symonds, he confuses many ages together as "*the Renaissance*," without discriminating between their subtle shades of difference. It is hardly true to describe Raphael as "*a Roman*"; it is provincial to talk about "*William Shakspeare*"; and "*Philip le bel*" should be given all in English or all in French. To those who write about Cardinal Allen and his times, Mr. Law's book on *The Jesuits and Seculars* is indispensable; and it is a shame that Mr. Coolidge ventured to insert the "*Guardian* article of my own" without reading or without mentioning Mr. Law's invaluable contribution.

"If I were asked," let me make Mr. Moore say in conclusion, "what was the main cause of unbelief in the present day, I should say, not new truths in history and criticism, but a higher tone of morality, acting upon an immoral travesty of the Gospel of Christ."

ARTHUR GALTON.

Dreams. By Olive Schreiner. (Fisher Unwin.)

THESE Dreams are eleven in all. They are printed, we are told, in the order in which they were written. That is odd; for while perhaps the first Dream is the most matured in style, the last is in style and thought the crudest. They appear to have been written in many different places—in South Africa, in London, in Paris, in Italy; and they have strong local colouring. The dreamer dedicates her work to "a small girl-child, who may live to grasp somewhat of that which for us is yet sight, not touch." It is doubtful, alas! whether aught that is contained within the covers of Miss Schreiner's book will be "sight" even for the small girl-children who are growing up among us. Let her say what she knows of reflection: it is that here we have "a strange old woman who has always one elbow on her knee, and her chin in her hand, and who steals light out of the past to shed it on the future." Pretty; but the stealers of light—from Prometheus, who stole it from the sun itself, to Miss Schreiner's old woman, who steals it from behind her back—have done away with but little of our darkness. The small girl-children must be content to grow into old women asking not to "touch." For them the Evangelist wrote the story of Thomas.

The first of Miss Schreiner's Dreams, "*The Lost Joy*," would be perfect were it not, short as it is, too long. The last sentence was, I think, not needed. Few will want to be told the name of that which has taken the place of "*first-joy*," of which thing rare and beautiful we hear:

"The sunlight when it shines upon the merry water is not so glad; the rosebuds, when they turn back their lips for the sun's first kiss, are not so ruddy."

This is not ordinary prose, and is not ordinary poetry. Some will think that the Dream in which it is but a passage chosen

at random is the most beautiful in the book.

"The Hunter," which appeared first in *The Story of an African Farm*, is too much of a thing that is not good. With few of the writer's merits, it has most of her faults—the trick of iteration, of inversion; the cold Romance word, where a warm Teutonic word was wanted; the terrible nomenclature: now we have a country called "The Land of Absolute Negation and Denial" (the reduplication is specially weak); now a person called "The-Accumulated-Knowledge-of-Ages."

In "The Gardens of Pleasure," the heroine of which, one notices with relief, has no name, we have a drop in style such as occurs but seldom in Miss Schreiner's writings. We are told of "the flowers she had loved so." "So" is a terrible little word, and, when used enclitically, as here, especially—so.

Quite a new tone marks the opening of "In a Far-Off World," the end of which is very noble and strong. A subject glimpsed at more than once (and more than twice) in the course of this book—to wit, woman's rights—meets with novel and able treatment in "Three Dreams in a Desert," marred, it may be admitted, by over mickle "she said," "he said." Baby Passion, who appears in one of these "Three Dreams," is a false conception, but the gold-haired thing is charmingly described.

Next comes "A Dream of Wild Bees." Bad Mother! exclaims the reader, but, happily, the Mother is not to be blamed. It is a case of misrepresentation (unintentional, let us hope) on the part of Miss Schreiner; for women who darn their children's stockings have surely healthier minds than she accredits her mother of nine children with having. Are the words on "talent" which occur in this "Dream," quite new, quite true?

"I am Talent. I can do all things—that have been done before."

With "In a Ruined Chapel" begins the jarring "God said," which henceforth takes the place of "she said," "he said," and the style positively grimaces in "the Bless'd rubbed-out Bambino." This dream in a ruined chapel is perhaps the least satisfactory of those recorded, and is full of marks of haste, the writer even sinning in the conjugation of the verb "to lay," as Byron sinned in the conjugation of the verb "to lie." The closing paragraph has the strong personal note of Walt Whitman, who might have written much that is in this book, and who must have indirectly helped Miss Schreiner to pile up the wonderful sentences in which she describes her awakening from the nightmare called "The Sunlight Lay Across My Bed":

"In the streets below, men and women streamed past by hundreds; I heard the beat of their feet on the pavement. Men on their way to business; servants on errands; boys hurrying to school; weary professors pacing slowly the old street; prostitutes, men and women, dragging their feet wearily after last night's debauch; artists with quick, impatient footsteps; tradesmen for orders; children to seek for bread."

This is Walt Whitman, even to the faulty syntax.

In "Life's Gifts" we have more of Walt Whitman, but in "The Artist's Secret" Miss Schreiner is herself again. In the opening paragraph of this Dream she seems to describe her own process in art, for she too is an artist who paints with one colour, and there is a wonderful red glow in her pictures. It is hot and pure, even as the glow of fire.

"I Thought I Stood" is a dream which must have been named by "the good grey poet," and which might have had for its motto the Psalmist's words: "I have roared for the very disquietness of my heart."

Last in the book is placed the well-known rhapsody, "The Sunlight Lay Across My Bed." All that is here recorded as seen was recorded as seen more than five hundred years ago. Dante sang of the horror of it, without that blasphemy, "God lay in the sunshine watching," and sang of the joy of it, without that bathos, "we shine here every day; see, the ground has cracked with our shining." A sense of reverence, a sense of humour (I sometimes think that these two senses are very near akin) might have saved the writer from making such fatal slips as those, and such fatal slips as these—the speaking of a woman's "front knees," of "The-Age-Of-Dominion-Of-Muscular-Force," of "stumps" in heaven. One does not like to think even of dear old Witherington in glory with his stumps only polished up, and passed on from hand to hand through Miss Schreiner's heaven, "that he may shine on things that need much heat." That is weak; and what is to be said of the banality (prefaced "God said")—"Once in heaven always in heaven,"—and of the egregiously bad geometry in the passage (it, too, prefaced, "God said") in which is contained the answer to the question: "Which is the larger, heaven or hell?"

Flaws these—and lamentable flaws—in an exquisite piece of work, for the Dreams as a whole are of rare power and beauty. Here and there both style and thought are touchingly simple, as when, in "The Sunlight Lay Across My Bed," the dreamer describes how she began to take off her garments in heaven, and how she determined to tell God of the way in which they had misunderstood her on earth. Quite perfect, too, is her description of the longing which seized her in heaven. Here it is:

"Like the passion of a mother for the child whom death has taken; like the yearning of a friend for the friend whom life has buried; like the hunger of dying eyes for a life that is slipping; like the thirst of a soul for love at its first spring waking—so, but fiercer, was the longing in me."

That is but one of many sentences with the fine sweep which is the poet's at his best. If there were but now and again a frank laugh in the book, or even a frank smile (people both laugh and smile in dreams), it would be immeasurably more beautiful. As it is, to come across the mere word "merry," which the writer uses charmingly, to come across the phrase "great laughter," is refreshing.

Is the book well named *Dreams*? I think not, unless indeed that Celt was right who once explained to some Englishmen, there-

by causing them to laugh loudly, that *to dream* was—to go on waking in one's sleep. It is most certain that the dreamer of the Dreams here under consideration goes on waking in her sleep. At times it is not to be believed that she sleeps even with one eye. She rather seems to watch through a night which is to her moonless and starless. She is filled with fear and horror, and is filled with sympathy. One feels that she would be ready to help with head and heart, the hot that is hot within her, in the great work of help that is going on—can it be unnoticed by her? The "Wine-Press" which she places in the midst of our fair earth is not there to-day, or, as she would have us say, to-night. She wrongs—this is her crime or blindness—the kindest age that has been since two left Eden.

ELSA D'ESTERRE KEELING.

Seven Essays on Christian Greece. By Demetrios Bikelas. Translated by the Marquess of Bute. (Alexander Gardner.)

THE essays contained in this volume were originally either delivered as lectures in France, or contributed as papers to various French periodicals. Subsequently they have been translated by the Marquess of Bute, and published from time to time in the *Scottish Review*, from the pages of which magazine they are now reprinted in a collected form. Altogether, they may be regarded as a sort of Apologia for mediæval and modern Greece, and as an exposition of the difficulties with which the Greeks have had to contend since the establishment of the kingdom, and of their aspirations at the present time. Of the translation we need say no more than that, as we read it, we forget altogether that it is a translation.

The first three of these essays treat of the character of the Byzantine empire, and of its influence on the history of the world; of the share in this influence which is to be assigned to Greek and Roman traditions respectively; and of the condition of the inhabitants of that empire as regards cultivation and prosperity, when compared with those of contemporary states. These papers were composed more than sixteen years ago; and as we read them now, we feel that they are in some sense landmarks by which to test a change which within our own time has been passing over European opinion. The idea that the Byzantine empire was weak, effeminate, corrupt, and immoral, is one of long standing, and has taken form in the name of *bas Empire*, which is applied to that state by French writers; but M. Bikelas is, no doubt, right in attributing its general acceptance to the influence of two conspicuous authors—Montesquieu and Gibbon. It seems strange that writers of such penetration should not have perceived that a state such as they believed the Eastern empire to be could not have been what in fact it was, the bulwark of Europe during the whole of the Middle Ages against the powerful nations which were prepared to overrun that continent from the side of Asia; but M. Bikelas assigns reasons for this perversion of judgment, arising from the point of view from which

they wrote. Finlay was the first to point out in his *Greece under the Romans* and *History of the Byzantine Empire*, nearly fifty years ago, the erroneousness of this view. And though at the time his books were read, and his judgment approved, only by the few, the seed which he sowed has since borne fruit. The same conclusion has been drawn, and the grounds on which it was made have been further strengthened, by writers of note, such as Hopf and Hertzberg in Germany, Rambaud in France, Sathas and Paparrhegopoulos among the Greeks, and Mr. Freeman and Mr. Bury among ourselves. We can now rest assured that it has been accepted by all serious students of history. But, notwithstanding this, there is no reason to regret the republication of M. Bikelas's essays, not only because they deal skilfully with the points in question, but because general readers still require that the correct judgment should be impressed upon them. In combating inveterate error the true principle to be observed is that enunciated by President Lincoln on a very different subject—"keep on pegging away."

The remaining four essays have been written during the last seven years, and deal with modern events. They deserve to be studied by those who wish to understand the present position of Greece, and the steps by which she has reached it. They will be found instructive, but few persons will feel them to be agreeable. There are two points of view from which the history of the Greeks in recent times may be regarded, according as we consider, on the one hand, the undaunted national aspirations of the people, their maintenance of the struggle for liberty against overwhelming odds, and the sympathy evoked by their cause in Western Europe; or, on the other, the chicanery of European diplomacy, by which their development has been checked and hampered. The poetical cast of M. Bikelas's mind would naturally lead him, we should think, to give the preference to the former of these; as it is, what he has here written treats almost exclusively of the latter subject, and those who read it must be prepared for an unwelcome story. The fourth essay, on "Greece before 1821," describes the condition of the Greeks under Turkish sway, from the evidence of travellers; and the sufferings of the people have seldom been more forcibly portrayed. The writer also points out the elements which held the Greeks together under this grinding despotism—their strong feeling of nationality, the influence of the clergy, and the communal system, which was allowed by the Ottomans to continue after their conquest; and he dwells on the influence exercised, first by the revival of commerce among the Greeks, and afterwards by the spread of education, which was one of its results, in promoting the regeneration of Greece. The three remaining essays, on "The Formation of the Modern Greek State," "The Territory of the Greek Kingdom," and "The Greek Question," are a long indictment against the European Governments, for their unwillingness to recognise the claims of Greece at the time of the War of Independence, on the ground that it was an

insurrectionary movement against constituted authority, and for their subsequent discouragement of attempts on the part of the Greeks at further development, arising partly from the desire of conciliating Turkey, and partly from their jealousy of one another. This opposition is described as culminating in the shameful violation of the arrangements of the Berlin Treaty as regards Greece, when, after it had been solemnly agreed that Epirus as far north as the Kalamas should be ceded to that kingdom, Turkey flatly refused to give it up, and after a delay of three years Greece found herself obliged to consent to this violation of her rights. M. Bikelas' accusation is not brought, at least directly, against the nations of Europe themselves—indeed, their sympathy for the Greeks during the War of Independence is recognised as a factor which the governments after a time had to take into account—but a survey of the course of events during this period is sufficient to explain the acrimonious feelings with which Greeks are apt to regard this portion of their history.

We observe that M. Bikelas, like many other Greek writers of the present time, speaks in favourable, almost laudatory, terms of the former King of Greece, the Bavarian Otho. Such a feeling is creditable to the hearts of those who entertain it; but it is irreconcilable with the view that was formed of him by his subjects at the time, and we hardly think this estimate will be endorsed by posterity. King Otho was a man of respectable life, of some culture, and, on the whole, of good intentions; and his youthfulness at the time of his accession, and the difficulty of his position, ought fairly to be taken as an excuse for errors of policy. But the injury which he did to Greece at a most critical period of her history by his endeavours to concentrate the government in his own hands, and to maintain his position by means of intrigue and court influence, appears to us to have been almost irreparable.

The following extract, with which we will conclude this notice, may serve to show that the political aspirations of the Greeks at the present time, as understood by M. Bikelas—and he is an excellent judge of the matter—are neither visionary nor exorbitant:

"It is not the object of the Greek people to set up a Greek empire at Constantinople. What we are struggling and longing to do is this. We hope to have a Greek state with a northern frontier starting eastwards from the Adriatic at some point north of Corfu, and reaching the Aegean at some point east of the Chalcidic peninsula, including such part of Macedonia as is Greek. The island of Crete would be our farthest limit southward. We would fain see Montenegro aggrandised; and, between such a Montenegro and ourselves, an emancipated Albania, either autonomous or attached to ourselves by a brotherly tie. We would that our northern frontier should meet those of a fully expanded Serbia, and of an enlarged and united Bulgaria, embracing not only the actual Bulgaria and Eastern Roumelia, but also all territory which is really inhabited by a majority of Bulgars."

H. F. TOZER.

Ballads. By Robert Louis Stevenson. (Chatto & Windus.)

ONE is tempted to believe that Mr. Stevenson was not quite in earnest, if in earnest at all, when he wrote and published the first two of these remarkable ballads. It is not because the versification is so very indifferent, for, despite the delightful sparrow-flights in *The Children's Garden*, and many noble verses in *Underwoods*, it was always evident that his mastery of metre was imperfect and not unlikely to break down on a longer and more exacting exercise. But in these ballads there are infelicities of expression and defects of style which it is hard to believe that the author of *Kidnapped* could have allowed to remain in any work of his, whether in prose or verse, except by way of a joke. It is not, in a word, the technical imperfections nor even the defective music that is most astonishing in these ballads, but the fact that one of the finest literary instincts in the world should fail its possessor so often and in passages of so great importance.

For instance, Rahëro, the hero of the first ballad, wakes to the fact that his treacherous enemies have set fire to the banqueting house in which they are sleeping off the effects of a debauch, and that he is the only one of his tribe who is not stupefied by drink and smoke. He immediately tries to find and wake his family, and Mr. Stevenson can find no fitter phrases than these to describe the way he did it:—

"Rahëro stooped and groped. He handled his womankind;
But the fumes of the fire and the kava had quenched the life of their mind."

Scarcely more elegant is the description of one of the sacred spots in the island:

"And now was he come to a place Taiárapu,
honoured the most,
Where a silent valley of woods debouched on
the noisy coast
Spewing a level river. There was a haunt of
Pai."

Nor less surprising in the work of such an author is the number of involved and "squinting" constructions, such as

"Strong in the wind in his manhood;"

or

"To bind what gods unkindly have sundered into one;"

or

"The holiday village careened to the wind and was gone from view
Swift as a passing bird; and ever as onward it bore,
Like the cry of the passing bird, bequeathed its song to the shore."

But of all the errors of literary judgment which Mr. Stevenson commits in these unfortunate poems none is more frequent and marked than the introduction of fine words in the midst of the otherwise homely texture of his verse. This is sometimes unhappy enough in narrative passages, as when he writes of the "emulous crowd" and the "sedulous fisher," or tells us that "copious smoke was conceived;" but it becomes absolutely ludicrous when it occurs in the passionate exclamations of savages. Hiopa has a vision in which the roof-tree of his enemies "decays and falls on the empty lodge, and the winds subvert deserted walls,"

and the Mother of Tāmátéa, in the exultation of her revenge, apostrophises the fire as the "debited vengeance of God," bids her enemies "hark, in your dying ears, the song of the conflagration"; and tells them that "the smoke of your dissolution darkens the stars of night."

But "Rahéro" is a finer poem than the "Feast of Famine" which follows, and it has no little interest as a contribution to folklore. Rahéro, savage though he be, is of the stuff of which legendary heroes are made. A man who, escaping from a conflagration in which every man, woman, and child of his tribe except himself have been burnt alive, can instantly plan how to begin it all over again, is no common person. To kill a fisherman on the shore and make off with his boat and his wife is, so to speak, the work of a moment for such a man as Rahéro. This is really the core of the legend, and is the only part of it in which Mr. Stevenson's imagination has been seriously interested. The verse in which this last adventure is described is certainly not free from flaw, but it is full of life and strength, and does much to redeem the rest of the ballad. As he gets into the boat the fisherman's wife mistakes him for her murdered husband and speaks to him, but

"Never a word Rahéro replied, he urged the canoe. And a chill fell on the woman.—'Atta! speak! is it you?
Speak! Why are you silent? Why do you bend aside?
Wherefore steer to the seaward?' thus she panted and cried.
Never a word from the oarsman, toiling there in the dark;
But right for the gate of the reef he silently headed the bark,
And wielding the single paddle with passionate sweep on sweep,
Drove her, the little fitted, forth on the open deep.
And fear, there where she sat, froze the woman to stone;
Not fear of the crazy boat and the weltering deep alone;
But a keener fear of the night, the dark and the ghostly hour,
And the thing that drove the canoe with more than a mortal's power
And more than a mortal's boldness. For much she knew of the dead
That haunt and fish upon reefs, toiling, like men, for bread,
And traffic with human fishers, or slay them and take their ware,
Till the hour when the star of the dead goes down, and the morning air
Blows, and the cocks are singing on shore. And surely she knew
The speechless thing at her side belonged to the grave.

It blew
All night from the south; all night Rahéro contended and kept
The prow to the cresting sea; and, silent as though she slept,
The woman huddled and quaked. And now was the peep of day—
High and long on their left the mountainous island lay;
And over the peaks of Tairapu arrows of sunlight struck.
On shore the birds were beginning to sing: the ghostly ruck
Of the buried had long ago returned to the covered grave;
And here on the sea the woman, waxing suddenly brave,
Turned her swiftly about and looked in the face of the man.
And sure he was none that she knew, none of her country or clan;

A stranger, mother-naked, and marred with the marks of fire,
But comely and great of stature, a man to obey and admire—"

Here, at least, the scene is fully felt and the verse is sustained by the force of uninterrupted passion. Faults the passage has; but, if all the rest were equal to it, there would not have been so much reason to regret the valuable time which has been wasted on the composition of this ballad. But in any case there would have been sad waste, for Mr. Stevenson should have a higher ambition than to be the Walter Scott of Tahiti or even the Homer of the Cannibal Islands. Besides these tales of the South Sea, the volume contains Mr. Stevenson's spirited ballad of Ticonderoga, reprinted from *Scribner's*, and two short poems, one of which, "Christmas at Sea," is in Mr. Stevenson's best manner, and altogether delightful.

COSMO MONKHOUSE.

Lectures on the Growth of Criminal Law in Ancient Communities. By Richard R. Cherry. (Macmillan.)

It was not the least of the services rendered by Sir Henry Maine that he succeeded in awaking attention to the great wealth of material for the study of comparative law and history which is to be found in the ancient laws of Ireland. These laws, as he said, had been developed in a way highly favourable to the preservation of archaic peculiarities, inasmuch as the two causes which have obscured the beginnings of other European systems and institutions affected them in a comparatively small degree—the formation of strong centralised governments, and the influence of the Roman Empire. The Hindu custom of "sitting dharna" appears in the provision of the Senuhus Mer that fasting precedes distress in the case of persons of distinction; in the Irish tribe we find the Hindoo joint family in another stage of development; while the large place occupied by the law of distress marks an important stage in the slow passage from individual redress to independent judicial decision. Since Sir Henry Maine wrote his *Early History of Institutions*, the Brehon laws have attracted fewer students than they deserved. The mine is not nearly worked out; and it is to Irish scholars that one naturally looks to continue the work. But "Irishmen," says Prof. Cherry, "almost alone of all nations of the earth, consider their national history unworthy of study." This is said somewhat sweepingly and impatiently. We should be loth to believe that Irishmen will not be found to follow in the footsteps of O'Donovan and O'Curry, of Sullivan and Richey. In the volume before us, Prof. Cherry shows that he has both the capacity and the knowledge necessary for doing excellent work in the early history of law; and he would do a good deal to wipe away his own reproach if he devoted himself to an elaboration of his lectures on the beginnings and growth of criminal law in Ireland.

In his present volume his aim has been by means of a sketch of legal systems, as far apart from and as much independent of each

other as possible (Irish, Hebrew, Moham-medan, Roman, and English), to show "the close similarity between the early institutions of very distant races as regards penal law." We now regard crime as a wrong done to the community and punishable by the community; but everywhere it has its beginning in customary regulations of self-redress, it can still be observed in that stage among the less civilised peoples of to-day, and traces of its early features remain even in the most highly-developed systems of law. It was only in the last year of George III.'s reign, for example, that in England the right of trial by battle was taken away. Prof. Cherry's lectures (especially that on Roman law) are rather of the nature of notes than systematic studies; but they are full of suggestion, and have the great merit of inviting the student to search further into the matter for himself, and of opening out to him the value and interest of the historical investigation of law. One cannot help noticing, however, that in urging the importance of the historical method the lecturer is curiously unfortunate in the typical illustration which he takes from English law—the history of the principle of a master's liability for the wrongful acts of his servant. After showing very truly that the master's negligence in employing an unskilful servant cannot be accepted as the ground of liability, he goes on to say: "The liability of the master is in reality a survival of the principle of the liability of an owner for the act of his slave, and is based on the same principle as his liability for injuries committed by animals in his possession."

This has often been said; but is it not mere guess-work? If Prof. Cherry will once more follow the principle of the master's liability back through the English cases, he will convince himself, by finding no evidence of it, that the continuity which he presumes had probably no existence. The illustration, indeed, was peculiarly suitable for an entirely different purpose from that for which he has used it—namely, to warn the historical student against the danger of plausible explanations. That warning the student needs perhaps more than any other.

G. P. MACDONELL.

Work While Ye Have the Light. By Count Tolstoi. Translated by Dr. E. J. Dillon. (Heinemann.)

EVEN the *Kreutzer Sonata* cannot destroy the sensation of eager anticipation aroused by an announcement of a new work by Count Tolstoi. If the great Russian writer had, with full intent, set himself to alienate every reader whom he had won by his earlier romances, he could scarce have devised any more satisfactory plan than to write a book which should have all the drawbacks of the fictitious method for the treatment of serious subjects, and yet neither in plan nor in manner have anything of a philosophical, a scientific setting forth—which should be a narrative, and yet not be a story; which should broach and even obtrude the most complex and urgent problems of the day, and yet should, in the most haphazard fashion, evade all their

really difficult intricacies, and leave them, so far as logical conclusion is concerned, in a greater rather than in a less confusion. To make the fate of such a work certain, it was further necessary to relieve the treatment by no grace or charm of style—in a word, to make the book as dull in manner as inconclusive in matter. Even such a book was produced by Count Tolstoi in the *Kreutzer Sonata*. It was, therefore, not unnatural that many people believed the end had come; that the once brilliant, but of late low-linging, fires of genius had burned down. Yet those who formed the resolution to read nothing more from the pen of Count Tolstoi made rash vows. In the first place, there are welcome signs that the author whom Tourguénieff hailed as the foremost Russian writer, and to whom he sent his loyal and now famous death-bed message, is about to take up the pen again as a literary artist, and not merely as the pamphleteer of an outworn fanaticism. There are exciting rumours of more than one great romance in the old manner—in particular, of one, long since laid aside, though yet unfinished, which will dispute supremacy with *Anna Karenina* and *War and Peace*.

Meanwhile, we have a welcome interlude in *Work While Ye Have the Light*. It is not a particularly inspiring, and is certainly neither a cheerful nor a cheering narrative; and Lyof Tolstoi, the Slav preacher of an effete, or rather of an impossible unprogressive communism, is more in evidence than Lyof Tolstoi, the greatest of contemporary Russian novelists. Yet it is as far above *The Kreutzer Sonata*, as a work of art, as the latter is, in earnestness of conviction, above the flood of shallow ethics with which we are deluged from innumerable minor intellectual conduits. The prologue apart, it gives, as a whole, a distinct and vivid impression. From the first words to the last, with their vague but haunting charm, every line is written not merely by an artist, but by an artist consciously controlling his fugitive thoughts and perilously ductile material to the accomplishment of a foreseen and carefully calculated end. It is this that gives a real value to *Work While Ye Have the Light*. It is, in short, a work of art. We may not like its substance or appreciate its style, but that, of course, is beside the mark. It is from no liking or disliking, no approval or disapproval of the views set forth in the *Kreutzer Sonata*, that the present writer, for one, looks upon that work as a deplorable episode in the literary career of its author; but simply because in it Count Tolstoi seems palpably to have failed in producing the effect intended, or even in producing any definite artistic impression at all, and because the book contains almost no signs of that creative shaping towards symmetry which is art. As for the opinions or convictions set forth in *Work While Ye Have the Light*, perhaps all that is necessary to be said about them on the part of a literary critic is that as opinions of a man like Count Tolstoi they are interesting, and that as convictions they are profoundly suggestive. Here fittingly it may be added that Dr.

Dillon's translation has all the merits of an original work, while, presumably, it is as literal as is practicable. Mr. Gosse also deserves a word of thanks for his pleasant and interesting introductory sketch.

The prologue, with its guest-table and shadowy modern personages, is, on the whole, unnecessary, though no doubt it does serve the useful, if obvious, purpose of giving the keynote of what is to follow. The guests are not individual personages, but conventional modern types. Apart from the main text, this prologue is interesting as an admirable example of Tolstoi's almost unique faculty for condensation—a faculty genuinely natural to him, though it may seem to some strange to affirm this of the author of the most diffuse works of fiction of our time. With a few keen rapid touches he sways the reader's mind this way and that, till he suddenly brings it up short, as a bewildered person traversing the dark after a swift guide abruptly comes upon a dead wall, with these concluding words:—"It appears, therefore, that no one should lead a good, upright, spiritual life; the utmost people may do is to discourse about it." Then, without further preamble, the story opens, one hundred years after the birth of Christ, in the reign of the Emperor Trajan, and at the house of one Juvenal, a wealthy merchant of Tarsus in the province of Cilicia. This Juvenal has a son Julius, who is the chief personage in the story. He and his friend, Pamphilus, respectively represent Worldly Wisdom and Christianity à la Lyof Tolstoi, and the whole narrative turns upon the intellectual ebb and flow set in motion by the mental and other differences of the two friends. The old physician, who plays so important a part in restraining Julius from accepting Christianity, is clearly meant to typify the scientific mind.

No one can deny the singular fairness and frankness of Count Tolstoi in this remarkable book. So frank, so fair is he, indeed, that again and again he, as Pamphilus, distinctly emerges the worse from the intellectual encounter. A Christian of his own sect might read *Work While Ye Have the Light*, and despairingly exclaim, "Almost thou persuadest me to be a Pagan." When, in the end, Julius does join the serene company wherein his friend Pamphilus moves like some beneficent being altogether above the frailties of common humanity, one is apt to think—at any rate, many readers will think—that his case is but another instance of "when the devil was sick, the devil a monk would be." It is only fair to add that in the sayings of Pamphilus, who is unmistakably no other than Count Tolstoi himself, there is little or nothing of that barren ethical rigour, of that almost savage abnegation of what are commonly called the just claims of the body, which characterises the *Kreutzer Sonata* and various essays and sketches of a similar nature. At the same time, it is the Asiatic fanatic rather than the Western enthusiast who speaks to us even in the soft low words, even in the serene thoughts, of Pamphilus. Tolstoi may be forgiven his belief in the nobility and beauty of the ethics of the Thebaid if he give us, in his old age, work so good, even if of a polemical nature.

After perusal of the predecessor of this book, one was tempted to apply to Tolstoi Senex what Horace wrote of one whom he knew well, and recognised as a familiar type,

"Difficilis, querulus, laudator temporis acti
Se puero, castigator censorque minorum."

Now that temptation is removed. Difficult and hard to accept is the ethical teaching of this Slav prophet; uninviting, the way of salvation he indicates; he has a bitter tongue for the comfortable hypocrisies of the day; an unsparing censor he of all moralities but that which he believes to be the only morality, indivisible and incorruptible, and not to be mistaken. But he has removed, now and conclusively, that reproach of barren fantasy which lay like a shade against the light of his genius.

WILLIAM SHARP.

SOME CLASSICAL TRANSLATIONS.

Dublin Translations into Greek and Latin Verse. Edited by Robert Yelverton Tyrrell. (Dublin: Hodges, Figgis & Co.; London: Longmans.) Prof. Tyrrell, venturing to oppose the tide that sets harder and harder against classical verse composition, has published this portly volume, the work of Dublin scholars, in order that, "if the composer cannot secure as heretofore scholarships and fellowships by the exercise of his art," he may at least "have the chance to recommend himself thereby to the good opinion of scholars, men of letters, and men of taste." He adds that, at Trinity College, Dublin, verse-writing "was never more encouraged than it is now." We observe, however, that the Preface is dated eight years ago, though the volume has only just been issued; we wonder if matters are now as they were even eight years ago. Verse-writing, we have been told, is dying, though it dies hard. We all know why it is dying; but why does it die so hard? Not, we apprehend, from mere conservatism, nor from any strong belief in the thing as in itself a valuable accomplishment, but from a sense among teachers that it is a very good tool for sharpening the literary sense in clever boys and youths who read English poetry skimmingly, and need to have their minds pinned to the process of finding out its full meaning and its likeness and unlikeness to the classical models. There must, we should fear, be a wistful doubt in Prof. Tyrrell's mind whether his compilation will reach "the good opinion of scholars, men of letters, and men of taste," though we have no sort of doubt that it deserves to reach it. The first half of the book consists of translations into Greek, largely, though not entirely, from English dramatists. Then follow more than two hundred pages of Latin versions: and, lastly, twenty pages of further translations into Greek. Between forty and fifty translators have contributed. Conspicuous among them are Prof. Tyrrell himself, Profs. J. F. Davies and H. Crossley, Mr. M. C. Cullinan, Mr. T. J. B. Brady, and (rather for the merit than the number of his versions) Mr. Arthur Palmer. Nor is the book devoid of intellectual courage—Mr. J. B. Bury successfully converts Rossetti's "Sister Helen" into a Theocritean idyll (pp. 146-155)—nor of daring humour—Prof. Crossley actually gets "Little Billee" into elegiacs, and the adventures of Penius, Barathro, and Telemachus appear in this style:

"Quae cum vidisset Penius, sic orsus: 'amice,
Disperam, ventrem ni premat atra fames!'
Tum Barathro: 'victus quoniam non suppetit
usus,
Nostrum alter vereor ne sit edendus' ait,

And the crisis is equally good:

"Vixque sacris functus puer 'O gratissima'
clamat
'Tellus' erecto corpore 'visa mihi!'
Apparet Dodona, apparet et ultima Thule,
Et gemina Hesperio terra potita polo!'"

And Mr. Palmer's rendering of Hood's "Bachelor's Dream" (pp. 451-61) is simply excellent; the intrusive "Captain Hogg" appears as "Verres," as, in the same translator's version of "Sally in our Alley," the heroine is complimented in the title as *Tota Merum Sal*. On the whole, we think the Greek versions are the more interesting; particularly good are the editor's renderings of "Oenone" into Theocritean verse (pp. 12-17), and of Falstaff's gasconade (pp. 31-3) into Aristophanic iambs; all Mr. Cullinan's tragic iambs, especially those on pp. 47 and 95. Mr. Maguire's rendering of Manfred's soliloquy, "Glorious Orb!" is sonorous and fine. Has the translator mistaken the meaning of "orisons"? If not, is not *χοροὶς* a curious equivalent for it? Prof. Davies is always excellent, though at times a little verbose—e.g., on p. 193. Mr. West, on the other hand, is sometimes too brief, as, e.g., in the last line on p. 215. Among the Latin versions, Prof. Crossley makes one more attempt at "Father William." A specimen will amuse:

"Te senuisse vides, si fas iterare querellam;
- Crescent crura tibi pingua, pingue latus;
Te tamen inversos dantem trans limina saltus
Miror: quae tanti causa furoris erat?"

It is strange to find Prof. Davies tolerating (p. 435) so cacophonous an ending to a hexameter as "per Gallica rura et Ibera." The book is full of taste and scholarship, with a touch of light-heartedness in it, as befits its origin.

Fifty Poems of Meleager. With a Translation by Walter Headlam. (Macmillan.) This pretty book, with its immense margin, exhibits the gems of the Greek Anthologia in a very delightful form. The Greek originals face the English; prefatory poems, and a concluding stanza, are added by Mr. Headlam himself in both Greek and English. One specimen of these we are sure our readers will welcome—

Ἦνιδε καλλίφθογα μελίσματα σοι Μελεάγρου
προσφέρομεν, πολλὰν ταῦτ' ἀπολεξάμενοι.
ἀλλ' εἰ μὴν δύνασαι, λαβὲ τὴν χάριν· εἰ δ' ἀμαθαίνει
λείπον Ἑλλήνων μύσαν ἀηδονίδαν,
σοὶ τὰ δυσερμήνευτα λαλήματα βαρβαροφώνως
χρησάμενοι φθόγγους πάντ' ἐσαφήνισαμεν.

"Sweet utterances we bring to thee
Of Meleager's voice,
That are of all his poetry
The treasures of our choice.

"Come, if thou canst, receive the gift;
But if thy learning fails
To rede the dulcet-sounding drift
Of Grecian nightingales,

"For thee the twitterings musical,
So hardly to be read,
In our outlandish phrases all
Have we interpreted."

This is to have read the Anthology to some purpose. To us the Greek appears better than the English: "dulcet-sounding drift of nightingales" seems to us a phrase forced by the preceding rhyme. The translations themselves are graceful and musical. There is an attempt to render the Greek elegiac couplet by a metre unfamiliar to us: the hexameter is represented by a line of fourteen syllables; the pentameter, by an ordinary ten-syllabled line. Here is an example from the version of the familiar *Ἀκρίς*, ἐμὴν ἀπάρτητα πόθον.

"Cicala, bringer on of sleep, deceiver of my pain,
Cicala, meadow-mouse of tuneful wing,
Nature's own mimic of the lyre, come strike a
charming strain,
With thine own feet thy shrill wings battering."

We quite feel with Mr. Headlam (Intro., pp. xii., xiii.) that the ten-syllabled couplet "can rarely give the effect of Greek elegiacs"; its parity is an insuperable objection to its form being held representative of the Greek couplet. On the other hand, his couplet seems to us to involve too much disparity. More successful, in our opinion, is his attempt to render the "bucolic hexameter" in the "Idyll on Spring" (pp. 76-7), *Χέλμαρος ἠνεμόεντος*, κ. τ. λ.

"As soon as windy Winter was gone from the sky,
Out smiled the sunny season of flower-bearing Spring:

The dark earth of green grass a coronal put on,
And suckling scions burgeoned with petals all anew.

And now the meadows drinking the tender dew
of Dawn,
Their foster-mother, laugh with the opening of
the rose.

The shepherd in the mountain pipes gaily on his
reed,
And in the white kids of the goats the shepherd
takes delight."

All this idyll is beautifully rendered, and shows Mr. Headlam at his best; he throws off a certain stiffness, which—probably from a great effort to be literal—besets the lesser renderings in slighter metres. On p. 49, we rather demur to rhyming "twine" and "entwine"; minute poems will hardly bear the license in rhyming which may well be conceded, e.g., to the Spenserian stanza. On p. 92, should not *τέφρη* be *τέφρη*? On the whole, it cannot be denied that the nightingales and butterflies of Meleager's fancy sing and float prettily in this English garden.

Latin Verse. English Poetry translated into Latin Verse, chiefly Elegiacs, for the use of Classical Tutors and Students. By the Rev. C. H. Bousfield. (Bell.) Mr. Bousfield is puzzled and a little indignant (see preface) at the comparative disfavour shown by schools and universities to the art of verse-writing; he sighs for the days when the young Addison's Latin verses won him a demyship and gave elegance to his English style. As a matter of fact, the same thing would probably happen to-day. Youths who can do Latin verse and write elegant English get scholarships with ease. We rather agree with Mr. Bousfield that half the inability exhibited by boys in this matter comes of bad teaching. A sense of form can be acquired, and a vocabulary must be, if Latin or any other language is to be of any use; when form and vocabulary have been acquired, verses test the student very well, but there is none of the mystic value about them that Mr. Bousfield seems inclined to ascribe to them. They "suffer not thinking on," like many other useful acquirements, from the multiplicity of subjects now forced upon the young, and must take their chance, which is, no doubt, a diminishing one. Meantime, we doubt if the merit of Mr. Bousfield's verses, though they have a certain grace of their own, is sufficient to make them much help to "classical tutors and students." In the first place, they render a singularly dull set of originals. Fragments of Shenstone, Akenside, Kirke White (or Kirk White as Mr. Bousfield, or his printer, insists on calling him from time to time) and "Anon" are not of sufficient merit to fix the attention usefully; and even Jonson and Burns are not represented by their best strains. On p. 9, "rediet" appears to us an heretical future of "redeo"; on p. 25, "vixerat" seems a misprint for "vix erat," and "tum," perhaps, for "tam," and "roboles" does not exist; on p. 45, should not "cornicium" be "cornicinum"? On p. 99, l. 11, "foret" should probably be "fovet"; a little lower down "volentia" seems used intransitively—a rare construction, except with "annis." There are some pretty verses on pp. 43 and 95-7,

The Works of Flavius Josephus. Whiston's Translation. Revised by A. R. Shilleto. Vols. 4-5. *The Jewish War Against Apion.* (Bell.) These two volumes complete Mr. Shilleto's translation of Josephus, and put within the reach of those students of Jewish affairs who do not read Greek a complete and revised version of a very popular and very valuable author. We have nothing to add to the notice of the earlier volumes which has already appeared in the ACADEMY. We cannot always admire Mr. Shilleto's style, and we do not always agree with his translation of particular passages. For instance, in the treatise against Apion 2, 4 (Mr. Shilleto's p. 223) *Καὶσαρ δὲ μέγας* is more probably "the elder Caesar," i.e., the dictator, than "the great Caesar"; at least, Josephus's use of *μέγας* of other men in other passages points that way. But we have not detected more serious errors; and it is clear that Mr. Shilleto has taken a great deal of trouble with his author.

THE CAMELOT SERIES.—*The Reign of Tiberius* out of the first six Annals of Tacitus, with his Account of Germany, and Life of Agricola. Translated by Thomas Gordon, and edited by Arthur Galton. (Walter Scott.) Mr. Galton has done well to rescue from oblivion the spirited old translation of Thomas Gordon. It may well be that Gordon has not "always conveyed the exact meaning of the sentences of Tacitus." Who has? "But he has done what is better and more difficult, he has grasped the broad meaning of his author, and caught something of his lofty spirit." A translation, as Gordon remarked, ought to read like an original; and much of Gordon's does so read. Mr. Galton's preface to the work is vivacious, or even petulant, and it is distinguished by a wonderful abuse of commas. But he has a theory that commas should be, and used to be, employed to mark many fine shades of meaning. In what sense, by the way, is the famous question of Tiberius, "Who was Hecuba's mother?" a "problem in theology?" It is surely a mistake to translate Volleius Paterculus's words about Tiberius deifying Augustus (*Non appellavit eum sed fecit deum*) "he not only called him, but considered him, divine."

THE CAMELOT SERIES.—*The Ethics of Aristotle.* Chase's Translation (newly revised). With Introductory Essay by G. H. Lewes. (Walter Scott.) "The basis of this version" is Dr. Chase's translation of 1847. So ancient a translation is decidedly out of date, even if it be, as the advertisement states, "carefully revised throughout." But the present revision has been far from complete; see, for instances of oversights uncorrected, pp. 129, 180, 818. The author too would be the most natural person to revise his work; someone else has here done it for him, and we cannot find that any use has been made of the revised fourth edition published in 1877.

NOTES AND NEWS.

THE Greek text, with introduction and notes, of the British Museum papyrus, containing "Aristotle on the Constitution of Athens," is to be published at the end of the present week, having been printed at the Clarendon Press. The autotype facsimile will not be ready for some little time. The editor, Mr. F. G. Kenyon—to whom, we believe, the largest share in the discovery is due—has contributed the following palaeographical description to the *Oxford Magazine*:

"The MS. consists of four rolls of papyrus, of which the longest measures rather more than seven feet in length, and the shortest only three feet. There are four different hands employed in it; and it evidently was not a copy intended for sale, but a transcript made for his own benefit by some private individual, with the assistance of his slaves. The bulk of the writing is in a small semi-cursive hand, employing a good many contractions, and

is generally free from obvious blunders. The date is apparently about the end of the first century A.D. There are thirty-six columns in all, but the last six are very badly mutilated; and the beginning of the work, to the extent of a column or two more, appears never to have been transcribed. At present the text begins in the middle of a sentence, and a blank space is left before it."

Messrs. Bell & Sons have arranged with Mr. Kenyon for an annotated translation of the treatise.

THE Palestine Exploration Fund have nearly ready for issue Mr. W. M. Flinders Petrie's account of his excavations last spring at Tell el Hes, the site of Lachish. The work will be published in demy quarto, uniform with his volumes of Egyptian exploration. It will be illustrated with a large number of lithograph plates, showing the pottery of various dates, architectural details, &c.

MR. HERBERT SPENCER will publish in March an entirely new edition of his *Essays Political, Scientific and Speculative*, in three volumes. It will contain many new essays not included in the previous editions, and will be uniform with his other works.

A SECOND volume of Mr. Charles Booth's *Labour and Life of the People* is in the press and will be published in the spring. It embraces Central London and will be accompanied by maps. A third edition of the first volume is also in the press.

MR. WILLIAM HEINEMANN will shortly publish an original tragedy, entitled *Nero and Actea*, by Mr. Eric Mackay, author of "A Lover's Litanies" and "Love Letters of a Violinist."

MESSRS. KEGAN PAUL, TRENCH, TRÜBNER & Co. are about to bring out a new edition of Mr. James Sully's *Pessimism*, with a preface and bibliography, bringing up to date the development of pessimistic literature in Germany and other countries.

MR. JOHN C. NIMMO will publish immediately a work in two volumes, entitled *The Hittites: their Inscriptions and their History*, by Prof. John Campbell, of the Presbyterian College, Montreal, who will be known to some readers of the ACADEMY by his attempted decipherment of the Etruscan and the Kelt-Iberian languages.

MESSRS. BENTLEY are about to publish a new novel, in a single volume, by Mr. Henry Seton Merriman, author of *Young Mistley*.

A TRANSLATION into English blank verse, by Mrs. J. B. Shipley, of Johan Runeberg's Swedish poem *Nudeschda* is announced for immediate publication by Mr. Elliot Stock.

MR. FISHER UNWIN has ready a second edition of the Rev. Dr. Augustus Jessopp's *Trials of a Country Parson*.

WE are glad to hear that a Civil List pension of £150 has been conferred upon the widow of Sir Richard Burton. The movement for this recognition of the services of the late explorer originated with the council of the Royal Geographical Society, who were supported by the Royal Asiatic Society, the British Association, and the Anthropological Institute.

A PROPOSAL has also been started to raise a fund for providing in Mortlake Cemetery, where he lies buried, a suitable memorial of Sir Richard Burton. Messrs. Coutts & Co., bankers, 59, Strand, and Alderman Sir Polydore De Keyser, Royal Hotel, Blackfriars, are receiving subscriptions for this object. Among those who have already subscribed are the Countess of Derby, who has given £20; Baroness Paul de Ralli, £20; Messrs. Ralli Brothers, £20; Mr. and Mrs. F. M. Russell, £20; Mr. E. Healey

Thompson, £1 1s.; Mrs. E. Ralli, £10; and Sir Polydore De Keyser, £5 5s. Should any balance exist after erecting the memorial, it will be devoted to bringing over to this country from Trieste Sir Richard Burton's library and effects.

THE third series of lectures provided by the Sunday Lecture Society begins on Sunday next, February 1, in St. George's Hall, Langham-place, at 4 p.m., when Mrs. S. D. Proctor will lecture on "The Life and Death of Worlds," with illustrations by the oxy-hydrogen lantern. Lectures will subsequently be given by Prof. Marshall Ward, Mr. Charles Cassal, Mr. J. M. Robertson, Mr. Arthur Nicols, Miss Amelia B. Edwards, and Prof. Percy Frankland.

ON Sunday next, February 1, Mr. C. F. Keary will lecture at the South Place Institute on "The Influence of Paganism on Christianity."

THE birthday of Charles Dickens will be celebrated by songs, scenes, and recitations from his writings in the French Chambers, St. James's Hall on Saturday next, February 7.

ON Wednesday next, February 4, Messrs. Sotheby will begin the sale of the first portion of the library of the late Edward Hailstone, of Walton Hall, near Wakefield, which will continue for ten days. Mr. Hailstone's local collection of topographical books, MSS., prints, &c., was bequeathed by him to the chapter library at York, as stated in the ACADEMY at the time of his death, and will there be kept separate as the "Hailstone Yorkshire Library." What is now offered for sale is of a miscellaneous character, including many works relating to the fine arts, especially lace and embroidery, and also illustrated books of the present century, both English and French. At the end will come a number of engravings and caricatures.

MESSRS. MACMILLAN have published this week the first volume of their new edition of "The Cambridge Shakspeare," edited by Dr. W. Aldis Wright, the sole survivor of the original editors. Like the first edition, which has now become a rare book, it will be in nine volumes, to be issued at intervals of three months; but the order has been somewhat changed. By relegating the reprints of the imperfect quartos to the last volume, together with "Pericles" and the Poems, the Comedies will now form three volumes by themselves, the Histories two, and the Tragedies three. The editor has bestowed a fresh recension on the text, in strict accordance with the principles laid down by the former editors; and he has, in particular, devoted a personal examination to what are known as the Payne Collier annotations in the copy of the second folio now in the possession of the Duke of Devonshire. The typography and paper (including the title-page) are a delight to the eye and an honour to the Cambridge Press. But there is one little matter that we are compelled to criticise. The bibliographical note on the verso of the title-page states that the first edition of this volume was published in 1863, the second in 1867, and the third in 1891. This is, no doubt, technically correct, if by the second edition is meant the reprint of the first, which was required immediately on the completion of the work, owing (we have heard) to an accident that happened to the stock of the early volumes. But it is not consistent with the fact that Dr. Aldis Wright's present preface is described as "preface to the second edition." It might also, we think, have been here stated at what stage J. G[lover] ceased to be responsible as one of the two original editors.

Correction.—In the last line of the sonnet entitled "Cambridge in Sunset," printed in the ACADEMY of last week, for "hue" read "here."

UNIVERSITY JOTTINGS.

THE councils of the two London colleges, University and King's, have each issued an appeal for subscriptions towards a capital sum of £50,000, to enable them to make up arrears in their equipment for the expensive work of modern university education, especially in physical science. It is stated that endowment is now absolutely necessary for the continued existence of the School of Modern Oriental Studies, conducted jointly by the two colleges in connexion with the Imperial Institute.

MR. R. T. GLAZEBROOK, of Trinity, has been appointed assistant director of the Cavendish Laboratory at Cambridge, with a stipend of £50 a year, to be paid from the common university fund.

THE special board for biology and geology at Cambridge recommend that the agreement between the university and Dr. Dohrn, director of the zoological station at Naples, be renewed for a fourth period of five years from Michaelmas, 1891, by the payment to him of £100 per annum out of the Worts Travelling Bachelors' Fund.

PROF. SANDAY is delivering a course of public lectures at Oxford upon "Recent Criticism on the Synoptic Gospels."

ON Saturday, February 21, Mrs. Fawcett will give a lecture at Oxford, on behalf of the Association for the Education of Women, upon "The Use of Economic Study in Education."

THE new anatomical buildings at Cambridge were inaugurated on Thursday of this week with a public lecture by Prof. A. Macalister on "The History of Anatomical Study at Cambridge."

MANSFIELD COLLEGE, at Oxford, has had five freshmen this term, raising the total number of students to 35. This includes seven Arts men, who have yet to graduate before their theological course of three years commences.

THE vogue attained by the "missions" movement at the universities may be learned from the fact that the Cambridge Press is going to publish a book, with a preface by the vice-chancellor, bearing the following portentous title:—

"Town and Gown: A Terrible Fight between eight Gownsmen and Twenty Thousand Members of the Town. A Despatch showing the Condition of Affairs at present, with Sketches taken on the Spot, and an Earnest Appeal for Help for the Gownsmen."

THE last number of the *Eagle*—a magazine supported by members of St. John's College, Cambridge—opens with an iconography of Bishop Fisher, who ranks as the second founder of the college. Full advantage has been taken of recent investigations at Rome, stimulated by the beatification of the bishop. For frontispiece is given an autotype reproduction of the engraving by P. Simon, prefixed to the third edition of Hall's *Life of Fisher* (Dublin, 1740). Another article describes the various representations of Bishop Fisher which have been included in the decorations of the newly-opened Roman Catholic church at Cambridge.

THE Cambridge University Press will publish immediately *Eighteen Years of University Extension*, by Dr. R. D. Roberts, organising secretary for lectures to the local examinations and lectures syndicate.

In *Nature* for January 22 is printed the probationary lecture which Prof. Karl Pearson delivered when candidate for the chair of geometry at Gresham College. It is entitled "The Applications of Geometry to Practical Life," and deals largely with the practical work of the professors of Gresham College in the seventeenth century.

THE last issue of *Bibliographical Contributions of Harvard University* consists of a bibliography of Beaumont and Fletcher, compiled by Mr. A. C. Potter. It is arranged as follows: (1) complete works; (2) selections, coming down to the Mermaid series and the Canterbury Poets; (3) separate plays, in alphabetical order; (4) the poems, including the doubtful *Salmasius* and *Hermaphroditus* (1602); (5) translations into French, German, and Latin; and (6) works on Beaumont and Fletcher, including magazine articles, in the order of authors' names. It may be observed that both the Harvard College library and the Boston public library are particularly rich in the works of Beaumont and Fletcher.

ORIGINAL VERSE.

AMORIS INTEGRATIO.

IF I might choose, my fellow-servant said,
And shyly turn'd her glowing cheek away,
If I might choose, which never till to-day
Was woo'd by man nor by myself betray'd,
I would not be thus shamefast, thus affray'd:
For neither joy, till now, nor tyrannous love,
Nor loneliness, did ever me so move
But that I wish'd to live and die a maid.
And yet, she said, I am not so dismay'd
By that great mystery of married souls,
Whereby each serves and also each controls,
And either is the other's light and shade,
As that I could not bring myself to see
The dear delight of being a part of thee.

M.

MAGAZINES AND REVIEWS.

THE New Year's *Livre Moderne* opens with, or rather includes, a lively and characteristic circular from the editor, in which, contrary to the wont of editors who assure their subscribers that the paper will go on in *secula seculorum*, he promises them that *Le Livre Moderne* shall certainly not go on long enough for them to get tired of it; but that in a year or two, or by three at most, he will alter its form and plan once more, and make it (as it is) a rarity and a possession for ever to the *abonné*. The number itself justifies this pleasant bravado very well; for, besides a good *compte-rendu* of more or less recent books by M. Gausseren and other current matter, it has an introductory article on the "Physiologie du Lecteur," a subject, as is observed, singularly omitted among the rush of *physiologies* of fifty years ago. This article is charmingly illustrated by some dozens of vignettes in a modern version of the old *physiologie* style, but more splendid, being printed in brown ink. There is also a full-page plate by M. Morin, entitled "La Lecture à Travers les Ages—Estrennes aux Bibliophiles." These "estrennes" depict in somewhat Ropsian style, though without kicking over the traces quite to the extent usual with the great Félicien, a Bacchic procession of readers, from a lady in a high collar and ejaulet sleeves backwards to one whose collar and sleeves cannot be described, because they do not exist. The plate is excellently hit off; and so is the number.

THE *Boletín* of the Real Academia de la Historia of November contains only two articles, but both are important. The first is a review and analysis, by F. Ceello, of the "El-Ksar el Acabir" of F. de Cuevas, written to prove that that site is not the Cerne of Hanno or of Plato, nor the Oppidum Novum of the Romans. Señor Ceello does not think the thesis proved against Costa; but the work is valuable for its geographical and geological details, and for local Arabic names and personal knowledge of the topography. A list is given of all ruins signalled in the district, and of the huge tumuli on the *Luxus*, known as the "graves of

the giants." The second article, by Padre Fita, "Cortes y Usages de Barcelona en 1064, Textos ineditos," is most important for the constitutional history of Northern Spain. He brings evidence to show that the term *Magnates* includes the higher burghers as well as the nobles: that the *usages*, *usaticos* then adopted were not an abrogation of, but an addition to, or graft on, the Gothic *Fuero Juzgo*. Incidentally, we have here the fullest texts relating to the "Truce of God," and a noble Bull of Alexander II. forbidding all ill-treatment of the Jews.

THE November number of *Al-Haqaiq*, the Arabic Quarterly Review published at Hyderabad and Woking, is printed on better paper and in better style than its predecessors, although the misprints are still rather numerous. Syed Ali Shustari, to whom some high-sounding titles are given, describes in the Raml metre the palace of the Nizam of Hyderabad called Falak Numea; the poem would appear to have been written seven years ago. One of the editors, Moulvi Abdul Jabbār, collects Arabic proverbs bearing on the leading characteristics of the Arab race, and also narrates at some length the life of El-Firuzabadī, author of the *Kāmis*; Abdussamad Khan collects some stories of the science of *Kiyāfa*, or tracking, as practised by the ancient Arabs; Mirsa Kāzīm Nimāzī gives a brief description of China; and the other editor, Syed Ali Bilgrami, continues his Arabic translation of *Rasselas*. Although the matter is for the most part well-chosen and appropriate, perhaps this review would do well to imitate the Cairene *Mukhtāf* in the keen interest with which the latter journal keeps up with modern scientific discovery, and also in introducing something like European critical methods into its historical studies.

CORRESPONDENCE.

MR. GEORGE MEREDITH AND HIS CRITICS.

Southport: Jan. 26, 1891.

I have just read in the ACADEMY a review of Mr. Le Gallienne's work on George Meredith, and have been much struck by a sentence in which the reviewer, Mr. Arthur Symonds, laments that Mr. Le Gallienne is not aggressive enough in his attitude towards those who cannot, or will not, worship at the Meredithian altar. The book, says Mr. Symonds, ought to have been "aimed full at the British Philistine."

Now, I should like to ask, what has the British Philistine done, that he should have a book shied at his head in the way Mr. Symonds thinks desirable? As regards Mr. Meredith, it seems to me that the British Philistine has been most exemplary in what he would doubtless call the discharge of his duty. He has tried his very best to read Mr. Meredith, and has failed; or he has read Mr. Meredith, but has failed in the attempt to enjoy him. In either case he deserves our sympathy. To punish him for missing a pleasure which another has grasped seems to me curiously unjust. Besides, admirers of Mr. Meredith would, I imagine, be themselves the first to admit that the works of their master were emphatically not written for the British Philistine; so why get angry because those works do not please the very persons whom they were confessedly not meant to please?

I fancy, however, that when Mr. Meredith's devotees speak of the British Philistine, they really mean the vast majority of the public; and it seems to me a little absurd that, because there is an author whose writings the public are comparatively indifferent to, it should be constantly assumed that the only person not in the least responsible for such indifference is the author. Other writers have achieved unpopularity before Mr. Meredith. Although the public, I am told, now read Browning, this was not always the case; yet I never heard of any attempt being made to have people hasten to admiring Browning, nor am I sure that such an attempt would have succeeded. Perhaps the best proof of the futility of trying to convert people into an attitude of admiration by "aiming" a book at them is afforded by Mr. Meredith's novels themselves. They are, in Mr. Symonds's sense of the word, "aimed" at the British Philistine, if ever novels were. The British Philistine has been hit hard by them—though, I must say, he does not seem to know it. He has been pelted through I do not know how many volumes—but have the missiles converted him?

WILLIAM WATSON.

"POTIPHARA," AND SIMILAR NAMES.

Weston-super-Mare: Jan. 19, 1891.

In the *Deutsche Rundschau* for May, 1890, appeared an interesting article on "Joseph in Egypt," by Heinrich Brugsch-Pacha, who has given so much attention to the same subject in previous publications.

He has here, however, brought forward reasons for assigning the entire Egyptian narrative in the book of Genesis to a late period of composition.

The most striking of these reasons lies in the names Potiphar and Potiphara. He says of the latter:

"the name is absolutely Egyptian. In the speech of the old dwellers in the Nile Valley Pu-ti-phra meant 'the gift of the sun' (*Ra, Re*, or with the article *Phra, Phre*). . . . only its formal composition shows a late epoch of Egyptian history. Proper names of Egyptian persons with the former element *Pu-te, Pe-te*, 'the gift,' and a god's name following it, appear first from the time of the ninth century, and are altogether un-

known in the earlier periods of Egyptian history" (*Rundschau*, May, 1890, p. 245).

On reading this statement I was much surprised, and turned to the index of Dr. Wiedemann's valuable history. There, among the names of the same construction, I found (*Aeg. Gesch.*, 329) the name of an officer of the XVIIIth Dynasty not only similar but identical—viz., Pe-tu-Ra, who was superintendent of oxen to Thothmes I.

New Brugsch himself gives the date of Thothmes I. as 1633-1600, B.C., and the expulsion of the Hyksôs as 1700, thus bringing the lifetime of our Pe-tu-Ra within a century of the last Hyksôs king. We might well believe that this master of the oxen was not the first man to bear a name of the construction in question; and, indeed, we have the name Petesuchos recorded as belonging to the time of Amenemhat III. (Wiedemann, *Gesch.*, 259; Parthey, *Aeg. Personnamen*, 82). And Wilcken makes this name Petesuchos to be in the original Pe - tu - Sebek, which is almost self-evident, and agrees with the worship of Sebek in the Arsinoite nome, to which the record refers (*Zeitschr. f. Aeg. Spr.*, 1883, 164; Wiedemann, *Supp.*, 28.) This would take us far back before the time of Joseph. But let us be content with the highly interesting name Peteseph, which is attributed by Chaeremon to Joseph himself (Josephus, *cont. Ap.* I., 32), and the very similar name adduced by Brugsch from a genealogy of six generations back from the second king of the restored Egyptian monarchy after the Hyksôs (Amenhotep I.)—namely, Pe-tu-Ba'al—and assigned by him to the early period of Hyksôs rule, for this man was the first in order of the six.

Of course, we thus find this type and formation of personal names, according to Brugsch himself, long before the lifetime of Joseph. (*Egypt under the Pharaohs*, I., 255. See the stela in question described by De Rougé, *Musée du Louvre*, 98. See also the names in Lieblein, *Recherches sur la Chronologie Égyptienne*, 129.)

In view of these things, I am "at a stand" to know how the learned Egyptologist can deny the existence of names of this form in Egypt before the ninth century B.C.; and, as a careful student of the Biblical narrative of Joseph's life, I shall be very thankful to any scholar who will help me out of my difficulty.

HENRY GEORGE TOMKINS.

THE GODS OF THE SLAVS AND SCYTHIANS.

London: Jan. 28, 1891.

Popular tales and the refrains of a few old songs excepted, the only authentic information we have of the gods of the Russian Slavs, before their conversion to Christianity, is contained in a few passages of the Monk Nestor's Chronicle, finished about the year 1093 A.D. Even Nestor dismisses the old deities with scant notice, and leaves us little beyond a list of names. The passages in which Nestor, in his quaint Slavonic tongue, mentions the Slavano-Russian gods, are as follows:

In the treaty of Egor with the Greeks, it is said*:

"As many as are christened, do not receive help from God, nor from *Perun*."

And again:

"Let him be cursed by God and by *Perun* who breaks his oath."

In the agreement between Svyatoslav and the Greeks, it is said:

"Let us swear by the god in whom we believe, in *Perun* and in *Volos*, the god of herds."

*Quoted by Sâharov.

In the confirmation of Egor's oath with the Greek envoys, he says:

"On the next day, Egor called the envoys and went to the holm, where was *Perun*. There he laid down his weapons and shield and gold."

In his account of Vladimir's reign, Nestor says:

"Then began Vladimir to reign alone in Kiev; and he set up images on a holm, outside the palace yard: the image of *Perun* of wood, his head of silver, his moustaches of gold; and of *Khors*, and *Daj-Bog*, and *Stri-Bog*, and *Simargl* and *Mokosh*. He served them whom he called gods, brought his sons and daughters, served the devils, and defiled the land with rites, polluting the Russian land and the holm with blood. . . .

"Vladimir set Dobrinia in Novgorod, and coming to Novgorod, Dobrinia put an image above the river Volhov, and the people of Novgorod served it as god. . . .

"Vladimir went to war against the Yatvyags, and conquered them, and coming back to Kiev served the images, together with his people. Then said the old men, and the Bayars, Let us cast lots for a youth and a maiden; on whom the lot falls, them shall we kill for the gods. There was a certain Varyag (Norman), a Christian who had come from Greece, and he had a son, fair in face and in soul. And the lot fell upon him. And the people who were sent told him: The lot has fallen on your son; give him to the gods, that the rite be accomplished. . . .

"He ordered to destroy the images; to cut some to pieces; to burn others with fire. He ordered to tie *Perun* to a horse's tail, to drag him down the mount Goricher, to the river, and sent twelve men to push with poles. Not because it was a soulless log of wood, but because the devil under its shape tempted the people, so let him take his chastisement, and be laughed at and scorned. And while it was dragged to the Dnieper, the people cried out, because they knew not the grace of christening. And when it was dragged to the bank, it was thrown into the river. And Vladimir said: If he stops at the bank, thrust him on till he passes the rocks; then renounce him. And as he said so they did. And when he passed the rocks, the wind blew where he was thrown, and the place was called the Fall of *Perun* unto this day."

There is a tradition in Kiev that when *Perun* fell in the water, the people in despair called on him to come out; and on the spot was founded the "Came-not-out" monastery (Nevy-dubeteki Monastery).

A dozen Russian mythographers have discussed these passages in Nestor without much positive result. They hardly carry us beyond the seven names—*Perun*, *Volos*, *Khors*, *Daj-Bog*, *Stri-bog*, *Simargl*, and *Mokosh*—of the old Russian gods. In the Slavano-Russian pantheon were also included the great rivers—the Dnieper, the Don, and the Bug, in deified forms.

I do not know that the comparison between the Slavano-Russian and the Scythian gods, which I am about to make, has been anticipated. At any rate, it is interesting enough to bear re-mention. The connexion between the old Slavs and the Scythians of the Danube is tolerably certain, though little positive evidence can be adduced in its support. Herodotus ("Melpomene") tells us that the Skolotoi, whom the Greeks called the Scythians, believed they were sprung from Zeus and a daughter of the Borysthenes (Dnieper). This is in harmony with the Slavonic deification of the Dnieper and the other great rivers by the Slavs. He further gives us an account of their rites and customs, their human sacrifices, and the offering of the sword, which agrees well enough with what Nestor tells us. Compare Herodotus's story, "On the summit of a pile (artificial mound) each Scythian tribe places a scimitar, which is considered as the shrine of Ares," with Nestor's account of Egor, "ascending the holm where was *Perun*, and laying down there his sword and shield." Grant-

ing the relation between the old Slavano-Russians and the Scythians, it is reasonable enough to suppose a connexion between *Perun* and the god Herodotus calls Ares.

Herodotus says the Scythian gods are—first, Hestia (Tabiti), then Zeus (Papaïos), and Gê (Apia), whom they believe to be the wife of Zeus. Next to these are Apollo (Oitosuros), the celestial Aphrodite (Artimpasa), Herakles, and Ares; and, amongst the royal Scythians, Poseidon (Thamimasadas).

A Slavano-Russian myth makes Mother Damp Earth the wife of the great god *Perun*, as Herodotus makes Apia, the Scythian Mother Earth, the wife of the great god Papaïos; and it may well be, granting the relationship of the Scythians (Skolotoi) with the Slavonians, that there is a real identity between Papaïos and *Perun*, with Mother Earth as the wife of each. Perhaps *Volos*, the god of herds, is the same as Herakles of the Scythians. Absence of data prevents our drawing any conclusion about the other gods, and it is merely by way of conjecture (probable though not provable) that I place the Scythian and Slavonian gods in parallel columns.

SCYTHIAN (HERODOTUS), 410 B.C.	SLAVONIAN (NESTOR), 1093 A.D.
Papaïos.	<i>Perun</i> .
Tabiti.	<i>Daj-Bog</i> .
Apia.	(Earth.)
Oitosuros.	<i>Stri-Bog</i> .
Artimpasa.	<i>Mokosh</i> .
Thamimasadas.	<i>Simargl</i> .
(Herakles.)	<i>Volos</i> .
(Ares.)	<i>Khors</i> .

The gods in these two lists may be identical—I myself think they are—still, I should be as glad to see evidence against their identity as in its favour, though I hardly know what evidence could be brought on either side.

CHARLES JOHNSTON.

"LIVES OF SAINTS FROM THE BOOK OF LISMORE."

Youghal: Jan. 13, 1891.

In looking through the translation, one cannot fail to notice the absence of systematic effort to reproduce the structure, turn of phrase, and conciseness of the original. No excuse can be pleaded here. The *raison d'être* of the book is linguistic. Here is a glaring illustration:

Bai adaiy ann iar n-iarmeirghi oc ernaighi co tarfas di cealla Eirenn uili, ocus tor teined dá ceach cill dibh docum nime. In tene thurgaibh a hInis Cathaig as i ba mó dibh, ocus ba hedrochta, ocus ba dirgha docum nime. "Is cain in reeles ut," ar si (p. 72).

Lives, &c., p. 219.

LITERAL TRANSLATION.

There one night, after nocturns, she was praying, when all the churches of Ireland appeared to her. And it seemed that a tower of fire rose up to heaven from each of the churches; but the greatest of the towers, and the straightest towards heaven, was that which rose from Inis Cathaig. "Fair is yon great church," she saith. She was one night there after nocturns praying, when appeared to her the churches of all Ireland and a tower of fire from each church of them unto heaven. The fire that rose from Inis Cathaig was that which was greatest of them and was brightest and was straightest unto heaven. "Fair is yon great church," saith she.

Evidence of carelessness is supplied by some thirty places in which single words, phrases, or whole sentences have been respectively omitted. Take the following (p. 31):

Galar trom tainic dia thimtirid-seom .i. Diarmait a ainm, co n-erbuilt, co nderna-som ernaighthi leis cu rothodhuise a bas. Ocus ní nama acht rochuinigh soegul . uil . mbladue do dara eis budhesin

Lives, &c., p. 179.

FULL TRANSLATION.

A sore disease befell his servant, and Colomb made prayer for him, and not that alone, but he asked for a life of seven years for him afterwards.

Grievous sickness befell his attendant—Diarmait (was) his name—so that he died. So he (Colomba) made prayer for him, until he waked him from death. And not (that) alone, but he besought a life of seven years for him after himself.

The textual recension is not always adhered to in the translation. One example will suffice (p. 27): *doroine recies ann. A u Dermhuigh dano, etc.* "(Colomba) built a great church there in Durrow. Moreover," &c. (p. 175). Read: (Colomba) built a great church (?) there. In Durrow, moreover, &c. This is the only rendering possible, for *dano* cannot begin a sentence.

The light derived from the variants can be estimated from a few specimens: "'Wouldst thou be loath," saith Ciaran, 'to rise from the

place in which thou art?' Findian rose up. 'The place from which thou hast risen,' saith Findian" (p. 227). The second F. (though it has escaped the editor) is a copyist's mistake. C., from another MS., will be found hidden away elsewhere (p. 344), without note or comment. More frequently, however, the *textus receptus* is discarded, the student being thus afforded an opportunity of trying his hand at a parallel English version; e.g., "One cannot go near her" (p. 227). This is from "B." The L. lection signifies "We cannot go near her." *Aingel de nim*, an angel of heaven (p. 81). The editor gives "an angel of the God of heaven," and a note: "Read with B., *nime*" (p. 229).

With regard to the translation of the reliable portions of the text, a long procession of corrigenda files on at the end of the book. Additions have been made in the ACADEMY. Here follows a fresh contingent from a muster one hundred strong. (Numerals refer to lines of text.)

TEXT.

3500, *timthreacht na n-aingel . . di*

the train of angels (rising) from
it

angels ministering to it (lit.
ministering of the angels to
it; cf. *timthreacht di*, L.U.
28b, L. 22).

Others, of which the following are typical, would require to be set forth in detail: *Is firt bithbeo beous sin, ar cech teidhm acht co tiagur tairis ní lean secha sin* (880). "It is an ever-living miracle; for every pestilence, even if it go over it, follows no further." But *acht* is not "even if" and *tiagur* is impersonal. The meaning of *ar*, &c., is: for every pestilence, provided one goes across it (the river), follows not (the patient) beyond that.

In *Dubthach-sin, o rogenair nab-Brigit rocen-naig-sein chumail Broicsech a hainm* (1154): "That D., when holy B. was born, bought a bondmaid named Br." Here is a new miracle. Brigit, daughter of D. and Br., was born before ever her parents met each other! O rogenair signifies "by whom was begotten."

In *sochraite ndermhair oc cáine ocus oc toirrei .i. enmac tuisigh na tuaithe robo marb acu ocus*

se ica breith dia adhmacul (2014): "A great multitude wailing and sorrowing; for the only son of the chief of the territory had died and the chief was carrying him to his grave." This is not given as an instance of a corpse being "carried by a man" (p. cii.). The causal clauses mean: the only son of the chief of the territory was dead amongst (lit. with) them, and he (was) being carried to his burial.

"Dobérthar cucaibh [ciccin]," ar Senán, "*nech dia tairgha bar n-incoimét na bidh a shuim foruible*" (2483): "'Verily,' saith S., 'this shall be granted to you. Be in no distress as to one from whom your protection shall come.'" This makes a new sentence at *nech*, without warrant in the original. The construction is quite obvious: "'There shall be brought to you, indeed,' quoth S., 'one from whom will come your protection; let not anxiety there-
anent be upon you,'"

Nir'ghabh oa fer gan techt a Mumain do cos-nunh righi dia macuibh (3066): "And nought she accepted from her husband save the invading of Munster to win the kingship for her sons." The expression *nir'gabhan* is idiomatic: she betook not (herself) without (obtaining). It means accordingly: she ceased not to importune her husband until he promised to go into M. to contest the kingship for her sons.

Is tualang he tonna in mara dh'fastúdh in cuirp inntibh conemchumhscaighi (3769): "He was able to constrain the waves of the sea, to keep the body in them immovably." Here we have two infinitives in the English for one in the Irish. Moreover, if *tonna* depends on *dh'fastúdh*, what is *cuirp* governed by? The same usus of *tuallang* is shown elsewhere in the present text. Translate: Able is he (to cause this, i.e., that) the waves of the sea shall keep the corpse in them immovably (lit. the waves of the sea to keep the body).

St. Moehua caused a lake-island to be submerged. The king, whose residence it was, went in a boat to M. *Ocus tuc he fein ocus a mac ocus a na a n-deri dhó ocus inn inis do shoerad ocus ro soerad iarsin* (4796): "And he surrendered himself and his son and his grandson in bondage to him and the island to be free (from tribute); and it was freed afterwards." But, *de non existentibus et de non apparentibus cadem est ratio*. If the island was to continue under water, it is not easy to see the use of freeing it from tribute. The copula has here a conditional force: he gave himself and his son and his grandson in servitude to him (M.), provided the island were saved (lit., and to save the island [from the water]). And it was saved after that.

In conclusion, it is right to add that the worst specimens have not been brought forward. Enough, it is submitted, has been adduced to demonstrate anew that in Celtic philology finality is unattainable irrespective of the living language. B. MACCARTHY.

P.S.—In my letter in the ACADEMY for January 24, p. 90, col. 2, l. 40, for "22" read "24"; l. 61, for "by e" read "by o"; p. 91, col. 1, l. 2, for "30a" read "31a"; in note, l. 2, replace the colon by full-stop.

APPOINTMENTS FOR NEXT WEEK.

SUNDAY, Feb. 1, 4 p.m. South Place Institute: "The Influence of Paganism on Christianity," by Mr. C. F. Keary.

5 p.m. Sunday Lecture Society: "The Life and Death of Worlds," by Mrs. S. D. Proctor.
7.30 p.m. Ethical: "Evolution and Morality," by Prof. Henry Jones.

MONDAY, Feb. 2, 5 p.m. Royal Institution: General Monthly Meeting.

5 p.m. London Institution: "Pompeii: the City of the Dead," illustrated, by Mr. Whitworth Wallis.

8 p.m. Royal Academy: "Byzantine Architecture," III., by Mr. G. Aitken.

8 p.m. Society of Arts: Cantor Lecture, "The Construction and Capabilities of Musical Instruments," II., by Mr. A. J. Hopkins.

8 p.m. Victoria Institute: "Recent Results of Babylonian Archaeology," by Mr. W. St. Chad Boscawen.
8 p.m. Aristotelian: "Guyau's Philosophy of Ideas," by Mr. G. F. Stout.

8 p.m. Richmond Athenaeum: Selborne Lecture, "Early Man in the Thames Valley, and the Animals he saw and hunted," illustrated, by Dr. H. Woodward.

TUESDAY, Feb. 3, 3 p.m. Royal Institution: "The Spinal Cord and Ganglia," III., by Prof. Victor Horsley.

SCIENCE.

The Impregnable Rock of Holy Scripture. By W. E. Gladstone. (Isbister.)

This is a most regrettable publication. It will delight Mr. Gladstone's enemies and dismay his friends. The prestige of the venerable statesman's name, the interest of his subject—let me add, even in this instance, the penetrating charm of his personality—will only serve to disseminate more widely the evidence of his incompetence to meddle with a controversy into which he has flung himself with reckless haste. In a field where criticism, not to be worthless, should be absolutely accurate, he has made himself responsible for misstatements, so wide in their aberration, so censurable in their levity, so mischievous in their incalculable consequences, that the whole of this review may fitly be devoted to their exposure and correction.

Among other topics dealt with in this little work, Mr. Gladstone is particularly anxious to uphold the early origin of a great part of the Psalms, and the Mosaic origin of the Levitical legislation, as regards very much, if not the whole, of its contents. As might be expected from his training and intellectual habits, he sets great store on authority in matters of theological opinion. But the authority of tradition cannot here be invoked, for it is the very question in dispute; nor can the judgment of even very eminent scholars on the orthodox side be appealed to with much advantage, since names at least as eminent may be set against them on the opposite side. Accordingly, Mr. Gladstone adopts the course of quoting in favour of his views the critic who is thought to go farthest in denying them; and when this is no longer possible, he tries to discredit him by the charge of haste and fickleness in forming conclusions on questions of Biblical criticism. The leader singled out for such treatment is Wellhausen.

In 1878 that famous scholar brought out a new edition of Bleek's *Einleitung in das Alte Testament*, containing some additions of his own. On the strength of this we are told that

"in editing and revising the work of Bleek, Wellhausen accepts in a great degree the genuineness of those Davidic Psalms which are contained in the First Book of the Psalter. But I have been told that this position has been

abandoned, and that, standing as he appears to do, at the head of the negative critics, he now brings down the general body of the Psalms to a date very greatly below that of the Babylonian exile. It is certainly unreasonable to hold a critic to his conclusions without exception. But, on the other hand, it may be asked whether, in order to warrant confidence, they ought not to exhibit some element of stability?"

In a note it is added that

"so recently as in the fifth edition (Berlin, 1886) the Bleek-Wellhausen work assigns much weight to the Davidic titles; gives to David nearly fifty Psalms; and holds that there is no Psalm later than Nehemiah, few so late" (pp. 13, 16).

It is a great pity that Mr. Gladstone was not more inquisitive or his informant more communicative. For in a work dated 1884—two years before the appearance of the fifth edition of the *Einleitung*—Wellhausen had already stated that *all* the Psalms originated in the post-exilic period (*Skizzen und Vorarbeiten*, i., p. 89). What is the explanation of this seeming inconsistency? It is very simple. I have before me the first edition of the *Einleitung* above referred to, dated 1878. On turning to the preface, I find that Wellhausen has carefully defined the extent of his responsibility for opinions expressed in the joint work, limiting it to certain specified sections and bracketed passages. Among the latter I find a note on p. 506 concluding with the significant words, "the question is not whether the Psalter contains any post-exilic, but whether it contains any pre-exilic Psalms."

Again, we hear that Wellhausen:

"in giving Bleek's 'Introduction' to the world, stated it as his opinion [*sic*] that there is a strong Mosaic element in the Pentateuch" (p. 41). "Bleek himself, sustained by Wellhausen as late as 1886, held that Moses had a hand (*einen Antheil*) in the Legislative Books. Many of the laws, they [*sic*] say, at that date, are without sense or purpose except in regard to circumstances which disappeared with the Mosaic period. . . . In dealing with the Pentateuch, we stand, at least as to the three middle Books, upon historical ground" (p. 173).

The unfortunate reader, at least, is not standing on historical ground when he hears such statements as this; and one shudders at the depth of ignorance exhibited by foisting such views on Wellhausen as held by him four years ago—perhaps I should rather say, at the perversity of a theologian who shuts both eyes close to keep out the light. For he goes on to mention what he calls "a later work of Wellhausen's (*Die Composition des Hexateuchs u. d. historischen Bücher*, 1889)," on which he makes sundry disparaging remarks (p. 174), in the evident consciousness that its views are adverse to those previously cited, while passing over in absolute silence some significant facts which he either knows or ought to have known. The work in question, so far as it relates to the Hexateuch, is a second edition of one issued in 1885, which, again, was a reprint of certain articles contributed to a theological review in 1876-77. Wellhausen has explained that he reprinted these articles without alteration because they are frequently referred to in the subsequent controversial literature of the subject, and such references could only be

verified by a comparison with his exact words as they originally stood. His theory of Hebrew history is duly developed and reasoned out in the well-known *Prolegomena to the History of Israel*, first published (under a slightly different title) in 1878, an English translation of which, as Mr. Gladstone himself mentions, appeared in 1885; and the most cursory examination of its contents should have set him on inquiring how far its author must be held responsible for the views embodied in Bleek's *Einleitung*. On referring back to that work he would have found that Wellhausen, while allowing the expression of his predecessor's opinions to stand, has implicitly contravened them by inserting a succinct statement of his own opinions, written, I may add, in a remarkably clear and interesting style. Thus, the attempt to discredit and damage hostile criticism by charges of instability proves to rest in evidence that the slightest examination would have shown to be illusory; and with it the attempt to turn a battering ram into a buttress utterly breaks down.

It may be said that this is a manoeuvre to draw off attention from the central issue of the controversy by fastening on points of comparatively trifling importance. But this would be to take a very superficial view of the question. For, by his attack on Wellhausen, Mr. Gladstone has unconsciously given us the measure of his competence to come forward as a historical critic. How can a man who loses his head directly, where the materials for forming a judgment are so simple and so readily accessible, be expected to grasp the elements of a problem so vast and so intricate as the composition of the Hexateuch and the chronological sequence of its different portions? It was easier to distinguish between the contributors to Bleek's *Einleitung* than between the Deuteronomist and the Priestly Legislator. It was easier to date Wellhausen's first essays correctly than to date the narratives of the Creation and the Flood. It was easier to ascertain that the traditional view of Moses was never at any time within the last fourteen years supported by the author of the *Prolegomena* than that it was unsupported during three centuries by the prophets of Israel.

Mr. Gladstone is entirely right when he urges that the decision of specialists with regard to the date and authenticity of the Hebrew Scriptures should not be imposed on the public as authoritative, nor accepted without examination. Various points of the highest importance have been mooted in this controversy on which a fairly well-educated reader is quite entitled to decide for himself—much better entitled, indeed, than he is to sit in judgment on many political and legal questions. It is also quite legitimate and even necessary that some who are not specialists should offer provisional guidance and instruction to others who know less and have less leisure than themselves. Prof. Mivart, who is no more a Hebrew scholar than Mr. Gladstone, has recently given an excellent summary of the results reached by modern criticism of the Old Testament. But to discharge this office some qualifications other than parliamentary dexterity are needed. There must be a certain patience to follow

out long trains of reasoning, however difficult the methods or distasteful the results; a certain ability to restate them faithfully in one's own language; a certain openness to new ideas; a certain temporary suppression of one's own crotchets; a certain aptitude for placing oneself at another person's standpoint—in short, what may be called a certain intellectual altruism.

I am quite ready to believe that Mr. Gladstone has exhibited such qualities at other times or in other controversies; but here and now he holds them in strict abeyance. One or two instances, chosen from among many, will illustrate what is meant. As an argument for the Mosaic origin of the Levitical legislation, Mr. Gladstone urges that, had it been a late fabrication of the priesthood, the prophets would not have failed to reproach them with the fraud:

"We have to remember that the schools of the prophets established a caste which was in professional rivalry with the priesthood, and which presented every likelihood of being its effective censor. We have the written and, I believe, unquestioned productions of this school of prophets reaching back into the ninth century (in the Book of Amos) above two hundred years before the Exile. . . . The supposition pressed upon us is that, during the period when the Books of the Prophets were being produced, the priests foisted upon the nation adulterated, nay, rather, forged works, which they audaciously ascribed to Moses, and which they shaped in the interests of the sacerdotal order. Is it not quite plain that if this had been true, nay, if it had been so much as an approach to the truth, the prophets would, in the interests of righteousness even more than in their own, have made use of the advantages of their position, and would have held up such a flagrant iniquity of the rival class to infamy or rebuke? Yet they do nothing of the sort" (pp. 188-9).

The reference to Amos is rather unfortunate. He did not write in the ninth century but in the eighth. He tells us that he was "no prophet nor a prophet's son," meaning that he did not belong to the prophetic caste or order. His mission was to Israel, not to the priesthood of Judah. And, finally, he bears witness against a Mosaic law of sacrifice by his famous question, "Did ye bring unto me (I alive) sacrifices and offerings in the wilderness forty years, O house of Israel?"

This, however, is only by the way. What I wish to point out is Mr. Gladstone's utter ignoring of the position taken up by Wellhausen and his school. They hold that the Deuteronomic code was made up in the reign of Josiah, when prophecy was in its decline; and that the only great prophet then living, Jeremiah, who was himself a priest, had a hand in its composition; while the Levitical code was composed and promulgated after the Exile, when the prophets had become an insignificant body, devoted to the interests of the priesthood, the way for it having been prepared by Ezekiel, a priest holding what we should call very High Church principles. Elsewhere, alluding to Prof. Huxley's condemnation of a loss alleged to have been inflicted on the Gadarene pig-owners by sending devils into their swine, as a "wanton destruction of other people's property," Mr. Gladstone takes the professor to task very solemnly for implicitly condemning Christ as "a law-

breaker and an evil-doer" (p. 269). Has it never occurred to him that Prof. Huxley disbelieves the whole story, and is trying to make others disbelieve it also?*

Nothing that I have said is to be understood as implying want of respect for Mr. Gladstone's advanced age and great public services. But as these extrinsic considerations ensure for his work a wider circulation than it would otherwise attain, so also they condemn it to a more merciless dissection than serious criticism could waste on the sophistry of any less conspicuous assailant.

ALFRED W. BENN.

OBITUARY.

DR. EDWARD JOHN WARING, C.I.E.

A LARGE circle of friends, in India as well as in England, will hear with regret of the death of Dr. E. J. Waring, a retired surgeon-major on the Madras establishment. He died on Thursday last, January 22, at his residence in Clifton Gardens, in the seventy-second year of his age, a victim to the inclemency of this cruel winter.

Dr. Waring was born at Tiverton in 1819, being the sixth son of Captain H. Waring, of the Royal Navy. An elder brother was well known as a devoted student of history to a former generation of Oxford men. Another member of the family furnished the title, if not something more, to Browning's famous poem; for we have it on the authority of the poet himself that he had met this Waring during his early visit to Russia, and had been impressed by his personality. Dr. Waring's wife (who pre-deceased him) was a sister of the late Dr. Francis Day, the Indian ichthyologist. His early days were spent at Lyme Regis. His first professional appointment was that of medical officer of health in Jamaica (1842), which led to his being employed by the Emigration Commissioners in different parts of the globe. In 1849, he entered the Madras medical service, and was stationed at Mergui in Tenasserim during the whole of the first Burmese War, for which he received the medal. The next twenty years of his life (1853 to 1863) were passed at Travancore, in Southern India, as residency surgeon and also physician to the Raja—an enlightened prince, with whom he was on terms of intimate friendship. On his return to England, he devoted himself to garnering in professional publications the results of his long residence in the tropics, but still found leisure to take part in many charitable works, and also to indulge his taste for collecting rare things.

Dr. Waring's first important publication was his *Manual of Practical Therapeutics* (1854), which has passed through four editions, besides an American reprint, copies of which were placed by the United States Government at the headquarters of every regiment. This was followed by *Bazaar Medicines* (1860), which has become a household friend throughout India, for Europeans and natives alike. In 1868, he edited, for the Secretary of State, the official *Pharmacopoeia of India*; and finally he printed with the New Sydenham Society the *Bibliotheca Therapeutica*, with an appendix containing the bibliography of British mineral waters (2 vols., 1878-79). This work, in which he brought together and arranged the titles of upwards of 10,000 publications, was intended to be preparatory to an *Encyclopædia Therapeutica*. Failing eyesight, with other causes, prevented him from completing this grand scheme; but his collections for it were freely put at the dis-

posal of other medical writers, and in 1887 his valuable library was presented to the Army Medical School, at Netley. On that occasion his life-long friend, Sir Joseph Fayrer, truly said of him: "Dr. Waring is a great author and physician, and a man who has conferred infinite benefits on his profession." In 1864, he was elected fellow of the Royal College of Surgeons, and in 1871 to the same rank in the College of Physicians. More tardily, in 1881, he received the decoration of C.I.E.

As is not infrequently the case with a man whom the world knows only as a learned specialist, Dr. Waring possessed a catholic and cultivated taste in all branches of literature. He knew and loved a rare book. He had brought home with him from India a small but choice cabinet of the curious currency of the South, so different from that of the North; and he would enjoy explaining to a sympathetic visitor how his salary in Travancore was paid to him in *chuckrams*, by means of a board with holes for the tiny coins. Above all, he solaced his declining years with a fine collection of autographs, many of which are illustrative of Indian history. He lived to a good old age, and he had finished his life's work; but the news of his death has come as a painful shock to many who had learned to regard him as a pattern of scholarly industry and genial benevolence.

J. S. C.

SCIENCE NOTES.

THE Chemical Society, which was founded in February, 1841, proposes to celebrate its fiftieth anniversary: (1) by a meeting in the afternoon of February 24 in the rooms of the Society of Arts (where the original meeting was held), when addresses will be delivered and delegates from other societies will be received; (2) by a reception given by the president and council on the evening of the same day in the hall of the Goldsmiths' Company; and (3) by a dinner of the fellows and their friends on February 25 at the Hôtel Métropole.

MR. J. G. BAKER, principal assistant in the Royal Gardens, Kew, has been appointed to the keepership of the herbarium and library, vacant by the retirement of Prof. Oliver, who will now devote himself to editing Hooker's *Icones Plantarum* for the Bentham trustees.

PROF. HELMHOLTZ will reach his seventieth birthday on August 31. Some of his very numerous friends and admirers will take advantage of the occasion to present him with a mark of their esteem. The details are to be settled by a committee, which includes Profs. Hofmann, Du Bois-Reymond, and Virchow.

THE instructive series of British plants exhibited in the botanical gallery of the British Museum (Natural History), Cromwell-road, has now been extended to the mosses. Each species is represented by a specimen, and (in the case of mosses) each genus by a coloured drawing showing an enlarged view of its structure, while a printed description is appended in every case. It is intended to carry on the series through lichens, algae, and fungi—an undertaking of no small magnitude, since fungi alone are nearly double the flowering plants in number of species.

THE annual general meeting of the Geologists' Association will be held at University College, Gower-street, on Friday next, February 6, when the president, Mr. T. V. Holmes, will deliver an address entitled "Further Notes on the Geological Record."

IN connexion with the London Geological Field Class, a course of four lectures will be delivered by Prof. H. G. Seeley on February 7 and the three following Saturdays, at 4.15 p.m.,

* The above was written before Prof. Huxley had explained himself in this sense with his usual vigour of expression.

at the Gresham College, on "The Gravel Beds of the Thames, and its Tributaries in relation to Ancient and Modern Civilisation."

The Flora of Warwickshire. By J. E. Bagnall. (Gurney & Jackson.) Mr. Bagnall's "Flora" is marked by great care and great completeness. He has followed the modern thorough-going plan for "Floras," giving us, in addition to his botanical information, a map of the county, with its ten districts based on the river-drainage, a survey of the elevation, meteorology, and so forth, an excellent account of the geology by Mr. A. B. Badger, and a history of the progress of botany in Warwickshire. Apart from this kind of fulness, Mr. Bagnall's book is the first complete "Flora" of his county. In 1820 Perry published his *Plantae Warwickenses Selectae*, recording only 402 plants, whereas we now find 2457 plants registered as growing in Warwickshire. This large number is, of course, made out by including ferns, Characeae, mosses, Hepaticae, and, among the fungi, Hymenomycetes and Gastromycetes. As to the last, Mr. Bagnall has had the help of Mr. W. B. Grove; but the body of the work is the product of nearly twenty-five years' labour of Mr. Bagnall himself. The book is printed much more carefully than is common with this class of literature, though one record for the finding of *Nitella flexilis* may, as it stands, cause some surprise: "Olten Pool, 1881, in company with Mr. James Groves." Mr. Bagnall asks for new records. We can only give him Warwick Castle, 1881, for *Reseda Luteola*, and the fields between Lapworth and Henley-in-Arden, 186-, for *Colchicum autumnale*. But we lent a guilty hand to digging up some of the latter. It is noted that *Elodea Canadensis* flowers abundantly at all its stations in Warwickshire, but Mr. Bagnall does not mention whether the flower is found of both the sexes. He has also some notes bearing on the great variability of the number or arrangements of stamens or stamens in the *Caryophyllaceae*. For instance, he records the occurrence in 1874 of *Lychnis alba* in a bisexual form. But the whole subject of the irregularity of this group requires further investigation.

PHILOLOGY NOTES.

THE next meeting of the Philological Society, on Friday, February 6, will again be a dictionary evening. Mr. Henry Bradley, who happens to be the president of the society for the current work, will report on his progress with the letter E for the New English Dictionary.

THE American Oriental Society has elected Prof. Ernst Windisch, of Leipzig, as an honorary member.

THE forthcoming number of the *Babylonian and Oriental Record*, commencing a fifth volume, will contain the following articles:—"The Chaldean Persens," by M. Jules Oppert; "The Lydian Legend on four Coins of Alyattes," by M. J. Imbert; "The Yovanoff Bull," by M. V. Scheil; "The Tan Shu," by Prof. C. de Harlez; "Tablet of Mentusa (XIIth Dynasty)," by M. H. Mengedoh; "The Silk Goddess of China," by Prof. Terrien de Lacouperie; "A Syriac Word," by Prof. J. Van den Gheyn.

PROF. MAURICE BLONFIELD, of Johns Hopkins, has reprinted from the *American Journal of Philology* a second series of "Contributions to the Interpretation of the Veda." As before, his object is to explain obscure passages in the hymns by means of the ritual practices which accompanied their recital. For example, he explains both the *jāyānya* charm and the *apacit* hymns in the Atharva Veda as having reference, not to poisonous insects, but to different kinds of diseases. The so-called

fire ordeal hymn of the Atharva Veda he interprets as an imprecation against an enemy. He further discusses the Vedic group of charms for extinguishing fire by means of waterplants and a frog, and the mention of women as mourners in the Atharva Veda.

AT the last meeting of the American Oriental Society, Prof. Morris Jastrow, of Philadelphia, read a paper upon "The Founding of Carthage." He started from the tradition reported by Philistus (Euseb. ed. Schoene, ii. 50) that Carthage was founded by 'Aḡāpos and Kapxḡḡav. From the variant reading ḡāpos, it is clear that the former word is the eponym of Tyre. The latter, he argued, is similarly the eponym of a Phoenician colony in Cyprus which joined in the foundation of African Carthage. This Phoenician colony in Cyprus he identifies with Kartihadašti of the cuneiform inscriptions, which Schrader has shown to be identical with the Greek Kition.

DR. GLASER'S last discovery is a very interesting one, and confirms the antiquity which he assigns to certain of the inscriptions found in the South of Arabia. One of these, which was copied by M. Halévy, states that it was inscribed by order of two Minaean governors of Tsar and Ashur, and expresses the thanks of the authors to the gods for their rescue from the war between the kings of the North and of the South, as well as for their deliverance in Egypt at the time of the war between Egypt and Madhi. Tsar and Ashur have already been identified by Prof. Hommel with Tsar, the chief fortress on the Asiatic frontier of Egypt, and the Ashurim of Southern Palestine. Dr. Glaser at first supposed that Madhi was the Edomite tribe Mizzah; but he now points out that the name must be identified with that of the Mazai of the Egyptian texts, who first appear in the time of the XVIIIth Dynasty as nomad huntsmen, and subsequently formed a corps of the Egyptian army, while in the kings of the North and South we must see the Hyksos prince who held his court at Tanis, and the native princes of the XVIIIth Dynasty who ruled at Thebes. The inscription, therefore, will go back to the period when the war broke out between Apophis and Ta'a, which eventually led to the expulsion of the Hyksos kings.

MEETINGS OF SOCIETIES.

ARISTOTELIAN SOCIETY.—(Monday, Jan. 19.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—Mr. F. C. Conybeare read a paper upon "The late Prof. Clifford's Philosophy." The paper commenced with an analysis of the essay upon the nature of things in themselves, in which Clifford starts from the distinction between the object as equivalent to a personal feeling, real or possible, which is a subjective appearance only, and the eject or feeling, real or possible, as inferred to exist out of myself and in another. The bearing of the distinction upon language and ethics was pointed out, and followed by a criticism of Clifford's reduction of ultimate reality to an absolute feeling, to a feeling such as it may be conceived to be prior to the genesis of a personal self. The lecturer contended that the doctrine, like Hume's, led straight to philosophic Nihilism, and that Clifford's deduction from the absolute feeling of the world and of the developed ego was only achieved by tacitly assuming in the unrelated feeling characteristics which it only bears in the medium of the developed self and memory.—A discussion followed, in which the president, Mr. Bernard Bosanquet, and others took part.

ROYAL ASIATIC SOCIETY.—(Monday, Jan. 26.)

E. L. BRANDRETH, Esq., in the chair.—Prof. Peterson read a paper on "Pāṇini, the Poet and Grammarian; with some Remarks on the Age of Indian Classical Poetry." Prof. Peterson cited verses ascribed in the anthologies to the poet Pāṇini, and gave reasons for believing that he and

the great grammarian of the name were one and the same person. The verses belonged to a style of writing which had lately been represented as belonging to the "Renaissance period of Sanskrit literature," as Prof. Max Müller called it. This Renaissance theory was based largely upon Ferguson's speculation with regard to the Vikramāditya era, which, according to him, begun in A.D. 544, whereas it purported to extend from 56 B.C. Prof. Peterson argued that this theory was no longer tenable, and went on to show that poetry of the kind exemplified in the books of Kalidāsa was already an old art in India in the first century of our era. It reached back at least to the poem on the life of Buddha by Asvaghosha, a Brahmin converted to Buddhism, who wrote in the time of Kanishka (A.D. 78). Prof. Peterson thought that the great triad of grammarians—Pāṇini, Katyāyana, and Patāñjali—were all poets as well, and held that it was no longer desirable to regard with distrust the tradition which assigned Vikramāditya and his court to 56 B.C., and represented him as surrounded by famous poets.—The reading of the paper was followed by a discussion, in the course of which Mr. Rusden drew attention to a remarkable similarity of thought between one of the verses quoted by Prof. Peterson and a passage in Horace.

FINE ART.

OLD MASTERS AT THE ROYAL ACADEMY.

III.

IT would be impossible to point to a finer portrait by Hogarth than the little-known "Mrs. Desaguliers" (W. C. Cartwright, Esq.). This represents, with extraordinary directness and force, a young lady of much sprightliness and a beauty not exactly of the higher order, attired in a gala costume which appears at least fifty years earlier than the date of the portrait. Solidly and, in its way, brilliantly painted, though with the hardness inseparable from the master's peculiar method, its intense vitality puts into the shade even the fine and very living performances by Reynolds and Gainsborough, which are its immediate neighbours.

Something of the Hogarthian humour, though not the dramatic genius or the power of realisation of that great tragi-comedian, descended to Johann Zoffany, who, with all his drawbacks of hardness and opacity as a painter, suggested with rare intuition the true individuality of his sitters; and portrayed them, too, with a sly seeming-unconsciousness such as adds much to the zest of the beholder, who deems that he discovers for himself what the unseen prompter has unobtrusively hinted to him. Among some of those delightful family portraits on a small scale, in which he is seen at his best, we may select for especial mention Lady Sarah Spencer's "Portrait Group," showing, in stiff attitudes amusingly suggestive of photography in its earlier stages, a family of country gentlefolk, whom we may surmise to be of a somewhat rustic order. This includes an elder lady, who is a very Mrs. Hardcastle in fussiness and *endimanché* splendour, and a younger one playing the mandolin, upon whose devoted head the senior has evidently clapped one of her most portentous turbans. By the side of them an elderly gentleman poses with much *naïveté* and complacency. Real skill is shown in the careful modelling of the heads and in the rendering of the elaborate costumes. Sir Joshua Reynolds has rarely, even at Burlington House, been seen to greater advantage than on the present occasion. He can be judged not only—as at many previous exhibitions—by the still beautiful ghosts of once glowing works, but by more than one performance in which are still displayed, relatively unimpaired, the charms of a colour seeking to unite the magic of the Venetian tints with the sombre glow of a Rembrandt. The "Master Bunbury" (Sir E. Bunbury, Bart.),

painted in 1780, shows with perfect simplicity, as well as with all that love for childhood in the expression of which the master stands unrivalled, a bright-eyed urchin, clad in a ruby velvet coat and dark yellow breeches, gazing out of the picture with the fixed and unconscious gaze of a bright-eyed squirrel. In perfection of preservation, as in true charm of delineation, this more than rivals that still brilliant piece of colour, the famous "Young Fortune-tellers" (Sir Chas. Tennant, Bart.), in which are given in fancy dress the portraits of two beautiful children, Lord Henry and Lady Charlotte Spencer. The fascination of the picture cannot be denied or altogether withstood; but it is none the less a marked example of that false and exaggerated *naïveté* into which Reynolds was not infrequently betrayed in his excessive straining after archness and a seductive *mutinerie*. The "Viscountess Crosbie" is the almost equally well-known portrait in full length of a beautiful and vivacious lady, who is seen fronting the spectator, moving onward with a swift, graceful motion. Whatever may be thought of the doubtful proportions of the figure, few will be found to gainsay the assertion that the head is, in the irresistible animation of its bright youthfulness, one of the most remarkable painted by the master. The whole is a striking example of that "momentary" quality which has been praised in the works of Sir Joshua. In this exceptional case the momentariness, expressing as it does the main, over-mastering quality of the lively creature portrayed, is entirely successful. Had the art of portraiture, however, been confined or even mainly directed to the representation of ephemeral phases of expression, its scope would have been singularly contracted, and its chief glory—the suggestion of mental as well as physical individuality—obscured. Faded as are the flesh-tints in the beautiful "Portrait of Miss Kennedy" (Sir E. Bunbury, Bart.), one is still, in contemplating it, inclined not to disagree with the dictum of Sir Joshua himself:—"It has more grace and dignity than anything I have done, and it is the best coloured." It is difficult, however, to connect the sobriquet of "Polly Kennedy" with this haughty and just a shade fretful beauty, whose face and attitude are the perfection of high-bred grace. Exquisite combinations of peacock-blue, dark green, crimson, and gold are obtained in the sumptuous pseudo-oriental costume and accessories, all of which must be from the artist's own brush.

To see Gainsborough in perfection this year it is necessary to go to the New Gallery, for here are only two first-rate performances from his hand. One is the easy and delightful "Portrait of James Christie, Esq." (James Christie, Esq.), which places before us in a three-quarter length, with his arm leaning on a picture—evidently a Gainsborough landscape—the founder of the well-known firm of auctioneers. This was painted in 1778, and presented by the painter to the sitter. To an early period of the master's career must belong the often-exhibited "Miss Hipplesey" (Sir C. Tennant, Bart.)—a lady of great physical attractions, but not altogether reassuring expression, who almost fronts the spectator in a low white dress with a mantle of cold bright blue. The modelling is much more solid and careful, if less broad, than that of the painter's most characteristic manner; and the true individuality of the model is more strongly emphasised, because artificial grace has been less sought for. The quality which is unmistakably Gainsborough's is that hardly controlled animal vivacity of spirits which he had the secret of exhibiting in features outwardly in perfect repose.

A Romney of exceptional tenderness and dignity is the "Portrait of Mrs. Carwardine and

Child" (Lord Hillingdon). It is a trifle dull in colour even for a Romney—and as a colourist he always suffers much from a comparison with his great rivals—but the design has an unforced harmony and nobility, the conception a simple human pathos, such as has hardly been attained either by Gainsborough or Reynolds. The mother and child are here absolutely one in mysterious sympathy and love, and the modesty of nature is not overstepped, even by a hair's breadth. An example of Romney in his least interesting phase—that of the only mildly interested limner of fashionable beauties—is the over-cleaned and tiresome "Portrait of Mrs. Powys" (Lord Hillingdon). Much better in every respect is the "Lady Edward Cavendish Bentinck"—a young lady quaintly and becomingly attired in a diaphanous white cloak, with a large white muslin hat tied under her chin with blue ribbons. A superficial modish elegance is shown in the very happily-designed "Portrait of Lady Milnes" (Lord Houghton)—a beauty very conscious of her undeniable charms; but this lacks, like many pictures of its class from the same brush, true life and characterisation. The earlier and better phase of Hoppner's practice is unusually well displayed in the "Portrait of Mrs. Gwyn" (Sir C. Tennant)—the Miss Horneck who, from some verses of Goldsmith, obtained the name of the "Jessamy Bride"; this is a very happy, but also a quite un concealed, adaptation of Sir Joshua's style, much lacking in strength, but not in charm. Stronger and more characteristic, but, at the same time, much coarser in technique, is the "Mrs. Hoppner" (James Christie, Esq.).

Turner may be studied here in almost every phase of his progress and transformation. Very difficult to appreciate in its present darkened and obscured condition is the "Kilgarran Castle" (M. H. Colnaghi, Esq.), which illustrates the first manner. To the second belong the fine pair of landscapes, both called "Scene in the Park at Lowther Castle" (the Earl of Lonsdale), and both painted in 1810. The more beautiful of the pair is the No. 131, in which the castle appears rather too definitely in the middle distance, under an evening sky still saturated with the rays of the dying sun, while cattle enliven the foreground on the skirts of a wood, which casts on the meadows the long shadows of approaching evening. The influence of Cuyp, in the treatment both of the vibrating golden atmosphere and of the wooded foreground, makes itself unmistakably felt. The pathetic, but not sad, quality of this simple English scene is such as could not be infused into a "composition," however noble, however well pondered. Of the class of so-called classical compositions, in which Turner openly came forward as the emulator and imitator of Claude le Lorrain, it would be difficult to point to a finer or more important example than Sir John Pender's "Classical Landscape: Mercury and Hersé," painted in 1811, and worthy to take rank with the "Crossing the Brook" at the National Gallery, if not quite with Lord Yarborough's "Vintage at Maçon," which, with all its classicism, is more sincere and more solidly based on nature. Nothing fresh need be said about Lord Wantage's "Sheerness," which has very recently been seen at the Grosvenor Gallery. The "Wreckers" (Sir John Pender) is a poetic and unusually well-preserved study of the warring elements let loose, serving as an admirable pretext for the indulgence in that tragic, unrestful mood which is the main characteristic of the master's late time. The sandy shore, the still angry encroaching waves, the black tempestuous sky, are presented with a magic power and a mity of effect which it would be difficult to parallel.

Even by the side of this great piece a most luminous and beautiful Bonington, "Low Tide on the French Coast" (Sir C. Tennant), succeeds in maintaining itself. Though it is open to much doubt whether certain problems of linear perspective connected with the figures and shipping in the middle distance have been accurately solved, and the awkward figures of children in the extreme foreground may be blamed, it is impossible to resist the fascination of one of the most beautiful evening skies to be seen here—one which any Dutchman of them all might be proud to have painted.

After several Constable years, we have now a Crome year; and if we do not find in the latter master the masterly breadth of execution, the originality of standpoint, the purely English quality to which the former owes his commanding position in the English school, we may enjoy in his work a far greater variety, a more intimate pathos, and a subtler penetration of Nature's secrets than Constable can show. The unusual and unusually exquisite "On the River Yare" (H. G. Barwell, Esq.) shows the river all pale-green and grey under the last livid gleam of sunlight which fights its way through menacing thunder-clouds. Here Crome has evidently been inspired by Van Goyen, whose method he applies with the happiest results to an English scene. In the noble study of trees, "The Willow-Tree" (G. Holmes, Esq.), the facile brush of Gainsborough has furnished an example for the treatment of foliage; but the drawing of tree trunks and branches is finer and more accurate than his. The much-admired "Poringland Oak" (Rev. C. J. Steward) shows everywhere, and especially in the peculiar accentuation of the branches, the influence of Crome's chief idol, Hobbema. The luminous sky, the middle distance, and the foreground, with its jewel-like emerald tones, are alike admirable; but noble as is the rendering of the great oak which gives its name to the picture, it unpleasantly suggests a tree stuck upright in the ground, rather than one whose roots still have a firm hold in the soil.

CLAUDE PHILLIPS.

THE LATE DR. SCHLIEMANN.

THE following letter has been addressed to Mme. Schliemann, on the occasion of her husband's death, by the heads of the foreign archaeological schools in Athens:

"The undersigned representatives of foreign archaeological institutions at Athens hereby desire to give public expression to their sense of the serious loss to archaeological science caused by the death of Dr. Henry Schliemann.

"They wish to take this opportunity of making due acknowledgment of his distinguished services in exploration and excavation of ancient Greek sites and monuments, which have undoubtedly advanced to an exceptional degree the study of ancient life and art, and have opened out new fields of enquiry yielding results important in the present and of great promise for the future.

"More than any man of our time he has awakened wide-spread interest in the great Hellenic past, and has converted what was previously a study confined to the few into a living influence which has enriched the intellectual resources of all civilised communities.

"They also desire to express their deep sympathy with the family of their distinguished colleague.

"Signed,

"W. DÖRPFELD, 1st Secretary	{ German Imp. Archaeological Institute at Athens
"P. WOLTERS, 2nd Secretary	
"C. WALDSTEIN, Director	{ American School of Classical Studies
"R. B. RICHARDSON, Annual Director	
"E. A. GARDNER, Director, British Archaeological School."	

CORRESPONDENCE.

THE ANCIENT EGYPTIAN MONUMENTS.

LUXOR: Jan. 13, 1891.

The announcement in the *ACADEMY* of December 27, that a numerous signed memorial has been presented to Lord Salisbury praying for the appointment of an official inspector of the Egyptian monuments, has given great satisfaction to those of us here who are interested in the subject. It cannot be too strongly impressed on archaeologists and lovers of art that if the monuments still remaining are to be preserved, the initiative must be taken by the Foreign Secretary. Whatever he orders will be carried out. But unless he gives precise and definite instructions nothing practical will be accomplished. It might have been thought that the agitation of last autumn would have stirred the Cairo officials to action. It served no other end than to promote a certain amount of aimless discussion. The suggestions of members of the Antiquities Committee like Gen. Grenfell and Col. Ross, who to a knowledge of the subject unite also an earnest desire to save the monuments, were invariably vetoed by the obstructive majority. Hard-working officials, having the management of important departments, cannot be expected to waste hours in attempting to reason with colleagues whose evident intention is simply to thwart action; and if Gen. Grenfell resigns his membership of the committee, as he has stated he will, he would certainly be fully justified in doing so. It is, perhaps, difficult for those unacquainted with Egyptian politics to realise the motives influencing the opposition. Unfortunately for the interest of art, this antiquities question is one of the few in which the native Pashas can indulge their passion for intrigue without fear of consequences. Opposition on what are considered more serious matters may be accompanied by loss of place. In this instance it is somewhat ostentatiously displayed, as a kind of investment which may yield good interest in the future. That the calculation is entirely fallacious is, of course, evident to those aware of the settled policy of England in the East, but then the native Pashas' notions on that subject are somewhat hazy.

Sometimes, however, even on this question, the opposition finds itself rather sharply pulled up, as happened two or three weeks ago in the case of Mr. Flinders Petrie's excavations. He came out to Egypt last November on the understanding that he was to work at the Pyramid of Médun under the same conditions that he excavated last year at Hawara. After he left Cairo new rules were made by the committee, of such a nature that Mr. Petrie, on learning them, decided to abandon his work, and discharged his men. This was what the majority of the committee desired. The fact of his being an Englishman, and a very successful excavator, greatly esteemed at home and with a European reputation, offered a rare opportunity for displaying their animus, and placing something to the account of the "investment." One member of the committee went so far as to say that "Mr. Petrie must be made to understand that there is no room for him in Egypt." Fortunately, the matter came to the ears of Sir Evelyn Baring, who summoned Mr. Petrie to Cairo, ordered the committee to abolish their late regulations, and in consultation with Mr. Petrie framed new ones, which will be decidedly more favourable to him than those under which he has hitherto conducted his operations.

This incident will explain to those interested in the preservation of ancient monuments how matters really stand here. They are sufficiently influential to demand of Lord Salisbury that the Egyptian temples be placed under efficient inspection. This can

only be done by the department of public works. And when Sir Evelyn Baring informs Sir Colin Monierieff and Col. Ross that the responsibility of preservation rests with them, unhampered with any conditions, we may entertain a reasonable hope that what yet remains of the monuments will not be lost.

As to their present condition, I notice a marked deterioration since last I visited Upper Egypt, three years ago. The natural decay has gone on to an alarming extent. Fine passages of sculpture, where the stone is saturated with nitre, can be obliterated by the pressure of the finger; and this might have been prevented if the stone had been properly washed when it was first uncovered. It is true that some tombs are shut in with doors; but the temples are unenclosed, and the natives have free access to them, which means that the decoration is at their mercy, the same as previously. In places where decayed stone ought to have been cut away and supplied with new, there is simply a plastering of Nile mud mixed with chopped straw. In short, the evidences of decay and wreckage in all directions is simply heart-breaking.

It cannot be otherwise under the present system. In the temperate climate of Western Europe it would be physically impossible for one man to direct a museum and overlook monuments extending over nearly a thousand miles. Consequently, for all purposes of practical study the museum is next to valueless, and the monuments are passing away before our eyes. Whether the museum of Ghizeh shall fulfil the function it might for this generation, and whether the monuments are to be preserved for future generations, is in the hands of the educated public of England.

HENRY WALLIS.

NOTES ON ART AND ARCHAEOLOGY.

THE object of The Royal Society of Painter-Etchers being not merely the restoration of original etching, but the re-infusion into all forms of the engraver's art of the painter-like qualities which it has lost, it has been determined by the council to include in this year's exhibition (in March) those plates of the *Liber Studiorum* which were executed by Turner himself.

GENERAL SIR FRANCIS GRENFELL, whose important discoveries at Assuan in 1885 have earned for him the gratitude of Egyptologists, has had a battalion working for the last month at Abû Simbel. An inscribed tablet, of which there appears to be no previous record, and two broken statues have been found on the west side of the Great Temple. The vast accumulation of sand at Abû Simbel renders the work of excavation one of unusual difficulty, as well as of promise.

MISS AMELIA B. EDWARDS'S forthcoming volume will be entitled *Pharaohs, Fellahs, and Explorers*.

THE fourth ordinary general meeting of the members of the Egypt Exploration Fund will be held on Saturday, February 20, in the hall of the Zoological Society, Hanover-square. The President, Sir John Fowler, will take the chair at 4 p.m.

THE *Art Journal* for February will contain the conclusion of the illustrated article on "Lord Tennyson's Childhood."

It is proposed to place a memorial to the late Archbishop Thomson in York Minster, in the form of a recumbent effigy, similar to that of his predecessor, Vernon-Harcourt.

THE late General Sir Edmund Whitmore has bequeathed to the National Portrait Gallery a picture of Sir George Brown, whose aide-de-camp he was in the Crimea.

DURING the three first days of next week Messrs. Sotheby will be engaged in selling the large collection of coins formed by the late Dr. Churchill Bahington, some time Disney professor of archaeology at Cambridge. The collection is particularly rich in Greek pieces, many of which came from historic cabinets. There is also a series of early British coins and Roman coins relating to Britain.

THE French minister of public instruction has commissioned M. Puvis de Chavannes to execute two cartoons for Gobelin tapestries representing the girlhood of Joan of Arc.

THE STAGE.

STAGE NOTES.

THE Globe Theatre, which has had so much bad luck, has now been re-opened by Mr. Norman Forbes, an intelligent young actor who has been able, it seems, to assume managerial responsibilities. We thank him for abolishing the little fussiness of fees for play-bills, and it is doubtless to the comfort of his audience that he has introduced the electric light. These be brave things. But what about his pieces? We question whether, in the choice of these, he has shown as much judgment; and, after all, it is by pieces and performances—not by free play-bills and unlimited electric light—that a theatre must stand or fall. Mr. Norman Forbes has been ill-advised in selecting a version of the now well-known "Gringoire" of De Banville as one of his two opening plays. All that we can say for the choice is that it shows a disposition to get away from the commonplace; but why get away from it in this particular direction? The adaptation of De Banville's drama by Mr. Besant and Mr. Walter Pollock is good enough for the plain man; and though a great expert of the theatre did say, years ago, that Mr. Wills (whose adaptation Mr. Norman Forbes produces) has written some of the best blank verse done since Otway, there will scarcely, we think, be found a place for the new adaptation of "Gringoire." And again, though it may be interesting, is it quite modest of a very young actor-manager to offer himself to the public in a rôle in which Mr. Beerbohm Tree is seen so often and with such singular success? We trow not. We consider it a mistake; but for this mistake Mr. Norman Forbes, to some extent, makes amends by the selection of a less important character in the second piece he plays. You see he is not a low comedian, and he has the sense to know it. This second piece—by far the longer of the two—is called "All the Comforts of Home." It is a farcical comedy, or rather, a very long farce, adapted from the German. As given upon the London stage, it is ill constructed. But two or three pretty young ladies, and one or two clever ones, perform in it. Miss Mary Ansell—perhaps a beginner—has a measure of charm, and works hard. Miss Lily Linfield makes a hit by a dance. But the best played part is that of one Theodore Bender, which is played by Mr. Harry Paulton. Of course this long established comic actor knows his business perfectly. We doubt, however, whether his performance, or the best efforts of the other ladies and gentlemen, will suffice to secure popularity to the present Globe play-bill. It has been asked already—and we echo the inquiry—hasn't the new young manager some stronger card up his sleeve?

FOR two or three nights last week Mr. Beerbohm Tree—owing, we are sorry to say, to a sharp bronchial attack—was out of the Haymarket bill. The public suddenly found that the young actor, Mr. Frederick Harrison—now Mr. Tree's acting manager—was ready and thoroughly able to step into Mr. Tree's

shoes as the Duke of Guisebury in "The Dancing Girl." Mr. Harrison performed an exacting part with remarkable vigour and effect. It was indeed a *tour de force* of a rare kind, and it demands this word of chronicle.

MISS MARIE FRASER produced Ibsen's "Doll's House" for a single performance last Tuesday at Terry's. We did not go. The lady's performance—as word is brought to us—was good, but the piece is said to have been received coldly. Did the enthusiastic Ibsenite forget to be present to see to it that a measure of applause—unwarranted by the art—was at least bestowed upon the topsy-turvy morality of the production?

MUSIC.

"IVANHOE."

THE Royal English Opera House opens to-night with Sir Arthur Sullivan's "Ivanhoe." Scott's novel of that name has already formed the subject of more than one opera, of which perhaps the best known—by name at any rate—is Marschner's "Templer und Jüdin." In that work we have the scene in the friar's cell, the taking of the castle of Torquilstone; and at the end Ivanhoe appears as Rebecca's champion at Templestowe. But though almost the same characters, and to some extent the same events, are to be found in Sir A. Sullivan's new opera, there is no resemblance in the music.

The moment has not yet come to discuss the work; but from a perusal of the vocal score we may venture on a brief description of the plot, as given by the librettist, Mr. Julian Sturgis.

The first act opens in the Hall of Cedric the Saxon. Brian de Bois Guilbert and Maurice de Bracy arrive, and are welcomed by Cedric. The supper scene, as related by Scott, is closely followed by the librettist. The drinking song for baritone solo (Cedric) and chorus is the chief musical feature of this opening scene. Towards the close De Bracy proposes to the Templar to seize Rowena when returning from the lists at Ashby. In the next scene Rowena is found alone, singing to "the moon clad in silver mail." Ivanhoe, disguised as the Palmer, is brought to her, and she anxiously inquires after the Crusaders, and especially after Ivanhoe. The act closes with the "tournament" music, the defeat of the Templar, and the recognition of the "disinherited" knight as Ivanhoe.

The second act opens in Friar Tuck's cell, and there are two songs, one for the disguised King Richard, the other for the "thievish" friar. The song for the latter is in good old English style, and it ends with a "Ho jolly Jenkin" refrain, in which both join. Given a good rendering, the success of this number is assured. The two are about to fight, when Locksley arrives, demanding "succour for Cedric, Thane of Rothwood, and for his ward Rowena," who have been carried off to Torquilstone; Ivanhoe, wounded, lies in the same accursed walls. The next scene takes place within the castle of Torquilstone. De Bracy offers liberty to Rowena and her father if she will marry him. Then the Templar appears and sings of his passion for Rebecca. In scene 3 Ulrica declaims her wild legend, founded on the one given in the novel. After this Rebecca comes to her asking if there be no way of safety. The maiden's prayer, "Lord of our chosen race," is said to contain part of a genuine Hebrew melody. The act closes with a long duet between the Templar and the Jewess. This is evidently one of the most ambitious numbers in the work.

The third act opens still in the castle of Torquilstone. Rebecca is watching over the wounded knight. She sings a lullaby soft and sweet, Ivanhoe, too, has his song. The storming and

burning of the castle bring the scene to a close. As in the novel, the Jewess is saved by the Templar, and Ivanhoe by King Richard. The next scene, with its opening chorus, "Light foot upon the dancing green," must come as a welcome contrast after the exciting Torquilstone music. The outlaws are assembled in the forest. Richard enters with Ivanhoe. We have the pardon of De Bracy; Cedric becomes reconciled to his son, and consents to his union with Rowena. In this scene there is a short quartet and a short love duet. The finale gives the arrival of Ivanhoe at Templestowe, as Rebecca's champion, and the death of the Templar.

Mr. Sturgis has cleverly condensed Scott's novel, so full of incident, and there is much poetry and force in his lines. The weak part of the book seems to us to be the divided interest caused by the two maidens, Rowena and Rebecca; but for this fault, if it be such, the novelist is responsible. Of Sir A. Sullivan's music, we will only venture to say that it is clever, full of melody, and for the most part thoroughly characteristic of the composer. It may be mentioned that he makes judicious use of representative themes.

J. S. SHEDLOCK.

RECENT CONCERTS.

HERR STAVENHAGEN gave an orchestral concert at St. James's Hall on Thursday, January 22. He commenced with Beethoven's Concerto in C minor (Op. 37). The playing was sound, but the work presents little or no difficulty to a pianist who has mastered Liszt. Herr Stavenhagen's rendering of some transcriptions by this composer were immensely appreciated, and he added one of the Rhapsodies. The novelty of the evening was a scene from G. Kastrapp's drama, "Suleika," set to music and conducted by the concert-giver, and sung by his wife. Mme. Stavenhagen, connected with the Weimar Court Theatre, is an accomplished dramatic vocalist. The music, like so much that is produced by young German composers, is inspired by Wagner and Liszt: a double portion of their spirit seems indeed to have fallen upon Herr Stavenhagen. The lady was much more successful in the grand scene from "Der Freischütz." The programme concluded with Liszt's Concerto in A. The playing was all that could be desired, but the work is hideously ugly. Mr. Arthur Friedheim was the conductor.

Herr Stavenhagen was pianist at the Popular Concert on Saturday afternoon, and played Beethoven's Sonata in A flat (Op. 110). His reading of the first movement was, as usual, somewhat affected. He took the Scherzo at *presto* pace, and the Trio was far from neat; the rest of the work was more satisfactory. The pianist was not at his best, but still he was encored, and gave Schubert's Minuet in B minor. Beethoven's Septet was splendidly performed by Mme. Neruda, and Messrs. Straus, Egerton, Paersch, Wotton, Reynolds, and Piatti. This popular work drew a large audience. Mr. Brereton, the vocalist, sang with success Mozart's "Qui sdegno" and Purcell's fine song, "Arise, ye subterranean winds." On the following Monday evening another popular work was given—viz., Schubert's Octet in F (Op. 166) for strings and wind. In spite of its length it was performed without the usual break. Mme. Neruda led; and her associates were Messrs. Ries, Straus, Egerton, Paersch, Wotton, Reynolds, and Piatti. The Beethoven Septet and the Schubert Octet are two magnets which never fail to draw the public, and never will fail so long as pure melody has power to charm. Mr. B. Schönberger played for the first time at these concerts Brahms's Sonata in C major. It is

marked as Op. 1, although Schumann, in a letter to Joachim, speaks of it as Op. 5. Anyhow, it is one of the master's earliest productions, one of those which attracted Schumann's notice and caused him to prophesy a great future for the young artist—a prophecy which time has proved true. The opening Allegro is remarkable for its energy. The charming and clever variations on an old *Volkslied* are supposed to have been written when Brahms was only fourteen years of age. A lively Scherzo and a fiery Finale complete the work. Mr. Schönberger played splendidly, and added Chopin's Etude in C sharp minor by way of encore. Mr. Braxton Smith sang songs by Handel and Sterndale Bennett. He has a pleasing voice and good method.

Miss Fanny Davies gave a Pianoforte Recital at St. James's Hall on Wednesday afternoon. She opened with Bach's C minor Fantasia and two Scarlatti pieces, all well rendered. In Beethoven's Sonata in E (Op. 109), the pianist was not altogether satisfactory. The first movement and the *presto* went fairly well; but the variations were cold. It is so rare to hear them played with warmth as well as skill: the moment the technical element becomes too prominent, the poetry of the music vanishes. Miss Davies gave a remarkably fine performance of Schumann's Fantasia (Op. 17); the middle movement was played with great power, and the perilous passage at the close was bravely and successfully attacked. The programme further included Brahms's Scherzo (Op. 4), and a number of short pieces by modern composers.

Chambers's Journal for February.

W. & R. CHAMBERS, Limited, London and Edinburgh.

FURNISH your HOUSES or APARTMENTS THROUGHOUT**ON MOEDER'S HIRE SYSTEM.**

The original, best, and most liberal. Suits all. FOUNDED A.D. 1888. Furnish direct from the Manufactory, from £10 to £10,000. Cash prices. No extra charge for time given. Catalogues, Estimates, Press Opinions, Testimonials Post Free. F. MOEDER, 248, 249, 250, Tottenham Court Road, W. (Kindly note numbers.) Also for HIRE ONLY.

SATURDAY, FEBRUARY 7, 1891.

No. 979, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Letters from Rome. By the Rev. T. Mozley. In 2 vols. (Longmans.)

"Vixere fortes ante Agamemnona."

THE *Times* had correspondents before those who make, or try to make, history discovered that it might be worth while to see that M. Blowitz and his peers had early and authentic information of what looked like important secrets of state. Its conductors have never been wanting to themselves. When the Vatican Council was to meet they sent the one of their staff who knew most about the business (though he could not speak either French or Italian) to sift and judge the information which their correspondent on the spot would gather; and they gave him an introduction to Mr. Odo Russell (as he was then), in the hope that he would tell him what he properly could. In fact, Mr. Odo Russell had little information to give, and kept what he had to exchange with Lord Acton and Dr. Döllinger. Obviously, Mr. Mozley was in no position to compete with the well-informed and bitter clique whose mouthpiece was Quirinus. It was reported at the time, as we learn from Mr. Mozley, that the reason the Germans were able to publish confidential documents was because they went to the source, or rather the issue, of things; for as every document was issued to members of the Council in duplicate, one served for waste paper, of which the consumption was large. Possibly the report was propagated on system.

One of the points which comes out most clearly in Mr. Mozley's *Letters* is the anxiety of the Papal party to screen and spare the minority so long as there was any hope of converting them. This supplements what we learn from Quirinus—that it was a very up-hill business to bring even the minority of inopportunists to the point of provisional disbelief in a doctrine which their language had often implied and their acts were soon to enforce. Both writers leave us quite uncertain as to the reasons which moved most of the most important bishops of continental Europe to try at the eleventh hour to stem a current which for twenty years they had done their best to swell. Probably lay opinion took an Ecumenical Council a little more seriously than other scarcely less numerous episcopal gatherings; and so it became possible to work upon the selfish and unselfish alarms of prelates who feared conflicts with the civil power and the final apostacy of educated half-believers, and were very possibly influenced by something like chronic jealousy of the Roman Congregations.

For one reason or other, amateurs of historical irony were regaled by the spectacle of the representatives of German science combining to extol the learning of the last apologist of the apocryphal Areopagite, and of Bishop Dupanloup transformed from a doughty champion of the Temporal Power and the Syllabus into a captious critic of the less creditable predecessors of Pius IX.

Both writers in different ways throw some light upon the question what the Council was originally meant to effect; whether Pius IX. and his most influential admirers were principally desirous of putting the theology of the Counter-Revolution into dogmatic shape at the Council of the Vatican as the theology of the Counter-Reformation had been at the Council of Trent, or had made up their minds from the first that a declaration of the personal infallibility of the Pope was to be the chief fruit of the Council. It appears from Quirinus that preparation had been made for both. Mr. Mozley was repeatedly informed, and dutifully reported, that Infallibility would not be brought forward, or, if brought forward, would be rejected. His own impression was that the Council was merely an opportunity of feeling the pulse of the episcopate, and ascertaining how strong a formula could be carried with some approach to unanimity—which was also the opinion of Archbishop Spalding, who had a formula of his own. A good deal was done to create an impression that the Council was summoned to put the Church in better working order, and to get rid of picturesque and inconvenient survivals of mediæval orders and rites. This can never have been the intention of the Pope and his confidants; but it may very well have been the desire of an influential section of the sacred College.

Certainly, until the question of Infallibility was brought forward, nearly everything that went on at the Council upon both sides was an admirable example of how not to do it. The Pope reserved practically the whole power of initiative to his own commission, and to a strong committee which represented the majority well and hardly ever met. The commission, if they wished to expedite business, proved quite incompetent. The fathers of the Council on both sides wearied one another by reading rambling Latin pamphlets in a hall where almost every voice was inaudible. In the intervals of this exercise they tried to get pamphlets printed abroad, or sent home denunciations of some priest or journalist, and went about Rome explaining as the case might be that no one knew any theology but the Italians, or that the Italians were grossly ignorant of history. Mr. Mozley found himself often reduced to writing about the Carnival and the Corso. He repeated gossip about a *flaneur* or a spy who managed to attend several sittings disguised as an oriental bishop, and speculations about the Marquis of Bute, who was expected to be liberal after his power (aye, and beyond his power) both in studios and churches. Once at least he got hold of a really important piece of news: on the tenth of February he was passing through St. Peter's and heard a great noise in the Council Hall, which he

thought was only the echo of the speaker's voice. Afterwards he found that the minority had been mobbing Ghilardi, the infallibilist Bishop of Mondovì, as the majority once and again mobbed Strossmayer, whose ideas of conciliation and reform were certainly provokingly impractical, while his criticism of the Curia was weakened by personalities. He accused the Cardinals of avarice, though his own official income was larger than theirs, as Cardinal Di Pietro told him. The only person who seems really to have distinguished himself was Cardinal Antonelli. He knew exactly what would happen, and took it exactly for what it was worth: he told everybody that the Church would be more peremptory than ever in theory, and as conciliatory as ever in practice. When he had made sure that France and Austria would keep quiet, it was time for the Council to try to begin to work.

Mr. Mozley was one of the privileged spectators of the promulgation of the decree *De Fide*; but as he could not hear the proclamation, he preferred to write about what he could hear, which happened to be a pretty "vert" chattering cleverly to another young lady about her change of views. This was almost the last Mr. Mozley saw or heard of the Council. At the end of April he was threatened with Roman fever, and so the whole party had to leave. On their way home Mr. Mozley was asked to relieve his Paris colleague, who was ill, and so had to report on the Plebiscite when it came off, though, as he is careful to remind us, the *Times*, was informed as late as March 31 that the idea would probably be abandoned. He had the option of taking up the situation permanently, and trying to make history himself by giving M. Olivier good advice through an interpreter; and the prospect rather tempted him. If he had yielded to the temptation he would have been shut up in Paris, and vacated Plymtree. But destiny, or rather a "guardian angel"—without wings—decided that he was to go home at once. He seems to have written a leading article on the hypothesis that the long-expected definition was to be proclaimed on St. Peter's Day; for he does not disclaim ignorance of the authorship as he does of another, which he reprints on the programme of the *Civiltà*, full of alarms as unreal as that programme itself. After another article he returned to Rome in time to witness the gloomy and ominous pageant of July 18, and imagined that a fat monk who shouted was really cheering an incipient schism. Mr. Mozley believed that the hundred or so illustrious prelates who fled protesting from the Council intended to organise resistance. Quirinus knew better.

"It only remains to follow up the anathematised enemy, the bishops of the minority, into their lurking places, and compel each man of them to bend under the Caudine yoke amid the scornful laughter of his colleagues of the majority."

"Man walketh in a vain shadow and disquieteth himself in vain." It is twenty years and more since the Council from which so much was hoped; and what has come of it? The most learned ecclesiastic of the century found himself condemned by his historical conscience to pass the last and

not the least brilliant years of a long life in spiritual isolation, witnessing to something or other—posterity will wonder what—with a patience and dignity almost sufficient to dignify a quaint little schism which, though he never exactly joined it, has not yet ceased to attract the respectful interest of a few English prelates and divines. Within the Roman pale a Pope, conscious not only of infallibility but of inspiration, had still seven years to reign. He has been followed by perhaps the most accomplished of all the successors of Benedict XIV. Has either lightened the many perplexities of the faithful by any new definition or by making any old definition clearer? All that outsiders can hear of is a recommendation to study St. Thomas Aquinas, and a sanction to the war which, for some reason, it is thought necessary to carry on against the memory of Rosmini. Infallibility seems to have been interpreted so as to secure the maximum of restraint with the minimum of guidance. The Pope does not undertake to think for the faithful, but they risk more than ever if they think for themselves in a way that may displease the Pope.

Probably Mr. Mozley is not alone in wishing that it were possible to modify the utterances of twenty years ago, to “sophronise” them “as we used to say in our golden Oriel days.” One of the most interesting things in the Preface is the epitaph of the Oxford Movement.

“Begun with lofty aims, disinterested motives, genius, learning, singular gifts of personal character, and an undoubted cause, it deeply affected those who could sympathise with the prime movers and understand the appeal. It became the heartfelt and life-long loyalty of some five or six thousand gentlemen and ladies, representing the best blood, the best traditions, and the best qualities of the nation. But the mass of the British people, deaf from the first, and unable to see what was the matter, only saw it to recoil.”

Yet that was not the end, the whole face of Anglicanism has changed. It would be false and profane to think of the daw in peacock’s feathers. Might one think of a gnarled and sturdy tree, where at its barest a Hooker or a Mant could find a staff, or a Bentley or a Warburton or a Grimthorpe choose a cudgel, while a Herbert, a Ken, a Heber, and a Keble managed to sing in its shade? It looked bright in spring and picturesque in autumn, only when Newman came near to pluck and eat, something set his teeth on edge. He looked, he almost hoped, for storms to shiver all the wilding shoots and leave the stump free for apostolical grafts. Now the branches spread more luxuriantly than ever; the tempest has not broken yet. Meanwhile, some of the choicest fruits of primitive and mediæval gardens may be seen ripening here and there among the boughs. If not quite unchanged they are recognisable still, and not less sweet. Many are pleased and few surprised; few care to wonder what will be the end.

Mr. Mozley has outlived such questions. He took his share of work and fighting once. He, if any, has won the right to say:

“To myself all this controversy upon questions better settled in the upper room of the Christian community, and in the innermost chambers of

the soul, had long been most painful and embarrassing, and I had kept clear of it as far as possible. In my heart, I don’t think there is much to choose between the infallibility of private judgment and that of the See of Rome. Theologians, whether public or private, whether professional or amateur, whether male or female, whether old or young, of whatever nation, language, or form of government, are a presumptuous and tyrannical race, ever trying to impose their words—words only, or sounds without sense—upon others more disposed, like Her, whom we may call the first Christian, to ponder over these things in their hearts.”

After all, it is hard to speak of peace peaceably. Even now the thought of “the Public Elementary Education Act, under which, as under hoofs, harrows, and steam-rollers, the Church of England has since been groaning to this day,” has power to trouble the well-earned repose of the old war-horse—

ὅς καὶ θνητὸς ἐν ἐπέθ’ ἱπποῖς ἀθανάτοισιν.

G. A. SIMCOX.

Poems. By Christina Rossetti. (Macmillan.)

ONE by one the *dii majores* of modern song are passing into the classic one volume, a form which the foolish assumption thereof by one or two who are emphatically not of the *majores* can hardly rob of its significance. Till a fame attains to that it is more or less nebulous. So long as one has to specify volumes—till “Endymion, a Poetic Romance” and “Lamia, Isabella, &c.” have become simply “Keats”; till “In Memoriam” and “Maud,” and how much else of the fairest art, have merged their identity in “Tennyson”—the poet has not yet undergone disembodiment, but still walks, so to say, in the dress of the period. With the one volume the poet enters into mythology. This, of course, with exceptions. Mr. Swinburne, for instance, ought really to be in one volume by this time, and Mr. William Morris, if one could only pack them close enough—an “if,” however, which the closely printed new edition of *The Earthly Paradise* makes rather forlorn.

But our present concern is to thank Messrs. Macmillan for a volume which we need not name “Goblin Market” or “A Pageant,” but our “Christina Rossetti.” Here, in four hundred and fifty clearly printed pages, we have the exquisite product of a life which cannot yet have left off singing, poems of as fair an art, lyrics of as fresh a note, dreams of as strange a phantasy, as ever made blessed the English tongue.

To say that Miss Rossetti is the greatest English poet among women is to pay regard to a distinction which, in questions of art, is purely arbitrary—a distinction which has given us the foolish word “poetess,” a standing witness in our language to the national obtuseness. How little must the artistic constitution—the third sex—be understood among a people with such a word in their dictionary. How inorganic such distinctions are, of course, needs no illustration, though, if such were necessary, Miss Christina Rossetti’s genius would form an admirable text; for, to my mind, she is, in right of its rarest quality, our one imagi-

native descendant of the magician of “Kubla Khan.” No English poet till the appearance of “Goblin Market” ever again found the hidden door to Xanadhu save she. Keats and Tennyson, and he who saw “the curled moon”

“like a little feather
Fluttering far down the gulf,”

have had rare glimpses of that land “East of the Sun and West of the Moon.” William Allingham wrote one or two fairy poems haunted with its strange light—poems which also bear an odd physiognomical resemblance to “Goblin Market”; but only Coleridge and Christina Rossetti have walked in it as their native clime.

In that power of dream, that gift of the child’s imagination, is the most absolute distinction of these poems. All things are seen in that light, the whole world is still a child’s vision of wonder, every hill is a presence, every flower a gnome, and that “mysterious face of common things” which every poet intermittently realises is for her their constant aspect. That is the individual charm of her many exquisite natural pictures; the light of the miracle is about them all; their fresh morning scent and bloom come breathing a sense of the mystery of their existence, not “the burden,” but the glamour—that sense of strangeness which an old-fashioned garden flower inspires, or

“the curious sudden stool
That perfects in a night.”

But this, though so much, is only one aspect of a genius which is singularly many-sided. A gift of simple singing, an artless perfection of art, a pulse of unpremeditated passion, an ideal spiritual exaltation—all these powers go to the making of these poems, with a spontaneity in their exercise rare indeed in our self-conscious age. In no other modern poet is “the fine careless rapture” so surely heard. It is characteristic of the artlessness of these poems that they are given to us without any attempt at arrangement, thrown down in a clustering tangle, moonflower and daisy, nightshade and hawthorn, oak-leaves—with acorns of pre-Raphaelite perfection—and wandering bramble; without any classification except the arbitrary division into first and second series, which, however, is well retained, as it serves to remind us of the two original volumes now merged into one.

The first series consists of the “Goblin Market” volume, reprinted without change or addition; but the second includes about a dozen hitherto uncollected poems, among which one turns to “Birchington Churchyard” and “One Sea-side Grave” with sad interest. I quote the latter:—

“Unmindful of the roses,
Unmindful of the thorn,
A reaper tired reposes
Among his gathered corn:
So might I, till the morn!

“Cold as the cold Decembers,
Past as the days that set,
While only one remembers
And all the rest forget—
But one remembers yet.”

Another beautiful “Vale” added to the many already given to us by the same singer; for the note of loss and the peculiar sad

cadence of the music, even though the song be of happy things, is another distinctive characteristic of Miss Rossetti's singing. It wells through all, like the sadness of the spring. Her songs of love are nearly always of love's loss; of its joy she sings with passionate throat, but it is joy seen through the mirror of a wild regret. Yet she is not as those who sorrow without hope—she can still say from the heart: "Or in this world, or in the world to come."

And though, of course, many of her poems are directly "devotional" as her brother Dante Gabriel's are not, it is interesting to trace the same strain of mystic materialism running through them as gave us "The Blessed Damozel": as in that poem, the dream is of a heaven where

"We shall meet as once we met,
And love with old familiar love."

And, to turn once more to purely artistic considerations, here and there also in her poems the verse has occasionally that "decorative" quality, as of cloth of gold stiff with sumptuous needle-work design, which is a constant effect in the painter's poetry—that rich material symbolism such as finds its most perfect illustration in a poem like the Song of Solomon. One lyric I am particularly thinking of is especially wonderful, in that, rich as is the garment, the song does not merely wear it, but animates it all through with throbbing life, so that the great rich images seem to come but as the native utterance of the happy heart.

"My heart is like a singing bird
Whose nest is in a watered shoot;
My heart is like an apple-tree
Whose boughs are bent with thickset fruit;
My heart is like a rainbow shell
That paddles in a halcyon sea;
My heart is gladder than all these,
Because my love is come to me.

"Raise me a dais of silk and down;
Hang it with vair and purple dyes;
Carve it in doves and pomegranates,
And peacocks with a hundred eyes;
Work it in gold and silver grapes,
In leaves and silver flours-de-lys;
Because the birthday of my life
Is come, my love is come to me."

It is late in the day to be quoting "A Birthday"—(to make use of a phrase which has latterly been applied entirely to writers of a fortnight old)—but I do so because probably of all Miss Rossetti's poems it most nearly embodies all the various qualities of her poetry. It is full of that strange light of imagination, it is a little spring of bubbling song, its passion is spontaneous, its art is flawless.

But these resemblances between the work of sister and brother, though organic, are only of occasional occurrence on the surface; and the vital impulse in each case is very distinct. The law of one is but the exception of the other. Dante Gabriel's was not spontaneity, Miss Rossetti's is. His phrase is sumptuous with Latin, hers is ever simple with Saxon, her most haunting rhyme—effects are in words of one syllable. Her song, though here and there coloured with her Italian blood, is as distinctly English as English maids and meadows.

Of what I have called its artless art one of its defects seems to me a proof—the occa-

sional lapses into prose, even into commonplace. Sometimes in her best poems we come across a word insensitive or out of colour. This, obviously, cannot be from lack of the power of art, it can only be because her exercise of the power is mainly unconscious. We find the same flaws in the early work of Keats; but he, on the other hand, soon learnt to train his song by a mature study of style. I should say, however, that Miss Rossetti has never done this; and so great is her instinctive power of art that she has really been able to afford the neglect, her poetry retaining thereby a charming *naïveté* which by a self-conscious culture might have been lost to us.

I have so far spoken of the essential qualities of Miss Rossetti's poetry without reference to her wide range of theme, which is none the less a significant consideration, significant usually of a power of large handling. Dream-allegories such as "Goblin Market," or that of the Prince who "loitered on the road too long" and lost his lady; ballads of the sweet old-world model, like "Maude Clare"; idylls of to-day such as "Maggie a Lady"; exquisite country-pictures—these are what we have long since found side by side with spiritual allegories such as "Up-Hill," poems of religious ecstasy such as "The Convent Threshold," and all the pages "ypoudred" with lyrics as that old meadow was "with daysé." Lyrics, lyrics, singing everywhere like brooks, jubilant with the joy of earth, tremulous with love's tears, buoyant with prayer and faith.

Miss Rossetti has written a sequence of love-sonnets—the "Monna Innominata"—which certainly should have place by those "from the Portuguese"; but no one else in our day has given us her

"... chants as of a lonely thrush's throat
At latest eve,
That does in each calm note
Both joy and grieve;
Notes few and strong and fine,
Gilt with sweet day's decline,
And sad with promise of a different sun."

There could be found no fitter words to express the spirit and cadence of Miss Rossetti's lyrics than these lovely lines from "The Unknown Eros."

RICHARD LE GALLIENNE.

"HEROES OF THE NATIONS."—*Gustavus Adolphus and the Struggle of Protestantism for Existence.* By C. R. L. Fletcher. (Putnam's Sons.)

GUSTAVUS ADOLPHUS may be called the ideal Protestant. Not quite a saint perhaps, though Mr. Fletcher somewhat rashly exalts him even above St. Louis, he nevertheless died a martyr's death, and the world has ever since placed him in the foremost rank of her noblest heroes. In Mr. Fletcher the great Swede has found an appreciative and sympathetic biographer, able and willing to do him complete justice. It is true, as he is careful to explain in his singularly modest preface, that his knowledge of Swedish is elementary. But, fortunately, the Gustavian literature is polyglot; and from the copious German, French, and English sources of this very wide subject, Mr. Fletcher has drawn both liberally and judiciously. After a vigorous and pregnant introductory

chapter (which testifies to a careful study of early Scandinavian history), and an irritatingly brief account of Gustavus's early years, Mr. Fletcher crowns his hero and plunges with him at once in *medias res*. The Polish wars, in which Gustavus may be said to have served his military apprenticeship, are rapidly yet adequately described; and then Mr. Fletcher settles down in earnest to what is, after all, the main business of his book—Gustavus's participation in the Thirty Years' War.

What was the king's real motive of interference in that great religious contest? That is a question which has often been asked and never satisfactorily answered. No doubt personal ambition had something to do with it; and we must allow something else for that strange, almost feverish, restlessness which characterised all the Vasas. But we certainly think that Mr. Fletcher is right in assuming that his hero's motives were pure in the main; and it is doing Gustavus no more than justice to say that his sympathy with his suffering co-religionists weighed more with him than any other consideration. The military history of the book is perhaps the best part of it, although great praise is also due to the author for the skill and patience with which he has unravelled the tangled skein of those dreary diplomatic intrigues with which the timorous and tergiversating Protestant princes wore out the forbearance and benumbed the energies of their chivalrous deliverer. The character of Gustavus's generalship is very happily summarised:

"Gustavus was not perhaps a greater master of strategy than Wallenstein; he was certainly a greater master of tactics. He was not a greater cavalry captain than Pappenheim; but the latter had not the *coup d'oeil* which enables a man to grasp a whole battle at once. He had not more endurance than Tilly; but he kept his soldiers better in hand in victory, as well as in defeat. Moreover, his position as a king, who was his own commander-in-chief and disposed of the resources of a kingdom, limited though they might be, and who was also independent of orders from any superior, gave him . . . an inestimable advantage over his rivals."

On the other hand, Mr. Fletcher is often overhasty in imputing blunders to Gustavus, as, e.g., with reference to the unfortunate Magdeburg affair. He underestimates the military genius of Wallenstein, who undoubtedly outgeneralled Gustavus at the commencement of the fatal Lützen campaign; and his verdict in favour of the noble Tarstensson, as the "best of all Gustavus's generals," is altogether against the evidence. That distinction belongs indisputably to Banér, whose victories and retreats, as the late Lord Beaconsfield once remarked, were little short of miracles. Nor can anything justify his covert sneer at the great Chancellor Oxenstiern, that moral and intellectual giant, Gustavus's indispensable fellow-worker and the sole supporter, after his death, of the tottering Swedish Empire.

The great battles are described throughout by Mr. Fletcher with spirit and intelligence; and here he very skilfully utilises the *Swedish Intelligence*, and the quaint and raucy memoirs of that jovial free-lance, Colonel Robert Monro, who eulogises Söest

as "a good Calvinist town which brews liquor best for the body and clearest from all filth or barme, as their religion is best for the soul and clearest from the dregs of superstition." In one place, however, Mr. Fletcher's defective acquaintance with Swedish is regrettable. An eye-witness of the battle of Leipsic quoted by Veibull, contrasts the Swedish tatterdemalions with the spick and span new Imperial troops whom he describes as *romarenäsige och snorrhättiska tillyaner* ("roman-nosed and whirling-hatted Tillians"). This Mr. Fletcher lamely renders by "the handsome troops of Tilly," thus entirely missing the pun, which is the point of the whole description.

These are only trifles; but we have a more serious quarrel with Mr. Fletcher. One misses in his book those personal minutiae, those private anecdotes and details, without which one can form no very definite idea of his hero. How can we hope to know what a man really is like if we are told next to nothing about his personal appearance, favourite pastimes, private life; nothing about what his intimate friends thought of him, or what he was to his family? It would have been something if Mr. Fletcher had even told us that the eyes of the great warrior king were large and blue; that his wonderful golden hair won for him in Italy the name of *Il re d'oro*; that he loved music and singing, and that his favourite instrument was the lute. Such things one looks for first of all in a popular biography, but in this case we look for them in vain. We have, indeed, "an interesting glimpse" of the king's personal appearance as described by some Dutch ambassadors in 1611; but it is the veriest glimpse, and even the romantic episode of Ebba Brahe (afterwards immortalised by Gustavus III. in his great drama, "*Gustaf Adolf och Ebba Brahe*") is cut down to half a page. In short, the book is rather a political monograph than a genuine biography, though it is due to Mr. Fletcher to say that he acknowledges as much himself.

The illustrations (mostly borrowed from Veibull's *Gustaf II. Adolf's Historia*) and the maps are excellent, the whole get up of the book is most attractive, and it has been edited with exemplary care. There are, however, one or two slight slips which should be rectified in subsequent editions. "*Dalecarlia*" for "*Dalarne*," though perversely adopted by many English writers, is about as absurd as "*Highlandmania*" would be for "*The Highlands*"; to call Gabriel Bethlen Prince of Transylvania Bethlen Gábor (let alone Bethlen) is to put the cart before the horse; and what need is there to take the German form (*Schonen*) of the Swedish Skåne when an English equivalent (Scania) is already in use? *On* for "*ou*," on p. 3, and *Slots* for "*Slott*," on p. 18, are, obviously, misprints.

R. NISBET BAIN.

With the Beduins: a Narrative of Journeys and Adventures in Unfrequented Parts of Syria. By Gray Hill. (Fisher Unwin.)

MR. GRAY HILL is almost too anxious to assure scholars that he does not write for them. The times are long since past when

scholars thought it enough to study the bare letter of the Bible, and neglected the priceless help which, even when shorn of its glory, the "pleasant land" can give. It is quite true that Mr. Hill is somewhat deficient in archaeological and scientific tastes. The publications of Conder, Tristram, Lortet, Oliphant, Doughty, and the Palestine Exploration Fund, are for critical purposes far and away more valuable than this plain record of adventures; and I am not sure that some of these writers do not beat Mr. Hill even in purely descriptive passages. Certainly, Mr. F. J. Bliss has given a more interesting account of his visit to Palmyra in *Scribner's Magazine* for April 1890, and of his stay at Ma'lûla, with its caves, inscriptions, and dialect of Syriac, in the *Quarterly Statement* of the Palestine Fund for April 1890. The descriptions of Sir A. H. Layard, too, if I remember right, give a far more vivid idea of the ruins of Jerash. All this is true; but Mr. Hill's keen sense of enjoyment as he travels communicates itself to us as we read. He makes us feel ourselves his companions; at least, we seem to be reading letters fresh from his Syrian encampments. One may hope that this is not the last time that we shall thus be favoured. His captivity in Kerak, and his summer settlement on the Mount of Olives, have given one at any rate of his readers a personal interest in him and in his brave wife.

Three distinct journeys are chronicled in this book. In 1888 Mr. and Mrs. Hill paid their first visit to the east of the Jordan, not without a slight experience of Beduin lawlessness. At Umm A'ois, the ancient Gadara, a well-planned night attack was made upon their tent. In 1889 Philistia and Palmyra, and in 1890 the country south and east of the Dead Sea, were their "happy hunting-fields." Certainly, in the latter year, they had chosen their ground well. They started, hoping to reach Petra from the northward, contrary to the urgent advice of the consul, though even he did not know how specially dangerous the journey was last year. I will not spoil the reader's pleasure by describing how the travellers were compelled to give up Petra in exchange for Kerak, and how dearly they paid for their most uncomfortable sight of that wondrous town (certainly not the קרחה of the Moabite Stone, as Mr. Hill has been wrongly informed, for reasons which will be found in Dr. Ginsburg's note on l. 21 of the inscription). No more exciting traveller's record has perhaps been written than (part iii.) chap. iv., "The Keraki—Trap No. 1"; chap. v., "The English Missionaries"; chap. vi., "The Keraki—Trap No. 2"; chap. vii., "We await the return of the 'holy man'"; and chap. viii., "We get free from the Keraki and cross Môjed" (Arnon). The sketch of Mr. Lethaby, the heroically obstinate missionary to these modern Ishmaelites of Kerak, is most effective, just because it is simply true. One of Mr. Lethaby's letters, printed by his supporters as a tract, had reached me some time before Mr. Hill's volume, so that I was prepared to study this lifelike portrait with interest. Who can criticise this faithful servant of conscience, or fail to love the

kind little boys, so unlike their sires, whom their instructress, Mrs. Lethaby, had prepared to befriended the forlorn travellers at a critical moment?

Mr. and Mrs. Hill are lovers of Syrian nature and interested students of Syrian humanity. There is, therefore, in the present volume a different flavour from that to which most writers on Palestine have accustomed us. The Keraki are splendid ruffians, and will not soon be forgotten. Dog-nature, too, falls within the range of their observation. Very touching is the story of "Werdie," as Mr. Hill reproduces the Beduin's pronunciation of *ward*, "rose"—the name which this poor wandering dog received from the camp-servants. On other points I must not linger. It will be noticed with regret that the view from Mount Nebo seemed disappointing; Socin's account in Baedeker's *Palestine* is somewhat different. The reverence of the good old Moslem cook for the prophet Mûsa is delightful, if not edifying. The Appendix contains a selection of quaint stories and fables told the author by one Abû Suleimân. Nor must I wholly pass over the sixty-eight helpful illustrations.

T. K. CHEYNE.

Letters to Living Authors. By John A. Steuart. (Samson Low.)

THE epistolary form of the papers in this volume is to be commended, for it has evidently been chosen, not whimsically, but deliberately, and with that judgment which has regard to the fitness of things. Mr. Steuart is an able man, who writes with unflinching facility and frequent pointedness, and therefore what he has to say is worth listening to; but had he given to the thoughts here uttered the form and name of "essays" or "studies," the critics would certainly have done their best to deprive him of readers. They would have described the matter of his book as ludicrously inadequate and its manner as almost impudently discursive; and severe as the verdict would have been, Mr. Steuart would have had no right to complain of it as unjust. What value, it would have been asked—and asked with perfect fairness—can possibly belong to an "essay" on Mr. Froude which gives one page to the entire mass of his historical work and five to his single romance, *The Two Chiefs of Dunboy*; or to a "study" of Mr. Swinburne, more than half of which is devoted to an indignant and scornful denunciation of that poet's critical inconsistencies? To such questioning no effective answer could have been returned; and Mr. Steuart's only possible course would have been to plead guilty, to promise amendment, and to throw himself on the mercy of the court. Now, however, he is free from even the risk of such humiliation, for a letter is the one form of expression in which a man can say what he likes, and withhold what he likes, without bringing himself within the jurisdiction of any administrator of critical law. The reader may agree with Mr. Steuart or he may disagree with him; but he has not a figment of right to complain because a certain theme is or is not treated in a certain place. The author

simply puts the name of a writer at the head of his page, and proceeds to write, not a complete critical estimate, but an easy letter about those features of the writer's work in which he is most interested, or those topics which they happen to suggest to him.

The writers addressed are seventeen in number; and, as might have been expected the letters are unequal in intellectual weight, in critical discrimination, and even in literary skill. Of the letter to Mr. Ruskin, for example, it can only be said that it is well enough as a light, chatty contribution to the columns of the popular journal from which the whole work is reprinted, while that addressed to Mr. Mark Twain is one of those specimens of forced, machine-made humour that are utterly worthless in any place and at any time. On the other hand, the letters to Dr. Oliver Wendell Holmes and Mr. William Black are models of criticism which is at once clear-sighted, sympathetic, and discriminating. They are inevitably too brief to be exhaustive, but within their range they could not well be more satisfactory than they are. So far as the intellectual needs of ordinarily sensible people are concerned, there was perhaps no necessity to expose the absurdity of Mr. Sala's characterisation of Dr. Holmes as "a funny fellow, a very funny fellow"; but the task of showing the vein of fine serious thought beneath the surface-soil of easy gaiety in the breakfast-table colloquies is so pleasantly performed that no one will disparage it because it is a work of supererogation. There is certainly nothing supererogatory about the interesting and appreciative passage in the letter to Mr. William Black which is devoted to establish the claims of *Macleod of Dare* to a place of honour, if not of supremacy, among its writer's works. There are, indeed, a great many people who agree with Dr. Downward in *Armada* that a novel should "occasionally make us laugh and always make us comfortable;" and, until the trading instinct is expelled from the mind of every artist, novels will be produced with a view to comfort rather than to artistic perfection. But Mr. Steuart is undoubtedly right in thinking that the conclusion of *Macleod of Dare* is one of the best pieces of work that Mr. Black has ever done, because he has dared to be uncomfortable in order that he may be imaginatively consistent and veracious.

Another admirable letter is the one addressed to Mr. J. R. Lowell, with its shrewd and, probably, just suggestion that the inspiration of the *Biglow Papers* is to be looked for in the dialect poems of Burns rather than in the satirical poems of Jean Paul Richter, where Mr. Thomas Hughes thinks he finds it. Indeed, Mr. Steuart's remarks on Mr. Lowell as a humorous satirist in prose and verse are so excellent, and so entirely to the point, that one is surprised to come upon such an almost fatuous sentence as that in which he says of the serious poems, "They are not all of equal merit, and, perhaps, none is quite Miltonic." There is no poet who has ever written to whom the first clause would not apply, and, therefore, the oracular *dictum* can have no special relevance to the work of any poet in particular; while the second

clause is surely the best instance provided by recent literature of the proverbial odiousness of comparisons. The odiousness of the present comparison lies in its utter ineptitude, for with Milton Mr. Lowell has absolutely nothing in common. The living poet never even reminds us of the dead classic, so that to say he is not "quite Miltonic" is as truly beside the mark as it would be to say that he is not quite Homeric or quite Shaksperian. On the same page is to be found one of those irritating little inconsistencies which are sure to crop up when articles hastily written for a periodical are reprinted without careful revision. Mr. Steuart calls Mr. Lowell a "useful" poet; whereas in the letter to Mr. Swinburne appears a long and rather crudely sarcastic passage in which Mr. Augustine Birrell, who applied this very epithet to the poetry of Matthew Arnold, is giped and flouted for using a term which the writer seems to consider has, in the criticism of verse, no intelligible meaning.

These things are, however, trifles, and no practical object is to be attained by dwelling upon them. The important defects of the book are a certain looseness in the use of words like "realistic" and "romantic," which are simply confusing unless the sense in which they are used is rigidly defined, and a lack of the judicial spirit in speaking of authors who are yet on their trial in the court of criticism. If one honestly feels strong admiration for the work of a contemporary, a studied reticence in the expression of one's emotion is open to the charge of cowardice or affectation; but to compare our favourites to accepted classics is to do them injury rather than service, for while faint praise has damned its tens, overcharged eulogy has discredited its hundreds. On the other hand, Mr. Steuart shows himself possessed of a large fund of really intelligent enthusiasm; and the verdict of an enthusiast, though it may be rash in expression, has often more of substantial truth than that of a cold "disinterested" critic. One thing, at any rate, is certain—that these *Letters to Living Authors* will be found eminently readable.

JAMES ASHCROFT NOBLE.

"GREAT WRITERS."—*Life of Arthur Schopenhauer*. By William Wallace, Whyte's Professor of Moral Philosophy, Oxford. (Walter Scott.)

The work before us might serve as a model for writers of little books on large subjects. No doubt material was embarrassingly plentiful, and the ground had often been covered before. Prof. Wallace, we think, has done the work more satisfactorily than his predecessors. The biographical detail—necessarily by far the largest part of the book—is better marshalled and digested, we think, than it was by Miss Zimmern, and much more amply given than by M. Ribot. If the part devoted to Schopenhauer's philosophy is very small, and we rise from its perusal with our knowledge not much enlarged, this, we suppose, is due to the necessary limits of the work. A public that is to buy such a handsome little book for a shilling will probably care principally

about Schopenhauer's scuffles with his landlady's female friends and his squabbles with his mother, the pretty picture of the country house by the Frische Hafl where he spent his early childhood, the pet lambs whose bells rang an octave as they gambolled together, the vivid sketch of the politics of Dantzig early in this century, and the study of the family history of his parents, which indicates that tendencies inherited from them go far to excuse the faults of their famous descendant.

All this Prof. Wallace has set forth admirably in the work before us. He has done more. Himself the eloquent exponent of Hegel, he has written a not less eloquent and not at all unsympathetic exposition of the doctrines of Hegel's bitterest and most contemptuous critic. Himself a professor and imbued with the professorial philosophy, the Katheder-Philosophie of Germany and Scotland, he has dealt in a friendly spirit with the work of one whom an enemy might call an amateur in philosophy, and who, in fact—despite all his efforts—spoke to a public that could hardly deserve even that designation. Unfortunately, this exposition takes up less than a fourth of the book. But there was clearly no space for more.

Though we thus learn little about Schopenhauer's system, we have a curious and repulsive study of character, eminently readable by a public which delights in studies of psychical pathology. We have the "two Schopenhauers" of whom Prof. Wallace speaks (p. 111): the outward man—irritable, petulant, vain, sordid, strongly sensual, and absorbed in self; and the philosopher, who "draws close to the great heart of life and

"holds the best life to be that of one who has pierced, through the illusions dividing one conscious individuality from another, into that heart of eternal rest where we are each member one of another, essentially united in the great ocean of Being, in which, and by which, we alone live."

Unfortunately, "in some of Schopenhauer's books," as Prof. Wallace says (and, we may add, in all his biographies), "the unpleasant self is rampant." But the very pettiness of his life drove him to retreat from it into the world behind the veil of sense, and seek peace in quietism and absorption. The particular form this retirement took, the mode in which he received his message of peace, was, of course, suggested partly by Kant, partly by his studies in science. It is this that makes his philosophy of such transcendent importance for scientific thought to-day. Hegelianism has died out, or run off into Socialism, or (as with Ueberweg) passed into virtual Materialism. The course of the empire of Fichte and Schelling has taken its way westward of the Mississippi. We have gone "back to Kant" and yet are not satisfied. To the spectator of science, and to many scientific workers, the developments of molecular physics and microscopic biology seem destined not only to unfold the secrets of the phenomenal world, but also to prolong and intensify the life of the individual percipient. Even in Sociology, the good old doctrine that great men are only the creatures of their age—that the individual agent is

nothing and the world everything—seems likely to be displaced by its contrary, which assuredly is much further from the truth. Students of science need constantly to be reminded of the truths so often insisted on—for instance, by Prof. Huxley, Prof. Tait, and Prof. Dubois-Reymond in the *Sieben Welträthsel*—that, after all, scientific propositions are merely a set of symbols, and that our knowledge is only phenomenal of the unknown. The world, too, and especially England, needs some kind of theory of art, and may find it in Schopenhauer. And especially in an age whose last deliverance in ethics seemingly is that the whole duty of man is to do just what his neighbours approve, souls that, like Schopenhauer's, have been spoilt in the breaking in, that reject the canons of society, and receive no comfort from the ministrations of the Churches, if they cannot hope for the restitution of all things, can at least find peace in the annihilation of self. To them Schopenhauer's ethic may appeal—to the normal mind, healthy and not too realistic, it does not. And to minds of this latter type—perhaps fortunately—the lower Schopenhauer permanently eclipses the higher.

JAMES SAUMAREZ MANN.

NEW NOVELS.

A Sensitive Plant. By E. and D. Gerard. In 3 vols. (Kegan Paul & Co.)

Two Penniless Princesses. By Charlotte M. Yonge. In 2 vols. (Macmillan.)

On Trust. By Thomas Cobb. In 3 vols. (Hurst & Blackett.)

George. By the Author of "Our Own Pompeii." In 3 vols. (David Stott.)

The Crimson Chair. By Richard Dowling. (Ward & Downey.)

It is true of books, as of persons, that a fascination produced on first acquaintance often wears off, while a colder feeling as often gives place to a close attachment. Readers of *A Sensitive Plant* who find the first volume dull should still go on to the second and the third. The first is unquestionably dull. The writers can tell a story well, but they keep their thrilling incidents to the last. If it is a little wearisome, this method has its advantages, and it is much truer than any other. Events in actual life do not generally happen until their causes have ripened to a culminating point, nor does character form itself otherwise than by gradual development. But there is a certain insufficiency about the tale which is almost as noticeable in the third volume as in the first. Janet Sinclair's shyness has too much of the quality of feebleness. She is the heroine of the story, the "sensitive plant" whose virtues are to remain unperceived while showy people attract notice—it is she who is to carry off the hero and the honours—but we see nothing behind her shyness to account for her ultimate promotion from the last place to the first. She has no remarkable beauty, and her intelligence is extremely limited. Why Cairnbro Chichester finally preferred her to all the other girls in the book is only

less a mystery than her suddenly conceived fondness for him. This is, perhaps, the least explained and least explainable thing in the story. When she first saw him she was gathering snowdrops, and he startled her by abruptly introducing himself and inquiring for her father. If he had been a handsome prince in a fairy tale, and she the pretty predestined maiden he had come to seek, her instant infatuation for him might be understood; but neither was he handsome nor was she expecting a fairy prince, or, indeed, any other newcomer into her little world. From that moment, however, he was all the world to her. Her knowledge and experience were so small that she scarcely realised that she loved him, and she was so little apt in the ways of women that on several occasions when she might have drawn him to her she let him go adrift. That they came together at last was due to one of those accidents which a good Providence brings about for lovers who do not know their own minds. As for Cairnbro Chichester, if Janet was worth the winning—and one has no doubt she was, though the fact has to be surmised—he certainly did not deserve to win her. He was a young gentleman who had been much courted, and he seemed to think that Janet ought to have courted him too. Several times over he was on the point of making love to her, but he gave her a chance of making love to him instead; and when the poor shy little girl shrank into herself, his pride was wounded and he said nothing. The skill of the writers is most shown in the drawing of the other characters, of whom there are four or five who possess a strong individuality. Janet's father, Sir Alec Sinclair, is a Scotch baronet with a turn for statistics and a temper that brooked no contradiction. His idiosyncracies, in spite of their grimness, have a highly comic flavour; and he is a man to be remembered. Mr. d'Obson, whom Sir Alec persists in calling Dobson, plays a small and rather absurd part in the story, but is a distinct personage nevertheless. Cookery with Mr. d'Obson is a fine art for which a man may even surrender the freedom of bachelorhood. He despairs of getting a wife who can cook a lobster *soufflé* as it ought to be cooked; but if he can persuade somebody to marry him he knows a model old-woman *chef* who will then consent to grace his kitchen. Of the women, the first place—not in interest, but in skill of portraiture—must be given to the designing Frenchwoman, Olympe's mother, who is too clever to make her plans succeed. Olympe herself, with all her beauty and her witcheries, is the true daughter of such a mother; and she gets her deserts. Aunt Penny must certainly not be overlooked. Her "sweet brother" snubbed her, but she is a type of sisterly devotion and old-maidish goodness too rare to be forgotten.

Miss Yonge has constructed a very pretty romance, in *Two Penniless Princesses*, out of the supposed wanderings of two daughters of James I. of Scotland. James was the minstrel king who took to wife the proud Joanna Beaufort, of the blood-royal of England; and of their two daughters who are the subject of the story, Jean—the

Lady Joanna—had her mother's beauty and spirit, while Eleanor—Elleen—had the love of minstrelsy and the gentleness which had distinguished her father. Their elder sister was married to the Dauphin, afterwards Louis XI.; and when the girls were wasting their youth in durance at Dunbar, they conceived the idea of going out to their sister, and perhaps of wedding courtly husbands in the flowery land of France. "Jamie," the young king, was readily persuaded to let them go, and time and circumstances were opportune for the journey. Their cavalcade had Sir Patrick Drummond at its head; and a brilliant progress was made, with some adventures by the way, as far as London. Here something is seen of Henry VI. and his Court, of a sumptuous nunnery where the princesses were housed, and of the Duke of York, the Earl of Warwick, and other notables. But it is after Calais has been reached and passed that the romance begins. René, King of the Two Sicilies and Jerusalem, belongs rather to romance than to history; and it was in his Provençal court that the princesses saw all that they were destined to see of those delights they had dreamed about. There were knights and fair ladies, and tilts and tournaments; and, alas! there was also a forcible abduction—for the times were rough—to a border castle where an ogre of a baron held sway. In Sir Patrick Drummond's train, however—an interloper there—was the heir of the Douglasses, who had followed the Lady Jean from Scotland. How he planned a rescue; how Duke Sigismund, who was enamoured of the Lady Elleen, aided in the daring task; how the princesses were freed and the baron slain, and what happy bridals followed—the reader must read. Miss Yonge is not an ambitious writer. Her materials in this story are such as Scott would have made a good deal of, but in her hands they become a pretty romance and nothing more. Still, that is something in days when the "novel" is paramount, and knights and chivalry are out of date.

It is "gold, gold, nothing but gold," that gives its chief interest to Mr. Cobb's well-written story, *On Trust*. It is gold, or the lack of gold, that determines the fate of most of his characters. The story starts, indeed, with a forgery, the motive of which was money. The forger escapes and goes abroad, where he remains for twenty years. He had promised his wife to come back when he had accumulated wealth enough to put himself straight in the world, and his return was always expected. To tell the story would be to spoil the reading of it; but it is necessary to say that after a long period a stranger arrives, who asks for the wife of the runaway. With the stranger is a daughter, a charming girl, who becomes the heroine of the story. What happens to the stranger must not be stated. The interest shifts from him to his daughter, who at one time is supposed to be an heiress, and at another to be penniless. In these varying aspects she has attractions for Ashley Barnard, the vicar, and Joliffe, the squire. The two men make a direct contrast. Barnard loves the girl; but her supposed fortune has been confided to him

"on trust," and he imagines that the trust is a bar to his marrying her. Joliffe does not love her, but he would gladly possess himself of her money. These are only parts of a very complex plot, which is not wholly unravelled until the end of the third volume. Mysteries, which have remained mysteries throughout the tale, are then explained, and it is seen how many dangers have been safely passed. The central character in the story is Ivy, whose fortune is one of the problems of the book, and whose fate is at last happily settled. Her peculiar history, her lonely position, and her beauty all contribute to the charm with which Mr. Cobb has invested her. The other characters are so many lesser lights, with orbits of their own, but all revolve around her. The descriptions of scenery and of country life are exceptionally good; but it is in the skilful management of his plot and in the drawing of character that Mr. Cobb excels.

Why *George* should be called "a story in drab and scarlet," and not in blue and yellow, or pink and white, does not at first seem at all clear. But the sub-title is not a freak of the binder's; it really indicates the lines of the story, which has to do with Quakerism and soldiering. *George's* personal history scarcely required to be told in three volumes. It might well have been compressed into two, and perhaps into one. A good deal that belonged to his early days, and much of the flabby talk, and the "teas" at which it was spoken, might have been omitted with advantage. But the picture of domestic Quaker life which the story contains is worth possessing, especially as it seems a true picture, and is certainly a pleasant one. The somewhat narrow limitations which the Friends impose upon themselves, and the shrewdness and tact with which they manage their worldly affairs, are fairly brought out; but we are enabled to see how much real calmness, thoughtfulness, and repose of spirit Quakerism implies. It is rather for this, than for anything that concerns *George's* separate history, that the book which bears his name is worth reading.

Mr. Dowling's *Crimson Chair* is a bright little story, whose only defect is its shortness. "Dr. Oubliettes, mind-mender," would have a good many patients if he were really to be found in the neighbourhood. Mr. Dowling indicates, though it would be desirable that "*Nepenthe*" should be capable of modified application, producing less extreme results than occurred in the case described. The other stories in the volume are all written in the same pleasant and easy vein.

GEORGE COTTERELL.

SOME BOOKS ON SOCIAL SUBJECTS.

"SOCIAL SCIENCE SERIES." (Sonnenschein.) In the prevailing chaos of opinion on social matters, a Social Science Series, if thoroughly well done, would be invaluable, and, even if only moderately good, would be very useful. So far as it has gone, Messrs. Sonnenschein's series cannot be said to be more than moderately good. Only to a few of the works which it includes can the grave name of science be

applied with the east fitness. Many of the writers have been too busy over the regeneration of men to have had time enough to observe them. There is far too much dogmatism with respect to matters on which a wise man can have only a temporary opinion; and the Socialists are allowed a predominance out of all proportion to the importance of their views. The hand of a careful and impartial editor has evidently been absent. Nevertheless, the series contains several books of a good deal of interest and likely to be useful. The best is Mr. W. H. Dawson's *Bismarck and State Socialism*, in which is given a detailed exposition of social and economic legislation and legislative proposals in Germany since 1870. Full of information not readily obtainable elsewhere, and free from undue intrusion of the author's own opinions, it is the most serviceable account which we possess of legislative experiments which not only throw much light on the condition of Germany, but have a direct bearing on our own industrial and other troubles. The editor of the series should have given us more of such works of information. For the sake of them we should gladly have gone without the cheap sneers at British stupidity in which Mr. Belfort Bax is allowed to indulge. A later volume by Mr. Dawson, entitled *The Unearned Increment*, is much less good. He has not been so careful as he should have been to call attention to the facts which tell against his argument. Anyone, for instance, who relied solely on his statement would gather an erroneous idea as to the evidence given before the Town Holdings Committee with regard to the leasehold system. *The Promotion of General Happiness: a Utilitarian Essay*, is a title with the breath of dulness upon it, but the essay turns out to be very far indeed from being dull. In a very calm and matter-of-fact way, and with a loyal desire to keep to facts, lead where they may, Prof. M. Macmillan (of Bombay) discusses and illustrates some of the chief means commonly relied upon for the promotion of general happiness, balancing the benefits on one side and the evils on the other, and indicating the direction in which the road to increased happiness may be expected to lie. That there is a soul of evil in things good, is the moral of his treatise; and in our schemes for legislation we had better take account of the fact. Mr. Laurence Gronlund declines to take account of any fact so depressing; and accordingly he is able to write such works as *The Co-operative Commonwealth*, which is reprinted in this series, and *Our Destiny*, another volume of the series, in a style that makes Mr. Henry George look by comparison a miserable pessimist. As examples of warm enthusiasm, Mr. Gronlund's books interest us greatly, and we are glad that such books are written and read.

"For the purpose of this essay," he says in *Our Destiny*, "it is assumed that all these acquisitions—leisure, security, and plenty—are within a measurable period to become the birthright of all as the products of natural evolution."

It does one good to find a man who with perfect sincerity can start off with such an assumption. Mr. Gronlund uses some bad language about opposing theories (the struggle for life theory is, in his own italics, "a lie," "it is satanic, nothing less than atheistic"); but from the altitude of such a faith Mr. Herbert Spencer must appear a person so base that perhaps there was no use in minding matters. We congratulate Prof. Macmillan in that his essay has not yet come into Mr. Gronlund's hands; his time will come, however, unless "our destiny" is accomplished before the prophet has time for another volume. Among the other books of the series are *Work and Wages*, by the late Prof. Thorold Rogers, being part

of his invaluable *Six Centuries of Work and Wages*; Schäffle's *Quintessence of Socialism*, translated by Mr. B. Bosanquet, a short and admirable statement of the essential features and economic consequences of modern socialism; an account of the growth and influence of *Socialism in England*, by Mr. Sydney Webb, one of the few men in the Socialist ranks who have had an economic training; a reprint of the chapters on property in Godwin's *Political Justice*; *Charity Organisation*, by Mr. C. S. Loch, the secretary of the London Charity Organisation Society; *The New York State Reformatory in Elmira*, by Alexander Winter, an account of a valuable experiment in the treatment of criminals, which in some of its features will sooner or later be tried in the prisons of this country; and *Luxury*, by Emile de Laveleye, an eloquent plea on moral and economical grounds for simplicity of life.

The Industrial History of England. H. de Gibbins. (Methuen.) This is the first volume of a University Extension Series, which is to be "a series of books on historical, literary, and economic subjects, suitable for extension students and home-reading circles." If the other contributors do as well as Mr. Gibbins, the series will deserve to find much favour. In 200 pages he has given an excellent sketch of English industrial history, and no one who knows the difficulty of such a task will be inclined to minimise the praise which is due to him. His interpretation of events sometimes requires qualification. Thus in describing the effects of the Great Plague and the consequent scarcity and dearth of labour, he calls attention to the rise of the tenant-farmer class, and to the emancipation of the villeins, but he does not make clear the important fact that this emancipation meant the great increase of a landless class induced by high wages to become mere labourers. But, on the whole, Mr. Gibbins's book may be recommended to the student as giving an accurate and, within its limits, a comprehensive survey of the subject. Its least estimable feature is a certain tone of infallibility in the concluding pages. When he speaks of "the foolish 'law of diminishing returns'" he suggests a doubt whether he understands the law; though in fairness we should say that he refers to a recent article in the *Westminster Review*, which we regret not to have read, and in which it would seem that he has given reasons for considering the Ricardian theory of rent and the law of diminishing returns to be pernicious theories. These being pernicious theories, it is evident that political economy will have to be reconstructed.

The Lessor the Revolution. D. Balsillie. (Edinburgh: & C. Black.) "The case of France for the last hundred years," says Mr. Balsillie, "is a light-ship to warn us of danger." Her people have been afflicted with the curse of a belief that the State can reconstruct society; while the secret of England's greatness has been the circumscription, within due limits, of State interference. Mr. Balsillie seems to us, in this matter, greatly to exaggerate the difference between the two peoples. But the difference, real or imagined, has given him the text for a very good lay sermon, full of earnestness, on our duties as citizens and politicians. He dwells upon the folly and the danger of seeking to cure the diseases of the world by more external remedies; the need for the moralisation and strengthening of the individual, so that through him society may be moralised and made strong; the inevitable continuance of social chaos and degradation so long as the mass of men live as they do now, with no loftier ideals than money, pleasure, and power. Mr. Balsillie takes rather too gloomy a view of existing society. Nevertheless, in these days of salvation by Acts of Parlia-

ment and schemes, there are many people who might profit by listening to his words of warning.

NOTES AND NEWS.

MESSRS. WILLIAMS & NOROATE have issued the prospectus of a collection of Irish legends and tales, to be edited from the original MSS. and translated by Mr. Stindish Hayes O'Grady, who—as readers of the ACADEMY know—occupies an almost unique position as being equally conversant with the old vellums and the modern language. Materials for two volumes of about 400 pages each are now ready, which will be sent to press as soon as a sufficient number of subscriptions are received at 28s. for the entire work. The first volume will consist mainly of Lives of Saints, the Ossianic and Cuchullin cycles; the second will contain the Dialogue of the Seniors, in three recensions. The title chosen for the work is *Silva Gadelica*.

The next issue of the "Temple Library," published by Messrs. J. M. Dent & Co., will be *The Essays and Poems of Leigh Hunt*, edited by Mr. R. B. Johnson. The pieces in these volumes are printed from the earliest known editions, with a list of the places in which it first appeared prefixed to each. Volume I. will contain a biographical and critical introduction; a list of portraits of Leigh Hunt; essays miscellaneous, critical, and autobiographical, including the preface to the rare first edition of Shelley's "Masque of Anarchy," and two essays in which use has been made of corrections in the author's handwriting. Volume II. will contain poems, including a reprint of the rare first edition of "The Story of Rimini"; prefaces, never before collected, to many of the periodicals edited by Leigh Hunt; a bibliography of published and unpublished writings of Leigh Hunt, including various reprints and selections brought out since his death. The volumes will also contain a portrait from an unpublished sketch by Samuel Lawrence, in the possession of Mr. W. Leigh Hunt, and five etchings by Mr. Herbert Railton—Leigh Hunt's birthplace at Southgate, Christ's Hospital, his house at Hampstead, the chapel of Horsemonger-lane Gaol, and the house at Putney in which he died.

THOSE who remember a pleasant little volume of verse, *Love in Idleness*, which was published by three young Oxford men about eight years ago, will be glad to hear that the authors—no longer so very young, and no longer resident at Oxford—have in the press another volume, to be called *Love's Looking Glass*. It will be published by Messrs. Percival & Co. Both titles, we may add, are taken from the flowers of those names.

THE English translation of Major Casati's book, entitled *Ten Years in Equatoria and the Return with Emin Pasha*, will be published immediately by Messrs. Frederick Warne & Co. It will be in two demy-octavo volumes, with nearly two hundred original illustrations and several maps.

MESSRS. CASSELL & COMPANY have made arrangements to publish in serial form a new atlas, to be called *The Universal Atlas*. It is based upon Dr. Andree's Hand-Atlas, the first edition of which appeared in Germany in 1881; but several new maps have been prepared of the British empire, and special attention has been given to the results of recent exploration and recent delimitation of boundaries. There will be altogether 117 pages of maps, with an index containing more than 100,000 names of places. The mode of issue will be in twenty-eight shilling parts, each giving from four to six pages of maps; and the first part will be ready on March 28.

MESSRS. GRIFFITH, FARRAN & CO., of London and Sydney, are about to publish *Cooce*, tales of Australian life by Australian ladies. Among the contributors are Mrs. Campbell Praed, Miss Margaret Thomas (the Australian sculptor), "Tasma," Mrs. Mannington Caffryn, of Melbourne, Mrs. Lance Rawson, Mrs. Henry Day, and Mrs. Patchett Martin, who is the editor of the volume.

The Weird of Deadly Hollow: a Romance of the Cape Colony, by Mr. Bertram Mitford, will be published immediately in one volume by Messrs. Sutton, Drowley, & Co. The same firm also announce a north-country story by the Rev. W. E. Chadwick, entitled *Thornleigh House*.

MESSRS. TRISCHLER & Co. announce the following books: *A Maiden Fair to See*, by C. J. Wills and F. C. Philips, with illustrations by G. A. Storey; *Lady Delmar*, by Thomas Terrell and L. T. White; *The Black Drop*, by Hume Nesbit; *Jardine's Wife*, by C. J. Wills, in 3 vols.; and a new edition of *Always in the Way*, by Thomas Jeans, with nine humorous and sporting illustrations by Finch Mason.

MESSRS. LONGMANS & Co. will publish next week the second part of Volume II. of Mr. Henry Dunning Macleod's *Theory of Credit*, completing the work.

A VOLUME of essays on *The Languages of the Bible and Bible Translations*, by Dr. Robert N. Cust, is announced by Mr. Elliot Stock.

MESSRS. SIMPKIN, MARSHALL & Co. will publish immediately *Yorkshire Battles*, by Mr. Edward Lamplough, the author of several works on local history.

MR. EDWARD PEACOCK has written a chapter on "The Pirates in the Humber" for *Bygone Lincolnshire*, a book to be issued at an early date, under the editorship of Mr. William Andrews, of Hull.

PROF. C. HUBERT H. PARRY will on Thursday next, February 12, begin a course of three lectures, at the Royal Institution, on "The Position of Lulli, Purcell, and Scarlatti in the History of the Opera," with musical illustrations; and Lord Rayleigh will on Saturday next, February 14, begin a course of six lectures on "The Forces of Cohesion."

MISS AMELIA B. EDWARDS will lecture on Tuesday next, February 10, at Bowdon, Cheshire, and on February 18 at the Birkbeck Institute, on "The Art of the Novelist"; also, on March 3, at the Westbourne Park Institute, on March 5, at the Streatham Hill and Tulse Hill Institute, and on Sunday afternoon, March 8, at St. George's Hall, on "The Literature and Religion of the Ancient Egyptians."

At the next dinner of the Political Economy Circle of the National Liberal Club, Prof. F. Y. Edgeworth, secretary of the newly-formed British Economic Association, will read a paper on "Recent Theories of Interest."

UNIVERSITY JOTTINGS.

MR. JOSEPH WRIGHT, Ph.D. of Heidelberg, has been elected to the deputy-professorship of comparative philosophy at Oxford, vacant by the resignation of Mr. Sayce. In addition to those formerly mentioned in the ACADEMY, Mr. R. Seymour Conway, of Caius College, Cambridge, was also a candidate. Dr. Wright is best known as the translator of the first volume of Brugmann's *Grundriss der vergleichenden Sprachwissenschaft*. He has been residing for some two years past at Oxford, working with Prof. Max Müller; and he has devoted special attention to English dialects, of which it is hoped that he may some day publish a dictionary.

WE understand that Prof. A. S. Wilkins, of Owens College, Manchester, and Prof. E. A. Sonnenschein, of Mason College, Birmingham, are among the candidates for the chair of Humanity at Edinburgh, vacant by the death of Prof. Sellar.

THE new Aristotelian treatise on the Constitution of Athens has naturally excited special interest at Oxford. Its editor is an Oxford man, and it is printed at the Clarendon Press. The *Oxford Magazine* of February 4 has already published a long review of it, signed R. W. M. These initials are those of the Reader in ancient history, who has announced that he will give four public lectures on the subject, and who will also open a discussion at a meeting of the Ancient History Society on Friday next.

MR. W. R. MORFILL, reader in Russian at Oxford, is to deliver a public lecture to-day (Saturday) on "Old Slavonic Myths."

MR. J. BASS MULLINGER will deliver a course of three lectures on Fridays during February, as Birkbeck lecturer at Trinity College, Cambridge, on "The Temporal Power of the Papacy: its Origin and Results."

BRASENOSE COLLEGE, Oxford, has elected three of its members to honorary fellowships: Dr. John Wordsworth, Bishop of Salisbury, formerly fellow and tutor; Mr. A. W. Rucker, professor of physics at the Royal College of Science, formerly fellow; and Mr. Arthur J. Evans, Keeper of the Ashmolean Museum.

THE University of Adelaide has been admitted to the privileges of that statute by which two years' residence there are treated, under certain conditions, as the equivalent of one year's residence at Oxford.

RIDLEY HALL, Cambridge, has just celebrated its tenth anniversary. On this occasion the principal, the Rev. H. C. G. Moule, stated that, of the 260 members who have passed through the Hall, more than thirty are now missionaries.

A SCHOLARSHIP of the annual value of £50 has been founded at Durham University, in memory of Bishop Lightfoot. Its object is to encourage those who have taken honours in Arts to keep three additional terms and take honours in theology.

THE Gamble gold medal for 1890, competed for by students of Girton College, has been awarded to Miss Alice Barlow, for an essay entitled "Peter Damiani: a Study of his Life and Influence." An essay on "Arnold, of Brescia," by Miss K. E. Dixon, was considered worthy of high commendation.

THE scheme of free evening lectures at University College, London, will be inaugurated on Wednesday next, February 11, with a lecture by Mr. L. Courtney, on "The Difficulties of Socialism."

THE University College School Old Boys' annual dinner will be held at the Holborn Restaurant, on Tuesday next, February 10, with Dr. Alexander Hill, the master of Downing College, Cambridge, in the chair. The hon. secretary is Mr. Alfred Paterson, Arundel Club, Adelphi-terrace, W.C.

OBITUARY.

DEAN PLUMPTRE.

WE regret to record the death of the Very Rev. E. H. Plumptre, Dean of Wells, which took place on Sunday last, February 1. The loss of his wife, about a year ago, was a great blow to him, and he had been confined to his house by the severity of the winter; but his fatal illness was very sudden at the last.

Edward Hayes Plumptre was born in London in August, 1821. After a private education, he

matriculated in May, 1840, at University College, Oxford, where his relative, Dr. F. C. Plumtre—so well known to successive generations of Oxford men—was already Master. In Easter term, 1844, he obtained a first in classics, along with Sir George Bowen, Dean Bradley, and Mr. E. Poste, the editor of *Gaius*. In the mathematical list of the same date, his name stands alone in the first class. He was immediately elected to a fellowship at Brasenose, which he forfeited three years later on his marriage to a sister-in-law of F. D. Maurice. Coming up to London, he was appointed chaplain at King's College, afterwards holding in succession the chairs of pastoral theology and of exegesis of Holy Scripture. His labours at King's College lasted altogether for thirty-four years, until he was nominated by Mr. Gladstone in 1881 to the deanery of Wells, in succession to Dr. G. H. S. Johnson—also an Oxford double first-classman. During almost as long a period he was connected with Queen's College, Harley-street, as dean and as principal. He was also at various times Grinfield Lecturer on the Septuagint at Oxford, Boyle Lecturer at the Chapel Royal, assistant-preacher at Lincoln's Inn, and select preacher at both universities. His Church preferments were a prebend at St. Paul's, and the livings of Pluckley and Bickley, both in Kent. The university of Glasgow conferred on him the degree of D.D. in 1875.

Dean Plumtre was a genuine scholar and a voluminous author. He was one of the largest contributors to Smith's Dictionary of the Bible. He also wrote for the Speaker's Bible, for Bishop Ellicott's Commentaries on the Old and New Testament, and for the Cambridge Bible; and he edited *The Bible Educator* (four vols., 1877-79). Among his independent theological publications may be mentioned *Biblical Studies* (1870); *Christ and Christendom*, the Boyle Lectures for 1866; and *Theology and Life*, with an appendix on the authorship of the Book of Job. As characteristic of the man, it may be added that two of his last published sermons were entitled "The Law of Development in Theology," and "Respite, Aspic, Propice."

But Dean Plumtre was more than a painstaking student and hold interpreter in theology. He aspired also to the fame of poet, translator, and historian. Three volumes of his verse—*Lazarus, Master and Scholar*, and *Things New and Old*—have each passed through several editions. In 1865, he published a translation of Sophocles, with biographical essay and appendix of rhymed choruses, which was followed three years later by a similar version of Aeschylus. The two works, however, on which his future reputation will rest, were the fruit of his learned leisure at Wells. These are an English translation of Dante, including the *Canzoniere* as well as the whole of the *Commedia*, in the metres of the original, together with an elaborate biography and several excursuses (two vols., 1887); and a handsome life of Bishop Ken, full of both historical and bibliographical research (two vols., 1888), of which a cheap edition has recently been published. His latest literary task was to collect materials for the biographies of his predecessors in the decanal chair at Wells, some prelections of which have appeared from time to time in the *Contemporary Review*. It is to be hoped that the work is so far finished that a friend may be able to see it through the press.

Any notice of Dean Plumtre would be incomplete which omitted to mention the beneficent influence exercised by his noble example of high thinking and plain living. No student that was brought into contact with him at King's College can fail to remember through life the warmth of his sympathy, the kindness of his monitions, his single-minded devotion to learning, his practical piety. At Wells, too,

the entire city has reason to keep his memory green, not only for his munificent charity, but also for his active participation in every good work.

J. S. C.

ORIGINAL VERSE.

A TOMB IN WIMBORNE MINSTER.

(The Father of the Lady Margaret.)

Long time we fought, firm-faced, against the foe,
Guarding the lilies of the fair fair France
Against the shafts of adverse circumstance
That brought upon this man what all men know.
Ah, Aquitaine! where late the roses blow
The sweetest, 'e'en in warrior's mischance
Ours once again! And Norman valiance
That Cressy and that Agincourt could show!
Sweet, art thou there! Bide patient, Margaret.
Sooth, who can tell what after us shall be?
Rest we in peace whatever may befall.
Pray Mary's Grace: God's judgments are not yet.
Reach me thy hand: and mine, O Love, for thee.
Now may we sleep until His Trumpets call.

CHARLES SAYLE.

MAGAZINES AND REVIEWS.

THE *Expositor* for February opens with the first of a series of articles on the criticism of the Synoptic Gospels by Prof. Sanday, and also includes Prof. Marshall's second article on what he calls the Aramaic Gospel. It is needless to say that both are well worth careful reading, though Prof. Sanday's is perhaps somewhat diffuse and popular in its style. The second of the Oxford professor's articles and the third and following ones of his Manchester colleague's will doubtless be still more valuable. Our appetite is now fully whetted. Dr. Perowne continues his notes on Genesis, and Prof. Bonney, as a geologist, contributes an appendix on Genesis i. Prof. Dods, in his survey of recent English critical works, speaks especially of those of Archdeacon Watkins and the late Bishop Lightfoot. Prof. Cheyne, in a review of Mr. G. A. Smith's Exposition of Isaiah xl.-lxvi., takes occasion to complain of the persistent neglect of his critical analysis of the Deutero-Isaiah in an article in the *Encyclopædia Britannica* (1881), and to recognise Mr. Smith's approximation to the provisional conclusions therein expressed. In the course of criticising Mr. Smith's views, he states the points in which he has himself gone forward since 1881.

CORRESPONDENCE.

"ARISTOTLE ON THE CONSTITUTION OF ATHENS."

Cambridge: Feb. 2, 1891.

On p. 16 of the edition of the above work, just published by the Trustees of the British Museum, we read of Solon's services to Athens: τὰ πράγματα νοσοῦντα μετεκρούσαστο. The editor, Mr. Kenyon, justly observes that μετεκρούσαστο is a "very doubtful reading." I venture to suggest that the right word is μετεχειρίσαστο. The verb is used elsewhere of a physician's treatment of his patients, as in Plato, *Republic*, 408 C (ἰατροὶ) ὅσοι πλείστους μὲν ὕγιεινός πλείστους δὲ νοσώδεις μετεχειρίσαντο. Similarly, of dealing with public affairs, we have, *ibid.*, 346 E., μηδὲνα ἐθέλειν ἐκόντα ἄρχεω καὶ τὰ ἀλλότρια κακὰ μεταχειρίζεσθαι ἀνορθοῦντα; and in the *Busiris* of Isocrates, §§ 16, 77, 87, we find three instances of πράξεις μεταχειρίζεσθαι.

On p. 36 the text as printed is ἐποίησαν διαφημισμὸν. But the substantive, as observed by Mr. Kenyon, "does not seem to be found elsewhere," while the corresponding verb occurs in late writers only. διαφημισμὸν is possibly a copyist's mistake for διαφημισμὸν. The latter is found in Athenaeus, p. 218 A, and is confirmed by διαφημίζονται on p. 107 of Aristotle's treatise.

On p. 116 the editor deliberately prints a word that does not occur elsewhere: ποιοῦσι δὲ καὶ δεκαρχαίρεσις στρατηγῶν. It seems safer, however, to regard δεκ as a careless repetition of the immediately preceding δὲ καὶ, which (according to the table of abbreviations) would be presumably written as δεκ'. A similar repetition of μετὰ τὰ for μετὰ has been noticed by the editor on the same page. The clause will thus run as follows: ποιοῦσι δὲ καὶ ἀρχαίρεσις στρατηγῶν.

On p. 120, among the duties of the πωληταί, we read: καὶ τὰς οὐσίας τῶν ἐξ Ἀρείου πάγου φεγγόντων καὶ τῶν . . . [ἐναντίον τῆς β]ουλῆς παλοῦσιν. Possibly the blank in the papyrus may be filled by the conjecture ἀρίμων. One of the forms of ἀρμία was followed by confiscation; and we know from Harpocration, who refers to this treatise in his article on πωληταί, that among their duties was the sale of τὰ δημεύμενα, or confiscated goods.

On p. 145, towards the close of an account of the tribunals that had cognisance of homicide, we have the following somewhat fragmentary information: εἰσάγει δ' ὁ βασιλεὺς καὶ δικά[σ]ουσιν . . . αἰ[σ]ο[ί] καὶ ὑπαίθυροι. It was already known from Antiphon, *De Cæde Herodis*, § 11, that in all cases of homicide the court was held in the open air. It would be interesting to recover, if

possible, the further fact which has almost vanished from the papyrus with the preceding adjective. I have every confidence in submitting that the lost word is *σκοταῖοι*, an adjective frequently found in Xenophon. The clause will then run thus: *δικάζουσι σκοταῖοι καὶ ὑπαῖθροι*. It is on the authority of Lucian, and of Lucian alone, that it has hitherto been vaguely surmised that the Areopagus held its sessions for the trial of such cases at night: *Hermetismus*, 64 (*οἱ Ἀρεοπαγῖται ἐν νυκτὶ καὶ σκότῳ δικάζουσιν*). The passage, as now restored, enables us to claim the authority of Aristotle for this impressive detail of Athenian procedure.

It is interesting to notice that the form *ληγουρία*, which recent editors of the Speech of Demosthenes against the Law of Leptines have adopted in place of the traditional reading *λειτουρία*, is confirmed by the papyrus now published (pp. 75, 82, 142). There was every reason for expecting such a form to be ultimately supported by the testimony of MSS., provided they were of sufficiently early date. Mr. Kenyon has duly noticed that this form is recognised by Greek grammarians; it is still more important to remember that it rests on the authority of inscriptions belonging to the age of Demosthenes and Aristotle.

J. E. SANDYS.

SOUTHERN PALESTINE IN THE FIFTEENTH CENTURY B.C.

Dahabiah *Istur*, Rhoda: Jan. 20, 1891.

I have been studying the tablets of Tel el-Amarna, which relate to the affairs of Southern Palestine, and have been published in the third and concluding part of the *Mittheilungen aus den orientalischen Sammlungen*.

The publication reflects the highest credit upon the administration of the Royal Museum at Berlin, and more particularly upon Messrs. Winckler and Abel, whose copies of the tablets are marvellously accurate. Only those who have themselves worked at these most difficult relics of the past can have an adequate idea of the difficulties the editors have succeeded in surmounting. The publication, like the readiness of the authorities in the Cairo Museum to place the tablets they possess at the disposal of scholars, suggests unfavourable comments on the conduct of the British Museum, which still withholds from Assyriologists that portion of the collection which has been purchased by the British public. Until we know what it contains, the information given us by the tablets in the possession of the Ghizeh and Berlin Museum, as well as of private individuals, must necessarily remain incomplete.

I have, in the first place, to correct a reading which I published in the ACADEMY last year. The local name of the deity worshipped on "the mountain of Jerusalem," according to Ebed-tob, the governor of the city, was not Marru, but Salim. The character must be read as one, and not divided into two. The name reveals to us the origin of the name of Jerusalem itself. A cuneiform tablet long ago made us acquainted with the fact that *uru* signifies "city," the Assyrian *uru*: Uru-Salim, or Jerusalem, therefore, must be "the city of Salim," the god of Peace. We can thus understand why Melchizedek, the royal priest, is called "king of Salem" rather than of Jerusalem; and we may see in the title, "Prince of Peace," conferred by Isaiah on the expected Saviour, a reference to the early history of the city in which he lived.

The letters sent by Ebed-tob to Egypt are long and interesting. He tells us that he had succeeded to his royal dignity, not by right of inheritance, nor by the appointment of the Egyptian king, but in virtue of an oracle of the god who is called in Genesis El Elyón. At the same time he was a tributary and "vassal"

of Egypt, and the district of which Jerusalem was the capital, and which extended on the west to Rabbah and Mount Seir (Josh. xv. 10), and on the south to Keilah and Carmel, was "the country of the king" of Egypt; who had established his name in it "for ever." Like the other vassal princes of Canaan, who had been allowed to retain their local titles and authority, Ebed-tob was compelled to admit an Egyptian garrison within the walls of his city, and from time to time to receive the visits of an Egyptian "Commissioner-Resident." One of the Commissioners mentioned by Ebed-tob was Pa-uru, whose stele has lately been discovered on the site of Mesides and printed by Mr. Wilbour. Another was Khapi, or Hapi, the son of Miya-Riya, or Meri-Ra, and the father of Amenôphis, who erected the famous colossi at Thebes. A third Commissioner mentioned by Ebed-tob is Suti, in whom we should probably recognise the Egyptian Seti. The Egyptian Commissioner at the same period in the district afterwards occupied by the tribe of Issachar was Aman-khatbi, the Amen-hotep of Egyptologists, whose name Prof. Maspero is shown to be correct in reading Amun-hotpu.

Where the native prince had been displaced, as at Lachish or Megiddo, the town was under the jurisdiction of a *Khazan*, or Egyptian "governor." In many cases the governor bears a Canaanitish name, and must therefore have belonged to the subject population. It would have been better if in all cases the local prince had been superseded by a governor, as the princes were perpetually quarrelling with one another and sending counter accusations to the Egyptian court. Ebed-tob, for instance, complains that Malehiel and Su-yardata had seized part of his territory; and Su-yardata replies that Ebed-lob had tampered with the men of Keilah. Malehiel was a governor, the seat of whose power seems to have been Gezer. Gezer had been "entered" by a certain Labai ("the lion") who writes a humble letter to "the king," his "lord," to explain why he had done so, as well as to answer the accusations brought against him by Ebed-lob.

Most of the letters appear to have been written towards the end of the reign of Amenôphis IV., when the Egyptian empire was already beginning to fall to pieces. The Hittites were threatening Northern Canaan, the "Plunderers," or Beduin, were overrunning the central part of the country as far south as Ajalon and Zorah (Zarkha), while Southern Palestine was assailed by the Khabiri, or "Confederates," under their leader, Elimelech. There were constant complaints that one or other of the vassal princes had joined the enemy. Thus, the king of Hazer in the north is said to have gone over to the Beduin, and the sons of Labai (who in one of the letters is stated to have attacked Megiddo) are accused of conspiring with the Khabiri. A suggestion has been made to identify the latter with the Hebrews, but the historical situation makes this impossible; and since the word means "Confederates" in Assyrian, it is better to see in them the confederated tribes who met in their common sanctuary at Hebron "the Confederacy." We know from the Old Testament that Hebron was inhabited by a mixed population, Amorite, Hittite, and probably, also, Canaanite; and the only explanation of the fact that the name of Hebron does not occur in the letters of Ebed-tob, although his territory extended to the south of it, must be that it was in other hands. Ebed-tob declares again and again that the country and governors of the Egyptian monarch are perishing, and that if no additional troops are sent "this year," "the country of the king" will be lost to him. There is no record that the troops arrived; on the contrary, it is probable that Amenôphis died

shortly after the despatch of the last of the letters of Ebed-tob. The Khabiri were allowed to continue their victorious career, and possibly to capture Jerusalem itself. At all events, when the Israelites entered Canaan, a century later, they found the city in the possession of the Amorite Jebusites, and Ezekiel tells us that its father was an Amorite and its mother a Hittite.

A. H. SAYCE.

"LIVES OF SAINTS FROM THE BOOK OF LISMORE."

London: Feb. 2, 1891.

Nearly six columns of the last two numbers of the much-enduring ACADEMY are filled with criticisms by Dr. MacCarthy of my edition of the *Lives of Saints from the Book of Lismore*. The possessors of that book, as well as some of the readers of this journal, may wish to know how far those criticisms are well founded, and how far they arise from the critic's imperfect acquaintance with the Middle-Irish language. I have, therefore, done what no one who has read the exposures in the ACADEMY for April 2 and July 30, 1887, December 1, 1888, and August 10, 1889, is likely to have done, namely, examined these criticisms with care, and made a list of the corrections suggested by that examination. Here is the list:

Text.

- L. 753 (p. 23), for *bliadain*, read [cét] *bliadan*.
 „ 1275 (p. 39), read *leassaigbius an ingen tainie ann na bu?*
 „ 2831 (p. 85), for *Imlech*, read *Imlecha*.
 „ 3253 (p. 97), for *n-æinadhb*, read *n-æininadh*.
 „ 4032 (p. 120), for *mil*, read [in] *mil*.
 „ 4459 (p. 132), for *ind*, read [is] *ind*.

Translation.

- P. 165, l. 5, for *would give*, read *gave*.
 „ 168, l. 23, for *when once*, read *at one time*.
 Note.—The Latin should be: *Et clamaverunt ad Dominum cum tribularentur, et necessitatibus eorum eripuit eos*.—Ps. 106, 6.
 „ 171, l. 8, for *year*, read *hundred years*.
 „ 173, note, for 82, 2? read 88.
 „ 174, l. 28, for *even if it*, read *provided one*.
 „ 175, l. 26, for *there in Durrow*. Moreover, read *there*. In Durrow moreover,
 „ 179, l. 9, for *servant, &c.*, read *servant, and he died, and Colomb made prayer for him, and waked him out of death, and*
 „ 183, l. 9, for *when holy Brigit was born*, read *by whom holy Brigit was begotten*.
 „ 186, l. 18, for *after*, read *in place of*. L. 25, read *Doth the girl that came there care well for the kine?*
 „ 188, l. 28, for *Thursday*, read *Wednesday*.
 „ 191, l. 31, for *his*, read *her*.
 „ 193, l. 17, for *opened for*, read *loosed from*.
 „ 197, l. 16, for *to*, read *of*.
 „ 205, l. 10, for *he*, read *it*.
 „ 207, ll. 36, 37, for *the chief was carrying him*, read *he was being carried*.
 „ 219, l. 20, after *greatest*, insert *and brightest*.
 „ 221, ll. 13-15, read "Verily," saith Senán, "there shall be granted to you one from whom your protection shall come: be in no distress about it."
 „ 224, l. 31, for *at the bishop's desire*, read *the bishop consenting*.
 „ 232, l. 9, for *abundantly*, read *idly*. Note 1 should be "The two Fermoys."
 „ 239, ll. 19, 20, for *And . . . invading of*, read *And she went not from* her husband without (his promise) to invade*.
 „ 245, l. 16, for *cause*, read *deliver*.
 „ 249, l. 16, for *calling*, read *laughing*.

* Cf. the Highland *gabh nam*, *apage*.

- „ 250, ll. 31, 32, for It . . . him, read Enemies that he had meet him.*
- „ 252, ll. 1, 2, for train . . . it, read angels manifestly ministering thereto.
- „ 257, l. 27, for It is manifestly from, read Manifest from that is.
- „ 258, l. 3, dele the comma.
- „ 287, l. 2, for tribute, read the waters. L. 7, for of that colouring, read to establish that. Cancel note 2.

Notes and Indices.

P. 303, l. 14, for 100, read 88.

P. 306, l. 23. Here I have confounded Aed Slane with his predecessor Aed mac Ainmirech. I should have said that the Irish Lives of Columba attribute to the former potentate a death-legend told of the latter.

P. 370, col. 1, l. 14, dele =.

These are all the corrections made by Dr. MacCarthy which I am able to adopt. Some of the errors which he has detected are due to what Dr. Johnson, speaking of one of his own mistakes, honestly calls "sheer ignorance"; others to my desire to give the Irish exactly as I found it in the codex, without indulging in conjectural emendation; those (namely, in lines 2831 and 3253, and in p. 175, l. 26; p. 191, l. 31; and p. 258, l. 3) may be typographical. But most are clerical, mere slips, inevitable in the process of producing an *editio princeps* of a long and difficult text in a language without a lexicon.

Dr. MacCarthy's lists are eked out by characteristic *γλίσχρολογία*, and by "corrections," of which some seem due to a want of familiarity with English idioms, while others certainly spring from his imperfect acquaintance with Irish in its older forms. He "corrects," for example, "by" (i.e., "begotten by," + *la* t) into "belonged to." He "corrects" my "he found favour in her eyes" (cf. Dent. xxiv. 1) into "she gave love to him," which is hardly English, although, no doubt, it is the literal version of *turt* (*doradh, dobreth*) *gradh do*, and appears as such in my translation, p. 232, ll. 28, 31. § He would alter "the little corn that it [i.e., the country] has" into "a little of corn in the territory," which is both bad English and an instance of the aforesaid *γλίσχρολογία*. He misrenders *ochtmadh uathaidh* (l. 1351) by "an eighth lunar day," which would be *ochtmadh uathaidh éscai*. ¶ He misrenders *cam*, "bent," "crooked" (= *σκαμβός*) by "squinting," which would be *camsháilech*, or *cléanamharcach*. Criticising my index of places, where I give the gen. of *Ferna* "Ferns," as *Fernann*, he asserts that in the text that case "is correctly given as *Ferna*, not *Fernann*." Grammar is certainly not Dr. MacCarthy's strong point. He will find that the gen. sg. of *Ferna* is *Fernann* in the Annals of Ulster, 662, 714 (Rawl. B. 489, ff. 9^a 1, 11^b 1), *Fernand* in Tigernach 693 (Rawl. B. 488, fo. 11^b 2). Of this gen., the *Fernan* of Chron. Scot. 689 and the *Ferna* of the Book of Lismore are mere corruptions.

* Dr. MacCarthy does not, apparently, perceive that this requires the *teacmhuidh* of the Lismore codex to be changed into *teacmhuid*; but the emendation is supported by the *teacmaid* of one of the Brussels MSS.

† See Dr. Murray's Dictionary, vol. i., p. 1231, col. 1.

‡ For Mid. Ir. examples of *la*, meaning *by means of*, through the agency of, see Atkinson's Glossary, p. 776.

§ Dr. MacCarthy does not mention this; but it is not worth while to notice his *suppressiones veri*.

|| See the preceding line, p. 242, l. 30.

¶ See Chronicon Seotorum, ed. Hennessy, p. 22, l. 14. Dr. MacCarthy's error comes from misunderstanding the gloss *hi coicid huathid*, gl. quinta luna, Cr. 33^b, i.e., "in quinta singulari," "am fünften der Einzahl," as Ebel and Windisch correctly explain it. See Ancient Laws, i. 82, ll. 6, 8, where *treis uathaid* corresponds with *aen.-treisi*.

Dr. MacCarthy says at the close of his second letter, "it is right to add that the worst specimens have not been brought forward." Let him substantiate this assertion, or lie under the stigma of having made a charge which he is afraid or unable to support.

WHITLEY STOKES.

Corrigenda.—In my letter in the ACADEMY for January 31, 1891, p. 114, col. 3, ll. 62-3, col. 2, for "the churches of all Ireland" read "all the churches of Ireland"; l. 67, col. 2, for "was" read "is"; p. 115, col. 1, l. 28, for "tann" read "tan"; l. 56, for "arbbur" read "arbur"; l. 57, for "riganna" read "rigdamna"; col. 3, l. 5, for "nir'gabgan" read "nir'ghabh gan."

B. MACCARTHY.

EURIPIDES OR MENANDER.

Brighton: Feb. 2, 1891.

In the ACADEMY of January 2, I observe that Mr. Leather in his article on a new translation of Longinus makes the following statement:—

"A passage" (cited from the translation in question) "of curious interest, which finds its parallel" . . . in St. Paul's quotation from Euripides, "Evil communications corrupt good manners."

Now St. Paul in 1 Cor. xv. 33 has been almost universally supposed to have referred to a line of the comic poet Menander. The words *φθειρουσιν ἥθη χρηστὴ δουλιαί καὶ καὶ* will be found in the fragment of Menander's play entitled "Thais," in Meineke's edition (*Frag. Com. Græc.* 4, 132), as well as in the *Γνώμαι Μονόστιχοι* attributed to him in the same vol., p. 361. Henry Stephens remarks, "I remember to have read, in one of the old copies of the N. T., these words written in the margin" (i.e., with reference to the quotation), *Μενάνδρου τοῦ κωμικοῦ γνώμη*. Socrates, it is true, in his *Hist. Eccles.*, iii., 16, ascribes them to Euripides; but Jerome, a more accurate authority, attributes them to Menander, as do Grotius, Estius, Photius and the consensus of modern commentators. Tertullian renders them into Latin thus: "*Bonius corrumpunt mores congressus mali*." A similar sentiment occurs in Menander's *Γνώμ.* Mon. 274, *Κακοὶς δούλων καὶ τοῖς ἐκβήσῃ κακός*, which corroborates the reference above. Cf. Nicophoros Kalogeras in his edition of Euthymius Zigabenus *ad loc.* No doubt such a sentiment perfectly harmonised with the sententious observations of Euripides, and was probably on that account wrongly ascribed to him by Socrates; but the opinion of Jerome has outweighed the other with almost all critics ancient and modern.

LAUNCELOT DOWDALL.

LECTURES AND PAPERS ON THE HISTORY OF THE REFORMATION.

Oxford: Jan. 31, 1891.

While I cordially agree with the reviewer (in to-day's issue of the ACADEMY) in holding that Mr. Aubrey Moore's book on the Reformation is "with all its faults most valuable," I venture to think that he has dealt somewhat hardly with me as regards my share in its production; and I therefore ask for space to defend myself.

The reviewer has evidently no very high opinion of my qualifications for the task of seeing my dead friend's work through the press. I allow that they might be greater; but perhaps the facts that for the last twenty years the history of the Reformation in England and on the Continent has formed one of the main subjects of my studies, and that Mr. Moore not only often obtained information from me for use in his lectures, but pressed

me several times to lecture in Oxford on the Reformation in his place (a flattering offer, which many engagements prevented me from accepting) may suffice to show your readers that I am not so entirely disqualified as the reviewer would have them believe.

I am sorry that the reviewer does not agree with Mr. Moore in certain points relating to literary style; but that has nothing to do with me, for (as I have stated in my Preface) I have only corrected absolute slips in Mr. Moore's MS. and added a few connecting words where necessary. The few cases cited in support of this criticism as to Mr. Moore's style are all matters on which it is perfectly lawful to hold different opinions.

The reviewer's most serious charge against me is that I have "taken advantage of the occasion" (these are his words) to insert one of my own *Guardian* articles in Mr. Moore's book, and, further, that I have neglected to "read or mention" one of the chief authorities on the subject of that article. Both these criticisms can be easily answered. The former, indeed, has been answered by anticipation in the book itself. In three cases I found that in Mr. Moore's MS. written lectures or notes were replaced by printed articles, two by himself, one by me. In each case certain passages were underlined; and reference to the notes of his pupils placed at my disposal showed that the lectures as delivered were simply summaries of these printed articles, the underlined passages in the one corresponding precisely with the headings of the other. Hence I thought it best in each case to reprint the article *in extenso*, and I am of the same opinion still. Thus I dealt with my paper precisely as I dealt with Mr. Moore's on Henry VIII.'s Divorce and on Zwingli.

The reviewer is, however, most angry with me for not having read or mentioned Mr. Law's book on *The Jesuits and Seculars* (I copy the title given by him, though it is not the right one). As to not mentioning this work, may I quote a sentence from my Preface, where I say that "I have not tried to write them [the lectures] up or to make a complete text-book out of them"? For had I done so the book would have been mine, not Mr. Moore's; and it is only because it is Mr. Moore's that, as your reviewer rightly states, it is "most valuable." I admit, however, that I might have made an exception to this rule in the case of Mr. Law's admirable book, especially as an earlier one by him is quoted in the list (printed immediately after my article) which I long ago sent to Mr. Moore.

Further, it was impossible for me to have read this book when writing my article. My article, as stated in the heading to the reprint, appeared in the *Guardian* for December 29, 1886, and was a summary of Dr. Bellesheim's *Life of Cardinal Allen*, published in 1885. Now Mr. Law's work is dated 1889, so that with the best will in the world I cannot see how I could have read it when writing my paper in 1886, while I saw no reason for mentioning in the unrevised reprint of that paper any work which might subsequently have appeared on the same subject.

W. A. B. COOLIDGE.

APPOINTMENTS FOR NEXT WEEK.

SUNDAY, Feb. 8, 4 p.m. South Place Institute: "Saffism," by Mr. E. G. Browne.

7.30 p.m. Ethical: "The Three Religions," by Mr. J. S. Mackenzie.

MONDAY, Feb. 9, 5 p.m. London Institution: "The Brain, its Structure and Functions," by Dr. H. Power.

8 p.m. Royal Academy: "Byzantine Architecture," V., by Mr. G. Aitchison.

8 p.m. Society of Arts: Cantor Lecture, "The Construction and Capabilities of Musical Instruments," III., by Mr. A. J. Hipkins.

8 p.m. Library Association: "The Selection of Geological and Biological Books for a Free Public Library," by Mr. Ogle.

- 8 p.m. Richmond Athenæum: "Felix Mendelssohn-Bartholdy," with Musical Illustrations, by the Rev. W. H. Bliss.
- 8.30 p.m. Geographical: "Messrs. Jackson and Oge's Journey through Masai Land to Uganda," by Mr. E. G. Ravenstein.
- TUESDAY, Feb. 10, 3 p.m. Royal Institution: "The Spinal Cord and Ganglia," IV., by Prof. Victor Horsley.
- 8 p.m. Civil Engineers:
- 8 p.m. Colonial Institute: "Canada," by the Earl of Aberdeen.
- 8 p.m. Society of Arts: "Sgraffito," by Mr. Heywood Sumner.
- 8.30 p.m. Anthropological: "Sketches of Horse Ornaments," by Mr. G. M. Atkinson; "The People and Languages of New Ireland and Admiralty Islands," by Mr. Sidney H. Ray (from Letters of the Rev. R. H. Rickard); "The Presence of a Mongoloid Element in Brittany," by the Comte A. Mahé de la Bourdonnais.
- WEDNESDAY, Feb. 11, 8 p.m. Society of Arts: "The Proposed Irish Channel Tunnel," by Sir Roper Lethbridge.
- 8.30 p.m. University College: "The Difficulties of Socialism," by Mr. L. Courtney.
- THURSDAY, Feb. 12, 3 p.m. Royal Institution: "Lull, Purrell, and Scarlatti," with Musical Illustrations, I., by Prof. C. Hubert H. Parry.
- 6 p.m. London Institution: "The Partition of Africa," by Mr. J. Scott Keltie.
- 8 p.m. Royal Academy: "Byzantine Architecture," VI., by Mr. O. Aitken.
- 8 p.m. Mathematical: "Two Notes on Isoscelians," by Mr. R. Tucker; "Quartic Equations interpreted by the Parabola," by Mr. G. Heppel; "The Oscillation of a Spheroid in a Viscous Liquid," by Mr. J. Buchanan.
- 8 p.m. Electrical Engineers: Discussion, "The Distribution of Electricity, with special reference to the Chelsea System," by Gen. C. E. Webber.
- 8.30 p.m. Antiquaries:
- FRIEDAY, Feb. 13, 5 p.m. Physical: Annual General Meeting; Discussion, "Photoelectricity," by Prof. Minchin; "The Change in the Absorption Spectrum of Cobalt Glass produced by Heat," by Sir John Conroy.
- 7.30 p.m. Civil Engineers: Students' Meeting, "The Clearing and Deepening of Rivers and Canals by means of the Transporting Power of Water," by Mr. W. H. Wheeler.
- 8 p.m. New Shakespeare: a Paper by Miss Latham.
- 8 p.m. Ruskin: "Some Aims of Art, according to Ruskin and otherwise," by Mr. H. E. West.
- 9 p.m. Royal Institution: "Recent Eclipse Expeditions," by Prof. A. Schuster.
- SATURDAY, Feb. 14, 3 p.m. Royal Institution: "The Forces of Cohesion," I., by Lord Rayleigh.

SCIENCE.

Plautus, Miles Gloriosus. Critical Edition by Goetz. (Toubner.)

THIS new volume of the "Ritschl" edition of Plautus is particularly interesting, because it is the first for which Studemund's collation of the Ambrosian Palimpsest has been available. So long as that important part of the evidence was wanting, one could not avoid a slight sense of insecurity about the text offered us by the editors of the series, at any rate for those plays which figured on the more illegible of the Palimpsest's pages. One knew that Prof. Studemund, after devoting the greater part of his life to an extraordinarily minute investigation of these precious though mutilated and defaced scraps of vellum, had attained a certainty of knowledge as to what they did and did not contain to which no other human being could pretend, and that, until his Apograph of the Milan fragments was published, the "last word" could not be said about their testimony to the text of Plautus. That Apograph has been recently given to the world, and in Prof. Goetz's edition of the *Miles Gloriosus* we see the first example of its influence. As we turn over the pages of the play to observe how this or that familiar difficulty has been settled, we cannot but feel how fully the labour spent on these Palimpsest fragments has been justified. Even where a complete line in them was hopelessly illegible, the knowledge of a letter or two here and there, or even of the mere number of letters which must have occupied the line or a part of it, often puts us in the way of avoiding the wrong reading and selecting the right. For the Ambrosian Codex—partly through its

great antiquity, being some 600 or 700 years older than any other MS. of Plautus, but mainly through the fact that all the others belong to one and the same family of MSS., the "Palatine" family, and that it alone can supply an indication of the right track when the "Palatine" MSS. agree in taking the wrong—commands for the slightest hint which it offers an importance which no conjectural emendation, however plausible, can claim. It is amusing to see how the publication of its readings has made havoc of previous conjectures. For example, in the passage where the braggart soldier is boasting of his slaughter of the Cappadocian army, the MSS. agreed in presenting line 54 in this form: *at peditas telu quia erant si virent*. Editors were, as usual, ready with conjectures—"at peditatus reliquiae erant si virent," "at satias belli quia erat siqui virent," and so on, until the true line was elicited from the Milan fragments, *at peditastelli quia erant sivi virent*, "they were more ragtag and bobtail soldiery, so I let them live." Similarly in line 8, where the soldier declares that his sword is longing to make mincemeat of the enemy—*quae misera gestit fratrem facere ex hostibus*—Studemund's collation, though it has not unearthed the actual word that should take the place of the corrupt "fratrem" of the Palatine MSS., has at least proved that it cannot be any of the words proposed by emendators—"fartum," "frusta," "offam," "stragem."

These two examples are enough to show how deficient an edition of a play of Plautus must be which is not based on complete information about the Ambrosian Palimpsest, and how much superior this new edition of the *Miles* is on that account to all previous attempts. We must, however, at the same time express our dissent from the idea that the text now offered to us is the best that can ever be attained. In the first place, there are a good many points about Plautine metre and Plautine diction that still remain to be solved; and their solution, one way or another, will leave its mark on the text. Thus, in line 185, and elsewhere, Goetz retains *profecto*, the MSS. reading, with a short second syllable. Whether this scansion is possible seems very doubtful. It has often occurred to us that the true form may be *profeco* or *profico*, a by-form of *profecto*, like Oscan *præfucus* beside Latin *præfectus*, and perhaps Old Latin *præficia*, a mourning-woman, literally "the leader of the mourners," beside *præfecta*. In the second place, one cannot resist the suspicion that here and there in this edition Prof. Goetz has not shown the same happy divination that was so noticeable in his text of the other plays, especially of those which he edited in conjunction with his lamented friend, Dr. Loewe. In the pun on Philocomasium's pretended name (*Glycera* according to Goetz and most editors), in line 438, the MSS. reading *a dice testu non dicat ei* squares better with Dr. Hasper's proposal, Ἀγλυκῆς *es tu non γλυκεία's*, than with Goetz's solution, *abi, piero's tu, non elucidata*; only, we should for our part prefer to make the pseudonym both in line 436 (MSS. *dicere*) and in line 808 (MSS. *diccam*) *Glycēa* (= γλυκεία), instead of *Glycera*. The corrupt *dicere* of line 436 is suggested by the preceding word *vocare*, and the line should run: *Quis igitur vocare? Glycēe nomen est. Iniuria's*. Again in line 894, where two of the Palatine MSS. give, as the first part of the line, *malamillamerest*, and the third *mala mulier est*, while all three give, as the remainder of the line, *ne pave peioribus conveniunt*, Goetz prints the passage in this way:

"PER. *mala mers es, mulier*. . . .

ACR. . . . *ne pave, peioribus conveniunt*,"

and supposes a line or two to have fallen out between the remark of Periplocemenus and the reply of Acroteleutium. Now the phrase *mala mers es*, "you're a sad baggage," is common enough in Plautus, though the *mulier* of Codex B. which Prof. Goetz adds to it can hardly be anything else than a "doctoring" of the same corrupt reading that is faithfully reproduced by the other two MSS.; but the mistake of supposing that it must have been the phrase used in this line has driven him to the hypothesis of a lacuna for the sake of getting a subject to the plural verb *conveniunt*. We cannot admit that this is doing the best for the passage. Why not make one line of it, thus:

"PER. *Mala mille meres*. ACR. *St! ne pave, peioribus conveniunt*."

"You deserve a thousand penalties.—Soft! do not alarm yourself, these are meet for women worse than me." This reading seems to us to keep more closely to the MSS. (for *malamillemeres* would easily be miswritten *malam illam eres*), and to be more likely in every way than that adopted in this edition. Nor can we approve of the substitution of *quamobrem peream* in l. 360 for the words offered both by the Ambrosian and the Palatine MSS. (*quamnam obrem*), nor yet of printing the name of the town in l. 648 as *Aminula* instead of *Animula*. And we confess to doubts as to the expediency of the spelling *sit* in l. 261, where both families of MSS. have *siet* (a monosyllable), and of *rementer* in l. 205, where both have *vehementer*. Is the latter word ever anything but a trisyllable, and has it anything to do with *echo*? We fancy not.

But in spite of one or two minor shortcomings of this kind, which it would be ungracious to dwell upon, this new edition of the *Miles* is not only vastly superior to any previous edition, but will also hold the field against all comers for many a year. It is indispensable for every student of Plautus.

W. M. LINDSAY.

SOME BOOKS ON CHEMISTRY.

Outlines of General Chemistry. By W. Ostwald. Translated by J. Walker. (Macmillan.) Two treatises, covering much of the same ground as Dr. Ostwald's "Outlines," have already appeared. One of these is Lothar Meyer's *Modern Theories of Chemistry*, translated into English by Drs. Bedson and Carleton Williams; the other is Mr. Pattison Muir's *Principles of Chemistry*, the second edition of which, published in 1889, was noticed at the time in the ACADEMY. Without entering upon a detailed comparison of these three valuable treatises, it may be stated, in general terms, that the volume now under review contains discussions of several subjects omitted from the works of Meyer and Muir, while at the

same time some other topics are argued with greater or less fulness of illustration. Perkin's researches on magnetic rotation, van 't Hoff's theory of solution, and Arrhenius's theory of electrolytic dissociation, may be cited as instances in point. Ostwald's text-book of the philosophical bases of chemical science is divided into two parts, the first treating of the laws of mass, the second of the chemical laws of energy. In the six books included in the first Part, mass, the properties of gases, the properties of liquids, solutions, the properties of solids, and chemical systematics are discussed. The five books of Part II. treat of thermochemistry, photochemistry, electrochemistry, chemical dynamics, and chemical affinity. All these subjects are handled with masterly clearness. The book, moreover, is written in an interesting manner; and we are sure that it will prove an attractive and valuable addition to the library of all students and teachers of chemistry who desire to penetrate beyond the empirical formulæ and the obvious properties of chemical compounds.

Chemical Arithmetic. Part I. By W. Dittmar. (Glasgow: Hodge.) This volume consists mainly of a collection of tables for the use of chemists: the author intends to supplement it by an exposition of the applications of arithmetic to the solution of chemical problems. The book before us is not a mere compilation, but is, as Dr. Dittmar rightly affirms in his Preface, an essentially original work. This statement is, to some extent, true even of the logarithmic tables, which show certain features that may be regarded as improvements on the ordinary methods of presentation. Every endeavour has been made by the author to ensure accuracy, and to include every kind of table which the chemist, be he commercial analyst or investigator, can require. To show how much the present volume includes, and of what varied material it consists, would probably demand a couple of pages of the ACADEMY; we must content ourselves with recommending our chemical readers to learn from the book itself how extensive is the ground it covers in the domain of chemistry and of chemical physics. We observe that Germanium and Samarium are omitted from the table of atomic weights on page 1. Dr. Dittmar does not adopt the recent corrected value for the cubic inches in a gallon—277.462 instead of 277.274. He gives the weight of a cubic inch of water as 252.458 grains, instead of 252.286. In the formula for transforming degrees Baumé into specific gravity in the case of liquids heavier than water the denominator is misprinted 145.08—it should be 145.88. On page 68 the old incorrect formula ($C_{16}H_{32}O_2$) for linoleic acid is given, instead of that now universally adopted ($C_{18}H_{32}O_2$).

"ENCYCLOPÆDIE DER NATURWISSENSCHAFTEN."—*Handwörterbuch der Chemie*. Herausgegeben von Dr. A. Ladenburg. 38 und 39 Lief. (Breslau: Trewendt.) These two last published parts of this monumental dictionary include several important subjects, such as the ethereal or essential oils, oxalic acid and its derivatives, a very heterogeneous group designated by the wide term *Pflanzenstoffe*, and Phenanthren. The article on essential oils contains a useful alphabetical table giving, in separate columns, the German names of the several oils, the botanical names of the plants which yield them, the parts of the plants from which they are derived, and the botanical orders to which they belong. This is followed by a series of brief descriptions of each oil, the arrangement following the alphabetical sequence of the orders concerned. Oxalic acid and its derivatives occupy forty pages, no fewer than 699 original memoirs, papers, or notes being included in the bibliography of this acid. In

the article on the unclassified constituents of plants the alphabetical arrangement is followed. It is difficult to say how far completeness has been attained in the descriptions given, but we miss several bodies from the list; some of these may, however, be discussed in other parts of the Dictionary. The important and widely-diffused colouring matter known under the various names of erythrophyll, coicin, and oenolin, does not, for instance, appear to be mentioned.

Principles of General Organic Chemistry. By Prof. J. Hjelt. Translated by J. Bishop Tingle. (Longmans.) This book is not a student's ordinary text-book. It is not a descriptive catalogue of organic compounds and reactions, but presents, in a concise form, some of the more important arguments connected with the composition, the physical properties, and the general behaviour of organic bodies. The work was originally written in Swedish: the present translation has been made from a revised German version.

Inorganic Chemistry. By W. Jago. (Longmans.) It is quite impossible to justify the multiplication of elementary manuals on chemistry. We cannot find in this volume any original features of value, while its scope seems to be identical with that of several similar works already before the public. Nor is it up to date. We see no definition of "mass"; and we cannot commend the author's statements about matter, weight, and force. Mr. Jago states (p. 155) that graphitic acid is prepared by heating graphite with potassium chlorate and sulphuric acid, and adds that the new compound, when heated, leaves a mass of pure graphitic carbon. Both statements are incorrect. On p. 197 the average percentage of carbon dioxide in the atmosphere is given as .04—a figure which is certainly 25 per cent. too high. The true distinction between earthenware and porcelain is wholly missed in the statement on p. 367, where the "varying fineness of the constituents and the skill expended in their manufacture" are alone named as causing the difference in question. The characteristic chemical constitution of glass is neither explained nor covered by the description given in paragraph 425.

CORRESPONDENCE.

NEW JAINA INSCRIPTIONS FROM MATHURĀ.

Vienna: Jan. 25, 1891.

About eight months ago I gave in the ACADEMY (April 19, 1890, p. 270) an account of some of the results of Dr. Führer's excavations made in the Kankālī Tīla at Mathurā during the working season of 1889-90. This year Dr. Führer has begun his operations much earlier, and his kindness enables me to report progress already. He arrived at Mathurā on November 15; and on December 27 he sent me impressions of nineteen new inscriptions, varying apparently from the year 4 of the Indo-Scythic era to the year 1080 after Vikrama, some of which possess even a greater interest than those found in former years.

The most important new document is incised on the left portion of the base of a large standing statue, of which the right half is still missing. Most of its letters are very distinct, and I read it as follows:

L. 1. *Sain* 70[+]8 *rva*[va] 4 *di* 20 *etasyain purvayān Koli ye* [Kottiyē?] *game Vairāyā śākhāyā*.

L. 2. *ko Arya-Vridhahasti arahato Nan*[di]-[d] *cartasa pratimān nirvartayati*.

L. 3. *śya bhāryāye śrāvikāye* [Dināye] *dān*[a] *n* *pratimā Vād*[dh] *ē thāpe devanirmite pra*.

Each line seems to be complete. It is, therefore, evident that the pieces wanting between l. 1 and l. 2, and at the beginning and the end of l. 3, must have stood on the right half

of the base. This side, too, must have had three lines; and it is not difficult to restore some portions of them conjecturally, according to the analogy of other inscriptions. The first line of the right side certainly began with the words *Thāniye kule*, and ended with the letters *vācha*, which latter are required on account of the syllable *ko*, with which l. 2 begins. In between probably stood a note regarding the Saṁbhoga, and the name of Vridhahasti's teacher, followed by the word *śishyo*. For, without such further specifications, the line would be too short in proportion to the lines of the left side, which each contain from 24 to 27 letters. The second line of the right side, of course, gave a more detailed description of the giver, as the daughter of N. N. and the daughter-in-law of N. N., as well as her husband's name. The third line certainly began with the syllables *tishthāpitā*, or with a Prakrit equivalent thereof.

With these explanations and restorations the translation will be:

"In the year 78, in the fourth (month of the) rainy season, on the twentieth day—on that (date specified as) above, the preacher Arya-Vridhahasti (*Arya-Vridhahastin*) [the pupil of . . .] in the Kōfiya [Kottiya?] Gana, in the Vairā Śākhā (*Vairā Śākhā*) [and in the *Thāniya kule*] orders to be made a statue of the Arhat Nandivartā. The statue, the gift of the female lay-disciple Dinā (*Dattā*), the wife of . . ., has been set up at the Voddha (?) Stūpa, built by the gods."

The first point of interest which the inscription offers is the name of the Arhat. The Jainas know of no Tirthankara Nandivartā; but the symbol, called Nandivartā, is the distinguishing mark of the eighteenth prophet, Ara. This person is undoubtedly meant; for in the mixed dialect of these inscriptions *Nandivartā* may stand either for Sanskrit *Nandivartu* or *Nandivartu*, and *arahato Nandivartasa* may be translated "of the Arhat, whose (mark) is the Nandivartā." This explanation confirms the discovery, which I announced in the *Vienna Oriental Journal* (vol. iv., p. 328), that the distinguishing marks of the various Tirthankaras were perfectly settled in the first century of our era. The list of Tirthankaras, worshipped in the two ancient temples under the Kankālī Tīla (*ibido*, p. 327), receives also a new addition.

Still more important is the information conveyed in l. 3, that the statue was set up at, i.e., probably within, the precincts of "a Stūpa, built by the gods." The sculptures, discovered at Mathurā by Dr. Bhagvānlāl Indrājī and Dr. Führer, left no doubt that formerly the Jainas worshipped Stūpas. Yet, the assertion that there was a Jaina Stūpa at Mathurā teaches us something new, and hereafter will prove very important; for, as stated in my letter to the ACADEMY of April 19, 1890, Dr. Führer has found a Stūpa in the immediate vicinity of the two temples. He declared it to be Buddhist, because he discovered close to it a seal with a Buddhist inscription, and I accepted his conjecture. Now the point becomes doubtful. It can be decided only when the Stūpa has been opened and its surroundings have been completely explored. Even more valuable is the statement that the Stūpa was *devanirmita*, "built by the gods," i.e., so ancient that at the time when the inscription was incised its origin had been forgotten. On the evidence of the characters the date of the inscription may be referred with certainty to the Indo-Scythic era, and is equivalent to A.D. 156-7. The Stūpa must therefore have been built several centuries before the beginning of the Christian era; for the name of its builder would assuredly have been known if it had been erected during the period when the Jainas of Mathurā carefully kept record of their donations. This period began, as the inscriptions show, with the first century B.C., to which Dr. Bhagvān-

lāl's inscription of the pious courtesan Dandā undoubtedly belongs. Dr. Führer's new inscription thus furnishes a strong argument for the assumption that one Jaina monument at Mathurā is as old as the oldest known Buddhist Stūpas. With respect to the name of the Stūpa, which is contained in the word immediately preceding *thāpe*, I am not prepared to give any decided opinion. The first syllable is perfectly distinct, but the lower part of the second is somewhat blurred.

Another of the new inscriptions, which unfortunately is not well preserved, gives the names of *maharāja devaputra Huksha*. Huksha probably stands for Huvishka or Huviksha, as an inscription of Dr. Führer's batch of 1890 reads. It is interesting, because it proves that the form Hushka, which occurs in the Rājatarāṅginī, and survives in the name of the Kāśmīrian town Ushkar or Hushkapura, is genuine and ancient.

A third inscription is dated in the year 112, during the victorious reign of the supreme lord and superior king of great kings Kumāragupta, and furnishes the last missing Sākha-name of the *Koṭṭiya Gana*, Vidyādhari, in its Sanskrit form. The date probably corresponds to A.D. 430-1, and falls well within the known limits of Kumāragupta's reign. It is interesting to note that even so late a document shows a few Prakrit forms, mixed with otherwise very good Sanskrit; and it is significant that it is the first found at Mathurā on which the title *āchārya* occurs. The monk, at whose request a statue was dedicated, bore the name *Datilāchārya*. The discovery of an inscription with a certain Gupta date will force us to exercise great caution with respect to dates which are not accompanied by the names of kings. They can be assigned to the Indo-Scythic period only if the characters are decidedly archaic. This circumstance makes me unwilling to speak with confidence regarding the age of a very interesting fragment, dated in the year 18, fourth month of the rainy season, tenth day, which records the dedication of a statue of divine Arishtanemi, the twenty-second Tirthankara. The letters look to me somewhat more modern than those of the inscriptions which undoubtedly belong to the Indo-Scythic period. The way in which the date is given, on the other hand, agrees with the usage of those early times.

Some other fragments confirm information contained in the earlier found inscriptions, or allow us to make small corrections in their readings. Thus the name of the Hāttakiya kula of the *Vārana Gana* (the Hālija of the *Kalpasūtra*) is very distinct in one inscription. In another the word *sādhachari*, i.e. *śrāddhachari*, is perfectly plain; and it would seem that this reading has to be substituted for *sahachari*, which I believed that I recognised in No. 11 of 1890. In a third inscription we have the name of *Grakabala ātapiko*, who seems to be the same person as *ātapiko Gahabarya* in Sir A. Cunningham's No. 6 (*Arch. Surv. Rep.*, xx., pl. v.). There are also fragments of five lines of a longer metrical Prasasti, showing beautifully cut characters of the Gupta period; and, finally, a small complete Prasasti in Devanāgarī letters, which consists of one r̥yā verse and one Anushtubh, and is dated *Saivatsarai (sic)* 1080, i.e., Vikramasāhvāt 1080. This last discovery proves, like that of two images with the dates *Saivāt* 1036 and 1134 found in 1889, that these ancient temples were used by the Jains during the greater part of the eleventh century, and that their destruction certainly happened in very late times.

When I add that Dr. Führer has again found numerous and fine pieces of sculpture, it will not be too much to say that the results of his work during the season of 1890-91 are in no

way inferior to those of previous years, and that the small sum allotted to these excavations has really been spent to good purpose and in the interest of Indian history.

G. BÜHLER.

SCIENCE NOTES.

PROF. VICTOR HORSLEY and Mr. Francis Gotch have been appointed joint Croonian Lecturers to the Royal Society for the present year. They have chosen as their subject, "The Mammalian Nervous System; its Functions and their Localisation as determined by an Electrical Method." Thursday, February 26, is the date fixed for the delivery of the lecture.

THE annual general meeting of the Geological Society will be held on Friday, February 20, at 3 p.m. In the evening of the same day the fellows and their friends will dine together at the Hôtel Métropole.

At the meeting of the Library Association of the United Kingdom, to be held at 20 Hanoversquare on Monday next, February 9, a paper on "The Selection of Geological and Biological Books for a Free Public Library" will be read by Mr. Ogle, of the Free Public Library, Bootle.

MEETINGS OF SOCIETIES.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Monday, Jan. 26.)

PROF. T. McK. HUGHES, president, in the chair.—A communication from Prof. W. Ridgeway was read, in which he ingeniously identified the words of Tacitus—"locum pugnae delegere saeptum agresti aggere et aditu Augusto" (*Annales* xii. 31)—as referring to one or other of the four great dykes in the south-western part of Cambridgeshire, which cross the road from Dunstable to Thetford, and must have been intended to obstruct the march of an invader into East Anglia. He noted that the great fen on the north and north-western side formed an impenetrable defence to the lands of the gallant Icen, and that the forest lands of Essex on the south and south-western border were at that time almost equally impassable, so that Ostorius Scapula was limited in his choice of a route to an old track along the high chalk-land, which is still known as the Ikenild Way. In the case of at least three out of these four dykes (and those the most important of them), the ramparts are on the eastern side, and consequently the builders of them must have lived in East Anglia: the date of this battle, so disastrous to the natives, is about 50 A.D. Prof. E. C. Clark expressed the gratitude of the society to Prof. Ridgeway for his most happy identification, which almost commanded acceptance; he further noted the vague and fragmentary style in which battles are generally described by Roman historians (with few exceptions, such as Livy's account of the battle by Lake Trasimene), and suggested that Tacitus probably gained his ideas of British topography from his father-in-law, Agricola.—Mr. Searle commented as follows upon the origin and date of Ingulf's History of Croyland Abbey. The chief part of the *Historia Croylandensis*, published by Fulman in 1684, consists of the history of the monastery from 716 to 1095, compiled by the then abbot of that house, Ingulf, writing thus at the very end of the eleventh century. It made its appearance in the literary world early in Queen Elizabeth's reign, being first mentioned by Dr. Caius in 1568. It was not, however, printed till 1596, when it was at once welcomed as an interesting and valuable addition to our historical materials by our leading historians, Camden, Dugdale, Fuller, and others, an example followed by many important historical writers in France. In England it has been used by countless writers, and so has made its way into standard works of English history. But though thus so widely accepted as genuine, there have not been lacking more sceptical students, who have brought forward such anachronisms in

the signatures to the charters contained in it, such mis-statements in the historical parts, and examples of such use of words belonging to much later date, that historians like Bishop Stubbs and Prof. E. A. Freeman condemn it as a work of absolute worthlessness as an authority. Yet the work, though an invention, is one of mediæval times, some writers putting it in the time of Edward II., others in that of Henry V.; and besides this, the writer, whoever he may have been, though ignorant, in many points, of the real facts of the assumed date, and at times very careless, was clever enough, or lucky enough, to introduce details, which receive very often most unexpected corroboration from perfectly authentic sources. The author, who is supposed to be writing about 1095, was evidently acquainted with the chief historians of the twelfth century, Florence of Worcester, Henry of Huntingdon, William of Malmesbury and others. This is sufficient to place the composition of the Ingulf late in the twelfth century at the earliest, or in the reign of Henry II.; while, as he knew a Chronicle of Peterborough (MS. Cott. Claudius A. v) which breaks off in the year 1368, it cannot be earlier than the end of the reign of Edward III. From the Patent Rolls in the Public Record Office we know that two of the charters, that of 716 of the foundation, and that of 948 of the restoration of the monastery, were in existence in 1393; but as these are more than extremely doubtful, if their genuineness be not absolutely impossible, this only shows that the process of manufacture had begun before that date, in the reign of Richard II. The book, though apparently in existence in the beginning of the reign of Henry VIII., was unknown to Bale, the diligent investigator of English literary history; and this is the more remarkable as two, if not three, copies were in existence, one, which yet remains at the British Museum of about 1490, and another, the so-called autograph of the Ingulf, which was kept at Croyland in the church chest about 1610, but has since disappeared. A writer, who has contributed much to the compilation of the Ingulf, is a monk, Ordericus Vitalis, who visited Croyland in 1115. But here the difficulty presents itself that, although Ordericus was of English birth, yet Bale does not mention him, and apparently, like Leland, Henry the Eighth's historiographer, who inspected the library of the monastery before the dissolution in 1539, had never seen a copy of the work bearing his name; and further, that while there is only one early MS. in France, there is none in England of sufficiently early date. A MS. in the British Museum, MS. Cott. Vitell. B. xi., contains a history of the abbots of Croyland, extending to the year 1427, extracted as to the Anglo-Saxon part of the Croyland History from Ordericus Vitalis only, a work which must have been written by a person interested in Croyland, while the Ingulf itself exists in another MS., MS. Cott. Otho B. xiii., written about 1490. The date of the composition of the Ingulf seems then necessarily to fall between those two periods, or somewhere about 1450. The author there seems no possibility of ever guessing at. Ingulf, according to Ordericus Vitalis, was a monk of the monastery of St. Wandregisilus or of Saint-Wandrille in Normandy, and died in December, 1108, having been abbat for twenty-four years. This brings his appointment to 1086. In Domesday, among the tenants *in capite* in Surrey, is found: "Abbas S. Wandregisili tenet Wandesorde per Ingulfum monachum," which would seem to refer to our abbat, as the monastery, the monk, and the date are all right, since Domesday was in course of being made in the spring of 1086, when Ingulf would still be monk, just before his appointment to the abbacy. It would be strange if there were another Ingulf of that monastery in England at that time. Ingulf had been secretary, before the Conquest, to Duke William; and so, living at Wandsworth, close to London, he might easily obtain his promotion. The riddle of the Ingulf is not an easy one to solve. In spite of long investigation, much yet remains to do which yet is worth doing—that future works of history, and new editions of earlier ones, may be purged from statements derived from the Ingulf, which have no real claim to be considered other than the offspring of the fertile and ingenious brain of the unknown mediæval writer of that work.—Dr.

Luard stated that even that pioneer of historical investigation, Dr. Maitland, had quoted stories from Ingulf as if they had been undoubtedly genuine, and mentioned that the twelfth century was the usual time for forgeries of this kind rather than the fourteenth. With regard to charters, he thought that genuine charters had frequently false witnesses' names attached, which had been introduced at a later time in order to give a higher value to the document, so that often charters were a better test of the witnesses than witnesses were of the charters.

ANTHROPOLOGICAL INSTITUTE.—(*Anniversary Meeting, Tuesday, Jan. 27.*)

DR. JOHN BEDDOE, president, in the chair.—The following were elected officers and council for the ensuing year:—President, Dr. E. B. Tylor; vice-presidents, E. W. Brabrook, Hyde Clarke, F. W. Rudler; secretary, C. Peck; treasurer, A. L. Lewis; council, G. M. Atkinson, H. Balfour, C. H. E. Carmichael, the Rev. Dr. R. H. Codrington, J. F. Collingwood, Dr. J. G. Garson, H. Gosselin, Sir Lepel Griffin, T. V. Holmes, H. H. Howorth, R. Biddulph Martin, the Earl of Northesk, F. G. H. Price, Charles H. Read, I. Spielman, Oldfield Thomas, Coutts Trotter, Sir W. Turner, M. J. Walhouse, and Gen. Sir C. P. Beauchamp Walker.

ROYAL SOCIETY OF LITERATURE.—(*Wednesday, Jan. 28.*)

SIR PATRICK COLQUHOUN, president, in the chair.—A paper by Mr. Arthur Benson, on Dr. Samuel Parr, was read. It gave a comprehensive sketch of his life and the principal literary episodes in which he was engaged. It dwelt principally on the egotistical and whimsical element in the character of Dr. Parr, illustrated this by anecdotes of his life and showed how it affected his literary work. The reader attempted to show how, by a curious and fortuitous concurrence of qualities and circumstances, Dr. Parr achieved a reputation far higher than anything that he deserved in his lifetime, which was followed after his death by an almost disproportionate collapse, so that students of literature in their amazement and disgust at the completeness of the imposture are now disposed to deny to Dr. Parr credit for the learning and virility of mind which he undoubtedly possessed.—The president, Mr. Bone, and Mr. Highton took part in the discussion.

FINE ART.

OLD MASTERS AT THE ROYAL ACADEMY.

IV.

THE fine series of water-colours illustrating chronologically the rise and progress of the art in England merits a much longer and more detailed notice than we are on the present occasion able to accord to it. It is on account of its near approach to completeness, and of its pretension to represent the English school in its entirety, that the gaps made by the absence of such widely recognised, if also very variously estimated, painters as Copley Fielding, Cattermole, Rossetti, and Pinwell, *inter alios*, become noticeable. If the absence of examples of their work be due to accident, there is nothing more to be said; but if *parti pris* should have anything to do with their ostracism, we should deplore a regrettable and unwise attempt to revise the judgment of contemporaries with regard to artists of well-established fame and well-defined position in English art. To put them in their right place—and we are not now attempting to establish in any way what that place is—it would, on the contrary, be doubly desirable to show them side by side with their *confrères*.

We may pass over the only topographically interesting "Views of Windsor" of Paul Sandby, with whom the series begins, and also the Italian scenes of that mild precursor of Cozens, William Pars, in order to arrive at Cozens himself, who is here represented by a

very fine and comprehensive series of his Italian studies. The superficial observer may—and does—pass these over, with the criticism that they are too cold, too limited and monochromatic in colour. The painter's limitations in this respect are of course undeniable; for he was of his own time, and from its conventionalities in this branch of art he did not entirely succeed in breaking away. None the less is he one of the greatest masters of landscape among moderns, and perhaps the one among all others who has most nobly and pathetically presented the beauties of Italy, unsophisticated and unadorned with extraneous excrescence. Among many fine things we may single out a "View of Sir William Hamilton's Villa on Vesuvius" (J. E. Taylor, Esq.), and more especially a beautiful "Sunset with St. Peter's in the Distance" (C. M. Agnew, Esq.). The powerful, and in more senses than one monumental, art of Girtin is also well shown in the noble "Durham" (J. E. Taylor, Esq.), which would appear to have influenced Turner, and through him many others in their presentations of the same scene; in the masterly "Tattersall Castle," and in "Peterborough Cathedral." Another and a more pathetic phase of his landscape art is illustrated in "White House, Battersea Reach" (H. L. Micholls, Esq.); and in an evening scene, showing under a weird sunset sky the bend of a road winding by a lake. A certain hardness of execution, and the lack of a very definite artistic personality, prevent Varley from taking quite an equal rank with the very best of his contemporaries. The best thing by him here is the beautiful "Lake Scene" (C. M. Agnew, Esq.). There is much that is almost repellent in the technique of John Sell Cotman—his frequent hardness of outline, the monotony and want of gradation of that colour-scheme in which he opposes masses of indigo-blue to masses of orange-yellow; but he must always command a very high place in virtue of the singular grandeur and originality of his conceptions. Daring and tremendous in its force is the "Storm: Yarmouth Beach, 1831" (G. Holmes, Esq.); while in the well-known "Draining Mill, Lincolnshire" (James Reeve, Esq.), a familiar motive is treated with an exaggerated truth, and yet with a sombre pathos, recalling Rembrandt's famous "Mill" at Bowood. It is impossible to withhold from David Cox the admiration which he enforces in virtue of the breadth and easy mastery of his technical method, the concealed art and naturalness of his compositions, the characteristically English flavour of all he brought forth. Why, then, is the charm which he exercises but a superficial one, in comparison with the spell cast over us by some of his more deeply-moved, if not otherwise more gifted, contemporaries? Is it not that, placed in the balance with theirs, his works appear to betray a lack of real emotion in the contact with nature, and a preference for what is obvious and easily appreciable over what is subtly suggestive and less easily revealed. Here are some of the finest among the often-described Coxes in the Nettlefold collection, including "Changing Pasture," "Sherwood Forest," and "Old Mill." Of a different order of beauty, and, indeed, in a certain sense a contradiction of what we have just said about Cox, is the beautiful and quite unconventionally rendered, "Moonlight Scene: Darley Churchyard" (Rev. C. J. Sale). Turner as a water-colour painter has been the hero on so many previous occasions that we need only now point to a few prominent examples of his art. Foremost among these is the magnificent "York," one of the most solemn and beautiful pages from English nature which the master has produced, and especially remarkable for the reposeful charm that per-

vades it—the absence of which quality often robs his noblest productions belonging to the second and third periods of half their power. "Colchester Castle" (the late Miss James), is an unreal and tormented performance, showing Turner at his worst; while "Lowestoft" (Rev. C. J. Gale) and "Shipwreck off Hastings" (H. Vaughan, Esq.), are noble studies in a more earnest mood of sea-coast scenery. De Wint appears, with all the sobriety of his manner, a master, even by the side of Turner, and the noble sincerity of his art is not for a moment in question. Never has there been a better opportunity than the present one for judging William Hunt in his various aspects. To our thinking, his wonderfully stippled still-life pieces, of which there are several perfect specimens here, are in no sense important, or indeed true, manifestations of art. It is in his close and sympathetic observation, in his humorous and accomplished rendering of English rustic manners, that Hunt shows himself in truth a master. Here his genuinely optimistic, yet far from unemotional, view of his subject is in curious and instructive contrast with much of the sad, noble realism of our generation. Particularly admirable in this category are "The Young Cricketer" (C. F. H. Bolekow, Esq.), and the inimitable "A Cold Morning" (same collection), showing two urchins almost weeping with the bitterness of the cold blast, yet stopping to gossip in the midst of the snow. The melting beauties of those transparent sunset skies which canopy almost all George Barret's landscapes, classical and other, are amply exhibited in a whole series of fine examples, the most beautiful among which is the so-called "Twilight" (James Orrock, Esq.). We can only note in passing the fine, pathetic, paraphrases of nature of George Fennel Robson, who excels less in transparency of colour than in sweeping breadth and unity of design; he seems to have undergone the influence of Turner's first manner. Again, Samuel Palmer—a very divinity to a certain narrow circle of admirers—shows here in "Lycidas" and "Tityrus restored to his Patrimony" the narrow limits of his charming art, but at the same time the genuinely idyllic character which informs it. A whole group of important drawings displays at its best the manner of John Frederick Lewis, especially in its oriental manifestations. We admire the wonderfully patient and truthful elaboration of his details, his skilful treatment of indoor light under difficult conditions, and the genuine artistic quality of all that he produces; but, especially in the scenes from those Eastern lands which he unfeignedly loves, we must deplore a singular and fatal inability to render truthfully types of humanity, or to express the varieties of facial expression which individualise the human countenance. This defect is particularly noticeable in those otherwise admirable pages of oriental life within doors, "The Reception" (G. E. Holland, Esq.), and "The Harem" (Birket Foster, Esq.). What remains to be said about the exquisite art of Frederick Walker, with a well-selected group of whose water-colour drawings the series is brought to a termination? His finest handiwork in this branch, his most genial and genuinely pathetic conceptions, are to be found at the Academy; for here are the "Harbour of Refuge"—unaccountably rechristened as the "Vale of Rest"; one of his masterpieces, "The Ferry"; the quaintly-named "Coachman and Cabbage"; "The Fishmonger's Shop"; "The Wayfarers"; "Philip in Church"; and other things besides. The impression given by this beautiful group of works on their reappearance is that of a genius of the genuinely poetical English order, which resolutely casts its rays only on the nobler if still the sadder side of life, and thereby limits its scope; of a craftsman in love rather with elaborated exquisiteness of

local colour and wealth of beautiful detail, than possessed of synthetic power or masterly breadth of execution. Indeed, the conviction forces itself more and more upon us that Walker, notwithstanding the beauty and the originality of what he actually achieved, had not, when his career was so prematurely cut short, attained his full maturity, whether of brain or of hand.

CLAUDE PHILLIPS.

OBITUARY.

MEISSONIER.

It was the privilege of Meissonier to live to be old, and yet not to outlive the reputation which he had acquired in middle age. When he died in his flat on the Boulevard Malesherbes last Saturday morning, he was, according to some accounts, seventy-five, according to others, seventy-nine; in any case, he was a man who had been working for nearly two generations. Meissonier was born at Lyons—a member of the lower middle-class—and he came to Paris as a student about the year 1830. From this it will be evident that his young manhood was passed at the period when the battle between the now temporarily neglected “Classicists” and the momentarily over-rated “Romanticists” was being waged with fierceness. It has been truly said of him that he never entered either camp, and that the source of his almost immediate success was his apparent originality; and we have been further informed that that originality—like the originality of Mr. Burne Jones—was in truth a return to earlier methods which had to a great extent passed out of notice. Meissonier, indeed, was a follower of the seventeenth-century Dutchmen—a follower, not a mere imitator, adding to their gifts the French gift of vivacity. In minuteness of treatment his work is on the lines of Gerard Dou; but while Gerard Dou and his fellows bestowed their detailed and precise art upon the record of contemporary scenes, Meissonier went back, for the most part, though, of course, not always, from his own century to theirs and to the intervening one, painting the epochs of Louis Treize, Louis Quatorze, and Louis Quinze. In the main, he treated what may be called Dutch themes—the themes of the Dutch *genre* painters—though in his battle-pieces he was obviously deserting the ground of Ostade and Metsu and Gerard Dou for that of Phillips Wouvermann. If his reputation—made, it must be remembered, nearly half a century ago—has already lasted so long, and if the art that commended itself to the epoch of Louis Philippe was found acceptable to the epoch of Napoleon the Third and to that of the Presidencies of Thiers and Sadi Carnot, this must be laid to the credit of the surprising technique which Meissonier had always at command. He was not what is generally called imaginative, but his realism was refined. He was correct without pedantry. And, on his limited inches, he was a draughtsman of extraordinary skill. Such technique insures, at all events, a measure of permanent value to any work that the possessor of it may produce. Meissonier cannot be forgotten in the future, though, like the Romanticists with whom he had little in common, he cannot in the next generation receive that tribute of hysterical approbation which the little informed are wont to lavish upon the favourites of an hour. He happens, like Millet, to have been exalted, for a period, above his own comfortable and even honourable place.

ART NOTES FROM PARIS.

Paris: Feb. 2, 1891.

DEATH has already made sad havoc this year in the ranks of French artists. The sculptors Aimé Millet and Delaplanche were the first victims; then came the turn of Chaplin; and last, but greatest of all, Meissonnier.

Chaplin was English by birth, and was only naturalised four years ago. He was essentially *distingué* as a man and an artist. A pale imitator of Watteau and Boucher, he was, above all, a painter of fashionable beauties. The first portrait he exhibited (1851) was that of the celebrated Marie Duplessis, better known as “La dame aux camélias”; the portraits of the ill-fated Duchesse de Luynes and of the Comtesse de la Rochefoucauld are fine specimens of his style. He was also an able engraver, and the well-known engravings of Watteau’s “Embarquement pour Cythère” and of Rubens’ “Helen Fourment” were done by him. The series of paintings of roseate, semi-nude nymphs, lost in diaphanous clouds of muslin, which were his favourite subjects, justified Mousselet’s witticism that he was “le chapelain de Cythère.”

Two *Petits Salons*, held in the picture galleries of the Cercle Artistique and the Cercle Volney, have just been opened; these fashionable and private views are a sort of rehearsal of the annual art fairs held in the Champs Elysées and Champs de Mars, and generally contain a certain number of works of merit. Among the portraits, special mention is due to a splendid portrait of a member of the Cercle, by M. Carolus Duran. The Due d’Aumale, by M. Bonnat, painted in profile so as to resemble a medallion, is very clever, but unsatisfactory; the portrait of M. Cernuschi is more worthy of this great painter. A bold, life-like piece of work is M. Gervex’s “Fencing Master.” M. Courtois also exhibits four exquisitely finished small cabinet portraits. Among the landscapes and *tableaux de genre* are several fine specimens of the work of such artists as Messrs. Cain, de Clairmont, Gérôme, Gervex, Flameng, Pasini, Merson, Weeks, and other familiar names.

The thirteenth exhibition of the Société d’Aquarellistes Français opens to-morrow in Petit’s drawing-room picture gallery, which will become the fashionable rendezvous of *le tout Paris* for the next fortnight. The exhibition consists, as usual, of a number of highly-finished exhibits, as far removed as possible from true water-colour painting. Messieurs Béthune, Adrien Marie, and Zuber contribute several really fine studies of London views and life, as well as Alpine scenery. M. Harpignie’s landscapes are admirable in their natural simplicity. M. Besnard’s three *études* are, as usual, specimens of the most correct drawing and marvellous colouring—a source of merriment to the Philistine, and a joy for ever to the enlightened amateur. M. Boutet de Monvel is to be seen here at his best; and, of course, M. Vibert’s inevitable red cardinal (gathering poppies this time) is present.

C. N.

CORRESPONDENCE.

A SAD CASE.

Autun: Feb. 1, 1891.

Would you kindly lend me the publicity of the ACADEMY in favour of a widow lady who greatly needs some assistance? She is an Englishwoman, living in London, although the widow of a French artist. Her late husband, Simon Rochard, was a well-known miniature painter in his day, employed by the Duke of Wellington and other members of the English aristocracy. I have made careful inquiry into Mrs. Rochard’s case, and find that she is really in want of help, and is suffering from an incur-

able infirmity. M. Rochard lost his savings through an unfortunate investment, and his widow has, until lately, been aided by a friend who is now dead. She receives a pension of £5 a year from a public institution, an income that most of us would consider insufficient. The vicar of her parish, who supports my petition, will answer any further inquiries, and receive on Mrs. Rochard’s behalf any sums that may be subscribed for her benefit. His name and address are the Rev. James Jackson, St. Sepulchre’s Vicarage, 5, Charterhouse-square, London, E.C.

P. G. HAMERTON.

THE SILOAM INSCRIPTION.

Southampton: Feb. 3, 1891.

I have been asked by the Council of the Palestine Exploration Fund to correct the statement which appeared in the ACADEMY (and has been copied in several other papers) to the effect that the correct copy of the Siloam inscription is “believed” to have been made by Mr. Sayce.

Mr. Sayce made a copy before the inscription was cleaned, and when it was impossible for anyone to make a correct copy. That referred to was made by Capt. Mantell, R.E., and by myself, in 1881, after the text was cleaned from a squeeze now in my possession. A cast was also procured by me for the Council of the Palestine Exploration Fund, which they now possess. A copy of my squeeze was sent, by my desire, to Mr. Sayce to enable him to amend his translation. He has subsequently published my copy of the text in a small work; and it appears also in my volume *Syrian Stone Lore*, and is fully discussed in the *Memoirs of the Survey of Western Palestine* (Jerusalem volume).

The discovery of the Siloam inscription being reported to the society, they undertook the expense of lowering the level of the water in the tunnel. Dr. Güthe had begun to copy the text, uncleaned, when I reached Jerusalem. It was suggested to him to clean it with a weak acid solution, and when this was done the beauty and careful cutting of the letters first became apparent.

C. R. CONDER.

NOTES ON ART AND ARCHAEOLOGY.

THE remarkable collection of Watteau drawings possessed by the late Miss James is likely to come into the market during the present season. If this be so, it is improbable, we suppose, that the two or three Watteau pictures, now on loan at the Old Masters, will long be retained by the family. They, too, will probably be sold; and thus is an opportunity afforded to the National Gallery of possessing itself of at least one example by the artist who was the acknowledged leader of the delightful French school.

THE exhibitions to open next week include a collection of drawings by Miss Kate Greenaway and Mr. Hugh Thomson—a most happy conjunction—at the Fine Art Society’s, in New Bond-street; and the usual “spring” exhibition of water-colour drawings by members of the Dudley Gallery Art Society, in the Egyptian Hall, Piccadilly.

WE understand that, prior to the exhibition of ancient and modern bindings which the Burlington Club will open later in the season, there will be held in the gallery a smaller exhibition illustrative of French etching. This exhibition is in a very forward state of preparation. It will include important examples of the work of the group of men who are identified with the modern revival—to wit,

Millet, Meryon, Jacquemart, Bracquemond, Corot, and others.

SIR JAMES LINTON is engaged in executing a portrait of Miss Margery Fulleylove, the daughter of the distinguished painter of architectural and garden subjects.

MISS H. HOSMER has received a commission from the ladies of the Isabella Association of America, whose headquarters are at Chicago, to design for the World's Fair of 1892 a full-length statue of Queen Isabella, of Castile, the patron of Columbus, sending him forth to discover the New World. The work is to be executed in bronze at Rome.

ETCHERS and engravers are to be congratulated on having realised the idea of a dinner among themselves. This took place at the Criterion restaurant on Wednesday in last week, about sixty being present. The object of the meeting was to promote social intercourse among the exponents of the different methods of etching and engraving, and exchange of ideas on matters connected therewith. A very harmonious and interesting meeting was the result, and it is likely to develop into an important annual gathering. Mr. Seymour Haden, president of the Royal Society of Painter-Etchers, was in the chair, and the principal toast of the evening was "Success to all forms of the engraver's art."

IN connexion with the death of Meissonier, we may mention that the Christmas number of the *Art Journal* for 1887 was devoted to an account of his life and works by Mr. Lionel Robinson, with many illustrations and a catalogue of his paintings. This number is still in print.

WE give a cordial welcome to our youngest contemporary, *Black and White*. With Sir J. D. Linton as chairman of the board, Mr. Spielmann as art-manager, and M. O. Lacour as head of the studio of engravers, it is unnecessary to say that every endeavour will be made by the new journal to live up to its title. Judging from the first number, its speciality seems to be the introduction into a weekly newspaper of the high standard of block-printing popularised by the American monthlies. We learn, with surprise, that this can only be accomplished by means of machines made at Angsburg.

THE STAGE.

THE ST. JAMES'S THEATRE.

ON Saturday we went to the St. James's Theatre—the first night under Mr. George Alexander's management. Half London having ardently desired to get into the New Opera House, the St. James's was left, not empty indeed, but without quite the customary array of "first-nighters." Moreover, the major part of the bill presented nothing of novelty. There was a welcome familiarity in the appearance of Mr. Alexander, Mr. Natcombe Gould, Miss Marion Terry, and Miss Maude Millett in those characters in "Sunlight and Shadow" which they had been representing for several scores of nights, under the same management, at the Avenue. That which was fresh began only at half-past ten of the clock, and was but a one-act comedy—a comedietta, properly speaking—by Mr. A. C. Calmour, whose graces of fancy "The Amber Heart" had hitherto expressed the best. "A Gay Lothario"—the new thing—is not without ingenuity. It recalls Colley Cibber more than Colman; but, indeed, it is not wholly of the past. Along with sentences that are cast in the mould of Sheridan—along with phrases conveyed almost bodily from "The School for Scandal" and "The Rivals"—there are, a little too perceptibly, the colloquialisms of to-day. However, Mr. Calmour's effort on

the whole is ingenious, and its result pleasing. The piece has four characters, though two of them—the servants, Sparks and Letty—exist hardly for their own sake: they are rather the machinery which is essential for conducting the necessary business of the play. The two characters of importance are those which are performed by Mr. Alexander and Miss Millett—a pair of lovers, whose loves or flirtations have been wide-spreading in the past, but between whom there exists a very genuine attachment. You feel that if anything happened to Amanda Goldacre, Sir Harry Lovell would not long be inconsolable; and from the engaging vivacity of Amanda you surmise that if anything happened to Sir Harry her grief, though real, could hardly for ever blight her spirits. In a word, they are charming young people—satisfied with themselves, with each other, and with the great world—sensible young people who lose their hearts, in a measure, but who never lose their heads. It is true, as has been said elsewhere, that neither Mr. Alexander nor Miss Millett richly endows the part that he or she assumes with what are deemed the characteristics of eighteenth-century manner. They, like the writing of the piece, are at times modern. Yet is Mr. Alexander thoroughly acceptable, in the lightness and grace which are his own; while as regards Miss Millett, the very best of the eighteenth century could never have improved upon her. Nor do we see how it would have been well possible for anyone to write, in the performance of Amanda, that eighteenth-century style which is demanded by convention with that delicate and detailed portrayal of the ways of true girlhood, or young womanhood, which the art and the personality of Miss Millett succeed in affording. Miss Millett's performance has, at the worst, only the defects of its qualities. Whatever it may lack, it is agreeable and refreshing to the last degree.

F. W.

THE SUPPRESSION OF "THERMIDOR."

IT would require the pen of a Beaumarchais to describe the various serio-comic incidents of the controversy which has been raging in Paris for the last week with regard to the interdiction "by authority" of M. Sardou's new drama "Thermidor." To a stranger, the whole affair must appear like a storm in a tea-cup, but to those who are in a position to get an occasional glimpse behind the scenes of political and theatrical life in Paris (the two often run together) the affair has been a very serious one. In fact, it almost led to a ministerial crisis. The truth is that the French have not yet acquired the requisite mental equilibrium necessary to judge dispassionately of the Revolution; party feeling and prejudice still reign supreme. It is dangerous ground to tread on even in ordinary conversation, and to dramatise such a subject is to court trouble and uproar.

M. Sardou protests in vain of "the purity of his intentions" with regard to the memory of the great men of the Revolution, and that his only object was to stigmatise the Reign of Terror and Robespierre. Many Republicans would answer him like the rat in the fable: "Ce bloc infariné ne me dit rien qui vaille." Besides, he is an old stager, too familiar with the extreme excitability of Parisian audiences not to have known beforehand that a drama descriptive of the tyranny and religious persecution of the Jacobin period was almost certain to set the audience by the ears—not the special public of the *première* or the select "Tuesday subscribers," but the more popular element of ordinary nights. The storm burst sooner and more violently than could have been expected;

that is all. He sowed the wind, and has reaped the whirlwind.

As one of the few who were fortunate enough to assist at the second and perhaps last performance of M. Sardou's drama, I venture to maintain, *en pleine connaissance de cause*, that "Thermidor," like "Rabagas" and "Daniel Rochat," was a *pièce de combat*. The long description of Paris under the Terror, in the first act, is nothing else than M. Taine's indictment of that period ("La Conquête Jacobine") put into dialogue. The very dramatic episode of the second act, one of the finest scenes M. Sardou has written, in which Faliene, subjugated by the impassioned eloquence of Martial, is on the point of following her lover, but is suddenly reminded of the sanctity and ever-binding character of her vows on hearing her sister nuns singing on their way to the scaffold, was almost certain to excite the ill-timed mockery of the *intransigeants*. The last act, the courtyard of the Conciergerie, represented with such picturesque reality, the presence of the executioner, the procession of prisoners on their way to the tumbrils waiting outside, the jeers of the *canaille*—all these and minor incidents of the play were calculated to excite popular feeling to a dangerous degree. Certainly the picture presented by the dramatist was, in a sense, truthful; but it was too one-sided a view, and the grand perspective of the background was dwarfed and distorted. As for the adverse manifestation which took place in the theatre, this has been very much exaggerated, and could easily have been quelled. It is deeply to be regretted that the "maintenance of order" should have necessitated the adoption by Government of so severe a measure as the interdiction of the play. But to explain this would be to tread on the forbidden ground of politics. In the meanwhile, the public has been deprived of the pleasure of seeing a highly interesting drama, admirably acted, and put on the stage in the most artistic fashion, due regard being paid to the exactitude of every detail. The loss to the Comédie Française will not be short of ten to twelve thousand pounds.

CECIL NICHOLSON.

MUSIC.

"IVANHOE."

THE production of a new English opera is naturally looked upon as an event of historic importance. During the last ten or twelve years native art has made great strides, but our composers have proved more successful on the concert platform than on the stage. The new opera "Ivanhoe" has been produced under peculiarly favourable circumstances. By common consent Sir Arthur Sullivan is one of our most popular musicians, and he has been provided with a libretto based upon a novel familiar both to young and old. Further, his work has been brought out in a new theatre erected specially for English art. Is "Ivanhoe" a success? That is the question which, within small space, we shall now attempt to answer. We do not refer to the reception given to it by the public. There was plenty of applause on Saturday—though perhaps not quite so much enthusiasm as one might have expected—and the composer was recalled at the close; but a first night verdict is no real test, be it favourable or otherwise. Have not operas in the past been brilliantly received and yet soon forgotten; while others, coldly received on their first appearance, now enjoy permanent favour?

Is "Ivanhoe" a success? By that we mean, is it a work which will command the attention and admiration of serious musicians at home and abroad—a work, in fact, which will take high rank when future historians pen the

history of the present? We feel inclined to answer in the negative. The story is exciting, and, as stated in our preliminary notice last week, cleverly condensed by the librettist, Mr. Julian Sturgis; but dramatically the plot is faulty. In the first act we are made aware of a conspiracy to seize the fair Rowena as she returns from the lists at Ashby. This is carried out, and in the second act Rowena is a prisoner in Torquilstone; but from the moment Rebecca is seen in the turret chamber, it is she who claims the interest and sympathy of the audience. Rowena is well-nigh forgotten, although she takes part in a quartet in the next act. There are other details, too, in the book which prevent concentration, to say nothing of gradation, of interest. The book then, despite many excellent qualities, is sufficiently strong to attract, but not altogether to inspire a composer. And this is exactly—in our humble judgment—what we find in Sir A. Sullivan's music. It is full of clever, brilliant, and at times dramatic points—as, for instance, in the tournament scene, the duet between the Jewess and the Templar, the assault of Torquilstone Castle, and the scene at Templestowe; but there are moments when the interest flags.

But, if judging it by a very high standard, the opera is not altogether satisfactory, still from other points of view it may be deemed a success. It has lyrical charm. The song sung by Rowena in the second scene of the first act, "O moon, art thou clad in silver mail?" is attractive; King Richard's first song has a very easy pleasing swing; and Ivanhoe's song and Rebecca's lullaby at the opening of the third act are in the composer's most winning manner. Then, too, as a specimen of humour—one of Sir A. Sullivan's strong points—we have Friar Tuck's jolly song, "The wind blows cold across the moor"; here, in the gathering of the outlaws who take up the stave, "So ho, jolly Jenkin," both librettist and composer have scored a success. The clever and appropriate music, again, in the earlier part of the scene between Friar and King deserves special mention. For brilliancy and effect, we would name the drinking song and chorus and the tournament music in the first act. And for numbers in which the composer displays dramatic power of a high order, we would call to mind Rebecca's scena, and especially her duet with Brian. This, indeed, is the high-water mark of the opera.

We have already noted that some use is made of representative themes. It is quite impossible for composers to ignore a method which has been employed with such wonderful effect by Wagner, and there is only danger when they try to imitate the extraordinary metamorphoses and interweavings of themes such as we find in "Tristan" and the "Ring." Sir A. Sullivan has merely a few phrases connected with Saxon or Norman, or with certain characters; and these are only sparingly introduced. We certainly find a reference to a representative, though not chief, theme at the end of the work; and it is just by such means that Wagner gives such power and unity to his music-dramas. But the concluding *ensemble* of "Ivanhoe" is based only on the theme of a previous quartet. With regard to the orchestration, the composer has shown his usual marked ability. Let us, before concluding this brief notice of the opera, express ourselves quite clearly as to its merits. It contains some of Sir A. Sullivan's best efforts; and if there are things in it to which one may take exception, it must, nevertheless, be regarded as a work of great skill and beauty. The music may be described as thoroughly Sullivanesque, and this in spite of reminiscences here and there. But who is free from these things? The influences of Gounod and Wagner are perhaps the most marked.

A few words with regard to the performance on the first night—last Saturday. Miss Margaret Macintyre played the part of Rebecca with dramatic power and pathos; she has a trying part in the second act, and her fine voice was heard to great advantage. Mr. Eugene Oudin was admirable as the Templar, both histrionically and vocally. Mr. Ben Davies sang well as Ivanhoe. Mr. Norman Salmund is an accomplished vocalist, but on this first night made a somewhat nervous King Richard. Mr. Frangon Davies, as Cedric, was successful, and Miss Esther Palliser (Rowena) looked and sang well. Mr. Avon Saxon was most acceptable as Friar Tuck; and had not the composer set his face against encores, his song would have been repeated. Miss Marie Groebel (Ulrica) and M. C. Kenningham (De Bracy) gave satisfaction. The orchestra, under the composer's direction worked wonders, and the chorus was excellent. The performance lasted until close upon twelve o'clock. Sir Arthur Sullivan (who conducted in person), Mr. D'Oyly Carte, and Mr. Hugh Moss were summoned to the footlights at the close.

We had almost forgotten to mention the mounting of the piece. The tournament scene was well managed; the falling of the walls of Torquilstone Castle was striking; while the forest scene afterwards, and the concluding one at Templestowe were wonderfully effective. "Ivanhoe" was repeated on Monday with a different cast: Miss Thudichum and Miss Lucille Hill were the Rebecca and Rowena, while Mr. Franklin Clive took the part of King Richard.

J. S. SHEDLOCK.

RECENT CONCERTS.

MASTER JEAN GERARDY gave a 'cello recital at St. James's Hall on Friday, January 30. The marvellous technical and intellectual powers of this talented youth, and the taste and feeling with which he interprets music have already been commented on in these columns on the occasion of his first recital last December. He was again most successful, playing two showy movements from a *Molique* Concerto, and short pieces by Bach, Saint-Saëns, Max Bruch, &c. The programme included violin solos skilfully rendered by M. Johannes Wolff, and songs by that intelligent singer Mr. Plunket Greene.

MR. HENSCHIEL gave his fourth orchestral concert last Thursday week, at St. James's Hall. The programme was an excellent one, and the performances were all first-rate. Mendelssohn's "Fingal's Cave" overture was followed by Mozart's Symphony in G minor, which was interpreted with great spirit and expression. The novelty of the evening was a short symphonic poem by M. Percy Rideout, a pupil for some years of the organist, Mr. R. Lockner, and afterwards at the Royal College of Music. The music is inspired by Shelley's "Epipsy-chidion." At the composer's request no analysis was given in the programme-book, and this was a wise precaution. Mr. Rideout is young, and the composition shows promise, but at present his head is too full of Wagner. Mme. Albani was the vocalist, and gained much applause for "Softly sighs," from the "Freischütz." She sang "Isolden's Liebestod" with great effect.

In memory of Niels Gade, his Octet was given at the Popular Concert on Monday evening. It is a melodious and pleasing, though scarcely a strong, work: the influence of Mendelssohn is clearly perceptible in the two middle movements. The influence, indeed, of Mendelssohn on this composer was pointed out by Schumann in an article on Gade as long ago as 1844. The work was led by Mme. Neruda,

and played with great finish. Mlle. Ilona Eibenschütz repeated (by desire) Beethoven's Sonata in C minor (Op. 111); and though her tone was not altogether satisfactory in the Allegro, we must admit that she gave a very fine performance of the music. The variations were rendered with far greater calm and poetry than on the first occasion. Mlle. Eibenschütz has risen considerably in our estimation. She played a movement from a Bach Partita by way of encore, but at rather too rapid a rate.

CLARENDON PRESS NEW LIST.

Just published, crown 8vo, cloth, price 10s. 6d.

PRINCIPLES OF ENGLISH ETY-

MOLOGY. Second Series. THE FOREIGN ELEMENT. By the Rev. WALTER W. SKEAT, Litt.D., LL.D. Edin., M.A. Oxon., Elrington and Bosworth Professor of Anglo-Saxon in the University of Cambridge.

First Series.—The Native Element. Crown 8vo, cloth, price 9s.

Just published, Fourth Edition, Revised, crown 8vo, cloth, price 8s. 6d.

SELECTIONS FROM BERKELEY, with

an Introduction and Notes, for the use of Students in the Universities. By ALEXANDER CAMPBELL FRASER, D.C.L. Oxon., Professor of Logic and Metaphysics in the University of Edinburgh.

THE ONLY ENGLISH EDITION OF PLAUTUS' RUDENS.

Just published, demy 8vo, cloth, price 8s. 6d.

T. MACCI PLAUTI RUDENS. Edited,

with Critical and Explanatory Notes, by EDWARD A. SONNENSCHEIN, M.A., Professor of Greek and Latin in the Mason College, Birmingham.

Just published, crown 8vo, gilt top, price 5s. (uniform with Selections from Burns, by J. Logie Robertson, M.A.)

SHELLEY.—ADONAI. Edited, with

Introduction and Notes, by WILLIAM MICHAEL ROSSETTI.

"I have endeavoured to present in my introductory matter a comprehensive account of all particulars relevant to 'Adonais' itself, and to Keats as its subject, and Shelley as its author."

From the Editor's PREFACE.

Now ready, Eleventh Edition, revised to December, 1890, crown 8vo, cloth, price 2s. 6d.

THE STUDENT'S HANDBOOK to the UNIVERSITY and COLLEGES OF OXFORD.

Just published, Second Edition, Revised, fcap. 8vo, stiff covers, price 1s.

CAMPBELL'S GERTRUDE OF

WYOMING. A Pennsylvanian Tale. Edited, with Introduction and Notes, by H. MACAULAY FITZ-GIBBON, M.A., Senior Moderator and Gold Medallist, Dublin University.

Now ready, crown 8vo, cloth, with 10 Maps, price 6s.

GEOGRAPHY of the DOMINION of

CANADA and NEWFOUNDLAND. By the Rev. WILLIAM PARR GRESWELL, M.A. Oxon., F.R.C.I., late Scholar of Brasenose College, Author of "A History of the Dominion of Canada." Under the Auspices of the Royal Colonial Institute.

"Mr. Greswell, like other competent writers on the subject, gives a broad signification to the word geography, including in his treatment of it such accurate information concerning the increase and distribution of population, trade, and native industries of the countries described as is necessary to the intelligent study of their social and economic condition."—*Times*.

COMPLETION OF WICKHAM'S HORACE.

Vol. II. now ready, demy 8vo, cloth, with a Map, price 12s.

Vol. I. Second Edition. Price 12s.

QUINTI HORATII FLACCI OPERA

OMNIA. The Works of Horace. With a Commentary by E. C. WICKHAM, M.A., Master of Wellington College, and formerly Fellow of New College, Oxford.

Vol. I. The Odes, Epodes, and Carmen Saeculare. Vol. II. The Satires, Epistles, and De Arte Poetica.

"Scholarly edition of a favourite classic."—*Times*.

"Mr. Wickham brings to the elucidation of Horace a wide and exact learning in the classical languages and literatures, and (what distinguishes him from other commentators upon this poet) a special knowledge of the point of view naturally assumed by an English student in approaching Horace."—*Scotsman*.

Just published, demy 8vo, half-bound, price 7s. 6d.

A FRAGMENT on GOVERNMENT.

By JEREMY BENTHAM. Edited, with an Introduction, by F. C. MONTAGUE, M.A., late Fellow of Oriel College.

"No student of constitutional and legal history can afford to overlook this book and its influence, and any student may be congratulated on making its acquaintance under such competent guidance as that of Mr. Montague's Introduction."—*Times*.

Now ready, Second Edition, Revised, extra fcap. 8vo, cloth, 2s. 6d.

THE APOLOGY of PLATO, with In-

troduction and Notes. By ST. GEORGE STOCK, M.A., Pembroke College, Oxford.

Full List of Clarendon Press Publications may be had, post-free, on application.

LITERATURE.

Nelson. By G. Lathom Browne. (Fisher Unwin.)

MR. LATHOM BROWNE has tried to do for Nelson what, in a previous work, he has done for Wellington. This is not a biography of our greatest seaman: it does not give us his living image; it does not contain an estimate of his heroic nature, or even of his illustrious career. The book is wanting in symmetry and just proportion. It is, nevertheless, a useful performance; and the general reader, if he dwells on its pages, will learn better from it what Nelson was than from studying other "Lives" in our tongue. For those, apart from Southey's remarkable sketch—now almost obsolete and marred by prejudice—are utterly unworthy of their noble subject. The work may be styled one of premises, conclusions being almost withheld. It tells us the tale of Nelson's exploits, as they may be collected from his own despatches, from those of leading sailors of his time, and from authorities of later date; and the author scarcely appears in the volume. Mr. Lathom Browne, too, has judiciously followed the admirable narrative of De la Gravière—by far the best extant account of Nelson, though written by a Frenchman, be it said to our shame—in his description of Nelson's combats and battles; and the translations are fairly done and effective. We cannot understand, however, why he has not given De la Gravière his true rank. This accomplished seaman and excellent critic has been long an admiral in his country's service, and is not a captain only, as he is called in this book; and Mr. Lathom Browne has borrowed some passages from him without making the due acknowledgment. As De la Gravière's work, too, is the foundation of this volume, the author would have done well to have made extracts from the diary and correspondence of the luckless Villeneuve contained in the French admiral's book; for these throw much fresh light on the naval campaign of 1805, and especially on the glorious day of Trafalgar.

We cannot here attempt a sketch of Nelson, and shall merely indicate the parts of his career which are brought prominently out in this book. His most distinctive excellence, perhaps, was that, far better than any other chief, he understood the decayed and effete condition of the navies of France and Spain in the Great War. Here he towered easily over admirals brought up in the traditions of the Seven Years' War, or of that of our revolted colonies; and this perception of the fact was one secret of his extraordinary daring and success.

As early as 1793, when we had an ally in Spain, Nelson wrote in this way of the Spanish navy:

"They have four first-rates in commission at Cadiz, and very fine ships, but shockingly manned. If those twenty-one sail of the line, which we are to join in the Mediterranean, are not better manned, they cannot be of much use. I am certain if our six barges' crews, who are picked men, had got on board one of these first-rates, they would have taken her. The Dons make fine ships—they cannot, however, make men."

He gives this account of the French fleet of Toulon, when in command of the *Agamemnon*: "In the morning I was certain of taking their whole fleet, latterly six sail. I will say no ships behave better than ours, none worse than the French." At St. Vincent, Nelson, as is well known, steered right into the midst of the Spanish fleet, and was engaged, for a time, with three first-rates. Yet he considered the *Captain* a match for two ships at least: "For an hour the *Culloden* and *Captain* supported this apparently, but not in reality, unequal contest, when the *Blenheim*, bearing to windward of us, eased us a little." The contrast he drew between the English and French seamen, in his despatch after the battle of the Nile, is well known, and deserves attention: "It must strike forcibly every British seaman how superior their conduct is, when in discipline and good order, to the riotous behaviour of lawless Frenchmen."

The letters of Villeneuve, and of several Spanish officers, completely confirm the views of Nelson. The Revolution half ruined the French navy: it wasted its resources and destroyed its discipline; and a corrupt despotism ruined the navy of Spain. It was shown at St. Vincent that the Spanish crews could not furl sail, or climb up the rigging. Villeneuve's diary before Trafalgar is a long complaint of "bad ships, bad sailors, bad gunners, bad guns." These facts should be carefully borne in mind. They vindicate Nelson; but they also show that in a contest on the ocean we should now have to deal with adversaries in a far better condition than our enemies of 1793—1805.

Nelson was certainly the first of modern seamen. His feats of seamanship remain unrivalled. Whether, as at the Nile, he steers his fleet where Brueys thought he would never venture; or whether, as at Copenhagen, he enters a channel where Parker would not attempt to move; or whether he maintains the blockade of Toulon with ships that seem to defy the weather; or whether he pursues Villeneuve to the West Indies, gaining on his enemy hand over hand—he is always the perfect, matchless seaman. This gift was largely due to natural genius. For example, Nelson says of himself when still in his teens: "Captain Robinson used to say he felt as easy when I was on deck as any officer in the ship." When still a boy-captain he could manoeuvre in this style: "I was chased by three French ships of the line and the *Irish* frigate. As they all beat me in sailing very much, I had no chance but running them among the shoals of St. George's Bank." The seamanship of Nelson must be as-

cribed, however, in some measure to long years of training. He served for some time as a common sailor; and the conqueror of the Nile largely owed his victory to his skill as a pilot, a craft he had learned when quite a boy in experiences on the Thames.

The nature of Nelson was heroic, and he had extraordinary power in gaining the hearts of men. These great qualities, combined with his perfect insight into the weakness of his foes, and with his skill in seamanship, made him an absolutely unequalled leader at sea. His feats of daring are well known; his ardour sometimes outran discretion; but, as a rule, his boldness was crowned by victory. The heroism of his character is attested by many examples. We cite a single one from this volume when Nelson was in his twentieth year:

"The first lieutenant was ordered to board her, which he did not do, owing to the very heavy sea. On his return the captain said, 'Have I no officer in the ship who can board the prize?' On which the master ran to the gangway to get into the boat, when I stopped him, saying, 'It is my turn; and if I come back it is yours.'"

The influence of Nelson on his officers and men was a talisman to secure success. He insisted on discipline, and could be severe; but, as a rule, he made his supremacy felt by inspiring his captains with complete confidence, by the ascendancy of commanding genius, by encouraging valour, by making large allowances for mere excess of zeal and daring, and by his intense sympathy with the common sailor. The author truly remarks:

"Great as had been the exertions of his predecessors in the glorious roll of English admirals, no one of them had, ere Nelson came, ruled rather by kindness and love than by fear. Even Jervis, respected as he was and readily obeyed, was rather feared than loved. Nelson was adored. He realised the duty of his being known by report to every man and boy in his fleet."

We have no space to dwell on Nelson's great battles. His celebrated manoeuvre at St. Vincent will be found well described in this book, in an extract from the *Edinburgh Review*. As for his victory of the Nile, the best planned and most perfect of all his triumphs, the honour of the decisive movement has been ascribed to Foley; but Berry's report appears conclusive.

"The position of the enemy presented the most formidable obstacles; but the admiral viewed them with the eye of a seaman determined on attack, and it instantly struck his eager and penetrating mind that where there was room for an enemy's ship to swing there was room for one of ours to anchor. No further signal was necessary than those which had already been made. The admiral's designs were as fully known to his whole squadron as was his determination to conquer or perish in the attempt."

The following shows the importance of Nelson's order to anchor by the stern in this famous action:

"I asked the second captain of the *Aquilon* how it was that, as we approached, they did not fire at us? He said 'after we got within a certain distance they ceased, reserving their broadside until we should anchor, and when swinging they meant to rake us; instead of which,' he said, 'you anchored by the stern,

and the first broadside you gave us killed the post captain and destroyed every battery but the lower deck, where the carnage was very great."

Nelson's tactics at Trafalgar could not be justified, if the contending fleets were of nearly equal power; but in the actual situation they were a stroke of genius. Collingwood, the surviving chief of the victory, Villeneuve, a skilful seaman, but a feeble leader, and Escano, who, after the fall of Gravina, succeeded to the command of the Spanish squadron, concur in opinion on this particular. We quote a few words from Collingwood's despatch:

"The enemy's ships were fought with a gallantry highly honourable to their officers, but the attack on them was irresistible."

Here is a sketch of Nelson by the Duke of Clarence, when the illustrious seaman was a youthful captain:

"He had on a full-laced uniform; his lank unpowdered hair tied in a stiff Hessian tail of extraordinary length; the old-fashioned flaps of his waistcoat added to the general quaintness of his figure, and produced an appearance of particularity which attracted my attention. . . . There was something irresistibly pleasing in his address and conversation; and an enthusiasm when speaking of professional subjects, showing me he was no common being."

Nelson had this appearance in the circle of home:

"Lord Nelson in private life was remarkable for a demeanour quiet, sedate, and unobtrusive, anxious to give pleasure to every one about him, distinguishing each in turn by some act of kindness, and chiefly those who seemed to require it most. During his few intervals of leisure, in a little knot of relations and friends, he delighted in quiet conversation, through which occasionally ran an undercurrent of pleasantry, not unmixed with caustic wit. At his table he was the least heard among the company, and so far from being the hero of his own tale, I never heard him voluntarily refer to any of the great actions of his life."

Mr. Lathom Browne discusses at length the questions of Nelson's conduct to Carracioli, and of his relations with Lady Hamilton. As to the first, Nelson had a full share of the anti-Jacobin prejudices of the day; and he was singularly wanting in tact in politics, and in prudence in difficult affairs of state. As to the second question, we shall not touch a scandal which must be painful to many still living persons; Horatia is not long dead—"taceamus de istis ne augeamus dolorem."

WILLIAM O'CONNOR MORRIS.

Hedda Gabler: a Drama. By Henrik Ibsen. Translated by Edmund Gosse. (Heinemann.)

THE later additions to Ibsen's gallery of "revolutionary" women might plausibly be regarded as experiments towards the solution of the problem—"How far can you provincialise, impoverish, or debase the revolutionary impulse without disqualifying it to serve as a dramatic motive." With every fresh canvas we seem to pass further from the forces and strivings of normal experience, from the primitive emotions and desires unadorned and undistorted. We have left far behind us Lona Hessel, with

her new-world unconventionalities, her infectious and triumphant soundness of heart and head; Nora, with her pathetic recklessness in defence of her wounded dignity; and even Rebekka, with her wild passion purified and ennobled by the presence of its object. We have entered a region where, of set purpose and with deliberate artistic intention, robust passion is replaced by sickly hankering, masculine will by fatuous caprice, and the pity and terror of tragedy by an ugliness which excites no fear, and from which we turn away rather because it is unsavoury than because it is sad. Even the Lady from the Sea, though her fortunes do not perhaps stir us very deeply, is yet in her way an alluring and pathetic figure; and the imperishable poetry of mermaid legend hangs about her wayward steps and consecrates her fantastic vagaries.

But Ibsen's latest heroine, Hedda Gabler, is drawn in soberer tints, and with a harder, more definite pencil than the half-mystic Ellida. She is no lighthouse child, but a fashionable city girl, for whom Nature possesses no spell and provides no sanction, and whose only excuse for her wild impulses is a bad heart and a morbid brain. She is not redeemed by emotion, for she can hardly be said to have any. Of love she is fundamentally incapable; and though she may be allowed, in justice, to hate her husband and her rival, it is with a cold malignity which never disturbs her composure. The only daughter of a general, she has been suckled in a preference of arms to arts which later on finds expression in a sinister taste for pistol-shooting in comparison with study. She has been reared in luxury, and is much courted by society. Entirely self-absorbed, she is chiefly occupied with the attempt to reconcile two dominant but contradictory instincts—a taste for the lawless deeds which society resents, and a profound dread of provoking that resentment. She longs for "life," but is afraid of scandal. She is fascinated by a brilliant adventurer, Lövborg, and listens with secret gratification to the loose tales which she permits him to pour into her maiden ear; but she is satisfied with listening, and when he one day takes advantage of her complaisance, in fear not so much of sin as of scandal she raises her pistol, and then, again in fear of scandal, lets it drop. They part, Lövborg to plunge into reckless dissipation, Hedda to find herself, after the general's death, reduced to marry the highest bidder for a maintenance. Her husband, it need hardly be said, proves, in the hands of Ibsen, a person entirely unlike herself. Dr. George Tesman is not only a scholar, but a Philistine among scholars. He has been brought up by an old aunt, who works him slippers, which he sorely misses when he goes abroad. His conversation, so far as it is not composed of vapid exclamations, gravitates under ordinary circumstances to the domestic industries of Flanders in the middle ages, upon which he is writing a book. He cares nothing for politics, in which it is not expected that he would succeed, if he did. He is, in short, the kind of scholar whom we should seek with less success in the British Museum or the Bodleian (though he may possibly exist there) than

in the imagination of the unlearned. Tesman is understood to have prospects of a professorship, on the strength of which he has married. At the outset of the play they have just returned from a prolonged wedding-tour, largely spent, on his part, in ransacking archives (we wonder, by the way, whether the consciences of all readers of the ACADEMY are quite clear in this matter), and, on hers, in a monotonous alternation of irksome solitude and intolerable *tête-à-tête*. Her return finds her more eager than ever to "live," though equally anxious to preserve appearances. The old aunt, who has mortgaged her income to furnish their home, proves insufficiently entertaining, and receives little encouragement to repeat her first visit. The prospect of "responsibilities," at which her friends drop various meaning hints, is angrily scouted by Hedda, and naively ignored by her husband. From the point of view of "life," motherhood is an irritating irrelevance; from that of the domestic industries of the middle ages, fatherhood is a blank. It is not for nothing that this Mrs. Tesman, as she already is by law when the play opens, retains her maiden name in the title. The poet knew better than the law; and he chose this way, the only one open to a dramatist of his reticence, of setting the critical brand upon his own creation. Hedda Tesman remains Hedda Gabler, and she freely makes it known. Her old "comrades," the wooers who would have been accepted if their offers had been more promising, gather around her, and find that they are to be comrades still. They listen sympathetically to her sarcasms at the expense of the domestic industries. Further than that, however, she declines to go. She has got into a *coupé* for a life-long *tête-à-tête* with Tesman; she will be bored to death, she knows; but she dare not shock society by jumping out, though she is willing to admit a companion "for entertainment." Two of these comrades play the leading part in the drama next to her own; the Lövborg before mentioned and a certain Justice Brack—both men of talent and no principle, who differ in so far as the one pursues with reckless vehemence and with flashes of generous remorse what the other achieves by crafty calculation and a scrupulous observance of social forms. Brack is a man of the world and of society, who supplies her readily with the "entertainment" which she desires; Lövborg appeals to her more deeply as the embodiment of the "courage of life," the reckless acting-out of impulse, which she aspires to but shrinks from. But Lövborg is a man of ideas as well as of acts; and in the interim he has won the heart of another young wife, Mrs. Elvsted, and under her inspiration has written a book on the forces of civilisation, which has made him instantly famous. This book is equally removed from the sphere of Hedda, who hates all books, and of her husband, who only reads the *Fachleute*; and, as it makes Lövborg a rival of Tesman for his professorship, so it constitutes Mrs. Elvsted a rival of Hedda in relation to Lövborg. The action of the drama is essentially Hedda's effort to destroy this comradeship based on ideas,

and to set in its place her comradeship based on action. She contrives to win the whole confidence of her artless rival, a frail and tremulous flower of womanhood, who cannot resist the smiles of the terrible Hedda. While they sit together in her house, the three men meet at a bachelors' symposium, and play characteristic parts. Lövborg reads aloud a new and still bolder work on the future of civilisation, and then raves in his cups of the woman who "inspired" it; Tesman listens in involuntary envy, and goes home to his aunt; and Brack watches the situation to his own advantage. Overcome by wine and excitement, Lövborg, half-reclaimed by the "ideal" comradeship, plunges back into his wild courses; on his way to a low haunt he drops the MS. of his book—the "child" of that comradeship—which is picked up by Tesman, and innocently confided to his wife. In the finest scene of the drama, Lövborg bursts in and announces his loss to her. "But, after all, it was only a book," she objects. "The pure soul of Thea was in that book." Its loss symbolises the loss of his higher self. He cannot retrieve the loss, and he will not endure it. There is nothing more for him now but to end. Hedda at once perceives a chance of gratifying her aesthetic taste for the "courage of life," and thrusts a pistol into his hand, "and—could you not do it—beautifully?" He goes; and she calmly takes the lost MS. from her desk, and burns it sheet by sheet in the stove, murmuring as she destroys the monument of the ideal companionship: "Now I am burning your child, Thea! You with the curly hair! . . . Now I am burning—am burning the child." Thus Hedda seems to have twice conquered. But the morrow brings darker issues. Lövborg is found shot dead, it is true, but neither the place nor the manner of his death is "beautiful." Brack, moreover, who conveys the news, intimates significantly that only his silence can prevent the loan of the pistol creating a scandal. Hedda, appalled at the prospect of the scandal, or its alternative, and disgusted at the vulgarity of the death, retires; and while Tesman is lamely struggling with Mrs. Elvsted to restore the lost "child" from her rough and fragmentary notes, a report is heard, and Hedda is found stretched lifeless on the sofa, shot, in accordance with her taste, through the temple, having through sheer cowardice succeeded in at least parodying the "courage of life." Thus parody is the final issue of both comradeships.

We have tried to tell this story with the dispassionateness which is due to whatever Ibsen writes; but it will be easily believed that "Hedda Gabler" is not agreeable reading. Not that it contains a single word at which, granting the subject, the most sensitive taste would take offence; from beginning to end it is written with the austere reserve. It is indeed just its monotony of gloom which makes it repellent to the normal eye. Almost every character is in some way repulsive; and the good old aunt who, to Hedda's amazement, when her sick sister dies must needs find some other invalid to care for, is too insignificant an exception to the prevailing type to count against it. To produce dramatic effect with

such characters is more difficult than with characters whose personal charm of itself makes their fortunes interesting; but Ibsen has always shown himself independent of this cheap source of interest, though he has nowhere, unless in "The Wild Duck," eliminated it with so remorseless a hand as in this sombre play. It is a study in social pathology; and pathological studies appeal, as a rule, rather to the searching brain than to the sensitive nostril. Accepting it as such, it must be allowed to be in its way a masterly work. Its fundamental motives, granting the morbid psychological conditions in which they are supposed to act, are worked out with unflinching consequence to the catastrophe; and the incredulous impatience with which most readers will be affected when they reach this point applies at most to these conditions, not to the act in which they issue.

But, fully admitting the strength of the drama, one involuntarily asks whether, as art, this piece of pathology is worth the heavy sacrifice of beauty which it has cost? It is true that it contains far more beauties than the hasty reader is likely to suspect—unobtrusive beauties of symbolism and suggestion, of grouping and sequence. But the finely-chiselled form does not redeem the essential ugliness of the matter. We are accustomed in "modern" art to forego much beauty for the sake of a more intimate discovery of reality; but we demand that this reality should have a certain preciousness, a certain significance of its own. But in "Hedda Gabler" we are plunged into a world of unrelieved ugliness, only to discover what is not only in the highest degree ugly also, but of about as much significance for normal humanity as the phases of leprosy, or—the domestic industries themselves. It is the work of a great artist, but he has not succeeded in giving his study in a provincial hospital the universality of great art. This middle-class Nero in petticoats—who is aesthetic in her cruelty, who likes her friends to die if only they will do it beautifully, and herself hands them the pistol when she holds the means of driving away their despair, but who all the same is a woman, haunted by a perpetual fear of society, and dying at last by her own hand in order to escape its censure—is a creation powerful and subtle indeed, but in which when the book is closed and the "picture turned to the wall," we only half believe. Those who best know Ibsen's work in its whole compass will read this drama with most insight and with least pain. But they will also be the first to wish that the great poet—who has so long disguised his faculty for beauty, for the harmonies of speech, for the grace and glory of humanity, and under the plea of delivering us from falsehood, left untold the better part of truth—would yet once before the end go forward, by turning back.

We have only to add that, so far as we can judge of the translation in the absence of the simultaneously published original, it appears to be adequate, though rather less felicitously colloquial than Mr. Archer's similar work. The troublesome *Men* of exclamations (Germ. *Aber*) cannot always

be rendered by "But." And like some other critics, we should be glad to know whether the "cock-of-the-walk" which Hedda utters with her dying breath represents an equally jarring vulgarism in the original. A good portrait of Ibsen is prefixed.

C. H. HERFORD.

Correspondence of Princess Lieven and Earl Grey. Edited and Translated by Guy le Strange. Vol. III., 1834 to 1841. (Bentley.)

UPON the antecedent issue of two volumes of this Correspondence, we were promised a third if sufficient encouragement were afforded. Now, in circumstances of greater freedom, with no fourth volume impending, we may express the opinion that the Correspondence—though it approaches nearer to our own times, and though, as the Princess says, "one always takes more interest in what one understands"—is less interesting in this final instalment. This is perhaps due to the failing health of the Princess, to the long separation of the two correspondents, and to their being less concerned with state affairs when Prince Lieven had ceased to represent Russia in London and Lord Grey was no longer in office or a candidate for power. Yet in the lady's opinion, though the possession of power is favourable to the most valuable gossip, it is otherwise with regard to judgment as to the effects of policy. The Princess says:—

"One must stand among the spectators to see the play fairly, the actors themselves cannot possibly judge of the effect. And this, believe me, is the fruit of my observations during the twenty-two years I passed in England watching those who in turn have been at the head of affairs. I have found no exceptions, not even in your case. The statesman in power is surrounded by flatterers. He is naturally little prone to give credence to uncomfortable facts, and those who are interested in obtaining Ministerial favours keep all disagreeable matters from his knowledge. It is the way in all countries, and your country in particular forms no exception."

Mme. de Lieven was very unhappy at Petersburg, longing always for the "mild climate" and the friends of England. "It is only the English," she writes, "in whom one finds constancy in friendship: they always take you up again just where they left you"; and of the father and mother of the late Duke of Bedford she says, "the Russells in particular are friends of the right sort." In Russia, she lost sons, lost health, lost happiness, which last seems to have revived when she was told she was never to pass another winter in Petersburg and found herself in Paris. The fact is the Princess was an inveterate gossip, with a very high repute for the best news, which she loved to maintain. Her affection for Lord Grey—and his for herself to some extent—was in no small degree based upon barter of interesting news. She never concludes a letter without entreating him for more; and he, in writing condolence on the death of her son or her husband, understands the situation too fully to omit the latest talk as to political parties and appointments. Her residence in Paris involved

difficulties with her husband; but still she had the society, with an admixture of English passengers, such as her soul loved. She was often with Talleyrand, Thiers, and Guizot. The first, she said, "loves society and politics, and when his time comes you will see that he will die with a newspaper in his hand." Summer and winter alike she was happy in Paris. On Midsummer Day, 1836, she tells Lord Grey: "I have only been in Paris twenty-four hours, and yet all the world has come to see me—M. Thiers among others." After entreaties on her side that Lord Grey should come to Paris, and on his side that she should visit him at Howick, the Princess came to London in 1837, but did not go to Howick, which possibly was a relief to Lord Grey, who knew, upon her own word, that she feared *ennui* more than sickness. From Stafford House she wrote:

"I have given up all idea of visiting in country houses. I go nowhere. It is now very evident to me that the air, the mode of life, and the sad souvenirs awakened by my visit to this country are not at all conducive to a better state of health. For fear of worse arising, I return to the place where I found myself tolerably well—namely Paris."

The personality of the Princess is interesting, but not difficult to understand. She loved powerful society; and it loved her—as she well knew—for herself, but not less for her information. She was most careful to protect the sources of her gossip. After telling Lord Grey something of the personal affairs of the Comtesse de Flahault, she added—

"I beg you to keep my remarks on this head to yourself, for with all her good qualities Mme. de Flahault is a focus of gossip and tittle-tattle such as I have seldom seen elsewhere."

Lord Grey, no doubt, enjoyed her friendship and affection very sincerely, but he had also an appetite for her news. He said, "Of foreign politics, what I hear from you is alone to be depended on." His own letters were far less interesting when he ceased to occupy the seat of authority. Through all the years of this final volume he always declared that he would never retake office; and yet the very last words of this long Correspondence throw some doubt upon his perfect contentment: "If anything," he says in a postscript to the concluding letter, "would make me wish for a return to power, it would be the hope of co-operating with him [M. Guizot] for the purpose of maintaining peace and amity between France and England."

ARTHUR ARNOLD.

The Wages of Sin. By Lucas Malet. In 3 vols. (Sonnenschein.)

THIS is Lucas Malet's fourth novel. The first, *Mrs. Lorimer*, was a delicate sketch of one woman's character, under very modern influences and very subtle emotions. It showed in outline a conflict between spiritual egoism and spiritual duty, as these two forces appear among the circumstances of the present day. The second, *Colonel Enderby's Wife*, took a wider field of action, though not more deep a sentiment. It dealt with the impulses, the wants, the capacities

of two women and of two men: a bitterly painful book, laying bare the ultimate reality of much in human nature that is cruel and of much that is helpless, to the accompaniment of a very exquisite irony and a very courageous cynicism. The book is a complicated and crowded, not always with artistic propriety; but it is a fine essay towards perfection. The third, *A Counsel of Perfection*, achieved perfection. It is a variation upon the theme of *Mrs. Lorimer*, that conflict of personal forces, as this difficult age affects them; but here, instead of a sketch, we saw a complete and rounded work. The psychology of the book is simply wonderful; its literary art is impeccable; its total charm is unforgettable. The result of a study in these three books leads us to conclude, that the greater success of Lucas Malet lies in the realisation of very personal and imperious conflicts of the emotion, apprehended through certain strongly felt and delicately touched characters: two or three central figures moving against a background of "black and white," or more often of a shadowy gray. A full stage, profuse accessories, the swing and stress of busy crowds, seem to overpower the peculiar genius of Lucas Malet: to deaden the vitality of the chief actors, and to dim their features.

The Wages of Sin is in the manner of *Colonel Enderby's Wife*: it is long, crowded, and ambitious of great things. Hitherto, Lucas Malet has excelled, and seems to recognise that excellence, in drawing a few contrasted and competing characters; here, the writer has been enamoured of expressing life at large: the great play of the world and its elements, the universal tragedy and comedy. To this end, the book is full of effort to be living and impetuous, in the spirit of Walt Whitman; indeed, that great writer has furnished Lucas Malet with mottoes and with metaphors. We read of "the splendour of living for those who dare sing the 'Song of the Open Road.'" Life is presented to us as a thing of passion and of heroism, of action, and of almost monstrous force. The especial motive of the book is selected with this intention: a motive, which supplies the writer with the most violent and tumultuary passion, to be represented, not, as heretofore, upon some exquisite and rather private stage, but, as it were, in the theatre of the world. That motive is, in the writer's repeated phrase, "woman, the secret of the Fall and of the Redemption," and, in consequence, "the mystery, the glory, the cruel riddle and tragedy of sex." It is not without regret and a certain apprehension that we leave the choice and delicate places of *A Counsel of Perfection*, to plunge into so tremendous a sea of troubles as the psychology of sex; yet it can hardly be denied that a successful novel upon that subject, a novel which should deliberately fasten upon it and pluck out the heart of its mystery, would be among the great books of our generation. *The Wages of Sin* is not a great book: it is a great book *manqué*.

The tragedy begins in Devonshire, and not the least happy part of the book is the Devonshire peasantry and dialect. Mary Crookenden, the heroine, her cousin Lancelot, a very pleasant and very English boy,

are children together, living with their relatives, whose characteristics are delightfully touched. To the little fishing village comes James Colthurst, a young and morbidly enthusiastic painter: a man of great personal power, of an ardent temper and genius, filled with a sense of his mission to invigorate art with new ideals and a true realism. He is a little uncouth; he stammers under emotion; he is inflammable; but his devotion to art is his dominant passion. Overcome by sudden impulse, he lets himself be entangled with Jenny Parris, a mad Methodist fishing preacher's daughter; and she leaves her home as his mistress. She is ignorant, tempestuous, but with a certain glory and dignity of nature under the stress of her passion. Here is one result of the "tyranny of sex." Presently Mary Crookenden, a somewhat coldly charming character, grows up; and, to put it crudely, the problem is this: whom does she love, and whom will she marry? Is it Cyprian Aldham, a correct, cultured, and selfish young clergyman; or Lancelot, an honourable, handsome, and unpretentious young athlete; or James Colthurst, the great new artist, successful after hard struggles, bizarre, impressive, and strangely powerful? For she has met the artist and felt, with all the strength of her desire for experience and reality, his profound fascination and force. Jenny, in a dismal London lodging-house, is now the coarsened and neglected mistress, unsuspected by the world. Colthurst, who is intensely modern in his virtue and vice, feels the purity and spiritual beauty of Mary Crookenden. So much of the book it is permissible to explain, and certainly it presents tragic complications. Now, the stage is crowded to excess; even the actors of the preceding novels appear once more. There is that urbane versifier, Antony Hammond, still "whirling the silver string of his eye-glass"; Adolphus Carr; Mrs. Frank Lorimer; the house of Fallowfield, and Lady Louisa Barking; and many more. There are some felicitous new personages, in particular one Sara Jacobini, Mary's friend and companion, and Mr. Barwell, a timid and reactionary drawing master. Most of the scenes are laid in London, and a very bustling, jostling, exuberant London; everything is done to create the impression of this rapid, emotional, modern life, so superficial and still so passionate.

But the book is a great book *manqué*, because the writer, anxious to create this impression, has lost something of that careful delicacy which in the earlier books, by phrases of an adorable precision and subtlety, explained character and indicated emotion; instead, we have a whirl of hurrying phrases, pages of fevered description, an elaborately fervent manner. The psychology of the book does not convince; it is full of tragedy, well told as incident, but not felt as inevitable results, fatal and certain. It ends for all practical purposes with a scene of immense pathetic horror; yet it is hard to believe that the scene is true, not to nature merely, but to the previous character of the performers. The very language and style are inferior to those of the previous books; it overflows with that odious quality, cleverness; it is even "smart." And yet the

book has great qualities; infinitely superior to the average novel, it abounds in fine conceptions, in all the marks of *mind*, which make the strength of literature. Force, power, an almost savage degree of reality, an almost painful degree of pity, these are good things in a novel; but, in the hands of Lucas Malet, they win us less than the incomparable delicacy, the never-failing grace, which crowned *A Counsel of Perfection*.

LIONEL JOHNSON.

TWO BOOKS ON THE NEW TESTAMENT BY THE
LATE W. H. SIMCOX.

"THE CAMBRIDGE BIBLE FOR SCHOOLS AND COLLEGES."—*The Revelation of St. John the Divine*. With Notes and Introduction by the late Rev. William Henry Simcox. (Cambridge: University Press.)

The Writers of the New Testament: their Style and Characteristics. By the late Rev. William Henry Simcox. (Hodder & Stoughton.)

THESE two little works, carefully edited by his brother, Mr. G. A. Simcox, afford fresh evidence of the nice scholarship and delicate critical sense of their lately deceased author. The first will certainly take its place among the best of the excellent series to which it is a contribution; while the other, short and unpretentious as it is, may be recommended as an admirable introduction to the study of the special characteristics of the different New Testament writers.

To take the works separately. In a pretty full Introduction to the Revelation, Mr. Simcox discusses the questions proper to the subject with commendable fairness and impartiality, and while he allows himself to be satisfied by the undoubtedly strong external evidence that the book is actually the work of John the Apostle, he shows the independence of his judgment by rejecting the tradition which refers the time of its composition to the reign of Domitian, and putting it back to the period between the death of Nero and the capture of Jerusalem. Attempts have recently been made to show that there is nothing in the style or language of the Apocalypse to prevent its being by the same author as the Gospel; but this was not altogether the opinion of so sound a scholar as Mr. Simcox. His judgment is that "*prima facie* the style of the Revelation is so utterly unlike that of St. John's Gospel and Epistles as to make it all but incredible that they are the work of the same author." And yet Mr. Simcox believed that they were. In fact, this seems to have been his main reason for assigning to the Apocalypse so early a date. If the Gospel was not written till towards the close of the century, and the Apocalypse before 70 A.D., there was, he thought, a sufficiently long interval to enable John to acquire that greater command of the Greek language and better knowledge of its grammar which the other Johannine writings exhibit. But seeing that Mr. Simcox found himself obliged to adopt the earliest date for the composition of the work, it seems odd that he did not also accept the usual pretirist explanation of the enigmatical

number 666. This would perhaps have carried him rather too far on rationalistic lines. Still, he does, to a great extent, accept the Nero-hypothesis, regarding the first five of the seven kings as the first five Roman emperors beginning with Augustus, the sixth as Vespasian, the seventh, who "must continue a short space" as Titus, while the eighth, who is of the seven, is Nero *redivivus* in Domitian. It is true that the mystical number lends itself to various interpretations. But certainly, from the modern critical point of view, none is to be compared with that which finds it in the Hebrew transliteration of Nero Caesar; and it was a little weak in Mr. Simcox to suggest that the true solution will not be found till the real Antichrist appears, when "believers will be able to identify him by this token."

Vischer's ingenious hypothesis of a Jewish ground-work as the basis of the Apocalypse has not been noticed in this Introduction, because, in fact, the Introduction was written long before the hypothesis was thought of. But full justice is done to it in an Excursus, in which, however, Mr. Simcox, while admitting one or two probable interpolations or misplacements, ably defends the integrity of the book as a whole. Of the notes it may suffice to say that they seem to be quite what the student is likely to need. They are brief and to the point, and full of information. They give the author's views without omitting other interpretations deserving of notice.

The second work named above is a companion volume to that on *The Language of the New Testament* already noticed in the ACADEMY (January 18, 1890). There is just enough of it to make one wish that the author had lived long enough to treat this whole important subject exhaustively. Even as it is, however, this little book will be found most helpful. It contains, in fact, a great deal in a very small compass; and certainly the young student could not do much better than take this book in one hand and his Greek Testament in the other, and turn up all the references. He will thus learn to distinguish the special characteristics of a number of writers, using with different degrees of mastery a common instrument, with whose peculiarities he has already familiarised himself by the aid of the former essay. Mr. Simcox, it is hardly necessary to say, does not rely upon mere phraseology, but takes into account the more subtle distinctions of style; and his book abounds in acute observations showing how thoroughly he had seized the leading characteristics of the different New Testament authors. It may, of course, be possible to dissent from some of his judgments, but they are always well considered and based on wide and accurate knowledge.

ROBERT B. DRUMMOND.

Edmond Scherer. Par M. Octave Gréard. (Paris: Hachette.)

M. GRÉARD is an academicien of the French Academy—an assembly of the *plus honnêtes gens*, some of the finest wits and gentlemen of Europe, to use a phrase of the seventeenth

century. Yet he lacks reverence for the Belles Lettres, *Litterae Humaniores*: he points at St. Marc Girardin, and calls that accomplished critic "ce professeur de belles-lettres." M. Gréard speaks of the "grâces solides" of a lady mentioned in his book. It is difficult to give a better instance of what the *curiosa felicitas verborum* is not. But there are words which he can employ with effect. One of them is "appesantissement," a rare and good substantive in French. Pascal has used it with force: "C'est un appesantissement de la main de Dieu." And M. Gréard writes suggestively about the "appesantissements de la vie." M. Gréard has literary tastes. He holds an important office in the French Ministry of Public Instruction, is a chief senior inspector of elementary education, and a junior member of the French Academy. It is to be expected that in such a soothing and urbane atmosphere he will become a faithful worshipper of the Belles Lettres. And if he can infuse a little genuine literature into the democratic education of his country, he will have done for France what Matthew Arnold laboured to do for England.

Edmond Scherer is well known on this side of the Channel, and what is new about him in M. Gréard's book is possibly newer to Scherer's French admirers than to his English friends. It is worthy of note that Scherer—who went through many educations, *mores hominum multorum vidit*, in England, France, and Germany—owed his second education as a boy of sixteen to England and a quiet parsonage in Monmouthshire:

"Le 10 août 1831 [he was then sixteen] il arrivait à Monmouth, chez le Révérend Thomas Loader. Monmouth, petite ville de cinq à six mille habitants, assise au confluent de deux rivières, était un lieu de retraite à souhait, entouré de promenades charmantes, de bois ombreux, de ruines pittoresques. Ce calme et l'existence recueillie dont il trouvait dans l'hospitalité du pasteur le conseil et l'exemple, produisirent tout d'abord sur Scherer une impression d'apaisement. . . .

"Sa journée, telle qu'il la décrivait à sa mère (29 février 1832) se faisait de mois en mois plus réfléchie et plus pleine. En hiver, lever entre 7 et 8 heures; déjeuner à 8 heures et demie; à 9 heures, leçon d'anglais avec M. Loader; lectures et extraits; dîner à 2 heures et nouvelle séance d'anglais; thé à 6 heures; lectures et extraits jusqu'au souper, à 9 heures; coucher entre 11 heures et minuit. Au mois de juin, le soleil le trouve sur pied souvent dès 4 heures. Il s'isole, il s'oblige, il s'impose des plans de travail; il apprend le grec, il lit Blackstone et Burke la plume à la main. 'Tout est modifié en moi,' s'écrie-t-il, non seulement mes habitudes, mais mes goûts et mes opinions. Je ne me reconnais plus.' . . .

A ces études, encouragées plutôt que contrôlées par le Révérend Thomas Loader, se mêlaient des discussions théologiques, des explications de la Bible, des méditations pieuses. Toutes les forces de son intelligence et de son âme étaient occupées. L'espèce d'atonie dont il souffrait avait fait place à une énergie d'application soutenue. De nouveaux horizons s'étaient offerts à son regard, serains et fortifiants. Pour la première fois la vie lui apparaissait avec ses devoirs et son idéal. Le sentiment chrétien l'avait pénétré.

At eighteen he formed a plan of work, and kept to it. M. Gréard observes with

truth that "possession of himself" was one of the most characteristic notes of his mind.

His third education was German; we have seen that his second was English; the first of all was French.

"Le séjour à Monmouth avait commencé à discipliner son esprit. C'est à l'école de Strasbourg qu'il se forma. Il n'en sortit pas seulement en pleine possession de la langue allemande, de même qu'il avait quitté l'Angleterre parlant et écrivant la langue anglaise comme sa langue maternelle; il y refit ou plutôt il y fit ses études. Les leçons du collège Bourbon ne lui avaient laissé qu'un mauvais souvenir. Il s'en accensait d'abord lui-même avec loyauté; il en accusait aussi le système. Il pensait que les humanités grecques et latines ne sont faites que pour une élite, un autre enseignement secondaire devant être approprié aux besoins du plus grand nombre; que même pour cette élite, elles absorbent un trop grand nombre d'années et qu'on pouvait en diminuer la durée, sans en amoindrir la portée; que ce qui surtout y faisait défaut, c'était l'esprit d'exactitude et de rigueur, l'esprit scientifique, en un mot, que l'école protestante de Strasbourg avait emprunté aux écoles d'outre-Rhin. . . . Plus tard il devait être plus juste pour la simplicité substantielle et lumineuse du génie français et se rendre compte des progrès accomplis depuis vingt ans dans nos méthodes d'enseignement. Il devait reconnaître aussi les abus et les dangers de la critique allemande, ce qu'elle risque d'engendrer de subtilité et de sécheresse, ce qui lui manque dans les idées générales d'aisance et d'ampleur."

Scherer forgot (at this time of his life) that things of perfect beauty are beautiful for all times and for all men and women and children, and find their way to the understanding of the wise and the imagination of the simple. In an essay on France and the democracy which he wrote after the ripe experience of a lifetime, he saw and pointed out the saving influence of the classics in a democratic society:—

"Ceux qui n'admettent point que la démocratie ait rien à envier à aucun autre régime montrent combien ils sont eux-mêmes étrangers à ces conditions d'étude et d'expérience, à ces qualités de finesse et de maturité qui font de véritables hommes politiques. Où auraient-ils appris, ces improvisateurs du journalisme et de la tribune, ce que les grandes lectures et le commerce de la société donnent d'étendue aux idées et de pénétration à l'esprit? . . . L'un des vices de la démocratie, comme de toute demi-culture, est la passion des idées simples, et par suite des principes absolus."

M. Gréard notes that Edmond Scherer was fond of walking, and that he belonged to that class of *promeneurs* who choose their walk and stick to it.

"Chaque matin il faisait sa promenade accoutumée [he was then a young man] dans un village de la banlieue de Strasbourg. Dès les premiers jours, il avait découvert l'endroit favori, combiné le chemin pour s'y rendre, et en dépit des railleries, il y était resté aussi fidèle qu'un nouvelliste d'autrefois à la grande allée du Luxembourg. En quelques pas il était à la porte de la ville. Puis venaient les allées droites et les feuillages épais du Mail. Au delà, la grande route. Après l'avoir suivie quelque temps, il entra dans un sentier qui n'aboutissait à aucun rendez-vous de promeneur. . . . Une fois là il ralentissait le pas: il était chez lui. . . .

* "Par sa mère il avait du sang anglais et du sang hollandais dans les veines," M. Gréard says in the beginning of his book.

Parfois il emportait avec lui le souvenir d'une lecture, qu'il méditait. Ce mot de Pascal l'avait arrêté: 'quand il serait difficile de démontrer l'existence de Dieu par les lumières naturelles, le plus sûr est de le croire.' En rentrant, il écrivait: 'Je ne puis me faire à ce raisonnement. Le plus sûr est naïf! Comme si la foi pouvait reconnaître d'autre motif de croire que la vérité.'"

Yes, *le plus sûr* is *naïf* (*certius est credere* is not *naïf* in Latin); but this very *naïveté* is the strength of genius in Pascal and in the French language spoken by Pascal. The want of *naïveté* was the weak point in Scherer. Had he possessed the gift of *naïveté*, he would not twenty years later have written in a "note intime," reproduced by M. Gréard—

"Pascal a les inconvénients de l'absolu. Il ne comprend point ce qui est en dehors de son point de vue théologique: la vie, l'humanité, le monde, lui sont à bien des égards un livre fermé. Il est sublime, mais étroit, singulièrement étroit. Il doit plus choquer qu'édifier l'homme qui a pratiqué le monde et qui sait voir les choses par leur côté relatif."

Are we then to believe that the world was a "sealed book" for Pascal? It is more likely that Pascal was a sealed book for M. Scherer. Another sealed book was Molière. It is remarkable that the two most original geniuses of French literature were "sealed books" for M. Scherer.

WILLIAM MARKHEIM.

SOME BOOKS ON FOREIGN COUNTRIES.

National Life and Thought. A Series of Addresses. By Prof. J. E. Thorold Rogers and Others. (Fisher Unwin.) The lectures contained in this volume were delivered on Sunday afternoons at South-place Institute, during 1889 and 1890, and were

"designed to give information, in a popular form, with regard to the national development and modes of political action among the different nations throughout the world, by means of sympathetic and trustworthy accounts of their history, national aspiration, and modes of government."

The result of this excellent design has been, not merely the delivery of these addresses to audiences mainly composed of the working classes, but the publication of the present volume. For all who desire trustworthy information about the nations of Europe, but who cannot afford to purchase the latest Encyclopædia, this volume can be highly recommended. It is a book not only to read, but to keep. Within the compass of some 400 pages we have an account of almost every nation of Europe, and the value of the addresses has been enhanced by an excellent though not infallible Index. The lecture we first turn to is one entitled, "Lessons from the Dutch Republic," by the late Prof. Thorold Rogers. All the other lectures, Mr. Bent's "Modern Life and Thought amongst the Greeks," and Mr. Singer's "Jews in their Relation to other Races" only excepted, are simply entitled "Italy," "Russia," "Servia," or whatever nationality the subject may be. The reason for the professor's lecture not being entitled "Holland" is plain enough. Except for a reference to the House of Orange, there is nothing in the lecture about modern Holland; but there is much about "dominion being founded on grace," and other matters which many will think far more entertaining than Holland, whether ancient or modern. "Lessons from the Dutch Republic" is, like anything

written by the late Oxford Professor of Political Economy, well worth perusal. Its very flaws attract; for if you abstract its egotism, where would its wit be? But though Thorold Rogers is more witty than most of his brother lecturers, it cannot be said that he has much less to tell us of the working classes. We look in vain for any account of their wages, their diet, their trade associations, of strikes, and of sweating. The way in which the poor (the bulk of the people in any country) live is passed over in silence by them all, except by Mr. Minchin, in his lecture on "Servia," in which he deals with the social economy of the Serbs. The local government of that country is also described to us clearly and succinctly. Mr. Braekstad's description of local government in Norway is not so satisfactory. He merely tells us that it is a "perfect system." These lectures were delivered orally, and therefore aim at being popular, and in this—with one or two exceptions—they succeed. The most interesting of them is perhaps Mr. Adam Gielgud's "Poland"; the most entertaining is certainly that on the "Gypsies," by Mr. F. H. Groome. Speaking of the pitiless legislation against the people "called, known, held, and reputed Egyptians," Mr. Groome is reminded of the cruel old Norfolk gardener:

"He was hoeing one day, and a frog hopped out before him. 'I'll larn you to be a frog,' said crabbed Roger, and hoed it forthwith in pieces. So 'I'll larn you to be Gypsies,' said British law-givers, and the gallows was their means of education."

The account too of the death of Lancelot, by Offa's Dike, with Pyramus playing old Welsh melodies upon his fiddle, is poetical and pathetic.

"First the 'March of the Men of Harlech,' and then from its stirring tones he slid imperceptibly into the tender 'Shepherd of Snowdon.' And as he played he wept, the big strong man. 'Play that again, my Pyramus,' said Lancelot. And Pyramus did play it again, but not quite to the end; for, as the last bar opened, Lancelot died. Then there was lamentation in the tents of Egypt."

Mr. Gielgud's "Poland" is an admirable historical address. He admits that until the adoption of the constitution of 1791 all political power was vested in the nobles; but he points out that in the eighteenth century the number of "nobles" in Poland was so great that it constituted a fifth of the whole population, "which," he adds, "is a much larger proportion than that of the people who enjoyed the franchise in England after the first Reform Bill." In other words, the franchise was wider in Poland even before 1791 than it was in Great Britain before 1868. He claims for Poland that she was the land of liberty from the beginning of her history, "and that it was because she was the land of liberty that the despotic governments which surrounded her have always been her enemies." He points out the fallacy of any comparison between Poland and Ireland:

"Poland lost her independence at the end of the eighteenth century, when she was a civilised state and one of the great powers of Europe; Ireland was conquered in the twelfth century, when all the countries of Europe were more or less barbarous, and Ireland not the least. In Russian Poland a Pole is not allowed to buy land. In Ireland the Government assists the Irish tenants to become proprietors by purchase of their holdings."

He combats the notion that Poles are revolutionists and anarchists by pointing to the Diet of Galicia, which is a model for parliaments nearer home, and to M. Dunajewski, the Minister of Finance in the Austro-Hungarian Cabinet, who has produced a budget with a surplus. As the lecturers are all nationalist

in their sympathies, their hostility to the Tzar and his government are not to be wondered at. M. Sevasly in his "Armenia" is as strongly averse to annexation by Russia as Stambouloff himself. Mr. Magnusson in his "Denmark and Ireland" is not one whit less plain-spoken. He deplores Denmark's political friendships with Russia and France.

"In her greatest need," he tells us, "his Muscovite Majesty has made a miserable dupe of Denmark. You may gauge the ruin of the country, with but one million inhabitants, being burdened with a national debt of over twenty-two millions, besides a debt of over sixteen millions sterling of unguaranteed note issue, with its fleet gone, with Norway torn away from it in 1814 by Sweden, and Heligoland by England. The note-paper debt was cleared off by the drastically simple process of state bankruptcy, which merely transferred the ruin from the treasury to the holders of the paper, a shift which had the most deplorable effect possible on the country's agriculture and commerce. This was the outcome of Denmark's infatuated policy in leaving her destinies in the hands of Russia and France."

Space forbids our indulging in further extracts, though there are many other thoughtful lectures in this volume besides those we have referred to. Mr. Whitman tells us he read in an English newspaper the following criticism on a book on Germany: "A dull book on a dull subject." Reversing this sententious judgment, we might say that these addresses are interesting addresses on interesting subjects. The thanks of the public are due not only to the lecturers, but to the South-place Ethical Society, whose public spirit and liberality originated the scheme.

Wayfaring in France. By Edward Harrison Barker. With fifty Illustrations. (Bentley.) This is a capital book of its kind. It is an excellent account of pedestrian touring in France. Without aiming at fine writing, the author brings before us a true picture of the scenery through which he travels. He wisely avoids details of how he got to the real starting-place of his walking tours, and shuns descriptions of well-worn spots. These wayfarings deal with very different parts of France, or what was lately France. The walks are through the Landes, in Dauphiné, in Languedoc, in Brittany, and in Alsace. Generally Mr. Barker seems to have walked alone; on two occasions he had a companion, and it is singular to note that the narratives of these two journeys are decidedly inferior to the rest of the book. Perhaps the counter-attractions of companionship drew Mr. Barker's attention off from the close observation of nature and of manners which is apparent in his solitary journeys. All these are good, but we prefer the tours in Languedoc and in Alsace to any of the others. Mr. Barker's specialities are field-botany and church architecture; he notices every wild flower, and visits every church near his path. In Lower Languedoc he penetrates into the desert of La Camargue; but neither there, nor at Avignon, does he mention the poems of Mistral, *Nerto* and *Mireio*, which so wonderfully describe those spots. In fact, want of acquaintance with the popular literature and language of the places which he visits is the sole drawback to Mr. Barker's complete equipment as a tourist-traveller. He wisely does not dabble with politics, or economics, yet here and there a casual remark suggests much; as when he observes, p. 181, the contrast between Sterne's description of the region between Lunel and Nîmes, "one unvaried picture of plenty," with the reality now, after the destruction of the vines by the phylloxera, and the ruin of the cultivation of madder. So, too, in Alsace the present results of the German occupation, and the fact of two churches, Roman Catholic and Protestant, being necessary in villages where

one sufficed for both worships before, are brought out with greater effect by this simple mention than by more lengthy and more studied reflections. We can cordially recommend this book as a model for pedestrian travel.

In Troubadour Land: a Ramble in Provence and Languedoc. By S. Baring-Gould. Illustrated by J. E. Rogers. (W. H. Allen.) Mr. Baring-Gould was at Rome in deadly fear of an outbreak of typhoid fever, and already meditating flight, when he received a letter from the publishers asking him to go to Provence and Languedoc and write a book thereon. Thus this volume is a piece of bookmaking; but it is bookmaking of an excellent kind, done by a practised hand. The comedy in it is supplied either by the incidents of travel or by reminiscences of Mr. Gould's earlier life, all excellently told—witness the account of bric-a-brac hunting with a German Jew in Florence. Mr. Gould inspects carefully the churches and museums in every place he visits, and gives account of them all. He also reads up his Greek and Latin authorities. Thus, antiquities and architecture, classical and mediæval, are well described throughout. The padding (which is not overdone) is taken from Plutarch, from Caesar, and from Merivale. There are well-written narratives of Marius's campaign in Provence, and of Caesar's siege of Bourges. The physical features of the Rhone delta, the almost deserted cities and towns overlooking the Camargue, and on the shores and lagoons of the Gulf of Lyons, are excellently depicted by the writer and illustrated by the engraver. But the reader can hardly refrain from asking himself—Did the history of Provence and of Languedoc come suddenly to an end in mediæval times? The book is entitled *In "Troubadour" Land*, and the land is as truly the land of song as ever it was. There is, indeed, an occasional allusion to an early troubadour—one or two of the best-known anecdotes are re-told; but, on the whole, *In Troubadour Land* is something like the play of Hamlet with Hamlet left out. There is nothing in it to make a person, unacquainted with the fact, suppose that the inhabitants use any other language than French, still less that there is any literature in it. Of the Provençal poets—or of their Catalan brethren, who are almost as popular in Provence—there is not a word. And yet, what is given is so well done that our worst wish is that Mr. Baring-Gould should first study Provençal, modern as well as mediæval, then revisit the land and give us a second volume, telling, not of classical and mediæval and ecclesiastical Provence, but of Provence as it is, with its living troubadours, its poetry, its joyous sensuousness, the abundant enthusiasms, the exuberance of life of these children of the land of sun, of the vine, and the olive.

Teneriffe; Personal Experiences of the Island as a Health Resort. By George W. Strettell. (Fisher Unwin.) This sensible little book is written to correct the exaggerations which treat the climate of the Canaries, and especially of Teneriffe, as a specific in all cases of consumption. The writer dwells on the evident fact that the island contains many different climates; differing not only by reason of altitude or of proximity to the sea, but also because of the shadow of the giant mountain. All who have lived among mountains know how the temperature, wind, and rainfall vary under the eastern, western, or northern exposure. Other disadvantages are the doubtful quality of the meat, and in some cases even of the water; but these evils may in time be remedied. Still, Teneriffe is asserted to be superior to any other health-resort for consumptive patients, if only the spot most suit-

able to the special case be selected; but this is a large "if"—a mistake may be dangerous, or even fatal. The cruelty of sending patients in the last stage to die abroad, away from friends and home comforts, is insisted on, and it is right to give this warning. But we have known some return to die, with full deliberation preferring to enjoy to the last gratefully God's common bounties of earth, and sun, and air, instead of being imprisoned in close rooms in England, even with all the alleviation that loving care and skill of art can give. This side of the case may be considered by those whose ties at home are few. That greater benefit is sometimes gained in summer than in winter we can well believe; we have known the same in Madeira. On p. 36, by a slip, this island is said to be south, instead of north, of Teneriffe. All invalids going to Teneriffe should read this book; it is not addressed to the general tourist.

The Diary of a Working-Man in Central Africa. Edited by J. Cooke Yarborough. (S.P.C.K.) Early in the spring of 1882 Charles Janson, a devoted mission priest, died on the shore of Lake Nyassa. Exposure and toil had brought on a choleraic attack, but he had done his work. The graves of some men have an attractive force greater even than their unselfish lives. "I thank God," wrote Mr. William Johnson, "for the privilege of being with him in his Christian fortitude." Mr. Johnson then set about pushing forward the good work which Charles Janson had begun. The problem to solve was: "How is the Gospel to be brought to the people of Nyassa?" His solution was:

"(1) Give us a steamer by which native teachers, trained at Zanzibar, and English missionaries could be carried from town to town along the shores; (2) a central station, if possible, or an island in the lake, to which missionaries might be transferred in case of war and sickness; (3) a training ship anchored in some sheltered bay, which might form a floating college for native teachers."

The outcome of his appeal was the building of the *Charles Janson*; and among the volunteers to serve on board her was the writer of this diary, William Bellingham, an engineer and lay reader. The journal begins with their arrival at Quillimane on December 7, 1884. Christmas Day was spent in making their first trip up the Zambesi. By May, 1885, they had got as far as Matope, on the Upper Shire, above the Murchison Falls. They had then reached a point at which the steamer would have to be constructed, but it was first necessary to make a dock in which her pieces could be put together. It was not until September, 1885, that Bellingham, with six other men, started in an open boat for the Lake, and eleven days after sailed past Charles Janson's grave at Maendaenda. They could not land owing to the heavy breakers on the shore. Christmas Day, 1885, William Bellingham spent alone, as the steamer still remained at Matope. The last entry in the diary is for October 12, 1886. Bellingham is then at Quillimane again homeward bound. The book has a good sketch map, and is well illustrated. The only complaint we have to make of the editor is that he leaves us to infer (see pp. 52-55) that there were "considerable dissensions among the little party," without telling us plainly the upshot of these disputes. Possibly, however, Mr. Yarborough may have thought that these "dissensions" did not concern him as editor of this diary. If that was so, it is unfortunate that he referred to them. There is an instructive footnote to page 78, which throws fresh light on what is done, or rather what is left undone, by our Foreign Office. In conclusion, we can recommend this unassuming little book to all who take an interest in Central Africa.

Forty Days in the Holy Land. By Elizabeth Harcourt Mitchell. (Kegan Paul & Co.) The first two chapters and the last two chapters in this book might well have been omitted. The remaining nine, which describe the writer's wanderings from Jaffa to Beyrout, form very pleasant reading. Mrs. Mitchell is a zealous High Churchwoman, but her enthusiasm makes her neither narrow nor bitter. The following is a fair sample of the style and spirit in which she writes:

"A visit to a harem was said to be a desirable conclusion to our sojourn in the East, but I, for one, declined to enter such a place of degradation. Were it possible by such a visit to help our poor sisters out of their slavery, I should only have been too thankful to make it; but to go and see them penned up in their detestable prison was a great deal more than any Christian woman ought to bear."

While Mrs. Mitchell's party was in Damascus they fell in with Milan, ex-king of Servia. This potentate was travelling at an expense of £20 a day, besides extras!

NOTES AND NEWS.

MR. JOHN MORLEY and Mr. A. J. Balfour have both been elected presidents of the newly-founded British Economic Association, of which Mr. Goschen is president and Prof. Edgeworth secretary. Besides the *Journal*—of which it is hoped that the first number will be ready by the end of March—members will also receive, for their annual subscription of one guinea, translations of foreign works and reprints of rare economic classics. It has been decided that the first of these shall be a translation of Roscher's *History of Economical Literature in England*.

MR. H. G. KEENE, author of *The Fall of the Moghul Empire*, has written a life of Madhoji Sindia, the contemporary of Warren Hastings, and the greatest statesman and warrior of his line, for the series of "Rulers of India," edited by Sir W. W. Hunter. He has been fortunate enough to find a portrait of him, painted in oils by a wandering Italian (name unknown), which is now in the possession of Sir Mountstuart E. Grant-Duff, the son of the historian of the *Mahrattas*. This will be reproduced as a frontispiece to the volume.

THE second volume of Mr. Charles Booth's *Labour and Life of the People* will be published next month. It will contain London street by street, Central London, South and outlying London, London children, &c. Five large maps and several tables of comparative poverty will also be given in a separate volume.

MR. BERNARD BOSANQUET has sent to press with Messrs. Swan Sonnenschein & Co. for immediate publication a criticism of General Booth's scheme, from the ethical point of view.

THE last volume of Mr. Bailey Saunders's series of Schopenhauer Selections will be published by Messrs. Swan Sonnenschein and Co. very shortly. It will be entitled *The Art of Literature*, and contain the essays on "Authorship," "Style," "The Study of Latin," "Men of Learning," "Thinking for Oneself," "Some Forms of Literature," "Criticism," "Reputation," and "Genius."

MESSRS. METHUEN announce a new series, to be called "Social Questions of the Day," under the editorship of Mr. H. de B. Gibbins, whose *Industrial History of England* was reviewed in the *ACADEMY* of last week. The common aim of the writers will be to treat their subjects from the point of view of the historical school of economics. The first volume, to appear immediately, will be *Trades Unionism—Old and New*, by Mr. George Howell. This will be

followed by *Poverty and Pauperism*, by the Rev. L. R. Phelps. Among other volumes arranged for are—*The Co-operative Movement of To-day*, by Mr. G. J. Holyoake; *Mutual Thrift*, by the Rev. J. Frome Wilkinson; *English Socialism of To-day*, by Mr. Hubert Bland; *The Commerce of Nations*, by Prof. C. F. Bastable; *English Land and English Men*, by the Rev. C. W. Stubbs; and *Christian Socialism in England*, by the Rev. J. Carter.

MESSRS. JAMES NISBET & Co. have in the press a new series of books on practical Christianity, entitled "The Christian under Review," edited by the Rev. Charles Neil, Incumbent of St. Matthias, Poplar. In twelve popularly-written small volumes the Christian will be viewed in regard to his start, aims, beliefs, mental and moral training, recreations, influence, privileges, duties and responsibilities, progress, worship, and inheritance. The list of the writers includes the bishop of Sodor and Man, the dean of Gloucester, the dean of Norwich, Archdeacon Sinclair, and Archdeacon Wynne, of Aghadoc.

A NEW novel, by Mrs. Needell, entitled *Stephen Ellicott's Daughter*, will shortly be issued by Messrs. Frederick Warne & Co.

A SHILLING edition of the English translation of Ibsen's "Rosmersholm," by Mr. Charles Archer, will be issued immediately by Mr. Walter Scott. At the performance of "Rosmersholm," to be given on February 23 at the Vaudeville, the text of his edition will be used.

MR. T. FISHER UNWIN will issue next week the second edition of *Mademoiselle Ixe*—a book which has lately received the encomium of Mr. Gladstone, though it is not true, as has been reported, that the authoress is a relative of the ex-premier.

THE first number of the *London Middlesex Note Book*, a new illustrated quarterly magazine of local history and antiquities, edited by Mr. B. P. W. Phillimore, will be published during next month by Mr. Elliot Stock.

AN "interview" with Dr. Herman Adler, acting chief Rabbi, will appear in No. 386 of *Cassell's Saturday Journal*, to be published on February 18. It is accompanied by an illustration, showing Dr. Adler in his office in Finsbury-square.

MAX O'RELL has accepted an engagement to pay a third visit to America next season. He is engaged to give a hundred *causeries* in the United States and Canada. On his return to Europe, Max O'Rell intends retiring from the lecture field.

AT the meeting of the Cymmrodorion Society, on Wednesday next, February 18, Mr. Alfred Nutt, author of *Studies on the Legend of the Holy Grail*, will read a paper upon "The Latest Views about Arthur."

THE Chief Rabbi will lecture at the Lambeth Polytechnic, Ferndale-road, Clapham, on Sunday next, February 15, at 3.30 p.m., upon "The Wit and Wisdom of the Talmud."

THE library of the late Archbishop Thomson, consisting of upwards of 6000 volumes, is to be sold in the De Grey Rooms, at York, by Messrs. Hepper & Sons, on Tuesday, February 24, and the four following days. Besides a large collection of theological and philosophical works, it comprises the publications of many learned societies.

ON Monday next, February 16, Messrs. Sotheby will begin to sell the library of the late Cornelius Paine, of Brighton. The collection is of a miscellaneous nature, including examples of early English printers, from Wynkyn de Worde; some rare Bibles, sold with all faults; the second Prayer-Book of Edward

VI. (1552); an extensive series of the works of Defoe; a number of old plays; local publications relating to Sussex, Brighton, and London; and some modern books printed on vellum. The sale will last altogether for eight days.

THE annual meeting of the members of the Harleian Society was held on Wednesday last, February 4. G. E. Cokayne, Esq., Norroy King of Arms, in the chair. The accounts of the society showed a marked increase in the interest taken in genealogical pursuits. The publications issued during the past year were the "Marriage Licenses issued by the Vicar-General of the Archbishop of Canterbury, 1679—1694," in two volumes, and the "Registers of St. George's Chapel, Mayfair, 1740—1754." "The Visitations of Norfolk," and "The Register of the Parish Church of Kensington" are now in the press. Mr. Granville Leveson-Gower was elected a vice-president, and Mr. J. W. Clay a member of the council.

Correction.—In Mr. Whitley Stokes's letter on "Lives of Saints from the Book of Lismore" in the *ACADEMY* of last week, p. 139, col. 1, line 26, for "those (namely)," read "five (those, namely)."

UNIVERSITY JOTTINGS.

LORD SELBORNE, who was formerly deputy steward as well as counsel to the university of Oxford, has been appointed high steward in the room of the late Earl of Carnarvon, who had held that office since 1859.

TRINITY COLLEGE, Dublin, has conferred the degree of honorary LL.D. upon Mr. A. J. Balfour.

THE general board of studies at Cambridge has approved Mr. E. A. T. Wallis Budge, of the department of oriental antiquities in the British Museum, for the degree of Doctor in Letters.

MR. SIDNEY J. HICKSON, author of *A Naturalist in North Celebes*, and some time deputy professor of anatomy at Oxford, has been appointed to the vacant lectureship at Cambridge in the advanced morphology of invertebrates; and Messrs. G. F. C. Searle and S. Skinner have been appointed demonstrators in experimental physics.

MR. PERCY GARDNER, Lincoln and Merton professor of classical archaeology at Oxford, will deliver a public lecture on Friday next, February 20, upon "The Life and Work of Henry Schliemann."

ON Monday next, February 16, Mr. E. Gardner, director of the British School at Athens, will deliver a public lecture, under the auspices of the Cambridge Hellenic Society, on "The Theatre of Megalopolis." At the same time a collection of water-colour drawings of Byzantine architecture, by Messrs. Schutz and Barnsley, will be exhibited.

AT the meeting of the Cambridge Philological Society, held on February 12, "Aristotle on the Constitution of Athens" was to be discussed by Dr. Jackson, Mr. Hicks, and Mr. Wyse.

Two portraits have been presented to the university of Cambridge by subscription: one of Dr. Westcott, now Bishop of Durham, painted by Mr. W. B. Richmond, which was exhibited at the Royal Academy last year; and the other of Prof. Alfred Newton, by Mr. C. W. Furse.

THE first scholarship founded at Oxford in memory of the late Aubrey Moore, for the encouragement of theological study, has been awarded to Mr. Ragg, of Christ Church, who has already taken a first in classics and in theology.

THE Union at Oxford has resolved to open negotiations with the general assembly of Paris students, with a view to placing them on the same footing, as regards honorary membership, with Cambridge, Dublin and Durham men.

THE *Oxford Magazine* has published a census of undergraduates resident this term. The total is 2420, as compared with 2394 two years ago. The chief features are the increase in non-collegiate students (who now outnumber any college) and at Lincoln, Brasenose, and Trinity; and the decrease at Worcester, Oriel, Queen's, Christ Church, and Merton.

PROF. EWING'S inaugural lecture at Cambridge, on "The University Training of Engineers," has been published as a pamphlet by the Pitt Press.

PROF. SETH, of St. Andrews, has been appointed to deliver the A. J. Balfour philosophical lectures at Edinburgh. He will give four lectures upon "Realism," on the four first Mondays of March.

THE free evening lecture at University College, London, on Wednesday next, February 18, will be delivered by Mr. Augustine Birrell, upon "Samuel Richardson."

MR. SATYANIDHAR, acting professor of logic in the Madras Presidency College, states that out of 207 Indian students now in England, Cambridge has 30 and Oxford 9. The rest prefer London or Edinburgh.

ORIGINAL VERSE.

A BIARRITZ SKETCH.

THE raincloud rests upon the Rhune,
A silvery light is on the sea,
The grey shale cliffs shine wet, and we
With pallid skies are more in tune
Than when the purple mountains glow
Along the clear horizon line,
And sparkling waves like foaming wine
Leap up and o'er the rocks below.
We seek the fresh salt-laden air,
The odour of the sea-wrack thrown
Upon a fearful coast, storm-blown,
That bids the mariner beware.
We cannot always feast or tread
Lightfooted, for the heart has fears,
And watchful eyes have hidden tears—
Bitterest tears are oft unshed.

BEATRIX L. TOLLEMACHE.

MAGAZINES AND REVIEWS.

THE Rev. Scott Robertson contributes to the *Antiquary* for February a useful memoir of Richard Yngworth, first bishop of Dover. He was a Dominican friar, but his early history has not yet been made out. He was appointed to the new see in 1537, and died in 1544. Mr. Robertson gives an abstract of the prelate's will; we wish it had been printed in full. Mr. Roach de Schonix reviews the new edition of "Petit's Architectural Studies in France," and is happily enabled to reproduce some of the engravings. One of these is "A Font at Leches," which, if it were in an English church, we should call Norman; but that would not be a proper term for any architectural object in Touraine. It is a circular bowl, with two rows of square panels, and a running pattern at the top. We wish some wandering antiquary who can draw accurately would reproduce it in full, so that the designs in all the squares might be known to us. Mr. Robert Blair contributes a note on "Sand-desks," that is, desks with a rim round them which were filled with sand, in which the earliest lessons in writing were acquired. They were, it seems, in use in the Bishopric of Durham as late as 1810. We thought that, like

the horn-book, they had been discarded in the last century. Mr. John B. Shipley communicates a very interesting article on recent discoveries of an archaeological character in the neighbourhood of Boston, U.S.A. We must await further information ere we accept the conclusions which would seem naturally to flow from them. Mr. Hope still continues his valuable series of papers on Holy Wells. We trust when he has come to an end that they may be collected into a volume.

A NEW THEORY OF THE OSSIANIC SAGA.*

PREVIOUS investigators of the Ossianic Saga have started from the indications of the Irish Annals which make Finn a prominent figure of third century history. Some have accepted the Annals as substantially true, and have based their interpretation of the Saga upon them; others, like Mr. Skene, have refused them all credence; others, again, like myself, have accepted a third-century historical Finn, while maintaining that his life and deeds had substantially no influence upon the Saga, which was in reality an arrangement of mythic and heroic tales, made chiefly in the eleventh and twelfth centuries. Prof. Zimmer now comes forward with a theory which, if true, is of such far-reaching consequence that no apology is needed for laying before the English reader the following hasty summary, made from an advance copy, which the writer owes to Prof. Zimmer's courtesy.

The historical conditions which form the basis of Prof. Zimmer's argument are, briefly, as follows: In 795 Norwegian Vikings appear for the first time upon the coasts of Ireland, which they assail and harry for more than half a century. At first they only plunder and sail away; but soon they fix themselves in the land, seize upon strategic points, ally themselves with the native kings (who eagerly seek their aid in the interminable conflicts which every Irish chieftain waged with all his neighbours), marry native women (who greatly appreciated their stature and comeliness), and become half-Irish. In the early years of the ninth century a Norwegian leader, Thorgils, seeks to found a Norse kingdom, but fails and is slain. The political organisation of Ireland is not seriously affected by the Norsemen. It is otherwise with the next batch of invaders—the Danish Vikings—who appear in the middle of the ninth century, seize and hold Dublin against both Irish and Norwegians, whom they defeat with terrible slaughter, and found a Danish kingdom, which has imitators in the South and West, plays its part in the ceaseless warfare that rages between the head-kings of Ireland and the under-kings, and which is at times the most powerful political factor in the island. The Danes remain heathens until the middle of the tenth century, when Anlaf, son of Sitric, invades England, is conquered by Eadmund, and submits to baptism in the year 943. Christianity furthered the assimilation of Celt and Scandinavian, as did likewise the political events of the late tenth and early eleventh centuries, when the Munster chief, Brian, wrested for a time the head-kingship of Ireland from the North Irish chiefs, with the aid of the Danish Vikings, and then, turning against the latter, inflicted upon them the defeat of Clontarf, which, however slight in its immediate effects, yet marks the termination of the period of invasions. The later raid of Magnus Bare-legs

* *Zeitschrift für deutsches Alterthum*. Vol. 53. H. Zimmer, Keltische Beiträge, III., weitere nordgermanische einflüsse in der ältesten überlieferung der irischen heldensage; ursprung und entwicklung der Finn-(Ossian-)sage; die vikinger Irlands in sage; geschichte und recht der Iren.

(A.D. 1103) was an isolated event, standing in no real connexion with the invasions of the ninth and tenth centuries.

Such is the historical background to the Fenian Saga. Prof. Zimmer first examines the fifteenth century account of Finn, which represents him as the head of a standing militia engaged chiefly in protecting the coasts of Ireland. He has little difficulty in showing that at the period assigned to him (second and third century, A.D.) Ireland was exposed to no invasions, and that texts of the tenth and eleventh centuries which deal fully with the history of that period know nothing of any standing militia. Moreover the texts of the older Ultonian heroic cycle, redacted in the thirteenth century, revised and interpolated down to the tenth century, although they contain numerous traces of the influence exercised upon them, by both the classical and Christian culture which blossomed forth so richly in Ireland in the seventh and eighth centuries, and by the Norse mythic and heroic tales of a later period, yet show no sign of any such institution as that pictured in the later Fenian texts. Nor is any mention made in the Book of Rights, a compilation of the later tenth century, of the elaborate code of rights and privileges of the Fenians as we know them from the fully developed Fenian Saga.

Irish texts of the eighth-twelfth centuries repeatedly present the word *fiann*, plural *fianna* (also *fénid*), in the sense of "warrior," "warrior band." Later texts specialise the meaning, referring it to the warrior bands of Finn and Goll, the Fenian militia. The word *fiann* is a loan-word from the Norse; it is the Norse *fiandi*, plural *fiandr*—"enemy." The Norse Viking was the enemy *par excellence*, he was also *par excellence* the brave enemy, the warrior whose valour roused the admiration of the puny (*schmüchlig*) Irishmen. From thence to "mercenary," "chieftain's suite," "fighting force of the clan," the transition is easy. Examples of all these various meanings are given, and it is shown that the word occurs in passages where Norsemen are either mentioned or where their presence may be suspected. But the signification of the word was still further extended; in the form *Féne* it became equivalent to "men," "race," "tribe." This took place when the original connexion between the words *fianna* and *féne* and the Scandinavian population had died out of the popular mind. Thus a verse in Fiace's hymn to Patrick, which runs thus, "he [Patrick] preached thrice thirty years to the heathen bands of the Féne" was taken in the sense that *Féne* was an old generic name for the population of Ireland. But how comes a name originally applied to Norse Vikings to appear in an early hymn to Patrick? The apostle of Ireland certainly never preached to the Norwegians. No, but the tenth-century Irishmen thought he did. Prof. Zimmer quotes several texts, of which I shall mention the most important presently, in support of this statement. But why did they believe this? The answer to the question involves the consideration of the Patrician documents in the Book of Armagh. Ever since the beginning of the eighth century Armagh had striven to push her claims to primacy; she had valiantly stood on the side of Rome in the struggle against the particularist usages of the Celtic Church (reckoning of Easter and special form of tonsure), and had not hesitated to forge a series of documents in furtherance of the Roman claims. Prof. Zimmer hints that the primacy was the price Rome paid to Armagh for this support. But the pretensions of Armagh were not finally accepted by the Irish Church until the middle of the ninth century, and we can follow the stages of the conflict in the Annals. In the

tenth century a new danger arises: the Danish king is baptised in England, the Danish Christian community looks to Canterbury rather than to Armagh. The old device is resorted to, and a series of pious fabrications of the last quarter of the tenth century represent Patrick as having converted the ancestors of the Danes. The device met with the success that attended any more than usually outrageous perversion of the truth in the Middle Ages generally, and in Ireland specially. Armagh triumphed; but her very triumph led to oblivion of the facts. In the eleventh century, when the mythology and heroic history of Ireland were thrown into chronological form, the Irish antiquaries were puzzled by the statement that Patrick had converted the *Féne*; they had forgotten all about the Danes, to them the *Féne* were one of the early races of Ireland, and they romanced about them to the top of their bent. But by this time, as we shall see presently, Finn and his men had been transferred back into the third century. The connexion of *Féne* with Finn was by this time well established. But the Irish antiquaries of the eleventh century knew that Patrick was later than the third century; they got over the difficulty by feigning that some of the *Féne* had lived long enough to be converted by the apostle of Ireland. Thus arose the fable of the supernaturally prolonged life of Ossian and Caillte.

Let us now turn to a tenth century text which brings together Patrick and the *Féne*. "Loegaire's Conversion" states that Patrick codified the customs of Ireland with the help of eight other commissioners, two with himself to represent the Church (Benen, Cairnech); three representatives of the kingly power (Loegaire the head-king, and the under-kings of Ulster and Munster); and three others, Dubthach head bard of Ireland, Fergus the poet, and Rus mac Tricim *sui berla féni*, "a knower of speech of the *féni*." This Rus mac Tricim is a Rus Tryggvasonar, and the *berla féni* is Norse. This fable corresponds to a fact. The *Senchus Mor* is no purely Irish text of the fifth-sixth centuries, but a late tenth century codification of Irish, Norse, and Norse-Irish custom, which came into existence when the Scandinavian invaders had welded themselves into the political and social life of Ireland.

So far has the word "fiann" carried us. Now for the earliest accounts of Finn himself. These date from the tenth century, and figure him as the chief of a Viking band, strong in the possession of the strategic position of Almu, allying himself now with this now with that native chief, making love early and often, playing such rough practical jokes upon his followers as to tie up one naked to a tree all night because he had deemed it too cold to go out when told (an interesting testimony to the antiquity of the special Teutonic form of honour), son probably of a Norse father and an Irish mother, and endowed with the seer's gift. As early as the second half of the tenth century he figures as a personage of the second and third centuries. How did this happen? The circumstances of the times in which the historical Finn (the Viking chief) lived must have been like those of the third century, so like as to induce confusion in the minds of the tenth century Irishmen who had no correct idea of the past. At the end of the second century Ireland is equally divided between Mug Nuadat and Conn Cethathach. In the middle of the ninth century Fedlimid mac Crimthain is the recognised king of Southern Ireland (*leth Moga*, Mog's half). The record of his struggles with the Northern kings, Niall and Maelsechlainn, recalls that of the second-third century head-kings, Art and Cormac mac Airt, against Southern Ireland. Indeed it may be assumed that the tenth-eleventh

century accounts of the second-third century wars were influenced by the real history of the ninth century. In one instance this can be proved. A late tenth century North Irish poet decks out the legendary North Irish third-century king, Cormac mac Airt, with traits derived from the historical South Irish bishop-king of Cashel, Cormac, slain in 903. In one of the oldest tales about Finn, his father, Cumall, carries off his mother Murni, daughter of Tadg mac Nuadat. Now Ailill Aulom, a celebrated legendary king of the early third century is a son of Mug Nuadat (mac Moga Nuadat); whilst Tadg mac Cúin is a prominent figure in the Leinster legendary history of the late third century. Tadg mac Nuadat reminded the Irish story-tellers of both these earlier personages, who were separated by nearly two generations—hence the uncertainty that prevails in the earliest Fenian texts about Finn's alleged date, and the fact that he is made to live over some 150 years. Finn is thus brought down to the early eighth century; and we find at this date a Caittil Find, who was slain in Munster in 856 by Imar and Olaf, kings of the Dublin Danes. These had appeared in Ireland a few years previously, and their hand had been laid as heavily upon their Norwegian predecessors as upon the native Irish. The Norsemen—now after two generations half-Irish—made common cause with the natives against them. Caittil Find was their chief leader; his defeat and death in 856 marks the triumph of the Danish invaders, who were to rule in Dublin for three centuries. About Caittil Find himself—half-Norse, half-Irish—gathered every floating story, every characteristic trait that the Irish knew of in connexion with the Norsemen. His fight against the Danish overlord, when transferred back into the third century, becomes the fight of the Fenian militia against the head-king of Ireland. But, it may be objected, Find is no Norse name. No; it is the Irish translation of *hviti*, "white." Caittil was a "Mr. White," as were so many of the Vikings of the first invasion, who came mostly from the Hardangerfjord. Indeed, the predominance of the name "white" struck the fancy of the Irish, and they called the over-sea visitors *findgenti*, "white strangers." Later, when the Danes appeared, and straightway came to blows with the Norsemen, they were distinguished as *dubhgenti*, "black strangers."

The after development of the Fenian Saga is conditioned partly by its semi-Norse origin, partly by the fact that the later bards borrowed scenes, incidents, and traits from the older Cuchulain cycle, and wove them into the new heroic epos. One instance may suffice. In the Cuchulain cycle Ulster defies the remainder of Ireland; Cuchulain, single-handed, holds at bay all the forces of the South and West. In the Fenian Saga Ireland takes the place of Ulster, and successfully withstands the onslaught of the King of the World and his motley tribe of allies. Through all, too, pierces the original heathen character of the eponymous hero of the Saga. But South Ireland was already Christian in the third-fourth centuries, so that positive heathen practices could no more have occurred there in the ninth century than in the Germany of the twelfth or thirteenth century.* Another testimony to this is the imported nature of the Fenian legends. The most distinctive trait of heathenism associated with Finn himself, and the one which seems to have impressed the Irish the most vividly, is his divinatory power and the magic practices with which it was accompanied. From one of the oldest Finn

* This shows how far removed is Prof. Zimmer's standpoint from that of the modern folklorist.

stories, dating back to the tenth century, we learn the names of these practices, *imbas forosnai* and *teinum laegda*. This latter cannot be explained in Irish; it is the Old-Norse *teinar laigðir*—"the thrown staves," and this method of divining the future may be compared with the casting of "surculi" described by Tacitus in chap. x. of the *Germania*.

This brief summary does scant justice to an investigation every point of which is buttressed by a wonderful array of facts, and by reasoning of the most subtle and acute kind. One other point, however, I must cite. Lochlann has hitherto been referred to Norway, and explained as "lake-land." But, according to Prof. Zimmer, the oldest form is *Lothlind*, gen. *Loithlinde*; and it is an Irish rendering of *Laland*, the island whence came the first Danish Vikings. At first it designated the Danes' country alone, and received the extended meaning of Scandinavia generally at a comparatively late period.

Let me first sum up the novel—nay, revolutionary—features of the hypothesis. If true, it supplies, as its author claims, an Ariadne's clue through the maze of early Irish history and literature. (1) Wherever we meet the words "fian" or "féni" we can postulate the presence or the influence of Norsemen. (2) Early Irish ecclesiastical history is dominated by a series of pious frauds *ad majorem gloriam Ard-machiae*. (3) The Brehon law is shifted several centuries down, and no longer represents an independent autochthonous legal growth, but a compromise between two rival systems. (4) The Fenian Saga, in so far as it is not a mere literary elaboration of historical and pseudo-historical facts, is to be referred to Teutonic rather than to Celtic mythopoeic fancy.

In presence of researches so weighted with matter, so clogged with ultra-ingenuity of analysis, written, moreover, and printed with all those refinements of obfuscation wherewith the modern German loves to supplement the natural want of perspicuity of his language, I can only present a few observations of the most general character.

It is hardly too much to say that the hypothesis turns upon the word "fiann." But is the suggested derivation a likely one? Granted the Celt could find no better generic name for the Viking than "the enemy," would he have gone to the Viking's tongue for the word itself? He must have learned it from the Viking; did the latter describe himself as a "fiandi" enemy? Moreover, although Prof. Zimmer shows that where "fiann" is used there is generally something Norse *sous roche*, yet he admits that *fiandr* was never officially used of the Norsemen as a whole. He quotes as analogous the word "slave"; the Germans captured numbers of Slaves, hence the word became synonymous with *servus*. But it hardly needs pointing out that the analogy is a false one. The further instances of Find = Hviti, and findgenti = Norsemen many of whom have the surname *hviti*, can hardly be said to support the main thesis. Indeed, I fear that presented thus baldly these conjectures may move to mirth. But Prof. Zimmer means them seriously, and has much to urge on their behalf. Nevertheless, philological considerations apart, I cannot but feel the immense initial difficulty of the theory.

Then, I find no satisfactory explanation of the most striking characteristic of the late Fenian texts: Finn's standing quarrel with the Lochlanners. If, as the hypothesis demands, all connected with the Scandinavians had become so vague even by the end of the tenth century as to allow the fable of a third century Finn, is it likely that the men of the twelfth and following centuries would have felt the stress of the invasion period sufficiently to make the Lochlann raider the standing figure which

he is in the Saga? The original enmity of Caittil and the Danes can hardly be adduced, because, *ex hypothesi*, this enmity had entirely lost its true character and been transformed into enmity between a third century Finn and a third century Irish head-king as early as the beginning of the eleventh century. Finally, are the facts mentioned by Prof. Zimmer at all strong enough to account for the transformation of a ninth century Norse-Irishman with a third century Irishman?

On the other hand, the *teinn laegda* incident has so profoundly impressed me. The fact that Irishmen of the tenth, twelfth, and fourteenth centuries should ascribe a distinctively Norse practice to Finn must mean something, even if it does not mean all that Prof. Zimmer thinks.

It is to be hoped that Celtic experts will not be deterred by Prof. Zimmer's peculiar modes of controversy, of which there are some characteristically unpleasant examples in this paper, from subjecting his theory to the most searching criticism. Whatever may be its fate, it is a marvel of hard work, of acute investigation, of subtle reasoning. In every sense of the word it is epoch-making.

CORRESPONDENCE.

"ARISTOTLE ON THE CONSTITUTION OF ATHENS."

London: Feb. 9, 1891.

Those interested in the newly-discovered *Ἀθηναίων πολιτεία* will do well in cases of doubt or difficulty to suspend judgment for a while until the book appears in a more satisfactory form, as it assuredly will do, when the promised facsimiles are once in the hands of Aristotelian scholars. Meanwhile the following corrections, which are mostly of an obvious kind, may be of use provisionally, if only to show the need of a new and revised edition of the text.

P. 16. ἐν τοῖς ποιήμασιν αὐτὸς πολλοῦ μὲνυκε. The last word, which is a *vox nihili*, is clearly a blunder for μένυται, the word used by the writer of the *Πολιτεία* in the very similar passage in p. 28.

P. 19. εἶδε δὲ τελεῖν πεντακοσιμέδιμον μὲν δὲ ἂν ἐκ τῆς αἰκίας ποιῇ πεντακόσια μέτρα. For τῆς αἰκίας we must surely read γῆς αἰκίας.

P. 29. καὶ πάλιν διαγινώθι [sic] τοῦ λέγει περὶ τῶν διανείμασθαι τὴν γῆν βουλομένων. I cannot find any sense in this as it stands; but, by the change of a letter or two, we may get something very different—καὶ πάλιν δὲ ἄλλοθι πού λέγει.*

P. 64. διὰ τὴν Ξέρξου στρατιάν. The writer means not the army of Xerxes, but his expedition—στρατεῖαν. A similar correction has to be made in p. 75, where στρατείας is printed στρατιᾶς.

P. 66. ἐπὶ Τιμοσθένου ἄρχοντος. Read Τιμοσθέους.

P. 100. Ρῖνον τε ὁ Παιανίους καὶ Φάλλος ὁ Ἀχέρδους υἱός. The last two words arise from a misreading of Ἀχέρδουσιος; Phayllus was of the deme called Ἀχέρδους, as Rhinon was of that of Παιανία.

P. 100. ἐπ' Εὐκλείδους ἄρχοντος. Read Εὐκλείδου.

P. 103. δοκοῦσιν κάλλιστα δὴ καὶ πολιτικέτατα ἀπάντων καρδίᾳ καὶ κοινῇ χρῆσασθαι ταῖς προγεγενημέναις συμφωραῖς. There is no sense in καρδίᾳ which is a mere error for καὶ ἰδίᾳ.

P. 125. κωλύουσι . . . ὑπερὺς μετεώρας εἰς τὴν ὁδὸν ἔκρουν ἔχον[τας] ποιεῖν. The double solecism in this passage may be removed by restoring μετεώρους and ἔχον[τας].

P. 143. Διογυσίων τῶν ἐπὶ Ἀθηναίων. Read Ἀθηναῖοι.

P. 162. ἐμνηγνύτης is an impossible word; the true reading must be ἐμπήκτης.

I. BYWATER.

Wadham College, Oxford: Feb. 12, 1891.

P. 14, l. 8. ἦν δ' ὁ Σόλων τῇ μὲν ῥήσει καὶ τῇ δόξῃ τῶν πρώτων, τῇ δ' οὐσίᾳ καὶ τοῖς πράγμασι τῶν μέσων. ῥήσει here being impossible, I thought of φύσει; and it seems confirmed by p. 48, l. 10, οὐ καὶ [τῇ] φύσει τῶν ἐπιφανῶν ἦσαν. This use of φύσει is perhaps against Aristotelian authorship. So is the use of τὰ πράγματα, unless *Vol. i.* 11. 12 be parallel.

P. 16, l. 11. For [ἄμα] τ' ἐξόν, where the brackets show that ἄμα is put in by Mr. Kenyon to represent something illegible, read ὥστ' ἐξόν. ἄμα τε is quite ungrammatical.

P. 25, l. 7. ὅς ἂν στασιαζούσης τῆς πόλεως μὴ [αἰρ]ηται (sic) τὰ ὅπλα μηδὲ μεθ' ἑτέρων. Read μὴ τεθῇται τὰ ὅπλα, the regular phrase.

P. 28, l. 7. Solon ἀποδημίαν ἐλογίσατο. But this is not Greek. ἀποδημίαν ἐποίησατο occurred to me; and it seems confirmed by p. 32, l. 18, τὴν μὲν οὖν ἀποδημίαν ἐποίησατο.

P. 43, l. 3. τῶν δὲ καινῶν [αὐτῷ νῦν] μελήσεσθαι πάντων. In this construction μελήσειν would be required. The writer probably said αὐτὸς ἐπιμελήσεσθαι. Cf. l. 17. Something is left out in the clause preceding.

P. 47, l. 9. ἦν δὲ [πατα]ρῶντες ἐν ἀκροπόλει τοῖς Παρθηναῖσι Ἰππίαν (ἐτυχαγεν γὰρ αὐτοὺς μετερχόμενος, δ' ὁ Ἰππορχος ἀποστέλλων τὴν πομπήν) μετερχόμενος seems unmeaning, and the present participle of ἔρχομαι is always suspicious. Read κατὰρχόμενος.

P. 48, last line. ἦα ἀσεβήθειαν ἄμα καὶ γέρας τοῦ ἀγενεῖς ἀνελόντες τοὺς ἀναίτιους καὶ φίλους αὐτῶν. Ought we not to read ἐναγείς for ἀγενεῖς?

* Dr. Sandys has sent, as another conjectural emendation, ἐτέρωθι πού.

P. 92, l. 4. οὐ χωρησάμενοι δὲ καλῶς τότε τοῖς πράγμα[σι]. χωρησάμενοι is perhaps only an oversight for χρησάμενοι.

The following suggestions I make with less confidence:

P. 14, l. 5. καὶ γὰρ ἐπῆλθεν καὶ πρὸς ἐκατέρους ὑπὲρ ἐκατέρων μάχεται καὶ διαφισθητῇ. The editor says "the reading is very doubtful, with the exception of the first καί." ἐπῆλθεν appears to give no sense at all. I conjecture with much doubt ἐπαλλάττει, a favourite word with Aristotle, which seems suitable to describe the attitude of a man who sees and takes both sides of a question at once, who is at home in both camps.

P. 16, l. 17. τὰ τε πράγματα νοποῦντα μετεκρούσατο. The editor tells us that μετεκρούσατο "is a very doubtful reading." In the *ACADEMY* for February 7 Dr. Sandys proposes μετεχειρίσατο, but this hardly gives the sense required. Solon must have spoken not of treatment only, but of cure. I have thought of κατεπαύσατο; and I see afterwards (1) that ἐπαύσατο occurs twice in the verses of Solon subsequently quoted, and (2) that the editor gives us [π]αρανεί [κατα]παύειν τὴν ἐνεστώσαν φιλονικίαν on p. 14, l. 7, the κατα being his representation of something illegible. Of course the middle voice (if right) would be due to Solon himself.

P. 43, l. 12. δι[μπε]ρόεις. This is hardly a word for Attic prose, and perhaps it is just permissible to conjecture διὰ παντός.

P. 44, l. 20. μέγιστον δὲ πάντων ἦν τῶν [ἀρεσκο]-μένων. ἀρεσκομένων thus used is no more Attic Greek than μελήσεσθαι mentioned above or ἔχον[τας] on p. 125, l. 5. Many words may probably be thought of. κεχαρισμένων would be possible.

P. 52, l. 8. ὁ δὲ Ἰσαγόρας ἐπιλειπόμενος τῇ δυνάμει. Ought we not to read ἀπολειπόμενος here and elsewhere (p. 76, l. 6, and p. 93, l. 5)?

P. 103, l. 13. ἄμα should probably be ἀλλὰ, and on p. 139, l. 13, δοκιμασθέν is presumably an oversight for δοκιμασθέντες.

P. 145, l. 6. εἰσάγει δ' ὁ βασιλεὺς καὶ δικά[ζ]ουσιν] . . . αἰ[α] καὶ οὐπαῖθριοι. Dr. Sandys suggests σκοταῖοι. I had thought of the more obvious θυραῖοι, but perhaps his suggestion is the better.

There are many smaller things which it is not worth while to point out here.

The passage of Polybius referred to by Mr. Kenyon (*Introd.*, p. xvii.) as citing a direct mention by Timaeus of the *Πολιτεία* of Aristotle does not appear to contain any such direct mention. It tells us that Aristotle wrote about the Locrian state, and was criticised by Timaeus: it does not tell us in what work he did so. As no other early authority for Aristotle's *Πολιτεία* is quoted, it is important that this piece of evidence should be accurately stated.

HERBERT RICHARDS.

Edinburgh University: Feb. 10, 1891.

Grateful as one may be for the prompt appearance of this work after the first announcement of its discovery, it is impossible not to regret the effects that haste has left upon the editing. Misprints are far too numerous—*e.g.*, διετρεῖ (13. 3.), Διφίλου (20. 3.), δια (35. 7.), ἡγλάτει (52. 13.), κηρυξιν (86. 1.), Ἀνυτος (93. 7.), την (106. 1.), θεῖς (112. 14.), τους (124. 2.), ταῦτατος (146. 12.). A more serious defect is in unsystematic or misleading punctuation—*e.g.*, the superfluous commas in 3. 11., the inconsistency of the period in 19. 11., compared with 6. 3., and 7. 2., the round brackets in 24. 3., &c. These may seem slight defects, but nothing is so persistent in a text as bad punctuation. Similar effects of hurry are visible in the notes. What is the value of such notes as that on ἀειφυγίαν (p. 2. from Liddell and Scott s. v.), or that on παράγμοσι (p. 14), or the many reflections on parallels from English history scattered up and down in the notes? Can the editor be really so unaware of what "Theognis" is as would appear from his comment on p. 29?

But the worst is that it is impossible to discover any principle whatever in the method of editing. It might, perhaps, be urged fairly enough that the publication of a facsimile reproduction of the MS. absolved the editor from

the duty of reproducing its readings in type; but would it not in the meantime have been better to add these, misspellings and all, at the foot of his text along with the *Testimonia* to the various passages? That this has not been done is clear from 86. n.; and the corrections of non-Attic forms and usages are very arbitrary—e.g., *Πισίστρατος* and *Πεισίστρατος* both occur on p. 45. Yet *ἐπιμέλονται* is altered to *ἐπιμελοῦνται* on p. 125, "because the form *ἐπιμελέσμαι* (i.e., *ἐπιμελοῦμαι*) is used elsewhere in the MS." *Πειρασί* is changed on p. 124, and *Λακεδῆμονας* kept on p. 49. About the retention of *ληιτουρίας* the editor hesitates, but ends by quoting Hesychius for the form and retains it. His Attic sense is offended by *ἄσαι ἡμέραι* (p. 111), but not by *ἀ ἐν* (84. 8., 87. 5., 140. 6., 157. 12.). Truly, "one is taken, and another left." Again, what is to be said of the forms *ἐγεωργούντο* (43. 12.), *διδας* (44. 3.), *χωρησάμενοι* (92. 4., *vid. infra*)? Is there any justification for the form *ἐπατηρίς* (137. 1.)? In the last place, several of the editor's interpretations are wrong. The note on *ἐλληνοτομίαι* (p. 84) supposes a contradiction in the text which does not exist; in l. 8 there is a limitation of some kind or other mentioned on their membership of the council, but no complete disability. In the note on p. 111 "are not suitable" should be "are not competent." More serious is the misapprehension on p. 20 (6. 7.), which has led the editor to asterisk his own reconstruction. The text as it stands is fair enough Greek for "bearing out their view that the position of a Hippeus means that—i.e., the keeping of a horse," which is the sense required by the context.

A few notes follow containing suggestions for emendations or reconstructions of the text: 2. 6. read *ἴστε*. 25. 1. *καλῶς* must be wrong—a middle (dep.) is required. (The punctuation in 24. 8. is very doubtful—perhaps *ἐς τὰ δὲ ἄλλα καὶ*, &c.) 42. 11. scarcely possible Greek for the editor's supposed meaning. 43. 12. *ἐγεώργουν*, 49. 7. (v. note) retain (at least temporarily) MS. forms. 82. 12. *<τα>* is unnecessary. 92. 4. *χωρησάμενοι*. 101. 15. scarcely right—it is difficult to see how the proposed reading is consistent with the usage of tenses and moods throughout the document. 125. 2. the proposed emendation is almost impossible to construe and fails to account for the corruption.

In 29. 12. *διαγνώθῃ* is certainly wrong. Read perhaps *δὲ ἁλλοθὶ πού*. In 145. 6. [*σκορ*]αῖοι would reduce the reputation of Lucian for accuracy. Twice over (*Hermot.* 64.: *De Dom.* 18.) he expressly states of the Areopagus that it met "by night." It is incredible he should have invented this statement, and in all probability he derived it from the present passage.

The references are by pages and lines.

J. A. SMITH.

[We have also received a large number of conjectural emendations from Mr. W. Wyse, of Trinity College, Cambridge, which we are unable to print this week.—ED. ACADEMY.]

London: Feb. 11, 1891.

As publisher for the Clarendon Press, where this work is printed for the British Museum, will you allow me to contradict the statement that the first edition was withdrawn.

The edition was sold out within a few days after publication, and a second edition is being printed, and will be ready next week.

HENRY FROWDE.

CHAUCER'S REFERENCES TO ALMANSOR, HERMES, AND PTOLEMY.

Christ's College, Cambridge: Feb. 5, 1891.

In the side-notes to Group D in the Ellesmere MS. of the "Canterbury Tales," there are numerous Latin quotations. I have found out where nearly all of them come from. Some of them are a little mysterious.

Thus, at l. 611, we are referred to "Mansor, Amphorison" 19." The only way to get at this was to make a bold guess. My guess was that "Mansor" is an Arabic name, and ought, perhaps, to have "Al" before it. So I tried "Almansor"; and, behold, it is right! The somewhat long Latin quotation which follows the name in the MS. occurs, word for word, in "Astrologia Aphoristica Ptolomaei, Hermetis, . . . Almansoris" &c. (Ulmae, 1641). It is section 14 (not 19) of Almansoris Propositiones. The mysterious "Amphorison" is an error for "Aphorismorum," and is due to the fact that Almansor's treatise begins with the words—"Aphorismorum compendiolum, mi Rex, petisti," &c.

Here, then, we have another source for Chaucer's poems; and it explains some other passages, all of which can now be easily followed. Thus, at l. 705 of Group D we have a long quotation from section 2 of the same treatise. But the same volume contains "Hermetis centum Aphorismorum liber"; and Chaucer quotes this also, at l. 622 in Furnivall's text. Chaucer's reference is to section 24, which is pretty near; for, in the printed text, it is section 25.

In reading these treatises by Almansor and Hermes I have come across several interesting references. There is yet a third treatise of the same character, in the same volume, viz., "Cl. Ptolomaei centum Dicta"; and there is at least one good thing to be found in it. So Chaucer had read this also.

Every reader of the Knight's Tale takes an interest in the temple of Mars and all its belongings. There, among others, is the famous line—

"Ther saugh I brent the shippes hoppesteres."

I am delighted to find that it was a special function of the planet Mars to burn ships! For what says Ptolemy in his fifty-fifth saying?

"Martis adversus naues noxia vis imminuitur, cum neque in coeli medio, neque in undecimo loco est. In his enim locus naum corruptit, praedonibus per vim occupantibus. Incenditur autem navis, si ascendens ab aliqua Stella fixa quae ex Martis mixtura sit, affligetur."

So now we know why Mars burnt the ships; it was because the ascendent was being worried by some fixed star that co-operated with his evil influence. Moreover, he was certainly either in mid heaven or in the eleventh mansion, and altogether in the worst of tempers.

WALTER W. SKEAT.

TUNIP AND THE LAND OF NAHARINA.

Weston-super-Mare: Jan. 31, 1891.

In the ACADEMY of Jan. 17 (p. 65) Mr. Howorth has started some questions about Tunip and Naharina. These require a careful reply, and I hope to give some help.

As Mr. Howorth thinks, Tunip was not the Daphne by Antioch, nor anywhere near Damascus. I quote from my paper, "On the Geography from the Nile to the Euphrates, as known to the Ancient Egyptians," read at the Bath meeting of the British Association, sect. E, in 1888, and published in the *Babylonian and Oriental Record*:

"When the place called by the Egyptians Nii was by mistake identified with Nineveh, we were led to suppose that they were lords of Assyria in earnest; and the Naharina of hieroglyphic record was taken in a large sense for Mesopotamia. In later years we have placed it between Euphrates and Orontes. But now the cuneiform correspondence of Tel el-Amarna certifies us that it is identical with Mitāni between Euphrates and the Belikh river on the east, says Dr. Schrader. But this must not limit Naharina as simply coterminous with Mitāni; and indeed we know that it stretched far to the

west, for the celebrated strategic point Tunip, now Tennib, south of Ezzaz, was in Naharina (Brugsch, *Geog. Inschr.* ii. 46), so that Lenormant was right in extending Naharina in his map (*Hist.* 9 ed., 234) right across from the Orontes to the Khabūr."

"It is highly interesting to find that when Thothmes III. took Tunip it was in the hands of the Ruten-folk, and its lords bore the Aramaic title of Maran, in Egyptian Marina; but in the treaty of Rameses II. it figures as a town of the Khêta with a Sutekh. Among the newly-discovered clay tablets is one from Tunip (Dunip), praying for help against the Kheta king some half-century later than when Thothmes took it. This agrees with the statement that Tunip was in Naharina, and shows us the date when the Hittites were overrunning this country in force, after the Egyptians had broken up the Rutennu."

It was Nöldeke who, fifteen years ago, identified Tunip with Tennib (*Zeitschr. f. Aeg. Spr.* 1876, 10, 11), and I believe this has been generally accepted. Tennib (given by Maspero as Tinnab) is not marked by Dr. Sachau in his map, and did not lie on his route; but it is marked in Rey's two important maps of North Syria (*Carte de la Montagne des Ansariés, et du Pachalik d'Alep, and Carte du Nord de la Syrie*). It lies rather less than twenty English miles northward (a little west) from Aleppo; and doubtless was "in the land of Khilibu" [Aleppo], to the king of which it was subject—the miserable king who was just afterwards drowned at Kadesh, and held up by the heels in the unscientific fashion shown in the picture.

Tennib is not many miles from Tel Erfad (ancient Arpad), and only some six or seven miles (apparently) south of Ezzaz, the Khazazu of the Assyrian Annals. All this region strongly appeals to men of means and spirit to explore it in a scientific way. In my paper before cited, I have concisely put together the Egyptian information. In another paper in the *Babylonian and Oriental Record* entitled "Notes on the Geography of Northern Syria and some Neighbouring Lands, viewed from the Assyrian side," I have collected the principal data of the records of conquest from the east; and by the kind assistance of Mr. Pinches, I have given the names of seventy principal places in cuneiform which I have endeavoured to identify, with the hieroglyphic names from Egyptian inscriptions, and the modern names, as well as transliterations of the ancient names.

To those who are seriously studying this subject I shall be happy, so far as I can, to supply separate reprints of these papers, and any other information within my knowledge. The highly important "Karnak List of Northern Syria," I edited and contributed in June, 1885, to the Society of Biblical Archaeology. It has been in print some years, and is still awaiting publication in the next (and last) volume of *Transactions*, which for the future will be superseded by the less tardy method of the *Proceedings*.

With regard to Hamath, whose name Mr. Howorth has not found in the inscriptions describing the campaigns of the XVIIIth and XIXth Dynasties, I have long ago proposed to see its name in the Amātu of the Karnak list of Thothmes III., a name identical with that by which the Assyrian Annals have designated it. And in view of the cuneiform despatches of Tel el-Amarna I feel that this opinion is strongly confirmed; "for the name," as I have remarked, "may have been written in cuneiform by a Mesopotamian scribe, and transliterated exactly into hieroglyphic in Egypt."

As to Patina, Mr. Howorth will see that it is not Paddan Aram, and has no connexion with "Batanaea or Bashan." Once more to quote my last-mentioned paper:

"The country of Patina had for its capital Kunu-

luain Unqi, between the Afrin and the Orontes, or Kinalia. See Delitzsch, *Wo lag das Paradies*, 274."

I think this is the present Tel Kounana (Rey's Map), *n* being often convertible with *l*; and Hazarra, another place in Unki (the Umk plain near Antioch, Amku of the Karnak List, 308), must be Hazrè (Sachau, 459) near Dana.

Paddan Aram must of course have been on the east of the Euphrates; and I think the name Paddan is preserved in Tel Feddân, with ruins, west of Kharran (Sachau, 222). This may be "the city Pitânû" of Esarhaddon's campaign (Budge's *Esarhaddon*, p. 41).

HENRY GEORGE TOMKINS.

WHY WAS THE HORSE DRIVEN BEFORE IT WAS RIDDEN?

Luxor, Upper Egypt: Jan. 30, 1891.

THE ACADEMY of January 3, containing Prof. Ridgeway's interesting note, has only just reached me. His views as to the small size of the horses of ancient Egypt are curiously supported by certain sculptures, recently unearthed, on the exterior walls of the temple of Amenhotep III. at Luxor. In one scene the king, seated in his chariot, is holding colloquy with some foreign potentate, and the horses are consequently at rest. An attendant stands at the further side of the horses, and his arm-pit is just seen over the horse's withers. Measuring the height of some pure-blooded Egyptian fellahin, I find that this would give 53 in., or 13½ hands as the height of the horses driven by the kings of the XVIIIth Dynasty.

In another scene a groom is riding a spare horse behind the king's chariot. He is not sitting astride, but side-saddle fashion, with both legs on the off-side of the horse. His feet hang down about a foot below the horse's belly, which would only be the case with a small horse. The extreme length of this horse from chest to buttock is not greater than the height of the groom, which would give under 14 hands for the height of the horse. If the Egyptians had been accustomed to ride, the man would certainly have been represented as sitting astride. There is no saddle.

The only perfect Egyptian chariot is, I believe, that in the Museum at Florence; and in this case, if I remember aright, the smallness of the wheels, the lowness of the axle and the pole, show that this chariot was only adapted for very small horses. Perhaps some of your readers at Florence could supply exact measurements.

ISAAC TAYLOR.

APPOINTMENTS FOR NEXT WEEK.

SUNDAY, Feb. 15, 4 p.m. South Place Institute: "Biblicism," by Mr. E. G. Browne.

7.30 p.m. Ethical: "The Practical Counsels of Economic Science," by Prof. V. H. Stanton.

MONDAY, Feb. 16, 7 p.m. London Institution: "English Folk-Songs," with Musical Illustrations, by Dr. W. A. Barrett.

8 p.m. Society of Arts: Cantor Lecture, "The Electric Transmission of Power," I., by Mr. Gisbert Kapp.

8 p.m. Victoria Institute: "Agnosticism and its Tributaries," by Prof. Orchard.

8 p.m. Aristotelian: "The Philosophy of Roger Bacon," by Mr. R. J. Ryle.

8 p.m. Richmond Athenæum: "Faraday," by the Rev. H. Pelham Stokes.

TUESDAY, Feb. 17, 3 p.m. Royal Institution: "The Spinal Cord and Ganglia," VI., by Prof. Victor Horsley.

4.30 p.m. Society of Arts: "Chartered Companies in Africa," by Commander V. Lovett Cameron.

7.30 p.m. Statistical: "The Vital Statistics of Peabody Buildings and other Artisans' and Labourers' Block Dwellings," by Dr. Arthur Newsholme.

8 p.m. Civil Engineers: Discussion, "Electric Mining Machinery," by Messrs. Llewelyn B., and Claude W. Atkinson.

8.30 p.m. Zoological: "Some Points in the Anatomy of the Crocodilian Skull," by Prof. Hovès; "The Variation and Development of the Leporine Sternum," by Mr. R. H. Burne; "The Genus *Chasiempis*, with Description of a New Species," and "Description of a new Species of the Genus *Himatione*," by Mr. Scott B. Wilson.

WEDNESDAY, Feb. 18, 8 p.m. Society of Arts: "Methods and Processes of the Ordnance Survey," by Sir Charles Wilson.

8 p.m. Geological.

8 p.m. Microscopical: "Eminia equatorialis, a new Earthworm from Equatorial Africa," by Dr. W. B. Benham; "Cystocerius of *Taenia coronula* Daj," by Mr. T. B. Rosseter.

8 p.m. Cymrodorion: "The Latest Views about Arthur," by Mr. Alfred Nutt.

8.30 p.m. University College: "Samuel Richardson," by Mr. Augustine Birrell.

THURSDAY, Feb. 19, 3 p.m. Royal Institution: "Lull, Purcell, and Searlatti," with Musical Illustrations, II., by Prof. C. Hubert H. Parry.

6 p.m. London Institution: "Asoka, the First Emperor of India," by Prof. T. W. Rhys Davids.

8 p.m. Chemical: Ballot for Election of Fellows.

8 p.m. Electrical Engineers.

8 p.m. Linnean: "The Dillenian Herbarium," by Mr. G. C. Druce; "A Self-fertilising Hermaphrodite Trout," by Prof. Chas. Stewart; "Some Points in the Life-History and Rate of Growth in the Yew Tree," by Dr. John Lowe.

8.30 p.m. Antiquaries.

FRIDAY, Feb. 20, 4 p.m. Egypt Exploration Fund: Annual General Meeting.

4.30 p.m. Society of Arts: "The Science of Colour," I., by Capt. Abney.

8 p.m. Philological: "The Celts and other Aryans of the 'P' Group," by Prof. Rhys.

9 p.m. Royal Institution: "Infectious Diseases, their Nature, Causes, and Mode of Spread," by Dr. E. E. Klein.

SATURDAY, Feb. 21, 3 p.m. Royal Institution: "The Forces of Cohesion," II., by Lord Rayleigh.

3.45 p.m. Botanic: General Fortnightly Meeting.

SCIENCE.

Aristotle on the Constitution of Athens. Edited by F. G. Kenyon. (Printed for the Trustees of the British Museum.)

THE announcement that a new writing of Aristotle's had been discovered was received in an Oxford lecture-room with perhaps not unnatural groans; but the feelings roused in everyone who has not before him the fear of a fresh subject for examination have been two-fold—interest and hope. We are now, it seems, to read what scholars have deplored as lost; and we may hope for still more treasures from Egypt, which has just given us the *Constitution of Athens*, after giving us many other valuable fragments. Yet we need not all of us, like Germanicus, go to Egypt itself *cognoscendae antiquitatis*. The trustees of the British Museum bring the new treatise to our doors, and who is to know that Bloomsbury is not preparing some other surprise for us? The secret of this one at least was well kept.

"Aristotle" has had another narrow escape, and the story of the cellar at Skepsis has been repeating itself. The fate of the *Ἀθηναίων πολιτεία* depended upon one damaged papyrus copy. The book seems to have disappeared from libraries "between the sixth and ninth century," and later references to it are probably made at second-hand. We possessed none of it except the meagre Berlin fragments, and quotations in Pollux or Harpokraton, of whose exact value we could not be sure. Nor have we got it quite all now. The beginning is lost, and the end is seriously mutilated. But we have the best part of it: the printing-press has made that much safe for ever: and scholars have got a new puzzle—*κυνιδίους δοσάριον ἐρρίμμενον*.

The papyrus manuscript, from which the book is printed, is ascribed with great probability by Mr. Kenyon to "the end of the first century of our era, or, at latest, the beginning of the second." The text itself cannot be directly dated; but on the same sheet there are some accounts of receipts and expenditure, apparently kept by an agent

or bailiff, and dated in the eleventh year of Vespasian, *i.e.*, A.D. 78-9.

"We cannot tell how soon afterwards the *verso* was used for receiving the text of Aristotle. But on the one hand, it is not likely to have been so used while the accounts on the *recto* were still valuable; and, on the other, the papyrus is not likely to have continued unused and undestroyed for very many years after the accounts had ceased to be of interest. Moreover, some of the most remarkable forms of letters and abbreviations which occur in the Aristotle are also found in the accounts."

In addition to whatever guarantees of genuineness the mode of acquisition of the papyrus gives, its character is confirmed by two things. First, e. 25 contains in full a story about Themistokles previously unknown to us, though the argument to the *Areopagiticus* of Isokrates is now found to have made obscure allusion to it. Secondly, of the previously known ninety-one fragments, "seventy-eight are found in the MS. in its present condition, and all the rest, with two possible exceptions, are satisfactorily accounted for." One of the exceptions is serious (No. 407 of the Fragments), for it "differs distinctly from a passage on the same subject occurring in the text;" and the above two points, if they stood alone, would not do more than show the cleverness of a possible forger.

We may, however, assume that *prima facie* this work seems to be the lost *Ἀθηναίων πολιτεία* attributed by every ancient writer to Aristotle. Is it really his? Mr. Kenyon accepts it without hesitation; but we cannot feel so confident, and his three arguments (pp. xvi-xvii) are not conclusive. The internal evidence of the book itself gives it a date of composition (or revision) earlier than B.C. 307.

"The author, in describing the constitution of Athens in his own day, speaks always of ten tribes, which number was increased to twelve in the year just mentioned. On the other hand, the date 329 is incidentally referred to in e. 54; and in speaking of the two sacred tithes in e. 61, the name Ammonias is used in place of the Salaminia. This change of name must have been made during the time of Alexander, who claimed to be the son of Ammon. . . . This work was therefore written, or at least revised, at the earliest in the last seven years of Aristotle's life, and at the latest in the fifteen years after his death."

But this does not exclude Valentine Rose's hypothesis that the *Πολιτεία*, of which collection this essay would be one section, were, like some other books ascribed to Aristotle, written by another member or members of the Peripatetic school. Certainly the essay clashes more than once with the *Politics*, though again there are some curious coincidences of language between the two books. No one could possibly yet form a final opinion upon such a matter, but at present the style of the book seems to us hardly Aristotelian. It is not only that the whole thing reads flatter than Aristotle, and that (except in the anacoluthon of e. 15) we miss his glorious irregularities and his standing formulae. There is a peculiar bald smoothness about it, less like the crabbed compression which we know so well than what Goldsmith calls "the diffusio productions of fruitful mediocrity." Even the

editor misses "any discussion of the spirit and principles of the Athenian constitution." The story told, the summaries given, are handled quite simply; there is an almost entire absence of reflection and generalisation.* It is, no doubt, as Mr. Kenyon says, dangerous to use any argument from style, not only because we do not know how the admitted works of Aristotle were composed, but also because the judgments passed on points of style are so curiously different with different critics. Nor should we deny his assertion that Aristotle's "impartiality, his dispassionateness, his matter-of-fact statement of his materials, are as evident here as in any other of his works"; and we must remember that the treatise before us, if really Aristotle's, was drawn up with an object different from that which inspired any other of his extant writings. It was not to be an essay, but only part of a collection of data on which essays and their theories might safely be based. It was one of 158 summaries of political constitutions, and speculation on them was probably reserved for the *Politics*. Like Mr. Herbert Spencer's *Descriptive Sociology*, it was raw material, not finished work.

The notes of the present edition represent, as their author modestly says, "a first attempt to estimate the bearing of the new material on the received versions of Athenian history." It will be long indeed before the last word is spoken, especially on the tangled subject of dates;† and, like Mr. Kenyon, we must avoid premature decisions. We can merely indicate some of the new matter placed before us for consideration, and even there we must be content with only a *prima vendemiatio*. The hungry Jonathan could but touch the honey with the end of a rod.

To begin with, it must be said that the statements of the treatise are either to be taken or left. We cannot go behind them and test their foundations, for the writer tells us nothing about his sources of information.

"Fortunately it is not of so much importance to identify his actual sources as in the case of such an author as Plutarch. Aristotle took care to sift his evidence for himself, instead of leaving it to be done by posterity; and when he clearly and positively states a fact, his statement is not lightly to be put aside."

The book is a constitutional history of the Athenians, which falls into two natural divisions. In the first, the successive phases of the development of the Athenian constitution are described. The author (c. 41) reckons eleven of these, from (and including) the arrangements of Theseus down to the restored democracy of 403. The beginning of the treatise, which is lost, has carried away with it the account of the state of affairs which preceded Theseus and the account of Theseus himself. The other ten phases we have complete. The second division surveyed with more or less com-

pleteness the actual functions in the fourth century of the Boule, the Prytaneis, the Dikasts, the Archons, the Apodektai, the Astunomoi, the Agoranomoi, the Eleven, and some smaller officials. This survey, however, reaches us incomplete, passing at the end into mere fragments; and much of the analysis of procedure in the law-courts is thus lost.

Even a cursory perusal of these two sections will show that there is in them a great deal which is new. Of this, some seems sure enough and a clear gain. Some merely disposes of flourishing modern theories. Other parts are in collision with facts (not theories) of which we previously thought ourselves certain; and to effect a reconciliation of authorities, or to obtain a verdict between them, will be a long business.

Among the smaller gains we must reckon a few new lines of Solon (the one authority whom the writer cites freely), some fresh instances of rare usages, and, if the transcription of the text can be trusted, some new words for the lexicon. In addition to *διαφημιωμός* and *δεκαρχαυρεσία* (both most ingeniously emended by Dr. Sandys in the ACADEMY of last week), which had already caught my eye, I may also mention *ἐπεισκαλῖν* and *ἐπίσκλητος* (c. 30). *Ἡσυχάζειν* occurs in c. 5, apparently active—a construction of which L. and S. give only one instance. And there are stranger things still.

In the field of history we have before us a richer crop, but one which needs weeding. The long list of Grecian worthies is increased by two—Kedon, who tried even before the Alkmaionidai to expel the tyrants, and Rhinon, who did good service in 403 in restoring peace and good feeling. We had their names before, but did not know their merits. The new facts, which there is little cause for doubting, are many. We get one new move for Theramenes (c. 32), one new trick for Themistokles (c. 25). As to the latter, it already stood on record (in the Argument to Isokr. *Arcop.*) that he did something to limit the power of the Areopagus, but one did not look on him as influential in the crippling of that body. Now, however, we read that Ephialtes *ἐπραττε ταῦτα συναιτίῳ γενομένῳ Θεμιστοκλέους*; and we find with surprise that Themistokles was still in Athens as late as 462–1, whereas he has generally been supposed to have fled to Persia about 466. It hardly seems possible that Plutarch can have known this story. We cannot well see the point of the trick by which Themistokles drove Ephialtes into action, for Ephialtes was apparently ready to act before.

The writer gives us clearer light on another matter in c. 19. We find that Hippias, after the death of Hipparchos, *ἐπεὶ κακὸς εἶχεν τὰ ἐν τῷ ἄστει*, tried to fortify Munychia. This is plain enough, for such a position would keep retreat open for him by sea, and make the introduction of mercenaries easy. But he was apparently turned out by the Spartans before he could change his residence. Not only were the Spartans prompted to this by the Pythia, as Herodotus tells us, but we now learn that they were jealous of the growing friendship between Argos and the Peisistratidai. Thus their action becomes much

clearer, and takes its place in the long series of moves and countermoves that aimed at winning or keeping the supremacy in Peloponnese.

But constitutional facts are most in the writer's way, though we have only space to notice a few of them. The revival of the Areopagus after 480 is more strongly asserted here than we are accustomed to find it, even as a theory; and the materials for a history of the archonship are full and interesting. But they need sifting. Chaps. 22, 61, seem to us conclusive upon the long debated question of how the *στρατηγοί* were elected. It is clear that Plutarch was right after all in saying that in Kimon's time they were elected one from each tribe, and that Pollux's assertion that they were elected *ἐξ πάντων* is only true of a later date. The office itself, it appears, is very old, having even overlapped the kingship; nor do those changes in the number and importance of the *στρατηγοί*, which Grote ascribed to Kleisthenes, really seem to belong to him.

But "Aristotle" perhaps raises as many difficulties as he solves. Troubles beset us about the *πρόεδροι*; and it is not easy, with the nicest care, to settle upon short notice whether "Aristotle" is to be preferred as an authority to Thucydides or Xenophon upon events which happened in the lifetime of Thucydides or Xenophon. Thucydides, 8, 92, gives us to understand that in 411 B.C. the famous Five Thousand were never called into existence. Chap. 30 of our new authority speaks of the body as real. Which are we to follow? Neither remark stands alone. "Aristotle" not only implies that they existed, but tells us what they did. Thucydides not only decides against their existence, but explains why they were never called into existence. But c. 32 here asserts that they *λόγῳ μόνον ἡρέθησαν*; and unless (with Mr. Kenyon) we invent a non-natural meaning for the term "five thousand," and say that it meant *from the first* all who could furnish arms, we must provisionally accept Thucydides *plus* our present authority against our present authority alone. Considering the stress which Thucydides laid on his episode of the Peisistratidai, again, we are strongly inclined to follow him rather than the new writer, who gives some different particulars about the movement of Harmodios and Aristogeiton (c. 18). It is very noticeable that Perikles fills no such place on this writer's horizon as he does on the horizon of Thucydides.

But with Xenophon, too, we find our "Aristotle" at variance, and even more often than Mr. Kenyon has noticed. We must think twice, or even thrice, before believing that the Attic silver mines were discovered (*ἐφάνη*, c. 22) in B.C. 483, in the teeth of the distinct statement of the *De Vectigalibus* that no one knows when they were first worked. On the career of the Thirty, we find many points of discrepancy. If, for instance, we follow our new light, we shall have to give up the familiar picture of Kritias striking the name of Theramenes off the roll; for that name will already have been removed before the meeting of the Council by a law excluding

* There is a little bit of the latter on the *δημος* in c. 22; and we recognise the observer of human nature in the remark in c. 40 that people postpone putting their names down for anything till the last moment.

† The chronology of Peisistratos is in no way cleared up by cc. 14, 17, which cannot be reconciled with *Pol.* 5, 12, 5. The dates in c. 22 "absolutely refuse to harmonise."

all who had shown hostility to the Four Hundred. There are two statements additional to what Xenophon tells us, which, if they can stand further examination, will be valuable: that two boards of ten were successively appointed after the Thirty, of which the second (with Rhinon on it) eventually put an end to the civil war; and that the faction at Eleusis did not disappear till the third year. There must have been a good deal of separate vitality in Eleusis, the one place in Attica which was allowed to strike special bronze money. But we cannot give ready credence to many of the writer's other stories, from his improbable sketch of Drakon's constitution downward. Even if Aristotle had anything to do with this treatise, we must allow for a certain percentage of errors in his facts, such as we find in the masses of facts got together for purposes of generalisation by another great social philosopher, Mr. Buckle.

A few words in the last place about the editing of the text. So far as historical matters go, Mr. Kenyon seems to have done his work with care and with fitting reserve. But about the state of the text itself we are far from content. Writing without the facsimile of the original, we cannot tell how far little points which offend us are due to that original, how far to inexact transcription or to mere misprinting. There is, of course, a small misprint on p. 146. On page 64 *σπαρτιάς* is wrongly used for *σπαρτιάριον*. We cannot tell the cause of this error; but it throws doubt on the accuracy of the spelling of various names, as *Ἀλκμεονιδῶν*, p. 52, and *Πισιστράτου* (pp. 38-41; *Πεισιστράτος* p. 37). There are, too, several places where the present reading cannot stand, and one would like to know whether it really has MS. authority. At the end of c. 15 some verb seems missing after *ἰδίων*. In c. 22 τοῖς *πεντακοσίοις* looks like a gloss on *τῇ βουλῇ*. In c. 27 can *πρώτον* be right, or should we read *πρώτος*? In c. 34 is *χωρησάμενοι* only a misprint for *χρησάμενοι*? In c. 60 the expression *συλλέγεται τὸ δ' ἔλαιον* is at least unusual in form. *Προσεκεκόσμητο* is probably not the right word in c. 18, though we cannot suggest a better. But at the end of c. 6 *μένυκε* (? *μένυται*) cannot be right, and should have been corrected, even if it stood in the MS. On p. 125 *ὄχετους μετέωρας εἰς τὴν ὁδὸν ἔκρουν ἐχόμενας* is a perfect nest of solecisms. Some of the accents here and there are very strange.

FRANKLIN T. RICHARDS.

SCIENCE NOTES.

A COMMITTEE has been formed to collect subscriptions in England, limited to two guineas, towards the testimonial to be presented to Prof. Virchow on his seventieth birthday. The chairman of the committee is Sir James Paget; and the hon. treasurer (to whom subscriptions should be sent) is Dr. Lauder Brunton, 10, Stratford-place, W. The testimonial will take the form of a large gold portrait-medal for Prof. Virchow himself, with bronze replicas for members of his family, and certain scientific institutions. The surplus of the fund will be devoted to the furtherance of scientific work, at the professor's discretion.

THE Friday evening discourse at the Royal Institution next week will be given by Dr. E.

E. Klein, who has taken for his subject "Infectious Diseases, their Nature, Cause, and Mode of Spread."

THE last number of *Nature* prints a translation of the opening lecture recently delivered by M. Giard, professor of evolution at the Sorbonne. It is an interesting defence of Lamarck against the somatogenio theory of Weismann.

MEETINGS OF SOCIETIES.

CLIFTON SHAKSPEARE SOCIETY.—(Saturday, Jan. 24.)

MISS FLORENCE HERAPATH, president, in the chair.—Miss Louisa Mary Davies, in a paper entitled "In the Mouth of Two Witnesses," drew attention to "Antony and Cleopatra" in comparison with "Samson Agonistes," each of which sets forth the tale of a hero's undoing by a too complete surrender to the enchantments of a beautiful sorceress. When the two poems are placed side by side, the difference in the two methods of workmanship is startling enough. "Samson Agonistes" is a careful etching in black and white; "Antony and Cleopatra" a massive study of gorgeous colouring. In the "Samson" there is the hush that pervades the scene of a great tragedy: now a blind hero speaks, then a mourning father; now a sympathising friend, then a seared wife and a terror-stricken messenger; but all through there is a solemn undertone of repressed strength of feeling. In "Antony and Cleopatra," on the contrary, life and motion are predominant. Among so many high-pitched points of interest, we can only marvel how the mind of the reader never for a moment ceases to watch for the gleaming convolutions of the golden thread of the love-story interlacing all the incidents of the drama. The burden of the story in each is identical—a strong man brought into ignominious captivity, not by love, as anchorites would have us believe, but by the character of the woman he loves. We have all been told, in these days of metaphysical chatter, that love *per se* ennobles the man or woman of whom it takes possession; but the truth is that love takes the hue of what it rests on and thus poisons or glorifies the heart of the lover and, with his heart, his life also. In Samson's character were all the elements that should have resulted in a successful life at an epoch of the world's history when all the conditions of life were comparatively simple. Imbued from his childhood with religious and patriotic fervour and certainty of a high destiny in store for him, sanguine of temperament, strong of will, possessed of matchless advantages of physique brought to perfection by austere simple training—what was there that he might not have been, and done? It is hard to conceive of Dalila as anything better than a mercenary traitress, who plumed herself on the conquest of such a distinguished man. Mark Antony, of whom history and poetry both give us a full-length portrait, is perhaps the most picturesque of Shakspeare's heroes. In scarcely any other has he put in the shading with more accuracy of detail and delicacy of touch, lingering, one might also say, lovingly over the dainty lines which were to throw up the high lights of his hero's generosity, bravery, eloquence, and irresistible good-fellowship. He, like Samson, was endowed by nature with a strong will, but, like Samson's, it fell prone before the spell of a woman's loveliness. Cleopatra's beauty has inspired poets, painters, sculptors, novelists, and actresses to unsparring and oft-repeated efforts to reproduce a presentment of those long-dead charms, in virtue of which she disputes with Helen of Troy the proud pre-eminence among those women who have turned the world upside down. The queens of the stage may, more or less, realise their own ideal of imperial grace; sculptors may mould form after form of exquisite perfection; painters may lose themselves in the endeavour to depict her fathomless eyes; but, after all, the half is not told us of the magic that enslaved man and woman alike—that made her bondsman turn his back on honour, home, and country; that changed the valiant soldier of Philippi into the flying dotard of Actium, and in the end inspired him with courage to deal himself his own death-blow, thus dying for a lie as he had lived for an illusion.

Shakspeare, in painting her, uses his most glowing colours. Pity it is that, being so often exposed to the light, they have lost, to the ordinary apprehension, their due vividness. We cannot imagine, however, that in Cleopatra's beauty and grace lay the supreme secret of her power. The weapons of Dalila's warfare must have been simple and limited in number, though potent enough in action. Unwearied perseverance, tears, entreaties, kisses, reproaches—and the spell takes effect. But Cleopatra's was of a much more ingenious and intricate composition. All these were there, but much besides, or Octavia would not have had to keep solitary state in Rome. In the words of the old chronicle, we may catch glimpses of her method of working, which consisted in varying her attractions—in being always with Antony, and in exhibiting an inconstancy of nature which gave him no rest out of her presence. Antony died unable to face life without her; she died to save herself from a fate she dreaded more. Her sister-wife, Dalila, makes her exit from the stage in less royal fashion. Defeated at all points in her remorseful endeavours to re-establish friendly relations with her husband, she departs snake-like, leaving a slimy trail behind her. And the man whom she has betrayed to his death counts the cost, and finding that his high destiny is to be fulfilled, not by living, but by dying, lays down his life on his country's altar, atoning, so far as in him lies, for the disgrace of his life by the heroism of his death.—Mr. S. L. Gwynn read "A Comparison of 'Antony and Cleopatra' with Dryden's 'All for Love.'" Although Dryden in style avowedly professed to imitate Shakspeare, and here and there borrowed his thoughts, yet the spirit of the work unmistakably is alien to that of his model, recalling Corneille rather than the Elizabethans. Shakspeare's play begins before Antony's marriage to Octavia. Dryden's begins after Actium, passes apparently within twenty-four hours, and strictly observes the unity of place. In fact, he has made his play out of Shakspeare's last two acts. Dryden's Antony is the moral Roman of the eighteenth century, prating Ciceronian platitudes. His Cleopatra is a virtuous lady, who gave Antony her first and only love. All this is poor when contrasted with Shakspeare's magnificent conception. With Matthew Arnold it may be said that Dryden, clear and vigorous as he is, pre-eminently lacks what Shakspeare so pre-eminently possesses—the accent of poetic utterance. This is conspicuous in the famous passage which is common to both—the description of Cleopatra in her barge—and far more clearly so in isolated phrases. But it is in his presentment of the two lovers that Dryden falls immeasurably behind. Yet it must be said frankly that Dryden's play is incomparably better constructed for representation. Clearly Shakspeare did not write his play to please the groundlings of the Elizabethan audiences. He wrote it to condense into an artistic unity the great crisis in the world's history, which ended with the deaths of Antony and Cleopatra.—Miss F. Herapath read a paper on "The Two Cleopatras." Shakspeare shows us the historic Cleopatra in her dignity, her rage, her gaiety, her tenderness, her frivolity, her friendships, her loves, her pathos, her cowardice, her courage, her guilt. Except in her innocence, all phases of this woman-heart pass rapidly before our eyes in almost dazzling succession. We gaze, we admire, we pity, we shudder, we recoil. But not till all is over can we stop to wonder at the superhuman skill which dares to exhibit in all its frailty the innermost recesses of a soul like hers. The secret of such marvellous comprehension is that similar outlines were burnt in upon Shakspeare's very being. He too had met a Cleopatra. He had known the witchery of "the dark lady," who, as we know from the Sonnets, bore a physical likeness to the rare Egyptian. Imperfections in both these women became beauties (II. ii. 236 and Sonnet cxlix.). II. ii. 243-5 and Sonnet el. show that in each evil seems good and vice appears virtue. The devotion of Antony and Shakspeare is similar (III. xi. 56-61 and Sonnet eli.). Infatuated as both these men were, they yet knew the falsity of their worthless loves. (III. xiii. and Sonnet cxxxvii.) Both can revile the women that fascinated them (IV. xii. 28-9, and Sonnet cxliv), and both are led away with their eyes open (III. xiii., 111-5, and Sonnet cxlviii.).

—Mr. John Taylor read some "Notes on 'Antony and Cleopatra,'" saying that, however prosaic and contemptible small vices may appear, it seems unfortunate for morality that supreme wickedness is poetic or, at least, is susceptible of conversion into the form of great poetry. Whether unbounded ambition, as in Milton's Satan, or limitless sensuality, as in Shakspeare's Cleopatra, be the feeling studied, there is a world of poetry in the work of creative genius. Antony was an unprincipled voluptuary, and Cleopatra an utterly worthless and abandoned woman, yet such is the interest in their story that they have furnished the subject of two Latin, sixteen French, six English, and at least four Italian tragedies. Lord Tennyson also, in his "Dream of Fair Women," has over fifty lines in commemoration of the Egyptian sorceress, who seems not to have had a single moral quality worthy of honour. But her figure still charms the world, and her very name breathes poetry. Like Helen of Troy, her career was one of continuous infamy. In the construction of the plot, Shakspeare had no political or ethical purpose, and the whole development of the play is subordinated to one fierce, unbridled passion, not of love, at least on the woman's part, but of a coarse, shameless feeling without a name.—Mr. Walter Strachan read a paper on "Enobarbus," the dominant feature in whose character was his mental sagacity. In representing him as a deserter from Antony, Shakspeare shows his knowledge of human nature, for such a man as Enobarbus would not have continued his devotion to Antony after the hardy soldier had become a mere amorous trifler. But, when the soldier of Antony has become the follower of Caesar, the honest, manly heart is sorely wounded by contrition, the black treason of his conduct galls him to the quick, and death alone can wipe out that great debt of shame and apostasy, and death only makes atonement for the renegade.

ARISTOTELIAN SOCIETY.—(Monday, Feb. 2.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—The hon. secretary read a paper by Mr. S. Alexander on "The Idea of Value." The writer confined himself to moral value, and endeavoured to establish two main propositions: (1) Ideals which form the standard of value are nothing but the formulations of desires. Consequently the current distinction of what has value from what has only existence, or of "ought" and "is" is not an ultimate one. "Ought" only implies a certain selection, among various sentiments, of those which conduce to social welfare. (2) The value of actions does not depend primarily on their producing pleasure. Accordingly, value was described as the efficiency of an action or person for maintaining the whole complex of actions which constitute social equilibrium. Value in morals was connected with value in economics, as depending on an exchange of services in society.—The paper was followed by a discussion.

FINE ART.

MISS KATE GREENAWAY AND
MR. HUGH THOMSON.

THERE are some few persons who say they are tired of Miss Kate Greenaway. They have our pity, though they scarcely deserve it. One might as well be tired of spring or daisies or fresh air. Hers is but a little world, but it is a case of little and good. Her charm is an open secret, consisting in the toddling graces of babyhood, its frank, sweet faces, and in the right use of mopecaps and sashes, and high waists and flat-soled shoes. Out of these, with a rare sense of decorative arrangement and a sweet, nosegay-like taste for colour, she has made a little world of her own, which all may enjoy. Thousands, not only in England, but abroad, have laughed and played in it, and many have plucked her flowers and sown the seeds therefrom; but, though the seeds are fertile in other soils and produce pleasant varieties in many countries, the plants will be

nothing to compare with those delightful blossoms which now brighten the walls of the Fine Art Society. But that we like Mr. Hugh Thomson's drawings vastly (the adverb comes from the walls of the room) we should wish their places filled by more Kate Greenaways, so that we might be completely ringed by a circle of her sweet colour and gentle humour.

But we are at least surrounded by old friends. We come to Mr. Thomson's drawings fresh from the sight of their facsimiles in the pretty edition of *The Vicar of Wakefield* lately reviewed in these pages, and to Miss Greenaway's drawings fresh also from recollections not perhaps so recent, but still as vivid. Indeed, the exhibition is somewhat of a holiday for the critic, who has no harder task to do than to review himself, so to speak; and no duty more disagreeable (though this may not be altogether pleasant at times) than to correct his previous utterances. Even these drawbacks may be mitigated in the present case by putting the engravers and other reproducers in the pillory instead of himself. I am not conscious of ever having written a line that was unkind to either of these artists; but, if I have, I feel sure that it was because I judged him or her by a reproduction instead of by the original. Such flattering unctious is scarcely of much virtue, however, in the case of Miss Greenaway; for, though there are delicacies of colour in her work which may not be printed, yet, on the whole, there is not sufficient difference between the charming models and almost as charming copies, to excuse a change from praise to blame, or *vice versa*. With Mr. Hugh Thomson the case is different. Good as the process is by which his drawings have been reproduced in the volume, the loss in every case is clearly to be perceived. Not only are the subtler beauties of his drawing missed altogether, but the shadows are often blackened, the expressions much obliterated, while, as in the drawing of the horses' hoofs in "On fine days rode a hunting," an emphasis is occasionally placed on a defect. Indeed, in many cases the change is so great that we scarcely recognise our old friends. They seem, as it were, to have risen in the world since we saw them last. Such is the case, for instance, with that excellent scene of "Fitting out Moses for the fair," and that still more admirable invention in which Mr. Thomson shows us Mr. Burchell about to engage the ruffian in fine clothes. Mr. Thomson has chosen the moment before the encounter, but no one can doubt the issue of it. The ruffian may draw his sword with as many "oaths and menaces" as he pleases, but we can see that he is no match for Mr. Burchell and his cudgel. In another moment the sword will be shivered to pieces, and the sweet Sophia will be out of the coach.

Among our old friends on the other side of the room are, indeed, a few new faces, pictures in which Miss Kate Greenaway has left her safe and pretty world and essayed to draw figures of a larger size, and to paint instead of tint. They are not as successful as one would wish. Her knowledge of the figure suffices for babydom, especially for much-clothed babydom on a small scale; and if her feet do not always come out exactly at the right place, or her legs at the right angle, it does not much matter. Sometimes, perhaps, a little incorrectness in this respect adds not unpleasantly to that unstable equilibrium which is one of the charms of childish movement; but when we grow up it is different.

COSMO MONKHOUSE.

LETTER FROM EGYPT.

THE PROGRESS OF EGYPT IN THE DESTRUCTION OF ITS ANCIENT MONUMENTS.

Assiout: Jan. 24, 1891.

A SOMEWHAT slow voyage up the Nile in a dahabiah this winter enables me to give a fuller report on the progress made during the past year in the destruction of the ancient monuments of Egypt than is possible for those who travel by steamer. Mr. Wilbour's dahabiah has accompanied mine, and we have stopped at a good many places between Cairo and Siût, at most of them, indeed, perforce through want of a wind. I find that the interesting tomb at Kom el-Ahmar, near Minieh, the only one left out of the many described by Lepsius and other earlier Egyptologists, has shared the fate of the tombs of Beni-Hassan and El-Bersheh. Portions of the inscriptions on the walls, and even the ceiling, have been cut out or hacked off, and the rest of the tomb has been wantonly and elaborately defaced; hours must have been spent in hacking the inscriptions and paintings with some metal instrument in order to render them illegible.

The tombs and ancient quarries towards the southern end of Gebel Abu Feda, which, when I last visited the spot eight years ago, were only partially destroyed, have now been almost completely blasted away. The work of destruction is still going on merrily among the old tombs of El-Kharayyib. A little to the south of the latter are the cartouches of Seti II. discovered by Miss Edwards. A year or two ago they were saved by Col. Ross from the quarrymen who were about to blast them away; but his interference has produced but a momentary effect, as I find that considerable portions of the monument have been destroyed since I saw it last March.

One of the tombs at Tel el-Amarna, and one only, has been placed under lock and key, now that, along with its neighbours, it has been irretrievably ruined. The two "guardians" appointed to look after the tombs live at Haggi Qandil, two miles off. They are natives of the place, and their efficiency may be judged of from the fact that pieces of inscribed stone, freshly cut out of the walls of the tombs, were offered to us for sale under their eyes. Anyone, indeed, who is practically acquainted with Upper Egypt well knows that the principal use of a native "guardian" is to draw a small salary from the government, supplemented by "bakshish" from visitors. For the protection of the monuments he does little, unless under the constant supervision of a European inspector. Europeans, however, even though they may be enthusiastic Egyptologists, cannot be expected to spend summer after summer in Upper Egypt unless they are paid well.

A. H. SAYCE.

CORRESPONDENCE.

THE ANCIENT INSCRIBED STONE ON WINSFORD HILL, EXMOOR.

Williton, Somerset: Feb. 9, 1891.

In the ACADEMY of September 10, 1890, Prof. Rhys gave an account of this stone, with its inscription

CARACI
EPVS.

He conjectured that the initial letter of the second word, which had been broken away, was N, and accordingly interpreted the legend Carataci nepus (*i.e.*, kinsman of Caratacus).

I have just been informed that the missing fragment was found and preserved by the Rev. J. J. Coleman, of Dulverton, and that it bears the character N, evidently a misshapen N. Prof. Rhys is therefore right in his interpretation; and the theory of those who wished to

make "episcopus" out of *epus* falls to the ground, as I always expected would be the case.

JOHN LL. WARDEN PAGE.

NOTES ON ART AND ARCHAEOLOGY.

WE feel it imperatively necessary to call attention to the dangerous condition in which one of the most important works in the National Gallery has been for some time past. This is the "Virgin and Child with St. Anne enthroned, surrounded by Saints," of Francesco Francia. All over it is showing the most disquieting signs of scaling away from the panels on which it is painted; so much so, indeed, that, should it in its present state receive a rough shock, the damage might be irreparable. It is astonishing that the picture should so long have been allowed to remain as it is, and steps should certainly be taken without further loss of time to remedy the process of disintegration which appears to be going on.

At a meeting of the council of the Royal Society of Painter-Etchers held at 5A, Pall Mall East on January 30, M. Felix Bracquemond was elected an honorary fellow, and Messrs. Robert Bryden, Arthur Evershed, Oliver Hall, Charles H. Shannon, A. Tallberg, and F. Inigo Thomas, were elected associates of the society.

A REPRODUCTION—photogravure, in all probability, as no name of an engraver is announced—will be issued shortly by Messrs. Graves of Sir Arthur Clay's large and interesting picture of the "Court of Criminal Appeal," which figured at the final summer exhibition at the Grosvenor Gallery. Such a picture, both from its theme and the treatment of it, is well fitted for reproduction.

THE exhibition at the Old Bond-street Galleries—Messrs. Agnews'—has as its most noteworthy feature an increase in the number of the older water-colours shown. Turner, who, when represented fairly, must, of course, be unapproachable, is seen at the Messrs. Agnews' in the various stages and periods of his art. Here are early blue-grey drawings; here are elaborately finished works of his Yorkshire time; and here, too, is at least one of the more suggestive visions which were vouchsafed to the master in his later days.

Two full-sized working cartoons are about to be sent to Italy for execution in mosaic for two more of the spandrels to the arcade of the dome of St. Paul's Cathedral. The designs are by Mr. W. E. F. Britten. Four of the eight spandrels are already completed and in their places, from designs by the late Alfred Stevens—namely, the four Greater Prophets. Two designs by Mr. G. F. Watts, representing St. Matthew and St. John, will be placed over the archway to the nave; and the remaining spandrels over the entrance to the choir will be filled by Mr. Britten's compositions. Meanwhile, Messrs. G. F. Bodley and T. Garner are busy at work decorating the apse of the choir.

The *Art Journal* for February contains a noticeable article on Sir James Linton by Mr. Frederick Wedmore, in which he contrives to combine justice and sympathy in a very happy manner. Mr. Claude Phillips's paper on the Staedel Art Institute at Frankfurt is a welcome and thoroughly competent survey of a comparatively little-known gallery. In the same number Mr. Anderson Graham concludes his interesting study on Lord Tennyson's childhood, and Mrs. Henry Ady (Julia Cartwright) commences a pleasant travel along the Pilgrims' Way from Winchester to Canterbury.

WE quote the following from the Cairo correspondent of the *Times*:—

"A grand discovery has been made of a vast

tomb of the high priests of Ammon, monarch of the gods and local divinity of Thebes, on the exact spot in the limestone cliffs of the Libyan Mountain, west of Thebes, near Dehr El Bahri, where Brugsch Bey made his famous find of royal mummies in 1881. The tomb is 25 metres below the surface, and it has two stories, the upper one not yet opened. In the lower, 240 sarcophagi have been already discovered, the oldest dating back to the Xth Dynasty (2,500 B.C.). There were also in the tomb 100 papyri and some large statues of the Theban Triad, Osiris, Isis, Nepthis, with vast quantities of statuettes and votive offerings. Everything was uninjured. The upper storey is to be opened immediately, under the personal superintendence of M. Grébaut, director of the antiquities department, who himself made the discovery through native information."

THE STAGE.

"WOODBARROW FARM."

IN mortal dread of a little provincial newspaper which takes me to task when I delay to form opinions about the third-rate rubbish at the second-rate theatres, I repaired—this time with undue tardiness, be it confessed—to "Woodbarrow Farm."

The Vaudeville has a piece of considerable inequality, which yet, upon the whole, one may see with entertainment and interest. Its motive is not absolutely new, but it is entirely healthy. Its study of rustic life, or the lives of the yeomanry, does not go very deep, though it does to some extent repeat the now historic endeavour to "bring the scent of the hay across the footlights"—it does this best by means of its interpretation, the vigour and the freshness of Miss Emily Thorne, of Mr. Bernard Gould, and of Miss Bannister. The life of "the great world" it makes practically no effort to represent. The great world is represented only by one of its hirelings, Allen Rollitt's "own man," acted so excellently by Mr. Thomas Thorne. For Colonel Dexter, who drinks, intrigues, circumvents, fails—and, as Mr. Frederick Thorne plays him, does all these things so that his stage existence becomes a very real one—Colonel Dexter, I say, has little reason to speak in the name of society. His comic vices, or our appreciation of them, cannot save him from being among the more or less disgraced. It is not so much society as two or three of its parasites that appear before us upon the Vaudeville boards. But these people—the mean soldier and the all-important servant—are amusing enough types indeed. And again there is an adventure to whom Mr. Jerome K. Jerome has mercifully permitted just the shadow of a conscience, just the ghost of womanliness, so that when she parts with the man whom she has fascinated, and whom she has used, she is a little sorry for the mark she has made upon his life. Such a person is, I may assume, truer than the quite conventional adventuress who adds heartlessness to ill-conduct; and did but Miss Vane throw into the expression of regret and repentance as much of reality as she does throw into the expression of stoniness and vulgarity, this character of Clara Dexter would, as a whole, be profoundly effective. As it is, it is played unequally—with a certain natural force, no doubt, but not, in all respects, from the inside.

Let me say a few more words upon the acting, and then have done with that. To

Mr. Frederick Thorne's reality tribute has already been paid. This well-versed and experienced actor, confident and full of resource, holds the stage thoroughly in such a character-part as that which is now assigned to him; and as the servant—who acts as a guide unto the youthful and lately rustic master, who teaches him what he must eat for breakfast, what he must smoke after it, what is the fashionable walk, and the accepted way of holding one's umbrella—as this competent yet deferential monitor, Mr. Thomas Thorne is as discreet and quietly funny as it is possible to be. Mr. Frank Gillmore is, I am bound to say, simply buried in a part at once unsympathetic and insignificant. For the nonce, the talent of a very good *jeune premier* is wrapped up in the napkin of a walking gentleman. With Miss Bannister one is completely satisfied in the scenes of gaiety, and less perfectly contented in those scenes in which the young heroine's absorbing interest in Allen Rollitt has somehow to be indicated. Graceful and agreeable, Miss Bannister has yet to be profound. As heroine's aunt and hero's mother—a country-woman, portly of presence, genial of smile, and hearty and outspoken—Miss Emily Thorne is, at all points, unquestionably excellent.

As for the story itself, let us note its progress as it marches from act to act. The first act, if a little tame, is fortunately short. The second—in which the hero is in contact with a time-serving attendant, and with those who would make him their dupe—is long and varied: in it is nearly all of the comedy and much of the serious interest of the play. The third act is divided into two scenes, of which the first passes in Allen Rollitt's London rooms, and the second in Mrs. Rollitt's Devonshire farm-house. The latter scene does but serve the purpose of suggesting delicately, and not of actually placing before us, the happy consummation which—this time—the student of the stage may unite with the most *bourgeois* playgoer in desiring. But the scene just before it is one in which Mr. Jerome's faculty of forcible and direct expression is heightened or made more effective by a piece of dramatic construction that shows extreme skill. I speak of course of what may be called the incident of the wine-glass. Therein the play-wright who knows his business comes visibly to the front, and so effectively that to a true lover of the theatre it would be possible to forgive the disappearance of the literary man. Yet in Mr. Jerome's plays—albeit they are not written with completeness of finish—the literary man is ever with us, sharpening the wits of the dull, and bringing forth sound sense, and a measure of imagination besides, from the lips of the ordinary. The piece is not a perfect one, but it is interesting and enjoyable.

FREDERICK WEDMORE.

STAGE NOTES.

MR. WILLIAM POEL has written the libretto of a musical piece which he will call "Equality Jack." The musical author is Mr. William Vinning. The piece, like Mr. William Howell's story, *The Lady of the Aroostook*, enjoys the curious distinction of having only one female

character. The humours of the far will be its principal source of interest; and for his presentation of these Mr. Poel confesses himself indebted to the late Captain Marryatt. Has any tale of Marryatt's ever been dramatised before? At all events, none has been dramatised and set to music.

THE first performance of Ibsen's "Rosmersholm" is now fixed for February 23 at the Vaudeville. Mr. F. R. Benson will play Rosmer, Miss Florence Fan Rebecca West, and Mr. Athol Forde the Kroll. The cast will also include Mr. Charles Hudson, Mr. Wheatman, and Miss Protheroe.

THE Independent Theatre (Théâtre Libre), which was projected six months ago by Mr. J. T. Grein, will start its career on March 6, when a private performance of Mr. Arber's translation of Ibsen's "Ghosts" will be given at the Athenaeum, Tottenham-court-road. The cast of the play will include Miss Edith Kenward, Mrs. Wright, Mr. Leonard Outram, Mr. Frank Lindo, and Mr. Basil Monk.

"LIGHTS O' LONDON" was revived at the New Olympic on Monday, with deserved success, Mr. Wilson Barrett, Mr. George Barrett, and Miss Winifred Emery playing the three chief parts. A good comediotta by Mrs. Willard was produced for the first time the same evening. It is called "Tommy." That very bright young actress, Miss Lillie Belmore, plays a principal part.

MUSIC.

RECENT CONCERTS.

A SONATA in C minor for pianoforte and 'cello by M. Em. Moor was played for the first time last Saturday at the Popular Concert. The composer, who is Hungarian by birth, was a pupil of Robert Volkmann's. He has written compositions for pianoforte and orchestra, also chamber-music, most of which has been published. The Sonata shows talent and training, but it lacks originality. It is not easy to understand why such a work should have been selected, and placed at the head of a Popular programme. Of the three movements the Adagio, with its flowing theme and florid accompaniment, is the most attractive. The performance by Mr. B. Schönberger and Signor Piatti was all that could be desired. The pianist played besides a Chopin Nocturne and a brilliant Hungarian Dance of his own. The Nocturne was the one in G major (Op. 37 No. 2); the analysis, however, of No. 1 in G minor was given in the programme-book. With respect to this No. 1 it is stated that the title "les Soupirs" was given by the publishers, Wessel and Stapleton, but that Chopin was entirely ignorant of it. He certainly knew, however, of the titles given by Wessel to some of his other pieces, for in the year 1841 he wrote to Fontana from Nohant as follows:—

"If he [Wessel] sustained losses by my compositions, it is most likely owing to the foolish titles he gave them, in spite of my directions. Were I to listen to the voice of my soul, I should not send him anything more after these titles. Say as many sharp things to him as you can."

The programme further included Schubert's Octet, led by Mme. Neruda for the second time this season.

Herr Joachim appeared on Monday night and received the usual warm greeting. The programme commenced with Brahms's Trio in E flat (Op. 40) for pianoforte, violin, and French horn. The dreamy opening movement (Andante) is full of melancholy charm. The lively Scherzo which follows forms a striking contrast. The Adagio Mesto is one of Brahms's most plaintive utterances, and is—in our opinion—the finest movement of the Trio.

The Finale again is full of life. The performance, by Miss Fanny Davies and Messrs. Joachim and Paersch, was exceedingly fine. Miss Davies afterwards played Schumann's Romance in F sharp, and Clara Schumann's pleasing Scherzo in D minor. Mme. Schumann always seems to us to take her husband's Romance at too rapid a rate; Miss Davies's quieter tempo is more suitable. She was much applauded, and gave an unusually crisp and brilliant rendering of Mendelssohn's Characteristic Piece (Op. 7 No. 7). Herr Joachim's solo was the Romance from his Hungarian Concerto, and his encore was one of the Hungarian Dances. The programme also included Beethoven's Septet. Some look down upon this, as did indeed the composer, as an early work. He certainly did produce greater things; but fresh generations are continually springing up, and to them the Septet appears new, fresh, and beautiful. Miss Bertha Moore sang Schumann's "Mondnacht," not a very suitable piece for a concert-room, and Henschel's graceful "Spinning-Wheel Song."

The Bach Society gave their second concert at St. James's Hall on Tuesday evening, when the whole of the programme was devoted to Bach. First came the Cantata, "Ich hatte viel Bekümmerniss." This was written during the composer's Weimar period, and is one of his ripest and richest works. Bach inscribed over it "Per ogni tempo," and these words may be taken in a wider sense than he intended. The first chorus, after the expressive Sinfonia, with its ingenious polyphony, has a theme which recalls the opening of Handel's "Ais and Galatea." The Aria for soprano with oboe obbligato is full of character, while the second Aria in F minor in no way yields to it in interest. In the chorus, "Wherefore grievest thou, O my spirit?" Bach gives us music which satisfies the intellect and stirs the emotions. The Cantata ends with a grand fugal chorus. This last number, like some of Handel's choruses, would bear any number of voices. Another work performed was "O ewiges Fener, o Ursprung der Liebe," a Wedding Cantata. The opening chorus is a fine piece of writing, full of life and ardour. The rest of the work did not, however, make a great impression; but the fact is that the programme was not only long, but also unequal in merit. The Partita in E, magnificently interpreted by Dr. Joachim, is a masterpiece of the first rank. But one can scarcely say the same of the Concerto for violin, two flutes, and strings played by Dr. Joachim and Messrs. Barrett and Toothill—one of the set known as the Brandenburg Concertos; it has no distinctive character, and is merely clever Capellmeister music of the eighteenth century. The programme included, besides the unaccompanied Motet, "Singet dem Herrn." The choir sang, as usual, neither very well nor very ill. The solo vocalists, Mrs. Hutchinson, Miss Hilda Wilson, Messrs. Hirwen Jones and Plunket Green, all deserve praise. Dr. Stanford conducted with his customary care; and he deserves the thanks of musicians for making Bach's noble Church Cantatas such prominent features in his scheme.

Gounod's "Redemption" was given at the Albert Hall on Wednesday evening; and, judging by the very large audience, this Oratorio has lost none of its popularity. Mme. Nordica sang extremely well, and the solo "From thy love as a Father" was encored. For a long time Mr. Barnby seemed to hesitate as to whether he should yield to the loudly expressed wish of the audience. Mme. Belle Cole was in good voice. Messrs. Iyer McKay, Watkin Mills, and Henry Pope acquitted themselves in a satisfactory manner. The chorus sang splendidly, and the "Unfold, ye portals everlasting" produced, as usual, a great impression. J. S. SHEDLOCK.

ELLIOT STOCK'S NEW LIST.

THE GENTLEMAN'S MAGAZINE LIBRARY.

NEW VOLUME JUST READY.

Tastefully printed on antique paper, and bound in cloth, price 7s. 6d.; hand-made paper, Roxburgh, 10s. 6d. net; Large-Paper (50 only), 21s. net. *The Roxburgh and Large-Paper Editions of this work are only sold in sets.*

Architectural Antiquities. Part II.

Being the Eleventh Volume of "THE GENTLEMAN'S MAGAZINE LIBRARY." A classified collection of the chief contents of "The Gentleman's Magazine" from 1731 to 1808. Edited by GEORGE LAWRENCE GOMME, F.S.A.

"Few of the collections yet published in the series have been more attractive than this, from the point of view of the antiquary."—*Morning Post.*

Now ready, in foolscap 8vo, olive cloth, price 4s. 6d., post free.

A Return to Paradise, And other Fly-Leaf Essays in Town and Country.

By JOHN JAMES PIATT.

Author of "Idylls and Lyrics of the Ohio Valley," &c.

CONTENTS.—A Return to Paradise—Lares Emigrantes—A Boy's Sight of a Ghost—Thanksgiving for a Day of Spring—A First Look at Strawberries—Summer Pictures with One's Eyes Shut—Unexpected News of Death—Fragments of Driftwood—A Handful of Autumn Leaves—A Newspaper's Monologue on its Birthday—In Winter Quarters—Going to Bed in a Cold Room—Idyll of a Winter Morning—An Acquaintance with Longfellow.

"The author takes no hackneyed themes, nor is his treatment of them conventional. There is a very acceptable individuality in all he does, and withal a welcome air of scholarship both in the ideas and in the expression. Altogether, these essays are above the average, and they are enshrined in a casquet worthy at once of themselves and the good taste of their publisher."—*The Globe.*

SECOND EDITION, Revised, tastefully printed and bound in cloth, price 3s. 6d.

Poets of the People in Foreign Lands.

By J. W. CROMBIE.

"A genuine and substantial contribution to the belles lettres. ... His verse is neat and accurate, his prose is flowing and pleasant."—*Globe.*

"Abundance of interesting matter ... matter sufficient to have furnished forth a stout octavo."—*Speaker.*

"A singularly well written and charming little volume Every line will be found well worth reading." *Literary World.*

NEW VOLUMES OF VERSE.

In crown 8vo, cloth, price 6s.

Lyrics from the Hills.

By CHARLES ARMSTRONG FOX.

"With an ardent love of nature, he combines the power of stimulating the fancy of others by a lively play of imagery which ennobles while it fascinates. He holds the creative faculty in active exercise, which originates all possible conceptions of loveliness of shape and clothes them with a beauty of expression which educates the soul for the higher mission, not only of living, but of living above the earthliness of a lower existence."—*The Rock.*

In crown 8vo, cloth, price 3s. 6d.

The Love Song of Barbara.

A Narrative Poem of London Life.

By CHARLES JOSEPH WHITBY.

"Deserves strong commendation on account of the correctness of its metrical form, the elegance of the diction, and the chaste character of some of the imaginative passages." *Public Opinion.*

"Displays genuine poetical feeling and a great deal of originality."—*Liverpool Daily Post.*

"Mr. Whitby's ten cantos show considerable power over the difficult Spenserian verse-form."—*British Weekly.*

In crown 8vo, neatly bound, price 2s. 6d.

Lostara: a Poem.

By SOPHIA LYDIA WALTERS.

Dedicated to "those thinkers whose mode of reasoning tends to reconcile opposing schools of science and philosophy."

"Contains many truly poetic ideas, some of which are expressed with considerable verbal skill. Miss Walters should do good work in the future."—*Sunday Times.*

"There is merit in many of the lyrics."—*Literary World.*

"Not without many good lines and some suggestive ideas." *Manchester Examiner.*

LITERATURE.

Studies in Ruskin. Some Aspects of the Work and Teaching of John Ruskin. By Edward T. Cook. (George Allen.)

THE advice given some years ago by Mr. Brander Matthews on the subject of prefaces has not been taken to heart by Mr. Cook. "In the preface the author must put his best foot foremost," said Mr. Matthews; and he warned authors not to make their prefaces weak in tone, or nerveless, or apologetic, for then "the critic takes the author at his word and has a poor opinion of him." Mr. Cook's preface is not nerveless, but it is in some degree apologetic. The author fails to put his best foot foremost. He leads the reader to expect little more than a reprint, with additions, of two articles which appeared in the *Pall Mall Gazette*. No doubt, the finest piece of prose literature in the world might take the form of a newspaper article; but as a rule it does not, and work of high permanent value is hardly looked for in the daily press. If Mr. Brander Matthews's counsels had been heeded, the impression from the preface would not be of a volume consisting mainly of reprinted newspaper articles, but of one of widely different description, a portion of whose contents did, in the first instance, appear in a newspaper. And this impression would be correct, as the reader who proceeds with the book is, by-and-by, agreeably surprised to discover. But why discourage either critic or general reader at the outset, and incur the risk that he may not think it worth his while to proceed?

At the same time, excellent as the work is, its various sections are not so perfectly welded together as they should be. There is not that absolute unity of structure which properly belongs to a book. Nor is the "study" exhaustive. Mr. Cook has written a guide-book to the National Gallery. His present volume is a guide-book to Ruskin. It is a first-rate guide-book, well designed to help the inquiring student through the devious ways of Ruskin life and writings, to reveal beauties, furnish information, and stimulate interest. Regarded in this way, the rather disjointed character of the contents, and even the introduction of contributions from other pens, are not unbecoming. Undoubtedly, anyone interested in Mr. Ruskin will find himself much aided in the effort to understand him by a perusal of Mr. Cook's work.

Mr. Cook is cordial, but critical. He understands and sympathises with the subject of his study, but does not allow his own independent judgment to be biassed. His is not the spirit of the Ruskin cult

which holds that Mr. Ruskin can do no wrong, that whatever he says and does is excellent just because it comes from him. Thus his book is valuable in a way which few books treating of the same subject are valuable. For, usually, such studies are written in a strain of indiscriminating eulogy; while a few err on the other side. "Nothing is easier for a captious critic," says Mr. Cook, "than to convict Mr. Ruskin of inconsistencies, and for a superficial reader, than to fall into bewilderment." Most of the enthusiasts are superficial and their bewilderment is great, while a captious critic seldom enlightens anyone, and in the case of Mr. Ruskin is especially likely to darken instead. Mr. Cook is a reader, but not superficial, and a critic, but not captious. Hence the exceptional merit of his book.

There are few eminent teachers toward whom an attitude of critical discernment is more necessary than toward Mr. Ruskin. He has declared himself to be "an impetuous, inconsiderate, and weakly communicative person." We must not hold him too severely to his words; he did not mean them, or meant them only at the moment of writing, when he happened to be in an impetuous, inconsiderate, and weakly communicative mood. Self-condemnatory statements are common enough. Most respectable persons in this country make a public statement, once a week at least, that they are "miserable sinners." All the while they are perfectly well satisfied to be and to remain so. Mr. Ruskin, also, when declaring himself to be impetuous, inconsiderate, and weakly communicative, feels no manner of shame in the fact, and shows no desire to amend himself. There is this difference between the prayer-book declaration and the declaration of Mr. Ruskin, that the one is a recognised part of a formal act of worship and neither excites nor is intended to excite attention, while the other is a declaration made consciously and for a purpose. Mr. Ruskin never forgets himself and never can endure to be in the background. Not in any of his writings is he "the man behind the book;" he is always the man in the book, and about whom the book is, in greater part, written. A man of magnificent generosity, "ever avaricious of giving," no one supposes for a moment that he ever gave anything in order that the gift might be talked about. It is not the less true that there does not abide in him that self-abnegation which after he had done good would make him blush to find it fame. He would not be happy if he were not talked about. With this consuming desire to be noticed, Mr. Ruskin's salvation lies in the nobleness of his sentiment, which leads him to desire to be noticed for noble things. But, rather than fail to make a sensation, he would denounce himself as an "impetuous, inconsiderate, and weakly communicative person."

We must not, then, hold Mr. Ruskin too strictly to his declaration. In the face of all that is known of his character and career, it is impossible to suppose for a moment that it is true. Yet it contains an element of truth. The long record of his unfinished works proves him to be impetuous; incon-

siderate he is—else the captious critic would not find it easy, as Mr. Cook says it is, to convict him of inconsistency; and weakly communicative he also is—else he would not talk so much, in season and out of season, about, not his great self only, but his trivial self. He is precisely the man to be the subject of a cult. Delighting to be noticed and delighting to play the guide philosopher and friend, he must needs encourage his would-be worshippers. There are Browning societies as well as Ruskin societies; but the former, questionable as their value is, do not flourish with the rank luxuriance of the latter, simply because Robert Browning was too great a man, too self-centred, to do more than, at the most, tolerate his worshippers. When a man is godlike he does not wish to be worshipped as a god.

As a teacher, then, Mr. Ruskin is to be accepted with reservations. Persons who regard him as an oracle are likely to derive more harm than benefit, not only by reason of the surrender they make of their own self-reliance and judgment, but because, under guidance so erratic, they are pretty sure to "fall into bewilderment." Critical discernment is, as I have said, peculiarly necessary in this case. When it is exercised, good may, or rather must, come. Mr. Ruskin as a master is a mistake. Mr. Ruskin as a man of noble instinct, of deep wisdom and deeper insight, whose words have the force, not of laws, but of valuable suggestions, becomes a good "friend and aider of those who would live in the spirit." His very weaknesses—his fussiness, fickleness, and vanity—when they take their right relation, give a certain grace to the service he renders. No longer an autocratic leader, often stumbling and misleading, but a friend and brother, greater than ourselves, his words, taken for what they are worth, are often found to be worth very much. We need not admire his random talk about "eggs of vermin, embryos of apes, and other idols of genesis enthroned in Mr. Darwin's or Mr. Huxley's shrines," or fall into raptures over his disquisitions on goose-pie, or deny that he is insolent when he speaks of John Stuart Mill and Herbert Spencer as "geese." The wheat is easily winnowed from the chaff. The teacher entitled to homage is he who affirms and reiterates sentiments such as these:—

"The consequences of justice will be ultimately the best possible, both for others and ourselves, though we can neither say what is best nor how it is likely to come to pass."

"The man who does not know when to die, does not know how to live."

"The modern religious fact-hunter, despising design, wants to destroy everything that does not agree with his own notions of truth, and becomes the most dangerous and despicable of iconoclasts, excited by egotism instead of religion."

"If you will make a man of the working creature, you cannot make a tool. Let him but begin to imagine, to think, to try to do anything worth doing, and the engine-turned precision is lost at once. Out come all his roughness, all his dulness, all his incapacity, shame upon shame, failure upon failure, pause after pause: but out comes the whole majesty of him also; and we know the height of it only

when we see the clouds settling upon him. And whether the clouds be bright or dark, there will be transfiguration behind and within them."

Of the practical undertakings with which, at one time or another, Mr. Ruskin associated himself, the most important, albeit one of the most unsuccessful, was the Guild or Company of St. George. It was founded in 1871, to "get moneys and lands together"—"field joined to field and landmarks set which no man shall dare hereafter to remove"; and over those fields "the winds of heaven shall be pure, and upon them the work of man shall be done in honour and truth." Writing twelve years later, Mr. Ruskin declared that the St. George's Guild

"is not a merely sentimental association of persons who want sympathy in the general endeavour to do good. It is a body constituted for a special purpose: that of buying land, holding it inviolably, cultivating it properly, and bringing upon it as many honest people as it will feed." [*Fors.* Letter 93].

Of the means to this end it is not necessary to say more here than that Mr. Ruskin has an infinite faith in government by "beneficent autocrats," and really seems to believe that such beings are discoverable. Had he himself been a second Robert Owen, with business talents and perseverance as great as his philanthropy, something might have been achieved. As it is, the Company is still in existence, owns a farm near Sheffield, some cottages at Barmouth, and a few acres of land elsewhere. But, as Mr. Cook says, "the St. George's farms have produced very little except a plentiful crop of disappointments." The Museum, upon which Mr. Ruskin has lavished both money and thought, has, no doubt, borne better fruit than the Guild. It is now leased to the Sheffield Corporation for twenty years. But none of Mr. Ruskin's "practical" undertakings has fulfilled, or come within measurable distance of fulfilling, the purpose and expectations of their founder. Excepting as illustrations of Mr. Ruskin's teaching, they are little more than failures. But they do serve as illustrations. These few spinning-wheels and weaving-ooms which have been set going will not revolutionise our manufacturing system or discredit the use of steam-power. It would be a pity if they did. Incidentally, they may increase the means of support and the happiness of a few poor families; but their importance to the world is as symbols, in an age too careless of genuine work. They call us back, not to the period of clumsy contrivances which, in their own time, were tolerated only because inventive genius was deficient, but to the honesty which, now-a-days, is supposed to have been the characteristic of that period. But steam-power is not necessarily fatal to honest work. The discernible fruit of Mr. Ruskin's efforts is scanty as yet. It may be traced in such undertakings as those of Mr. Rydings at Laxey and Messrs. George Thomson & Co. These disciples have proved themselves to be not mere hearers of the word, but doers also; and it is a pity Mr. Cook has told us so little about them, for in such directions, if anywhere, Mr. Ruskin's permanent influence will be chiefly manifested.

As to Mr. Ruskin's peculiar notions about steam-power, usury, and publishing—though

he proclaimed them somewhat loudly and they attracted more attention than they deserved, they never really entered deeply into his life. They may have been mere conscious eccentricities, serving to advertise him, some of those "fads and fancies" of his, of which Mr. Cook says they have "often been laughed at, but by no one more heartily than himself." There is a tone of insincerity about them which seems unnatural in so resolute a preacher of sincerity. While condemning steam-power, Mr. Ruskin used it for convenience in travelling and for printing his books; and his denunciation of "usurers" as thieves did not prevent him from living on the rent of houses and the interest of his capital. It reminds one of Dr. Cummings securing a long lease for his house when he professed to believe the end of the world was at hand. After a time, the theories themselves gave way to a great extent. His books are now sold in cheap editions in much the same way that other books are sold, and even his publisher has migrated from "the middle of a country field" to London itself. These failures and inconsistencies prove that the theories had not a vital relation to Mr. Ruskin's real work.

The notes on Mr. Ruskin's Oxford lectures which Mr. Cook appends to his book are of interest and value, for they contain much that never appeared in the printed versions. The personal descriptions of Mr. Ruskin as a lecturer are also good, bringing us, as they do, nearer to the man himself. The book, as a whole, gives a truer and therefore better impression of Mr. Ruskin personally and of his teaching and work than any other that has appeared for some time.

WALTER LEWIN.

THE CARTHUSIAN MARTYRS UNDER HENRY VIII.

Origines du Schisme d'Angleterre. Henri VIII. et les Martyrs de la Chartreuse de Londres (avec Cartes, Plans, Héliogravures, Facsimile, &c.). Par Dom Victor-Marie Doreau, Prieur de la Chartreuse de Saint-Hugues, Parkminster, Sussex. (Paris: Retaux-Bray; London: Burns & Oates.)

THE community of the new Charterhouse in Sussex seem determined to spare no pains in making known the sufferings of their predecessors, the Carthusian Martyrs in England in the reign of Henry VIII. And they may be assured, in these days, of all possible sympathy, even from those who care little for monasticism and can yield no obedience to the authority of the Church of Rome. For whatever may be said of the beneficial effects of the English Reformation, there is no possibility of disputing the violence and brutality with which it was originally enforced; and the patient victims of despotism deserve all the honour due to men who have laid down their lives for conscience sake. We need not wonder therefore at the appearance of this sumptuous volume, illustrated with numerous engravings, partly from old prints and pictures, partly from sketches of the Charterhouse and the Tower of London as they exist at present. These

alone would suffice to give the work very considerable value.

It is true that the ancient engravings, valuable as they are, require to be used with some discrimination if looked at in the light of historical documents. For not one of them is strictly contemporary with the acts which it illustrates, and it would be a great mistake to treat any of them as if it were a photograph of the actual scene. A few, from pictures in various foreign Charterhouses, seem to be no more than ideal representations of the trials and martyrdoms of the English Carthusians. But there are two or three to which a higher value may reasonably be attached, especially the copy (opposite p. 352) of an engraving made in 1584 from a picture which has since disappeared belonging to the English College at Rome. It represents five Carthusians hanging from two pair of gallows, the executioner being apparently on the point of cutting them down half-dead to undergo the further brutalities—which we also see depicted in the foreground—of a barbarous law. This engraving, we are informed, has been used as an important piece of testimony in the recent "beatification"; and it was certainly right thus to bring it in facsimile before the eyes of many who could have no opportunity of inspecting the print of 1584 itself.

The care bestowed upon these graphic illustrations seems to justify one word more before proceeding to the letterpress; for local antiquaries will be no less thankful for the views of old London Bridge and the entrance to old Newgate, and for the two views of the old parts of the existing Charter House building, than for anything else in the book. Indeed, the question almost presents itself whether the engravings were meant to illustrate the text or the text the engravings. For the literary part of the book is really very much composed of pictures also. Like the work of Dom Lawrence Hendriks, *The London Charterhouse*, reviewed by me in the ACADEMY of June 15, 1889, it consists merely of a series of sketches of the history of English Carthusianism, both before and after the Reformation; and though some attempt is necessarily made in the central epoch to set forth the main facts connected with Henry VIII's first marriage and divorce, the view taken of the political history is not marked by much originality. It is, indeed, what we might very well expect from a good Carthusian in his cell. Henry himself is the evil genius of the age, who threw off the authority of the Church and led his whole people into schism. It is needless to look beyond him, or about him, for other and concurrent causes of this serious evil. And though Father Doreau takes note both of Henry's early zeal for the papacy, and of the testimony of Giustinian to his early delight in hearing masses, he finds nothing better to explain these inconsistencies than innate hypocrisy of character.

So completely is Henry VIII. an object of horror and detestation that Father Doreau seems to feel himself half-bound to apologise for exploding a strange story of his coronation, into which some French writers have been led by a curious blunder of Sir Henry

Ellis; for he protests that he does this only in the interest of historical truth and not with any view to mitigate the reader's judgment on Henry's character. As the tale itself will be new to most Englishmen, it is worth while relating it here before explaining its origin. At his coronation it is stated that Henry was solemnly asked by the Archbishop of Canterbury whether he would maintain the ancient privileges and liberties of the Church, and swore that he would do so. But scarcely was the ceremony over when he asked for the written form of the oath that he had taken, and withdrawing into a secret chamber, altered it with his pen, interpolating words to make it appear that he had sworn to defend those ancient liberties only so far as they were not prejudicial to his royal dignity. He then shut the book, says M. Audin in his *History of Henry VIII.*, without showing anyone what he had done.

The fine historic imagination which conceived this episode had documentary evidence to go upon. Sir Henry Ellis actually printed and even engraved in facsimile a coronation oath corrected in this manner by Henry's own hand, and drew from it the remarkable conclusion that Henry aimed at supremacy over the English Church even at the commencement of his reign. Unfortunately for this wonderful theory the text of the oath is in the handwriting of Wriothesley, who was not heard of in the early years of Henry VIII.'s reign; and, as I pointed out briefly in my *Calendar* some years ago, the document was undoubtedly drawn up and corrected by the royal hand about the twenty-sixth year of the reign when the Act of Supremacy was passed by Parliament. It was a coronation oath for future kings that Henry was preparing—one in which royal supremacy over the Church should be carefully safeguarded in time to come. At the commencement of his reign, and for many a long year afterwards, his mind was altogether different; and when he wrote his book against Luther, strange to say, even Sir Thomas More suggested to him that he had perhaps gone too far in defence of papal authority. But I know not where Father Doreau discovered that he said, in answer to the remonstrance, "Non, non, je ne puis être trop explicite. N'est-ce pas du Saint-Siège que je tiens ma couronne?" Such an acknowledgment, surely, could hardly have passed his lips.

It would be wrong, however, to judge a book like this by the light it throws upon political history. For the title is clearly intended to suggest, not that Henry VIII., but that the Carthusian martyrs under Henry, are the main subject of the work. We are introduced to the cloister that we may see how the sanctuary was violated; we are not taken abroad into the world, into courts or camps or council-chambers to learn how the great political and ecclesiastical revolution came about, of which Prior Houghton and his fellow-martyrs were the first victims. But to enable us to appreciate more fully the spirit of that tranquil life which was so rudely disturbed, Father Doreau first carries us back to the foundation of the monastery at the close of the

fourteenth century, and relates to us briefly the stories of former priors as they stand in the records of the Order. In some of these there is a legendary element which suggests curious questions—as, for instance, the story of William Tynbygh's early life, which we should be sorry to suppose came from himself in the form in which it is related by Maurice Chauncy. Prior Tynbygh, we are told, when a young man, was taken prisoner by the Saracens in Palestine, whither he went on pilgrimage, and was condemned to death. Expecting his fate, he prayed vehemently, and fell asleep in his dungeon, invoking St. Catherine, whose image he remembered vividly in a chapel close to his Irish home. To the astonishment, both of himself and his friends, he woke up, not in Palestine, but in Ireland; and Father Doreau, apparently, has no doubt about the fact.

For my own part, I wish it clearly understood that I have no doubt either of the veracity of Prior Tynbygh or of the honesty of Maurice Chauncy. And yet from whom could Chauncy have learned the story but from his fellow monks when he entered the monastery two years after Tynbygh's death? And must not they in like manner have had it from Tynbygh himself? So one would think if it had only been an ordinary incident and the Charter House an ordinary community. But, in the first place, the Carthusian rule prohibited conversation in the cloister, and Carthusian humility would itself have restrained the prior from speaking much of his own adventures. But after his death every incident in the life of a prior who died in the odour of sanctity must have been precious to the brethren, and any intelligence that they could procure on the subject from Ireland must have been welcome. Need it be added that a far less imaginative people than the Irish might in the course of three score years (for according to the dates given by Father Doreau himself that must have been about the time) easily have converted some perfectly intelligible facts into a supernatural incident? If, as Father Doreau informs us, the story has hitherto puzzled Protestant critics, "*ennemis-nés du surnaturel*," perhaps it was because they had not considered the conditions of Carthusian life, and the probable sources of Carthusian information.

It will thus be seen that there are passages in this interesting volume about which there may be more opinions than one; but I think no one will read—I am sure no one ought to read—the chapters about the martyrdoms without feeling deeply moved. After recording these, the book goes on to tell of the later history of English Carthusianism domiciled abroad, as we have seen it related in English by Mr. Hendriks. The work concludes with an account of the steps recently taken to do honour to the Carthusian martyrs at Rome, and a chapter on the prospect of England being re-converted to Catholicism.

JAMES GAIRDNER.

"*CAMEO SERIES.*"—*Lyrics*. Selected from the Works of A. Mary F. Robinson (Madame Darmesteter). (Fisher Unwin.)

OUR woman-poets seem comparatively little affected by that reticence of the emotional nature which, broadly speaking, distinguishes present-day poetry (as written by men) from the poetry of the more fervid first quarter of the century. The heart, which was the fashionable sleeve-ornament for the poets of Byron's time, is worn by our male contemporaries in a less ostentatiously exposed situation, and is for the most part "clothed upon" with a thick and comfortable chest-protector of reserve, and thus guarded from that frost of public indifference which is keener now than in the days when the spectacle of a poet's inconsolable woe was among the most attractive and successful of popular exhibitions. We could not imagine any of our contemporaries writing, and publishing, such verse as Byron's "Fare thee well, and if for ever," with its "Would that breast were bared before thee, Where thy head so oft hath lain," &c. To take a different and less extreme instance, we could with difficulty imagine a man of these days calmly giving "*Epipsychidion*" to the world—even with his wife's approval. "The pageant of his bleeding heart," which Byron carried across an admiring continent with such splendid spectacular effect, would not so certainly "draw" nowadays; and if a young man under thirty were to apostrophise the West-wind in such lines as

"Make me thy lyre, even as the forest is:
What if my leaves are falling like its own?"

we fear the pathetic personal accent, lovely as it is, would provoke a smile from the profane. Indeed, with the full and final establishment of Wordsworth's position on the throne of English Poetry—which we suppose took place gradually during the ten years between the deaths of Byron and Coleridge—the great Confessional School in literature, with Rousseau at its head, De Quincey at its tail, and Burns and Byron among its most conspicuous intermediate figures, may be considered, so far as this country is concerned, to have come to an end.

Not quite, however; for the tradition of a more direct self-disclosure than is common among later poets has been continued without visible break by the poetesses. Not to mention that now perished generation of feminine singers who, with much tenderness and grace, and only too much facility, combined a sort of belated Byronic romanticism of style with a rather humdrum domesticity of sentiment, the result of the mixture being not so much Byron-and-water as a non-descript beverage apparently composed of Byron and weak tea—not to mention this now defunct school, in the stronger-voiced women-poets, from Mrs. Browning, through Miss Christina Rossetti, to their later-risen sisters, we still find in full force the intensely personal note, and the passionate necessity of heart-declaration, which seem to be the normal characteristics of songstresses' song.

In the beautiful anthology of Mme. Darmesteter's lyrics which forms the sixth volume of the *Cameo Series*, these charac-

teristics are exquisitely apparent. They are felt in such verse as the following :—

"When I am dead and I am quite forgot,
What care I if my spirit lives or dies?
To walk with angels in a grassy plot,
And pluck the lilies grown in Paradise?"

"Ah, no! the heaven of all my heart has been
To hear your voice and catch the sighs between.
Ah, no! the better heaven I fain would give,
But in a cranny of your soul to live."

And here again we have the same note, struck with the same pathetic power :—

"Ah, love, I cannot die, I cannot go
Down in the dark and leave you all alone!
Ah, hold me fast, safe in the warmth I know,
And never shut me underneath a stone."

"Dead in the grave! And I can never hear
If you are ill or if you miss me, dear.
Dead, oh my God! and you may need me yet;
While I shall sleep; while I—while I—forget!"

Yet one more illustration of this acutely egoistic vein shall suffice:

"Since childhood have I dragged my life along
The dusty purities and approach of Death,
Hoping the years would bring me easier breath,
And turn my painful sighing to a song;
But, ah, the years have done me cruel wrong,
For they have robbed me of that happy faith;
Still in the world of men I move a wraith,
Who to the shadow-world not yet belong."

"Too long, indeed, I linger here and take
The room of others but to droop and sigh;
Wherefore, O spinning sisters, for my sake,
No more the little tangled knots untie;
But all the skein, I do beseech you, break,
And spin a stronger thread more perfectly."

But although this deeply, and sometimes almost painfully, subjective quality is common to much of Mme. Darmesteter's work, imparting to it the emotional sincerity and spontaneity which are not among its least real excellencies, she has many other and happier moods, of which the lyrical outcome is no less rich in melody and grace. For an example of her lighter manner nothing could be more charming than the little piece called "Celia's Home-Coming," with its

"Maidens, kilt your skirts and go
Down the stormy garden-ways,
Pluck the last sweet pinks that blow,
Gather roses, gather bays,
Since our Celia comes to-day
Who has been too long away."

"Crowd her chamber with your sweets—
Not a flower but grows for her!
Make her bed with linen sheets
That have lain in lavender;
Light a fire before she come
Lest she find us chill at home."

This is altogether fragrant and winsome. So, too, in another way, and with the addition of a deeper meaning, are the stanzas entitled "Spring," in which nature's happy trick of repeating herself through the ages is sung with curious felicity of cadence:

"See, the aspen still is
Hung awry to droop and falter;
Still the leaves of lilies
Lift aloft their tall and tender sheath.
Wiser than the sages,
Spring would never dare to alter
What so many ages
Showed already right in bloom and wreath."

We venture to commend the foregoing sentiment to apostles of the eccentric and prophets of the amorphous, in poetry and other arts, though we have not Mme. Darmesteter's warrant for so doing. The following sonnet—fine in conception, and

in execution not inadequate—permits no ambiguity of interpretation:

"God sent a poet to reform His earth,
But when he came and found it cold and poor,
Harsh and unlovely, where each prosperous boor
Held poets light for all their heavenly birth,
He thought—Myself can make one better worth
The living in than this—full of old lore,
Music and light and love, where Saints adore
And Angels, all within mine own soul's girth."

But when at last he came to die, his soul
Saw earth (flying past to heaven) with new love,
And all the unused passion in him cried:
O God, your heaven I know and weary of;
Give me this world to work in and make whole.
God spoke: Therein, fool, thou hast lived and died."

We do not feel sure that it is given to the poets, even the best of them, to do much towards "making whole" the afflicted world they "work in"; but though the flowers in a sick-room cannot cure disease, they have yet their happy use and exquisite office. In like manner, such poetry as Mme. Darmesteter's cannot help us to "combat" the sterner part of "life's annoy"; but it brings to us, as through some open casement, wandering airs from a world of moonlight and music, and colour and perfume: a world where Sorrow does indeed come, but comes in raiment of graceful folds, and seems like Beauty's twin-sister.

Our thanks are due to Mme. Darmesteter for bringing together thus compendiously these delightful lyrics, and to Mr. Fisher Unwin for giving to some of this lady's most delicately-carved and gem-like work a setting which we cannot praise better than by saying that it is worthy of the intaglio.

WILLIAM WATSON.

TOURISTS AND COLONISTS IN NORTH AMERICA.

The Pacific Coast Scenic Tour. From Southern California to Alaska, the Canadian Pacific Railway, Yellowstone Park, and the Grand Cañon. By Henry T. Finck. (Sampson Low.)

The British Colonist in North America. A Guide for Intending Emigrants. (Son-nenschein.)

THE two latest books on America are perhaps the most satisfactory which have come before us this season. The one is written by an American, and the other by an Englishman; and though neither contains much information that can be pronounced actually new, both are replete with details obtained at first hand, and are accurate beyond the wont of volumes hastily compiled by tourists without experience sufficient to justify their literary ventures.

Mr. Finck is familiar with most parts of the United States and with the finest scenery of Europe. He is, moreover, an artist and an author of some note, and writes of the Pacific with the knowledge acquired during a residence of eleven years. He is, therefore, in a different position from the majority of his predecessors, for his pages supply an excellent guide-book to the more accessible parts of the picturesque region from Southern California to Alaska. The chapter on the mountain scenery of the Sierra Nevada and Cascade Ranges are those which are likely to prove most useful to visitors; but

all of the twelve are well worthy of study, not only for the hints they afford to tourists, but for the recent, and in almost every instance, correct information with which they are packed. The plates, with two exceptions (those two being taken from the U.S. Geological Survey), are prints from actual photographs. In every respect they are admirable illustrations, both as works of art, and as pictures of the most romantic spots in the Pacific Coast Scenic Tour. Mr. Finck, as a rule, writes with vigour, grace, and good taste. The only occasions in which he descends into offensiveness are where he deems fit to indulge in gibes at the expense of England. Thus, he thinks it necessary to declare that it is a specimen of British stupidity not to give a "check or receipt" for a parcel left at the express office in Victoria; the fact being that this institution is an American one, while the maligned British have long granted the desired boon. Again, he displays at once his "spread-eagleism" and his ignorance of the laws of geographical nomenclature by ranting over the iniquity of Mounts Hood and Rainier being named after "obscure lords" and not after American citizens. The simple rejoinder to which is that if American citizens are ambitious of this distinction they ought to discover their mountains for themselves, and not permit English naval captains to perform that office for them; though at the date when Vancouver bestowed these doubtfully appropriate titles on the Cascade peaks, Oregon and Washington were regarded as British territory. Nevertheless, the absurd manner in which the Rocky Mountains slopes are getting bespattered with the names of nonentities who happen to be friends of the explorers, though in no way connected with the region in question, demands some protest. The Canadian Pacific Railway Company is one of the worst offenders in this respect. Lieut. Schwatka set the example in Alaska; and the latest visitors to Mount St. Elias and the Chilcat county have followed suit in a style so ridiculous that it is sincerely to be hoped we have seen the last of this practice. Mr. Finck also advocates changing "Willamette" into "Oregon," after the fashion of a certain traveller who fancied that the Congo could be redubbed the Livingstone with the same facility that Californians alter the names of their big trees in the Mariposa Grove to flatter the latest political favourites.

However, with the few exceptions mentioned, the pretty volume in which Mr. Finck embodies his experiences is highly commendable, though we must take exception to his statement that there are mountains 9,000 feet high in Vancouver Island, that the Chinook "wood" has anything to do with the Japan current, or that the mild climate of "Southern England" is due to the Gulf Stream. It is also possible that the presence of "pirated American novels" in the Victoria book-shops might not strike most people as its most strikingly British feature; and to consider Montreal as an eminently English city will be news to the Canadians.

The Guide-book for Colonists is anonymous, a circumstance which is likely to cause its statements to be scanned with some dis-

trust. In reality, though the compiler is often a little loose in his orthography, and too ready to accept "facts" on feeble authority, a tolerably close examination of its contents has not detected any very serious blunders, or any attempts to entrap the emigrant in the interest of land corporations or railway companies with "alternate sections" for sale. On the contrary, the tendency of the volume is rather to deprecate the exaggerated accounts of "unlimited resources," and so forth, with which the agents of interested people flood Europe, and to warn our countrymen against many drawbacks which are inherent in the process of replanting Britons in American soil. But it is difficult to see why the only parts of Canada and the United States described as fit fields for new homes are British Columbia, Manitoba, Washington, Oregon, California, New Mexico, Texas, and North Carolina; or why Virginia, Dakota, Montana, Wyoming, and other states and territories are excluded. Much of the information given seems to have been obtained by personal visits to the regions described. The Pacific Coast, in an especial degree, is familiar to the author. British Columbia is one of the best chapters in the book, though the geographical data do not appear to have been so carefully noted as the more practical questions concerning the value of land and the price of provisions. There is, for example, no such sheet of water as the "Comox" Lake, and the coalfields in that part of the world are a considerable way from the settlement. On this point the present reviewer may be permitted a very positive opinion. For it was he who discovered and named the "Puntledge (Comox) Lake," and the stream on the banks of which his party found the first outcrop of the extensive coal-beds in that quarter was named in his honour. "Chemaenius" "Albert" (Alberni), and "Deems" (Deans), which we notice more than once, are misprints; but it is a trifle misleading to say that "until the last few years" little was known of the interior. A great deal, indeed nearly all that is worth knowing, was obtained nearly a quarter of a century ago, scarcely anything having been added to the sketch map which I published in Petermann's *Geographische Mittheilungen* for 1869, and which has been copied again and again by governments, by societies, and by private individuals, without permission and without acknowledgment. Assuredly, there is no more recent information to warrant the statement that in the interior are "peaks reaching an elevation of 9000 to 10,000 feet." Nor is the Chinook "a language common to the tribes of the Pacific Coast." It is, as most people are now aware, a mere jargon, composed of fragments of many tongues. The sportsman who expects to find "panthers" in Vancouver Island will be disappointed; though, as a compensation, we may promise them wapiti at many other places than "at the North End near Fort Rupert." In truth, there are comparatively few there.

The book is, with these trifling exceptions, unusually accurate, and almost unique among its class for the honesty with which the good and bad are placed before the reader; and the maps, though evidently prepared for

some railway guide, are sufficiently correct for the purposes of reference.

ROBERT BROWN.

Later Leaves. By Montagu Williams. (Macmillan.)

IN regard to Mr. Montagu Williams's second appearance as an autobiographer, the advice given in the *ACADEMY* to the judicious reader on his first appearance must be reversed. We then said, read the first half and skip the last; we now say, skip the first half and read the last. "It was," says our author, "my original intention to write a short book treating merely of the East End of London and of metropolitan crime; but many friends urged me," &c. The formula is well known. Those "friends" of the author have much to answer for. In this case they are responsible for 200 and odd pages of printed stuff, an undigested heap of extracts from old briefs and newspapers, mixed up with *mal apropos*, stale, and generally pointless anecdotes, which nothing but the three days a week "off" of a metropolitan police-magistrate can excuse an active man for depositing for public inspection. When those 200 and odd pages of the author's own rag-picking are succeeded by thirty more gleaned from his mother-in-law, the jaded appetite of the reader may well make him cry, Hold, enough!

But if he did, he would do it just at the wrong moment; for on p. 231 Mr. Montagu Williams returns to himself and his senses. The extracts he gives from his last cross-examination in a *cause célèbre*, the libel prosecution against the editor of *Punch* by the notorious Gent-Davis and wife, are decidedly amusing. The case unfortunately ended, after Mr. Burnand had been committed for trial, in the Lord Mayor who had committed him (Sir R. Hanson) earning the well-merited execration of all lovers of sensational cases by squaring it over a luncheon to all the parties concerned in the Egyptian Chamber.

Shortly afterwards, Mr. Williams became a Police Magistrate. He had not been a month at his new duties before he made a sensation by appealing for money for his poor-box and offering his "warrant-officers, &c.," as inquirers into the characters of applicants. In spite of being effectively "scored-off" by a correspondent in the *Times* (whose letter he very honestly quotes because he thinks he scored off him)—who pointed out that "if the magistrate and the officers had leisure for the work of administering to the needs of 600,000 people, the Home Secretary had better consider whether there was not an opening for a considerable reduction of the public expenditure"—the appeal was successful. In that and other matters Mr. Montagu Williams has now quite taken rank as a modern Cadi, who sits under his palm-tree to grease the palms of others with bakshesh instead of having his own greased (according to ancient precedent), and to settle the family jars and domestic concerns of an extensive pashalik. His experiences in this capacity are well told; and it is not too much to say that they are quite on the level in point of substance and

style with the *Bitter Cry*. He has shown praiseworthy energy, both as a man and a magistrate, in dealing with cases of "insanitary dwellings," as the dens of filth in which the poor have to live are somewhat euphroniously termed.

More novel and, in the same line, not less interesting, is the record Mr. Williams has published, from a shorthand writer's notes, of a single morning's work last year at the Worship-street Court. The morning was selected in August, and therefore probably represents a less awful state of things than a similar morning in January. First came thirty applications for summonses, the majority by women against brutal husbands for assault; then thirty-six charges for various crimes from house-breaking to drunkenness, twenty-one of them for the latter offence, seven being women.

The cases were not, of course, amusing as a rule. But the following application is worth quoting as a fairly favourable sample.

"Landlady in black, smiling cheerfully: 'My second-floor lodger died last night and she owed me five weeks' rent.' 'Well,' I observed, somewhat taken aback, 'the dead can pay no debts.' 'Quite so,' she replied briskly, and then, lowering her voice confidentially, she added, 'but I can have her things.' 'I don't know about that.' 'But don't you see, if I don't have them the milkman will. He came round to my place this morning and said she owed for fourteen weeks with four eggs every Sunday.' 'Well,' I said, 'you can distraint for rent, I don't see what else you can do.' 'Oh, I know all about that,' the woman retorted, 'but I thought, perhaps, if I mentioned the matter to you, you would give me authority. I now see,' she added, looking at me disdainfully, 'that I have made a mistake, and I beg to wish you a good morning,' upon which, with a haughty inclination of her head, this great personage left the court."

This good lady, and a gentleman who said he had enjoyed 1,007 fits in three weeks in a hospital, must afford some relief to the wife-beaters and the drunkards who form the painful staple of the morning's work. In three months during last winter, on two days of the week only, 379 of the latter cases were heard, or an average of more than fourteen a day at a single court; and these were more "drunks and disorderlies" or "incapables," and do not include the assaults and other crimes arising from drink. Mr. Montagu Williams, therefore, imputes a large amount of the misery of the "slums" to drink. But though he hints that it is doubtful whether in some cases the slums cause the drink or drink causes the slums, his experiences seem to have made him regard the "insanitary dwelling" owner as the *causa causans* of most of the misery, and the worst enemy of the London poor. He disbelieves, and gives good reasons for disbelief, in General Booth, as a general patent medicine for all our ills. Indeed, he makes the very striking assertion that already the mere rumour of his schemes had increased the "beggar's march" to London by 10 per cent., so augmenting the evil to be remedied. His own nostrum appears to be direct state interference to remove rookeries and replace them by dove-cots, the funds being derived from a graduated income tax—a proposal too large to be discussed at the fag-end of a review.

A. F. LEACH.

NEW NOVELS.

Stand Fast, Craig Royston! By William Black. In 3 vols. (Sampson Low.)

The Wonderful Adventures of Phra the Phoenician. By Edwin Lester Arnold. With an Introduction by Sir Edwin Arnold. In 3 vols. (Chatto & Windus.)

Criss-Cross Lovers. By the Hon. Mrs. Henry Chetwynd. In 3 vols. (White.)

The Plunger. A Turf Tragedy of Five-and-Twenty Years Ago. By Hawley Smart. In 2 vols. (White.)

The Story of Eleanor Lambert. By Magdalen Brooke. (Fisher Unwin.)

ONE does not, as a rule, care to undertake the responsibility of suggesting that a supremely successful shoemaker should even temporarily lay aside his last to take up some other implement. Such suggestion may dispute with prophecy the claim to be considered the most gratuitous form of human folly; but the temptation to folly is sometimes irresistible, and it is simply impossible to refrain from telling Mr. Black that it is his bounden duty to write a book about Scotch ballads. It must not be a book of scholarship, with grave array of dates, authorities, collations, and the like; it must not be composed of that literary material commonly called criticism; it must be simply a book of talk—eloquent, sympathetic, tender—talk which transports us from “Piccadilly” to “green pastures”—talk which emancipates us from the present and leaves us “sole sitting on the shores of old romance;” such talk, in short, as that delightful monologue of old George Bethune, which is the making of *Stand Fast, Craig Royston!* There is here no hinted depreciation of the new novel as a whole. As a story-teller, pure and simple, Mr. Black’s hand has not lost his cunning. He has a hero who is quite as likeable as the young Prince Fortunatus about whom he told us some time ago, and a good deal less foolish; while Maisrie is a heroine with whom we must fall in love at once if we would not proclaim ourselves men of no account, fit only for treasons, stratagems, and spoils. Of heroes and heroines, however, Mr. Black has a good score; and, doubtless, there are plenty more to come; but there is only one George Bethune, and, therefore, he is a man to be made the most of. Some critics seem to be much exercised in their minds concerning the moral character of the elderly dreamer whose genealogical tree grew in the soil of no-man’s-land, whose ancestral seat had been mysteriously alienated, whose family motto was a recent imitation of a genuine antique, and whose own personal conduct was certainly such as to give rise to uncomfortable suspicions. As a matter of fact, George Bethune has his weaknesses; but, to paraphrase a familiar line, “list to his talk and you’ll forget them all.” It has eloquence, glamour, and ever so many nameless fascinations, not the least of which is the romantic, picturesque personality behind it. Indeed, when that suggested book comes to be written—and written it must be—its best form will be that of a

monologue, with Maisrie’s father raised from the dead to act as monologist. “*Twilight in Ballad-Land*: talked by George Bethune, and edited by William Black,” would be a capital title-page, and the sale of one copy is hereby guaranteed. As for the book already written, *Stand Fast, Craig Royston!* which has here been reviewed in such very incomplete fashion, the only thing that can now be said is that it ought to be read by every one who knows what is good and who wants to increase his store of this kind of knowledge. Somehow, the perusal of any of Mr. Black’s novels seems to make one feel, at least for a time, that life is better worth living.

In one respect the author of *She* has succeeded in doing what the author of *Zanoni* and *A Strange Story* failed to do—he has made the invention of multi-centenarians a literary fashion. The latest follower of the fashion is Mr. Edwin Lester Arnold, who, in *The Wonderful Adventures of Phra the Phoenician*, introduces us to a gentleman whose experiences were certainly remarkable, inasmuch as that, while in the strict sense of the word he had only one birth—an event which occurred in the days of Julius Caesar—he suffers death no fewer than five times, his final decease happening on English ground in the reign of that bright occidental star, Queen Elizabeth. We say final, though there is no guarantee of finality, as a constitution which could survive a hacking from the sacrificial adze of a Druid priest might reasonably be expected to recover from the effects of a dose of poison administered by an unamiable Spanish rival. There is, moreover, a certain suspicion belonging to these deaths. One of them—the one for which the Druid was responsible—is certainly genuine, and there is another which it may be hyper-sceptical to doubt; but the other two look extremely like cases of prolonged trance, in which case they are physiologically rather than psychologically remarkable. Sir Edwin Arnold’s introductory remarks about transmigration, re-incarnation, *Karma*, &c., are hardly to the point. These variations of treatment do something to mar the artistic effect of the romance, for though Sir Edwin is perfectly right in saying that “to be charming an author is not obliged to be credible,” it may not unreasonably be declared that he is bound to be inventively consistent—that is, having chosen one particular incredibility (say metempsychosis) as a narrative foundation, he must build his structure upon it, and not allow another incredibility (say hibernation) to divert him from it. As a matter of fact, Mr. Arnold’s supernatural or preternatural machinery, though indispensable to the scheme of his narrative, can hardly be said to add to its attractiveness. Each of the lives of Phra the Phoenician is interesting in itself, but no part of its interest depends upon its connexion with the other lives; and the only link which binds the stories together and gives them artistic homogeneity is the occasional appearance of the British princess Blodwen, Phra’s first wife, who presents herself at odd times with no very apparent reason for the manifestation. Indeed, we should say that the least admirable feature

of the book is the very feature by which Sir Edwin Arnold is most strongly attracted; for as a simple story of adventure—or more properly as a series of stories of adventure—*Phra the Phoenician* is an admirable piece of work.

The misunderstandings of fiction are wont to be long drawn-out affairs, and in real life it is tolerably certain that the mistake which alienated Alison Langley from Colonel Gordon would have been rectified too speedily to allow of its providing material for a three-volume novel. A novelist may, however, demand some reasonable latitude in this respect; ample scope and verge enough must be given to what Goethe called “the retarding element”; and in *Criss-Cross Lovers* Mrs. Chetwynd does not suffer her lawful liberty to degenerate into license. The obstacles which delay the inevitable explanation are so ingeniously invented and naturally introduced that the reader’s mind—if it be moderately well-regulated—is free from the irritation which this kind of thing usually sets up; and the author wisely buttresses the love-story, which might be a little too slender to stand alone, by the sub-narrative of the financial difficulties of Mr. Macleod, the laird of Craigenvoehr. Perhaps the general opinion will be that the buttress, into which some really excellent work has been put, is on the whole more attractive than the main structure. We are certainly more interested in the harassed laird, whose troubles have spoiled his fine temper and made his generous instincts a thorn in the flesh, than in the very admirable, very noble-minded, but rather dull and conventional, pair of lovers; and Mrs. Chetwynd even manages to insinuate her opinion (not by any means wholly favourable) of the practical working of the Rosebery Act without making us want to indulge in skipping—a feat demanding no common skill on the part of the performer. The two busy-bodies who both over-reach themselves and make a mess of it generally—Lady Scrumpton, because she is rather too clever, and Mrs. Morrison, because she is not quite clever enough—are a very human couple; and though there is nothing at all remarkable in *Criss-Cross Lovers*, it is a very readable novel.

Mr. Hawley Smart has heightened the flavour of his latest story of sporting life by introducing a murder, followed by the usual amateur and detective business, which, stale as it is, never seems to lose its charm for the circulating-library public. There is, perhaps, no valid object to be urged against murder as an artistic motive, if more agreeable material cannot be made equally savoury; but even Mr. Hawley Smart, though not a purist in language, might have refrained from following the bad example of the third-rate reporter and calling his murder a “tragedy.” The victim of the mis-named crime is that genial country gentleman, Tox Wrexford, who is persuaded to nominate a horse for the Cesarewitch. A couple of rascally bookmakers have laid such heavy odds against the animal that its success will be their ruin; and so on the night before the race poor Wrexford’s brains are beaten out, in order that Bobadil may be disqualified by the decease of his nominator.

Apart from its homicidal material, *The Plunger* has little to distinguish it from its numerous predecessors. We have the usual turf talk—not too technical for the intelligent outsider—the usual capital description of a race, and the usual pervading vivacity, which attracts to the author's novels even readers who are not enamoured of his unvarying theme.

The Story of Eleanor Lambert is short enough to be got through with ease even by a slow reader in the course of a single afternoon. It is also very pretty and graceful, but perhaps a little too sad to hit the taste of the majority. The central narrative idea is not unlike that of Mrs. Browning's "Bertha in the Lane," but it is worked out on entirely different lines. The two girls, Eleanor Lambert and Felicia Gray, are not sisters but bosom friends; and Will Egerton, the "Robert" of the story, who unluckily falls in love with one young lady after he has in honour committed himself to another, behaves a good deal more creditably, though perhaps not more wisely, than his predecessor in the rather harrowing poem. Whether the story as a whole is true to human nature may be doubted; that it is not true to ordinary human nature as most of us know it is certain, and therefore the book has an air of sentimentalism. But if it is, as it seems to be, a first effort, it is good enough to encourage hope of something better in the future. It must be supposed that the form of the volumes in the "Pseudonym Library," to which the book belongs, is intended to attract attention by its oddity and ugliness.

JAMES ASHCROFT NOBLE.

RECENT WORKS ON OLD TESTAMENT CRITICISM.

"THE EXPOSITOR'S BIBLE."—*The Book of Isaiah*. Vol. II. Isa. xl.—lxvi. By George Adam Smith. (Hodder & Stoughton.) It is needless to mention the literary merits which in reviews of the first volume of this work were so abundantly recognised. This is, indeed, one of the few theological books which it is a pure pleasure to read; nor need one, in the case of the present volume, add the qualifying remark that the homiletical element is somewhat unduly large. The scholarship, too, is still as accurate as might be expected from Mr. Smith's excellent training. There are, however, some peculiar and disputable renderings, such as "on-ahead" (p. 119) for *בְּרִאשׁוֹ*; "a prediction" (p. 121) for *רִאשׁוֹן*; "by his knowledge (shall he) be satisfied" (p. 345), separating *יִשְׂרָאֵל* from *יִרְאֵהוּ*. And though in the choice of words a remarkable command of vigorous English expressions is revealed, I cannot help doubting whether so constant an endeavour to reproduce the Hebrew rhythm was advisable. It would be easy to quote passages in which the ordinary canons of taste are violated for an object which, to many lovers of English, will seem inadequate. But it would be unfair to quote them: in this, as in many another case, the context would considerably modify the judgment of the critic. Passing to the illustrative and exegetical matter, one notices directly the thoughtfulness of the arrangement. There are four "books," headed respectively, "The Exile," "The Lord's Deliverance," "The Servant of the Lord," and "The Restoration." Book I. contains a helpful essay on the great question of the date, and also an outline, as different as possible in style

from those given in the handbooks, of the history of Israel from Isaiah to the Exile. The summary of the "spiritual goods" which the exiles carried with them to Babylon is valuable. The opposition which ultra-orthodox critics sometimes make to the introduction of "results" other than those which relate to the primary subject of a work like this will, perhaps, only be avoided by the extreme care and the perfectly excusable generality of this summary. The view that Deuteronomy is a work of Isaiah's, is hinted at so delicately that few will notice the drift of the reference (p. 41); and the historical importance of Jeremiah, though fully realised by the author, may, for want of more facts, scarcely be taken in by the reader. Of course, the answer is that Jeremiah requires separate treatment, and that a large and comprehensive view of Jewish literature and history could not be expected in a volume of a vastly improved Pulpit Commentary. There is no reason whatever why one man should attempt to cover the whole field of the history and literature of the Old Testament. Various recent writers (Mr. Ball, for instance) have indeed been fascinated by the evening star of prophecy; even M. Renan, in his own provoking way, seeks to do justice to the personality of Jeremiah. But it was well that Mr. Smith should write even a few suggestive pages on this great prophet. Again and again he emphasises Jeremiah's influence on the work of the Second Isaiah, who, as he remarks, might almost be called the Second Jeremiah. I wish, however, that he could have formed a somewhat different estimate of the Babylonian and Persian religion. Was it only the spirit of "scribes and makers of libraries" which passed from the Babylonians to their Jewish captives (on p. 60)? Is it correct to say that "no Hebrew could have justly praised" the faith of Cyrus (on p. 165)? I will not pursue this interesting subject here. I do not myself think so lightly either of Nebuchadnezzar or of Cyrus, and have, in fact, withdrawn from the position respecting Cyrus's religion which, following Mr. Sayce and M. Halévy, I at one time took up. But by all means let the reader study Mr. Smith's interesting note on Isa. xli. 25 (pp. 130, 131), and compare Dillmann's note in his Commentary, which, though unreasonably dogmatic, says much in a small compass. Our author is at any rate not unwilling to admit that there are religious points of contact between Israel and other nations. Two interesting pages (247, 248) refer to the evidence of their existence continually being brought by Semitic research. He thinks, and rightly thinks, that such a common element is perfectly compatible with the presence of something specifically original in Hebraism. Israel was an elect people, but elected not to selfish pleasure, but to the service of God and man, and this idea finds its noblest expression in the passages on the "Servant of Jehovah." Mr. Smith preserves his independence even in the presence of an honoured teacher like Prof. Davidson (on p. 270). His defence of the theory which finds in Isa. lii. 13—liii. the portrait of an individual is admirably put. And his distinct and hearty admission that Isa. xl.—lxvi. are not, as the majority of critics have maintained, a unity, though an editor may have given them such a semblance of unity as was possible, but consist of "a number of pieces by different men, whom God raised up at various times before, during, and after the Exile, to comfort and exhort" (p. 21), is specially gratifying to one who has been blamed for his advocacy (in 1881) of a seemingly revolutionary view. It is true that Mr. Smith endeavours to spare the sensitiveness of conservative theology. He does this by showing that by extreme care the consequences of admitting this view can be

deprived of their far-reaching character. This seems to me needless; orthodoxy will have to get over more revolutionary views than this. Some readers will perhaps ask, Would not Mr. Smith have done better to publish his conclusions in another form? They are perhaps necessarily provisional, and the same remark may be made with regard to his statements on the dates of certain Psalms (see pp. 14, 218, 418). Still, the importance of conveying the critical spirit to the multitude of intelligent Bible-readers probably justifies the author in the course which he has taken.

An Introduction to the Old Testament. By C. H. H. Wright. (Hodder & Stoughton.) *Die Bücher Richter und Samuel, ihre Quellen und ihr Aufbau*. Von Karl Budde. (Giessen: Ricker.) The inherent fascination of the Old Testament is in nothing more visible than in the enormous energy and ingenuity bestowed upon its criticism. No reasonable man doubts that there are "ascertained results"; Dr. Wright, who represents a moderate English Evangelicalism, is on this point agreed with Prof. Budde, a representative of the free evangelical theology of Germany. The only question is, what these results are. I cannot honestly say that Dr. Wright's work is directly helpful to this end. But, indirectly, its utility is very great. In the space of 226 pages it not only gives an account up to date, so far as this is possible, of the state of the Hebrew text and the Hebrew MSS. of the Massora, the versions, &c., but information on some of the critical questions at issue, especially those of the Pentateuch, and a list of the chief books, old and new, bearing on the subject in hand. It is in this bibliography that Dr. Wright's strength is fully seen. German books must, as he clearly sees, be read by advanced students; Dutch and Danish works may, however, be pardonably left unstudied by the majority. There is no unfairness in Dr. Wright's selection, and few very important books, or even articles, have been omitted. His treatment of criticism is, no doubt, extremely slight. I wish that he could have gone as far as Prof. Strack in his brief *Einführung*, which represents, perhaps, the maximum of really defensible conservatism; but great allowance must be made for Dr. Wright's difficult ecclesiastical position. At any rate, he displays no animosity even towards radical critics, and his moderate concessions on Jonah, Daniel, and the Psalms deserve recognition. I now pass to a German fellow-worker, who writes in a country where "the battle of the standpoints," to use Principal Cave's expression, has been won. His idea of an introduction is large and scientific: such a book is to introduce the student to the present position of the literary criticism of the Old Testament, assuming a definite personal point of view. He finds, as others have found before him, that to produce such a work involves entering into a number of special investigations, and that if these are not published from time to time, their results are forestalled. He has given much attention both to the Hexateuch and to the books of Judges and Samuel, and it is to the latter that the present work is devoted. Nearly half of it, indeed, has been already published in Stade's *Zeitschrift*, but the student may be sure that the latest works have been carefully considered. In his scrupulous fairness, indeed, the author reminds us of no one more than of Kuenen, whose thorough representation of views differing from his own constitutes one of the many good points in his masterly *Onderzoek*. Frequent reference is made by Dr. Budde to the Leyden master; but we also see quoted Schrader and Colenso (see p. 72), Bruston (on p. 70), Cornill (on pp. 169, 175, 179, 202), Driver (pp. 2, 73, 83), Kamphausen (on p. 232), Klostermann, who really needs a few words of praise (on pp. 197, 220, 237),

Matthes (p. 163), Kittel, Stade, Wellhausen, and even A. Moses, the paradoxical author of *Nadab und Abihu* (see pp. 155, 170, 198, 255). Among the passages which deserve to arrest the attention are notes on the text of Judges iii. 22, v. vii., viii. 30, 1 Sam. xiv. 36, and the remark on a failing of the critical analysts on p. 77. The sections on the author's personal results should of course be carefully read; e.g., p. 210, where not merely one primary document, enlarged by numerous additions, but two are demanded for 1 Sam. xvi.—2 Sam. viii. I do not know whether the author, in his critical hypothesis, does not show too great a love of symmetry. Among the details of criticism, the analysis of Judges xix.-xxi., is specially important, not only for the study of Judges, but also for that of Hosea; while the treatment of 2 Sam. xxii. and xxiii. 1-7 is not without a bearing on the question of pre-Exilic Psalms. Prof. Budde holds that the Psalm of which we have a twofold recension in 2 Sam. xxii. and Ps. xviii. is certainly not Davidic, but written much later, "though still in a good period," in the name of David; and he takes a similar view of "David's testament," rendering in v. 1. "the darling of the songs of Israel." It should be added that he regards the Song of Hannah (2 Sam. ii. 1-10) as pre-Exilic on account of the reference to a king; but he admits, like Kuenen, that the Song is probably a "very late insertion," inasmuch as 1 Sam. i. 28 occurs in a more original form in the Septuagint at the beginning of 1 Sam. ii. 11. Is it probable that a genuine pre-Exilic psalm had had to wait for centuries before it found a permanent home? In fact, it is very difficult to discuss the date of this song or psalm except in connexion with that of similar compositions in the Psalter. To me it appears an early post-Exilic work, a view which I hope to justify elsewhere.

Beiträge zur Jesaiakritik, nebst einer Studie über prophetische Schriftstellerei. Von Friedrich Giesebrecht. (Göttingen: Vandenhoeck und Ruprecht.) The author here displays a singularly minute acquaintance with the data of some very difficult critical and exegetical problems. In his view of the relations between Isa. v. and Isa. ix. 7—x. 4, he takes a step in advance of Ewald, whose view, neglected for a time, was revived by myself in 1870. I do not venture to say that his re-distribution of chaps. v. and ix. 7—x. 4 is correct; it is arbitrary, and involves the excision of v. 25 as a gloss. But he has shown difficulties in the way of accepting Ewald's arrangement as a complete restoration of the original form of this text. In his second essay, Giesebrecht seeks to show that Isa. xi. 10—xii. 6 is a later insertion. That Isa. xii. 1-6 is a post-Exilic hymn has for the last ten years been clear to me, but I have long hesitated to ascribe such a vigorous passage as Isa. xi. 10-17 to the Soferim or Scripturists. Was it impossible that Isaiah, who had sometimes the gloomiest views of Israel's future, should have foreseen a vast captivity? Of course, "and from the coasts of the sea" (Isa. xi. 11b) must be given up, but might not the rest be retained? Were there not points of contact both for language and ideas in the early prophetic literature? But I must regretfully admit the force of Giesebrecht's and Kuenen's arguments. Not only Isa. xxxix. 6, and part of Mic. iv. 10, but Isa. xi. 10-17 must be an Exilic or even post-Exilic insertion; the notion of the "monotony" of post-Exilic writing must be abandoned. The third essay proposes a new view of Isa. xxviii., the rapid transitions in which are no doubt remarkable. On Isa. x. 5, 34 Giesebrecht's result agrees with that of Guthe and Kuenen. The rest of this small book of 220 pages is devoted to (1) the pictures

of the future in Isaiah (cf. Guthe's *Zukunftsbild des Jesaja*) and the arrangement of the Book of Isaiah, (2) the meaning of "the former things" and "new things" in the second Isaiah (cf. G. A. Smith's similar view in the *Expositor's Bible*), (3) the idea of Isa. lii. 13—liii. 12 (on Giesebrecht's theory, cf. G. A. Smith, ii. 349), and the alternation of threatening and promise in the prophetic writings (the theory of interpolation is shown to be not so wilful as is commonly supposed). Altogether the book is hard reading, but stimulative.

T. K. CHEYNE.

NOTES AND NEWS.

WE hear that the Council at Oxford have agreed to recommend to Convocation the name of Mr. Henry Bradley for the honorary degree of M.A. For some years past Mr. Bradley has been assisting Dr. J. A. H. Murray in the New English Dictionary. More recently he has been entrusted as joint editor with the independent compilation of a special section of the work; and we believe that a Part containing almost the whole of E is now nearly ready for publication. This he will afterwards follow up with F and G. Mr. Bradley is also president for this year of the London Philological Society. About two months ago the Clarendon Press published his revision of Stratumann's Middle-English Dictionary; and a fifth and carefully revised edition of his book on *The Goths*, in the "Story of the Nations" series, will very shortly be issued by Mr. T. Fisher Unwin.

MR. ROBERT BUCHANAN'S new poem, *The Outcast; a Rhyme for the Time*, is now definitely announced for publication by Messrs. Chatto & Windus. The text, which will be illustrated with about a dozen full-page engravings, in addition to vignettes, is divided into four portions, named respectively "The First Christmas Eve," "Madonna," "The First Haven," and "An Interlude."

ALMOST simultaneously with the publication of *The Outcast*, will appear the first number of *The Modern Review*, the monthly critical organ edited by Mr. Buchanan, which will bear as its motto the familiar quotation, "Quis custodiet ipsos custodes?" The price will be one shilling.

A COLLECTION of Stories, Studies, and Sketches by Q., which have attracted so much attention during the time of their appearance in the *Speaker* and elsewhere, will be published by Messrs. Cassell & Co. under the title of *Noughts and Crosses*.

THE second edition of Mr. Le Gallienne's *George Meredith: Some Characteristics*, will be issued by Mr. Elkin Mathews next week. Mr. John Lane's bibliography has been much extended. A contribution of Mr. Meredith's to *Chambers's Edinburgh Journal*, two years before the date of his first volume, has come to light, besides several other early writings which have never been reprinted.

MESSRS. SWAN SONNENSCHN & Co. have in the press a book entitled *The Truth about the Portuguese in Africa*, by Mr. J. P. Mansel Weale. The author has been for eighteen years resident in South Africa, and is known in scientific circles from the papers he has contributed to the *Proceedings* of the Linnean and Entomological Societies, and from the observations on orchids, &c., with which he furnished Darwin. He was secretary to the Kaffrarian Farmers' Association, and has therefore had unrivalled opportunities for the study of South African questions from the point of view of the native and the settler.

THE Saga Library, translated and edited by Mr. William Morris and Mr. Magnusson, is steadily progressing. The next volume will be chiefly taken up by the Eyrbyggja Saga, one

of the most historical of those that deal with purely Icelandic matters. The interesting and very ancient fragment of the Heath-Slayings Saga, in which several of the characters reappear, will be added in an appendix. The volume is far advanced towards completion.

MR. GEORGE CLINCH, of the Department of Printed Books, British Museum, has for several years past been collecting materials for a Bibliography of Kent, which is to include not only books relating to and printed in the county, but also lists of magazine articles and official publications.

THE title of Bishop Westcott's new book, to be published next week by Messrs. Macmillan, is *Essays on the History of Religious Thought in the West*.

THE next volume in the "Adventure Series," published by Mr. T. Fisher Unwin, will be *The Log of a Jack Tar: being Passages from the Adventurous Life of James Choye, Seaman*, edited from the original MS. by Commander V. Lovett Cameron, with illustrations.

M. GEORGES PILOTELLE—who dates from 62 York-terrace, Regent's-park—proposes to issue a reprint of a rare medical tractate of Marat, of which the only known copy is that in the library of the College of Surgeons. Like other early works of Marat, it is written in English; but, "comme tout le monde n'est pas obligé de savoir cette langue," M. Pilotelle has resolved to retranslate it into French. It will bear the title "De la Presbytie Accidentale"; but whether it is identical with the work described in the *Encyclopædia Britannica* as an "Enquiry into the Nature, Cause, and Cure of a Singular Disease of the Eye," we do not know. It will be published in handsome quarto form, limited to one hundred copies, at the subscription price of 25 francs.

FOUR new cantos of Mr. Rowbotham's poem, *The Human Epic*, will be issued in March by Messrs. Kegan Paul & Co. The period covered by the fresh instalment will be the Laurentian and Cambrian systems, the Silurian sea, the Old Red Sandstone, and the coal system. The scenery of the first three is understood to be entirely submarine, and the *dramatis personæ* are the shellfish and fishes who inhabited the ocean in those ages.

MESSRS. F. V. WHITE & Co. will publish immediately, Mr. William Day's book *Turf Celebrities I have Known*, with a portrait of the author. A new novel in three volumes by Annie Thomas (Mrs. Pender Cudlip), entitled *That Affair*, is also announced by the same firm.

A VOLUME of Antiquarian and Natural History Gleanings reprinted from the *Hampshire Independent*, is announced for early publication, by Mr. Elliot Stock, under the title of *The Hampshire Antiquary and Naturalist*.

MR. HALL CAINE'S last novel *The Bondman* has reached a sale of close upon 15,000 copies in less than a twelvemonth, which includes three editions in the expensive library form. It has also appeared in the Tauchnitz collection of "British Authors," and in Petherick's colonial collection of "European Authors." It is published in New York, in an authorised edition, by Mr. Lovell, besides in various pirated reprints. We now learn that a German translation is in preparation, which will be published by Mr. Schorer, of Berlin.

AT the request of the author, who is dissatisfied with its price and "dress," the second edition, now in the press, of Mr. Jerome K. Jerome's book *Told after Supper* has been withdrawn.

MESSRS. GRIFFITH, FARRAN, OKEDEN, & WELSH will henceforth publish the church books and similar publications formerly issued by

Mr. J. T. Hayes, of Henrietta-street, Covent-garden, who is retiring from business after forty years' connexion with this class of literature. This change will take effect from March 1 next.

THE directors of the Booksellers' Provident Association have arranged for a dinner, similar to that of last year, to be held at the Holborn Restaurant, on Saturday, March 7. The chair will be occupied by Mr. John Murray, jun., and the vice-chair by Mr. E. Marston.

M. B. H. GAUSSERON, whose bibliographical contributions to *le Livre Moderne* will be familiar to many readers of the ACADEMY, has conceived the idea of compiling a sort of French "Book-Prices Current"—a priced catalogue of recent book-sales in France. The full title of the work is—

"Bibliographie Instructive. Petit Manuel du Bibliophile et du Libraire, donnant la Valeur actuelle des Livres anciennes ou modernes recherchés et appréciés, Gravures, Manuscrits, Reliures, &c. Notes sur les Variations et la Plus-value du Prix des Livres les plus estimés en tout genre et la Mode en Bibliophilie."

The mode of issue is in fortnightly parts, at a subscription price of 16 francs for the year. Indexes of both authors and titles are promised. The publishing address is 76, Rue de Seine, Paris. Now that French books now come up for sale so frequently in London auction-rooms, M. Gausseron's Manual may be found useful by English collectors. In the three parts now before us we notice Dorat's *Les Baisers*, large paper, 1130 frs. (£45); the "Fermiers Généraux" edition of La Fontaine, 650 frs. (£26); the fifth edition of Montaigne, 385 frs. (£15). Cruikshank and Rowlandson seem to be in greater demand, even in France, than Gavarni and Cham.

WE have received the second bound volume of *The Library* (Elliot Stock), edited by Mr. J. Y. Macalister. As the organ of the Library Association of the United Kingdom, its contents are largely devoted to details of library management; and the report of the annual meeting of the association at Reading takes up the whole of two monthly numbers. But there are several papers of general interest to all lovers of books. Among these we may specially mention—the elaborate description of the "She" Bible, by Mr. Walter E. Smith, of Lowestoft; the popular series of four articles on Christopher Plantin, suggested by the tercentenary at Antwerp, by Mr. Reginald S. Faber; and a scholarly account of Frederick Egmond, an English fifteenth-century stationer, by Mr. E. Gordon Duff. Altogether, we may congratulate the editor on having attained a happy blend of the practical and the historical. One little matter we suggest for his reconsideration. The index (a very full one) is placed at the beginning of the volume, where we should naturally look for a brief table of contents, with a list of the chief contributors' names.

FORTHCOMING MAGAZINES.

AMONG the articles that will probably appear in the first or second number of the *Quarterly Economic Journal*, edited by Prof. F. Y. Edgeworth, are the following: "The Progress of the Historical School in Germany," by Prof. Hasbachs; "Some Points in French Economic History," by Mr. F. Seeborn; "The German National System of Insurance," by Dr. L. Brentano; "Mirabeau's Système Politique," by Mr. Henry Higgs; "Taxation through Monopoly," by Prof. C. Bastable; "The Valuation of Immaterial Wealth," by Prof. J. S. Nicholson; "The Reduction of Hours in Mines," by Prof. J. C. Munro; and Mr. Leonard Courtney's recent lecture at University College on "Difficulties of Socialism."

MR. WILLIAM CROOKE, author of a "Rural and Agricultural Glossary for the North-Western Provinces and Oudh," has issued a circular, dated from Mirzapur, suggesting a revival of *Punjab Notes and Queries*, of which four annual volumes were brought out by Capt. R. C. Temple, before his transfer to Burma in 1887. The latter has promised his help to the new publication, which is to be called *North Indian Notes and Queries*. It will be published monthly, at a subscription price of eight rupees per annum, including postage. The subjects treated of will comprise—religion, social customs, antiquities and local history and legends, folklore and popular superstitions, castes and modern dialects, slang and agricultural terms, proverbs, songs and riddles, biographies of early Anglo-Indians and monumental inscriptions, bibliography, the productions of local mints, minor manufacturing industries and the less-known agricultural staples. We wish all success to Mr. Crooke's enterprise.

THE March number of the *English Illustrated Magazine* will contain articles on "Hospital Nursing," by Mrs. Hunter, with illustrations by Mr. Harry Furniss; "The Etchings of Frank Short and William Strang," by Mr. Frederick Wedmore; "Impressions of Cairo," by Mr. W. Morton Fullerton; and, under the title "Traditions of the Baguen," a paper by Miss Edith Sellers on Robin Hood's Bay in the old days of smuggling.

THE *Century* for March will have for a frontispiece a portrait of William Cullen Bryant, and Mr. George R. Parkin will follow up his article on "The Working Man in Australia" by one on "The Anglo-Saxon in the Southern Hemisphere."

THE March issue of the *Theatre* will contain an article on "Duelling on the Stage—and Off," illustrated by three full-page engravings (depicting the duellists from "Ravenswood," "The Dead Heart," and "Macbeth") specially lent by Mr. Henry Irving.

MR. W. P. W. PHILLIMORE has undertaken the editorship of *Gloucestershire Notes and Queries*, in succession to the Rev. Beaver H. Blacker, by whom the magazine was started in 1878. It will be remembered that Mr. Blacker died in November, just after the completion of the fourth volume.

THE series of sketches of women of the day which Mr. Frederick Dolman contributed to the *Woman's World* is to be resumed in *Myra's Journal*, Miss Hope Temple, the composer, being the subject of the first article to appear in the March number.

THE Theosophical Society, under the auspices of Mme. Blavatsky, is evidently very angry with Prof. Max Müller. A statement appears in the January issue of the society's monthly magazine that the next numbers will consist of papers by Swami Bhaskare Nand Saraswati, F.T.S., showing over 600 important mistakes made by Prof. Max Müller in his translation of Vedic hymns and other Sanskrit works. The correct translations will be given. There may be safety in numbers.

UNIVERSITY JOTTINGS.

PROF. A. CAMPBELL FRASER, the editor of *Berkeley*, who has filled the chair of logic and metaphysics at Edinburgh for nearly thirty-five years, has announced his intention to retire as "professor emeritus" at the end of the current session. At the same time he expresses a "hope to devote some remaining strength to the service of the university by further research and literary work in the department entrusted to me, and in this way still to discharge an important part of the duties of a professor."

A fourth and revised edition of Prof. Fraser's *Selections from Berkeley* has just been published by the Clarendon Press.

BY the selection of Prof. Mandell Creighton for the bishopric of Peterborough—a selection which has been received with a chorus of approval in all quarters—the Dixie chair of ecclesiastical history at Cambridge is rendered vacant. Prof. Creighton has occupied the chair since its foundation in 1884.

PROF. MAX MÜLLER finished his third course of Gifford Lectures at Glasgow last Friday. They will be published under the title of *Anthropological Religion*.

AT a meeting held last week in the hall of Corpus Christi College, Oxford, on the invitation of the president, a proposal was unanimously adopted in favour of shortening the honours course, and encouraging post-graduate specialism; but there was less agreement about the means by which such results should be effected.

THE Council at Cambridge have accepted a proposal from Prof. Alfred Marshall to give a prize at intervals of three years, to be called the Adam Smith prize, for an essay by graduates on some unsettled question in economic science, or in some branch of nineteenth-century economic history or statistics, the subject to be selected by the candidate himself.

MR. W. B. RICHMOND has asked permission from the university of Cambridge to lend his two portraits of Charles Darwin and Bishop Westcott to the forthcoming Berlin exhibition.

THE special board for music at Cambridge recommends the renewal of the grant of £50 a year to Prof. C. V. Stanford, for the illustration of his lectures on classical orchestral works.

AT the meeting of the Cambridge Philosophical Society on Monday next, the president, Prof. G. H. Darwin, will read a paper on "Tidal Prediction—a General Account of the Theory and Methods in use and the Accuracy attained."

MR. SYDNEY J. HICKSON, the newly appointed university lecturer at Cambridge in the advanced morphology of Invertebrata, proposes to lecture this term on "The Morphology of Coelenterata."

ACCORDING to an official statement, the number of livings in the presentation of the several colleges at Cambridge is 315, having an aggregate annual value £121,624. Trinity stands first in number with 62 livings, value £19,707; but the 51 livings of St. John's show the higher value of £23,212. Then follow King's—38 livings, valued at £14,098; and Emmanuel—25 livings, valued at £12,046. The university, as distinguished from the colleges, possesses only two livings, valued at £652.

THE St. Andrew's University Dramatic and Shaksperian Society, whose representation of "Ajax" was noticed in the ACADEMY last year, are this session to act "Twelfth Night" on three days, February 26, 27, 28, the last being a *matinée*.

THE Cambridge Antiquarian Society have issued this week, as No. xxvi. of their Octavo Publications, a Calendar of the Feet of Fines for Cambridgeshire, from the seventh year of Richard I. to the end of the reign of Richard III. It is edited by that indefatigable East-Anglian antiquary, Mr. Walter Rye, who edited the Norfolk Fines ten years ago, and now has ready for the press a similar Calendar for Suffolk. The work is, of course, provided with a full index of both places and names; and in the Preface the editor calls attention to 128 unusual Christian or fore-names, only twenty-eight of which are found in a similar list of unusual names in Norfolk, and also to the nicknames.

TRANSLATION.

(From the German of Georg Herwegh.)

As the last gleams of day give place to night,
As dies the great sun's glory in the west;
O peaceful death, thus would I take my flight
Into the bosom of eternal rest!

As fades the star at first approach of day,
Still shining to the end brightly to view;
Thus painlessly I fain would pass away
Into the far-off depths of heav'n's dark blue.

I fain would die as the flow'r's fragrance dies,
Which on the wings of perfumed air is blown
From the fair calyx till it upward flies
As sweetly smelling incense to God's throne.

I fain would pass away as morning dew
Is drunk up by the sun's first thirsty beam;
Would God that thus my world-tir'd soul might
too

Be wafted upwards in the sunshine's gleam.
I fain would pass away as dies the sound
Of some sweet quiv'ring harp-string—full of
rest,

That, hardly lost to earth, its chord hath found
Within the Great Creator's loving breast.

"Thou wilt not die as dies the sun's last ray,
Nor as the star departs at early morn;
Not thine like flow'r's sweet scent to pass away,
Nor like a vapour to be upward borne.

"Yet thou shalt die, and leave no trace behind:
Yet much of life's best power's grief first shall
take.

Nature alone dies softly, poor mankind
Wears out his heart by suff'ring ere it break."

C. M. ATKMAN.

MAGAZINES AND REVIEWS.

THE February *Livre Moderne* contains a more than sufficient amount of current matter to justify its motto of *hodiernus non hesternus*. Among the most interesting parts of this is the account of the Champfleury sale of prints and drawings, at which it is surprising to learn that various water-colours of Constantin Guys, for whom Baudelaire ought to have made a name tempting to those who buy for the name, and whose work is both interesting and uncommon, went for a song. A Baudelaire collection itself, proofs of adornments by Bracquemond, for a projected edition of *Les Fleurs du Mal*, was carried off by an American, despite M. Uzan's patriotic efforts. The article of the number, however, is one on the "Portraits et Charges" of Lamartine, following up that devoted recently to Dumas. The portraits are numerous and handsome: the caricatures few and not specially interesting, for an obvious reason. There was nothing caricaturable in Lamartine's person, which was simply that (only better looking) of any gentleman of his time; and caricaturists were, therefore, driven to exaggerate dress and accessories.

In the *Boletín* of the Real Academia de la Historia for January, Sabina de Alvear sets forth the claims of her father, Don Diego de Alvear, to the authorship of the *Diario* of the survey made in 1783-1801 of the frontiers of Brazil and the province of Misiones, which was printed at Montevideo in 1882, in a work entitled "El límite oriental del Territorio de Misiones," from a MS. of José Maria Cabrer. The daughter contends that this is merely a copy of her father's work made by one of his subordinate officers. She quotes from the MS. and other materials by her father, still in her possession, to substantiate this. Roque Chabas and F. Fernandez y Gonzalez have interesting articles on the condition of the Mozarabes under Moorish rule, especially in Valencia. Christian worship continued down to the re-conquest; the Church and quarter of the Mozarabes were without the city walls, and had gathered round the shrine of St. Vincent. Santiago de Vande-

walle gives some details of the residence of Columbus in the Canaries, where he had put in to repair his ship, *La Pinta*. Padre Pita writes on the visit of S. Luis Gonzaga to Spain in 1582, and on the companionship of Ignatius de Loyola and Alonso de Montalvo in Arevalo.

THE *Euskal-erria* of December 30, 1890, wholly, and of January 10, 1891, in part, is dedicated to the third centenary of Father Manuel Larramendi, which was celebrated on December 28. The prize biography, and compositions in prose and verse, in Basque, are given in these numbers.

CORRESPONDENCE.

"ARISTOTLE ON THE CONSTITUTION OF ATHENS."

Trinity College, Cambridge: Feb. 10, 1891.

P. 6, l. 13.—*ἡδὴ κατ' ἐνιαυτὸν αἰρ[εθόντες ἐπὶ τὰς ἀρχάς]*. Read *αἰρ[εθόντων]*.

P. 11, l. 8.—*τῇ μὲν ῥήσει*. Read *τῇ μὲν φύσει*.

P. 26, l. 2.—*τῷ βουλευμένῳ [δικάζεσθαι] ὑπὲρ τῶν ἀδικουμένων*. The supplement is not satisfactory. Read *τιμωριῶσθαι*.

P. 27, l. 1.—*ὅπως τι τῆς κρίσεως [ἐ]χρ[ε] [ὁ δῆμος κ]ύριος*. Perhaps [μετέ]χρ[ε]; μετὰ in the MS. is represented by μ'. Further, κύριος seems to demand ὦν. Has the participle fallen out at the end of the sentence? The next clause begins οὐ μὴν εἰκός.

P. 27, l. 11.—*ἡ μὲν πρότερον [μὲν ἔχου]σα παρα-πλήσιον ἐβδόμηκοντα δραχμὰς*. Read [ἐλκο]υσα; The symbol for μὲν in the MS. is μ'.

P. 28, l. 7.—*ἀποδημῶν ἐλογίσαστο*. Perhaps α. ἐποίησαστο.

P. 30, l. 1.—*ἐπεὶ δὲ λέγων [πράττειν] οὐθέν*. Read, as a friend suggests, [οὐκ ἐπεί]θεν.

P. 43, l. 2.—*ἀλλ' ἀπελθόντας ἐπὶ τῶν ἰδίων*. Perhaps εἶναι should be added after ἰδίων; the symbol in the MS. is \.

P. 51, l. 12.—*ἐπεξιόντας*. Read *ὑπεξιόντας*. Herodotus (5.65) has *ὑπεκτιθέμενοι* in describing the same occurrence.

P. 52, l. 8.—*ἐπιλειπόμενος*. Read *ἀπολειπόμενος*. The same corruption on p. 76, l. 5, and p. 93, l. 5.

P. 64, l. 10.—*ἐντὸς Γεραιστοῦ καὶ Σκυλλαίου κατοικῶν*. Read *ἐκτὸς*.

P. 86, l. 1.—*πρεσβεία*. Read *πρεσβείαις*, as on p. 113.3.

P. 87, l. 9.—*τὴν δὲ βουλὴν ἐπειδὴν καταστήσῃ ποιήσαντα ἐξέτασιν ὅπλοις*. Read *καταστῇ* and *ἐν ὅπλοις*.

P. 91, l. 8.—*ἀνείναι*. Read *ἀνείναι*.

P. 93, l. 1.—*διασώσειν ἐπειδὴν ὦντο*. The editor observes on διασώσειν; "so corrected by the reviser from διασάξιν." If the reviser wrote διασώσειν, he probably made a mistake. Did he mean διασώζαι?

P. 95, l. 1.—*ἐὰν μὴ μανίων ἢ γῆρῶν ἢ γυναικὶ πειθόμενος*. Read *γῆρως ἐνεκα* and *πειθόμενος*. "The single letter i often takes the place of the diphthong ei," p. 86 n. Cf. for the correction the law in [Dem.] 46.14.

P. 101, l. 14.—*τὰς δὲ δίκας τοῦ φόρου εἶναι κατὰ τὰ πάτρια, εἰ τίς τινα αὐτοχειρὶ ἀπέκτενον* ἐκτίσει ἱερῶς. The editor supplies ἀπέκτενον, and changes αὐτοχειρα of the MS. to αὐτοχειρῖ. I think αὐτοχειρῖ more probable (see [Dem.] 59.9. *ἐκτείνων αὐτοχειρῖ*, and Plat. *Lysis*, 872 B.), and disapprove of ἀπέκτενον. In place of ἱερῶς one naturally thinks of τρώας; but I doubt whether the simple remedy of reading αὐτοχειρῖ κτείνει ἢ τρώας is the true correction. What I desiderate is (1) a proper antithesis to αὐτόχειρ (or αὐτοχειρῖ)—i.e., the word βουλευσῶς or βουλευσις; (ii.) the addition of ἐκάν or ἐκ προνοίας.

P. 103, l. 15.—*προγεννημέναις*. Read *προσγεννημέναις*.

P. 105, l. 2.—*πρώτη μετὰ ταῦτα [ἐξ]έχουσα πολιτείας τάξις ἢ ἐπὶ Θησέως γενομένη*.

MS. *πολιτεία ταξιν*; "for which," says the editor, "some emendation is clearly necessary." Perhaps [παρ]έχουσα πολιτείας τάξιν.

P. 107, l. 9.—*ὅταν δὲ γράφονται*. Read *ἐγγράφονται*.

P. 108, l. 4.—*ἐπιψηφίσανται*. Read *ἐπιψηφίσανται*.

P. 109, l. 6.—*τὸν μὲν πρῶτον ἐνιαυτὸν οὕτως ἐξάγουσιν*. Perhaps *ἐξασκῶσιν*. I think this preferable to διαγῶσι, as being nearer the MS.

P. 110, l. 7.—*τῶν ἐπὶ τῶν θεωρικῶν C. I. A. II. 114, l. 37, has ἐπὶ τὸ θεωρικόν*, according to Koehler; and, on p. 120.1 of this treatise we find τῶν ἐπὶ τὸ θεωρικόν ἡρημένων. Aesch. 3.25 has οἱ ἐπὶ τὸ θεωρικόν κεχειροτονημένοι; but, in § 24, ἀρχων τὴν ἐπὶ τῷ θεωρικῷ ἀρχὴν, and ἐχειροτονήθη τὴν ἀρχὴν τὴν ἐπὶ τῷ θεωρικῷ. So Demosthenes 18.113, ἐπὶ τῷ θεωρικῷ ὦν. The plural, then, is wrong; whether the accusative or dative singular be right seems to depend on the reading in C. I. A. II. 114.

P. 111, l. 5.—*συνάγουσιν εἰς τὴν βουλὴν καὶ τὸν δῆμον*. Omit *εἰς*, comparing p. 113, l. 15.

P. 120, l. 21.—*κατακυροῖ δὲ* καὶ ὁ βασιλεὺς τὰς μισθώσεις, τῶν μὲν *ων* ἀναγράφας κ τ λ. Read τὰς μισθώσεις τῶν τεμεῖων ἀναγράφας.

P. 122, l. 8.—τίμημα [παρὰ] ἀβόμενος. Read [ἐπιγρ.] ἀβόμενος.

P. 122, l. 25.—δοκιμαῖε δὲ καὶ τοὺς ἀνίππου, κὰν τινα προχειροτονήσῃ πέπαιτα μισθοφορῶν αὐτοῦ. Read ἀνίππου and ἀποχειροτονήσῃ; change, also, π[ρο]-χειροτονήσῃ on l. 24.

P. 125, l. 1.—ὅπως τῶν κοπρολόγων μηδεὶς ἐν τοῖς παρὰ τοῦ τείχους καταβαλεῖ κόπρον ἐπιμελοῦνται. Perhaps ἐντὸς τοῦ Πελαργικοῦ τείχους.

The editor remarks on ἐν τοῖς παρὰ τοῦ τείχους: "The original writing runs *εντας ιδων του τειχους*; but the *s* at the end of *εντας* and the *δ* in *ιδων* appear to be cancelled by dots placed over them; and over the last three letters of *ιδων* are written the characters *ς π(αρα)*. The latter character is rather doubtful, and might be read as *τα*."

ἐντὸς τοῦ Πελαργικοῦ τείχους was suggested to me by the inscription in Gilbert, *Handbuch*, l. 241, n. 3, μηδὲ τοὺς λίθους τέμνειν ἐκ τοῦ Πελαργικοῦ μηδὲ γῆν ἐξσάγειν μηδὲ λίθους. We have in Hdt. 5.61, τῇ Πελαργικῇ τείχει; and, on p. 61 of this treatise, τὸ καλοῦμενον Πελαργικὸν τεῖχος; but τὸ Πελαργικόν seems the usual Attic name. However, I now feel that ἐντὸς τοῦ τείχους is nearer the sense of the passage.

P. 125, l. 1.—ὄχεταὺς μετεώρας εἰς τὴν ὁδὸν ἔκρουν ἐχμ[έναι]. Read ἐκροᾶς ἔχον[τας], and cp. Plat. *Lysis*, 761 B.

P. 135, l. 3.—πολιτείας. "The fourth and fifth letters in the MS. are doubtful." Read ἀτελείας.

P. 139, l. 10.—καὶ πρότερον μὲν εἰς ἐνέβαλλε τὴν [ψ]ῆφον, νῦν δ' ἀναγκὴ πάντας. ἔστι δὲ ψηφίζεσθαι περὶ αὐτῶν, κ.τ.λ. Read ἀνάγκη πάντας ἔστι διαψηφίζεσθαι, κ.τ.λ.

P. 140, l. 14.—νῦν δὲ ταῦτοις αἱ φυλαὶ φέρουσιν. Read ταῦτους. comparing, e.g., Demos. 39.7.

P. 142, l. 2.—νῶν κακώσεως. Read γονῶν.

" 1. 8.—τ[ὰ] ἐαυτοῦ κτήματα ἀ]πολλύ[ν]αι. I think πατρώα preferable to κτήματα.

P. 143, l. 14.—κὰν τις ἱερῶσιν ἐπιφισβητῇ προστιμᾷ. "The reading in the MS., which is very faint, rather resembles *προς τινα*." The latter, not the reading in the text, is right.

P. 145, l. 8.—οὐδεὶς τὴν ἀ[ρ]τίαν δ[ύ]ναται ἐ]μβαλεῖν αὐτῷ. Read οὐδ' εἰς τὴν ἀ[ρ]τίαν ἐ]μβαλεῖν αὐτῷ.

P. 145, l. 10.—ὅταν δὲ τ[ις] εἴπῃ τὸν ποιήσαντα τῷ δράσαντι λαγχάνει.

The editor remarks on ἔταν δὲ τις εἴπῃ: "The reading is doubtful, as the letters are much rubbed, and the sense of the passage remains rather obscure." Read ὅταν δὲ τ[ις] μὴ εἰδῇ (or ἀγνοῇ) τὸν ποιήσαντα, τῷ δράσαντι λαγχάνει. Compare Dem. 47.69, ἀνομασί μιν μηδὲν προαγορεύειν τοῖς δεδρῶκεσι δὲ καὶ κτείναν. Plat. *Lysis*, 874 A., ἐὰν δὲ θευνῶς μὲν αὐτὸς φανῇ, ἀλλήλος δὲ ὁ κτείναν ᾧ καὶ μὴ ἀμειλῶς ᾗτοισιν ἀνέρετος γίγνηται, τὰς μὲν προῤῥήσεις τὰς αὐτὰς γίγνεσθαι. καθάπερ τοῖς ἄλλοις, προαγορεύειν δὲ τὸν φόνον τῷ δράσαντι καὶ ἐπιδικάζαντον ἐν ἀγορᾷ κηρύττει τῷ κτείναντι τὸν καὶ τὸν καὶ ὠφληκτόν φόνον κ.τ.λ.

P. 147, l. 2.—τὰς καταχειροτονίας. Here τὰς ἐπιχειροτονίας seems more suitable.

W. WYSE.

* Queen's College, Cork: Feb. 15, 1891.

On p. 27 we get some information about Solon's reforms in weights, measures and currency, as the writer says that after the Seisachthion Solon increases the measures, weights, and currency (τὴν τε τῶν μέτρων καὶ σταθμῶν καὶ τὴν τοῦ νομίσματος ἀξίαν). For the measures were made greater than those of Pheidon (a fact of great importance for those who wrangle over the Attic foot), and the mina which heretofore contained 70 drachms was made up to 100. Then we are informed that the "ancient stamp" was a didrachm; after which he adds ἔποίησε δὲ καὶ σταθμὸν πρὸς τὸ νόμισμα τρεῖς καὶ ἐξήκοντα μνάς τὸ δάκτυλον ἀγούσας καὶ ἐπιδιενεμήθησαν αἱ μναὶ τῷ σταθμῷ καὶ τοῖς ἄλλοις σταθμοῖς. Mr. Kenyon thinks τρεῖς καὶ "corrupt," as there never was a talent with 63 minae. Now, as we are told by Plutarch that 73 (not 70) old drachms (Aeginetan drachms are, of course, meant) went to the talent, it is very

tempting to suppose that τρεῖς καὶ really belong to ἐξδραμήκοντα three lines above. But if this be done, there is no augmentation of weights effected. It is, therefore, probably safer to take the reading as it stands, and to understand that Solon augmented the talent by adding three additional old minae, the new talent, of course, only having 60 minae, as the three additional minae were spread over all. The old stater of 129 grs. was thus raised to 135 grs., and so on proportionally in the case of the drachm and obol.

p. 43. ἀλλ' ἀπελθόντας ἐπὶ τῶν ἰδίων, τῶν δὲ κοινῶν [αὐτῶν νῦν] μελήτεσθαι πάντων. Surely ἐπὶ before τῶν ἰδίων and μελήτεσθαι are both wrong. Read ἐπιμελεῖσθαι τῶν ἰδίων, τῶν δὲ κοινῶν [αὐτῶν ἐπὶ] μελήτεσθαι πάντων. The very phrase, ἐπιμελεῖσθαι τῶν κοινῶν, occurs at the bottom of the page.

P. 14, for ἐκλήλυνεν, read ἐπράυνεν.

P. 77. προστάτην ἔλαβεν ὁ δῆμος οὐκ εὐδοκιοῦντα τὰ παρὰ τοῖς ἐπικείσι. Strike out τὰ, which is a dittography from the last syllable of the preceding word.

P. 80. τὴν ἐν Σικελίᾳ γενομένην διαφορὰν. Surely the Sicilian expedition suffered a διαφορὰ, not a διαφορὰ.

WILLIAM RIDGEWAY.

[In Mr. Herbert Richards's letter in the ACADEMY of last week, in the suggested emendation to p. 25, for τεθῆται read τιθῆται.

A report of the papers read last Thursday week before the Cambridge Philological Society by Dr. Jackson, Mr. Wyse, and Mr. Hicks is printed in the *Cambridge University Reporter* for February 17.]

THE PARENTAGE OF QUEEN TEIE: ANCIENT TOWNS IN PALESTINE.

Dahabiah Ishtar, Rhoda: Jan. 20, 1891.

One of the cuneiform tablets from Tel el-Amarna, now at Berlin, and recently published in the *Mittheilungen aus den Orientalischen Sammlungen* (iii., No. 188) seems at last to solve the problem of the nationality of Queen Teie, the mother of the "Heretic King" of the XVIIIth Dynasty. The tablet begins as follows:

"To my son thus speaks the daughter of the king: To thyself, thy chariots [thy horses and thy people] may there be peace! May the gods of Burra-buryas go with thee! I go in peace."

Burra-buryas was the king of Babylonia, and it is difficult to account for the mention of his name except on the supposition that he was "the king" whose daughter the writer was. Teie, however, is hardly a Babylonian name; it is probable, therefore, that it was given to the princess on her marriage with the Egyptian monarch. That this was the case with Mut-mua, the mother of Amenophis, we now know from the tablets of Tel el-Amarna, which inform us that she was the daughter of the king of Mitanni. Why the mother of Teie should be called Tu'a on the famous seal of Amenophis III. is an unsolved mystery. Tu'a is the name of an Amorite in one of the Tel el-Amarna letters, and Toi was the king of Hamath in the time of David.

Some of the letters from Palestine are sent from places which are elsewhere mentioned only in the geographical list of Thothmes III., at Karnak. Thus, one of them (No. 153) is written by Pu-Dadi the governor of Yurza, the Yurza of Thothmes (No. 60) which Brandes and Mr. Tomkins identify with Khurbet Yezeh, eleven miles S.S.W. of Mujedda; another comes from Tubikhi (No. 171), which had been attacked by the Tyrians. Tubikhi is the Tubkhu of Thothmes (No. 6). It is not noticed in the Old Testament, like Khasabu, the Khashbu of Thothmes (No. 55), the governor of which alludes to the city of Kinza and the

country of Am in Phoenicia, which had been invaded by the Hittites. In the list of Thothmes the name of Khashbu is followed by that of Tasult, unnamed in the Old Testament, but evidently the Tusulti of the Tel el-Amarna tablets (189, 193). Tasult is associated with Annkhertu, the Anaharath of Josh. xix. 19, in what was afterwards the territory of Issachar. Quddasuna, "the sanctuary" (Tel el-Amarna, No. 170), throws light on the Qitsuna of Thothmes (No. 4); and the Maskha of Thothmes (No. 25) may be the Musikhuna of Tel el-Amarna (Nos. 130, 192), of which the Mitannian Sutarna was governor. How much assistance may be derived from a comparison of the list of Thothmes with the tablets can be judged of from a single instance. The list mentions a place near Ta'anach called Gentu-asna or Gath-Ashan (No. 44). Now one of the Tel el-Amarna letters was sent by the governor of the city of *ti-as-na. One character has been lost at the beginning of the name, and the vacant space would just be filled by the sign which has the value of *gim*. Ginti-asna would be the correct Assyrian form of Gath-ashan.

The tablets illustrate the North Syrian list of Thothmes as well as his Palestinian list. Thus the governor of Gebal, Ilu-rabi-Khur ("a great god is Horus"), states (No. 91) that the country of Am was threatened by "the king of the country of the Hittites and the king of the country of Nariba." Nariba must be the Nereb of the North Syrian list (No. 189) which Mr. Tomkins has identified with Nerab, south-east of Aleppo. It may be added that Am, also called Ammiya, is probably the Ummah of Josh. xix. 30; and that Mr. Tomkins is shown to be right in extending the Egyptian empire to the eastern side of the Jordan, since one of the Tel el-Amarna letters (No. 132) is from Artama-Samas, the governor of Ziri-Basani or "the plateau of Bashan." The latter name explains that of Zarbasana, found in an Egyptian stela of a prime minister of Merenptah, whose native Syrian name was Ben-Matsana, of the land of Zarbasana (see Mariette: *Catalogue Général des Monuments d'Abydos*, Paris, 1880, p. 421, No. 1135).

A. H. SAYCE.

"TUNIP AND THE LAND OF NAHARINA."

Bentcliffe, Eccles: Feb. 14, 1891.

I have been unwell, or should have acknowledged the criticisms of your correspondents sooner. Mr. Cheyne says my notion about Naharina is not new. I am delighted. It was new to me, and I could find no reference to it in such excellent histories of Egypt as Brugsch or Wiedemann or Hommel. I am very glad that in the main I am in such excellent company as Nöldeke and Mr. Tomkins, the latter *facile princeps* in elucidating the early geography of Northern Syria. I wish he would write a memoir and publish a map embodying his discoveries.

In regard to Tunip, my suggestion was tentative only, and rather meant to emphasise the impossibility of accepting either of the sites suggested by Brugsch or Wiedemann. Mr. Tomkins agrees with me so far; but he identifies Tunip, as Nöldeke did before him, with a place still called Tennib, and marked on Rey's map.

I do not, however, quite see how we can identify this last Tennib, situated twenty miles north of Aleppo, with Tunip, which, according to the inscription of Rameses II., was planted between Kadesh and Aleppo. How does Mr. Tomkins explain this difficulty, which seems a real one? By the way, I notice that my friend, Mr. Guy LeStrange, in his admirable work on *Palestine under the Moslems*, mentions, Tinnab, "a large village belonging to Haleh"—i.e., Aleppo, and quotes Yakut I.

876, and Safi ud Din, the author of the *Marûsid al Ittila* I. 215.

Let me refer to another difficulty. In the accounts of the campaigns of the Assyrian kings in the neighbourhood of the Orontes, I can find no mention of a place Tunip. They elsewhere no doubt mention a place of this name, but it must have been far away from here. In the great inscription of Tiglath Pileser I. it is named in line 72 among the 23 countries of the Nairi, while in the part of the Bull inscription of Shalmaneser II., relating to his fifteenth campaign it is also mentioned. Hommel argues that it must have been situated near the sources of the Euphrates (*Gesch. Bab. und Ass.* 528); while Sayce says it was situated east of the Tigris on the river of Mush (the modern Kara Su) (*Records of the Past*, New Ser. 1, note 2.) This points to their having been two Tunips, one described by Rameses II. as in the land of Naharina, and the other stated in the Assyrian inscriptions to have been in the land of Nairi or Nahri, which is assuredly the same name as Naharina. It would be interesting to have the etymology of Tunip. It is a Semitic name.

I revert however to the campaign of Rameses.

I notice that it is usual—and notably is it the fashion with my friend Mr. Sayce, whose communications are always so welcome—to speak of Kadesh as the southern capital of the Hittites. This seems to me to be somewhat misleading. Kadesh was an old Syrian town, and although in the hands of the Hittites in the time of Rameses II. it had only been recently occupied. I believe myself that the cause of the war between Rameses and the Hittites after the long peace which the Egyptians had enjoyed on this side was the occupation of Kadesh and the valley of the upper Orontes by the Hittites. This was in effect an invasion of an Egyptian outpost, since the Rutenum or Syrians were deemed vassals or dependents of the Egyptians at this time. It seems to me that Tunip, where Rameses had two of his royal effigies erected, has much better claims to be looked upon as the southern Hittite capital.

Among the commentators on the campaign of Rameses I notice that there is unanimity in identifying Arathu with the Island of Aradus, on the Phœnician coast. This is possible, but I think it quite as, if not more, probable that it ought to be identified with Arfad, described by Yakul as a large village near Azaz, in the district of Halab (*Le Strange* 396), and represented on the maps by the mounds of Tel Erfad.

In regard to the connotation of Naharina, it is curious that precisely the same uncertainty exists with the Nairi of the Assyrians, the uncertainty of which Sayce explains by arguing that it meant one district at one time and another at another. M. Delattre has discussed the names at considerable length and with acumen, and his conclusion is, I think, worth quoting:

"Nairi," he says, "was a wide stretch of country, or rather a series of countries. Tiglath Pileser I. and Ashurnaturpal speak of the countries of the Nairi. The kings of Urarthu (in Armenia) who adopted the titles of kings of Nairi, looked on their own country as a part of Nairi. Tiglath Pileser I. speaks of twenty-four kingdoms of Nairi, and gives the names of twenty-three. Shamshiraman mentions twenty-seven kingdoms of Nairi, without repeating a single one mentioned by Tiglath Pileser. The name Nairi (or Nahri) seems, in early times, to have been a generic one given to the countries ranged in a circular curve around Mesopotamia, from the gulf of Cilicia to the lake of Urmia and beyond. It was then used in a sense like Scythia among the Greeks, and India among European writers of the sixteenth century." (*Le Peuple et l'Empire des Mèdes* 61.)

Schrader also speaks of the term Nairi as having a very wide connotation like that of "Great Armenia" with the classics, and as often employed among the Assyrians with the meaning "the people of the North" (*Der Namen der Meere in den Assyrischen Inschriften* 191).

H. H. HOWORTH.

Oxford: Feb. 17, 1891.

Mr. Tomkins's letter on the above subject will be valued by many besides Mr. Howorth. I wish that he would collect or condense some of his helpful papers into a single volume.

But, strangely enough, we have all overlooked one passage in which Dunip (Tanip) appears to be mentioned. It is one of the Tel el-Amarna tablets, containing, as M. Halévy states, a letter by the governor of Dunip; and the context shows that this town lay to the south of a country called by the writer of the letter *mat nuhashshe*, which had been invaded by the king of *mat hätte* in the time of Amenophis IV. M. Halévy identifies *nuhashshe* with the Heb. נחש, "copper," and *mat nuhashshe* with the Biblical נחש ארס. He also explains נחש (A. V. "zoba") with the Assyrian *qubitu*, to both of which words he assigns the meaning "copper," comparing נחש "yellow as gold." Dunip or Tunip, therefore, he infers, may be placed in the neighbourhood of Damascus. Of course this may be a precipitate conclusion. See Halévy's article, *Revue des études juives* (avril-juin, 1890, p. 199).

T. K. CHEYNE.

"LIVES OF SAINTS FROM THE BOOK OF LISMORE."

Youghal: Feb. 14, 1891.

I am not disposed to triumph over error confessed, but the pleas of textual difficulty and lack of a lexicon, put forward in the *ACADEMY* of February 7, compel me to state that most of the linguistic corrigenda are demonstrably the result of failure to perceive the idiom. With respect to the emendation on p. 39, somebody, it is now conceded, "has blundered sadly." Of the corrections, four are demurred to upon grounds which it may not be out of place to notice briefly.

1. Whether *la* (with) signifies possession or agency must be determined by the context. In the present case, the meaning is clearly defined; as, a little further on, in the narrative of the same incident, *o* (by) is used to express the agent.

2. *Uathad*=lunar day comes, it is said, "from misunderstanding the gloss *hi coicid huathid*, gl. quinta luna, Cr. 33b." Certes, it were to err in good company, even that of Mr. Stokes: "nathad s. moon, lunar month [p.] 66, hi coicid huathid (gl. in quinta luna) z. 310. Root pû? cf. Skr. pavamana" (*Three Mid.-Ir. Homilies*, p. 137). But my translation was the result of independent inquiry. *Uathad* (*singularitas*), a unit, when employed in connexion with a solar datum, means a lunar day. The usus, to mention but one source, is established by more than forty instances in the Annals of Innisfallen. One example (O'Connor, *R. H. S. ii. Ann. Innisf.* 49) will suffice here: (A.D. 1001) *Kl. Enn. for Cetain ocus aile huath[ad] fuirre*, "Kalend (1st) of Jan. upon Wednesday and the second lunar day (Epact ii.) thereon." It needs not a Scaliger or a Petavius to see that this is correct. But, according to the editor, the sense is that in 1001 Jan. 1 and Jan. 2 both fell on Wednesday. This is to introduce a new *saltus solis*; possibly to pair off with his other similar discovery of the "third Kalend."

3. In reference to *Finan Cam*, the correction proceeded from the not unreasonable belief that, after all, a twelfth-century gloss in a native martyrology was preferable to the *ipse*

dixit of a nineteenth-century translator. Herein I am fortified by distinguished authority.

MR. STOKES

(*ACADEMY*, No. 979).

He misrepresents cam, "bent," "crooked" (= *σκαμβός*) by "squinting."

MR. STOKES

(*Calendar of Oengus.*)

(April 7) Finan Cam, cam, "bent," "crooked" F. the squinting (p. lxvii). Camm, crooked (= *σκαμβός*) April 7 (p. ccxxix).

The editor's native equivalents for squinting are Irish "as she is wrote." *Cammderc*, the gloss on *strabo* of the St. Gall Priscian (folio 63a), is the Irish "as she is spoke."

4. *Fernann*, we are informed, is found as gen. of *Ferna* in the Annals of Ulster and in *Tigernach*. This I am quite prepared to believe. For it is easy enough to find corruptions even worse in the known copies of these Chronicles. But in the present case why has the editor omitted to mention, what I verified with my own eyes, that in the codex of the Ulster Annals which he professes to quote from the obit of Aed of Ferns has (folio 7b) the *Galba* and *Tiberius* form, *Ferna*? (The same is given in *Tigernach* (O'Connor, *R. H. S. ii.* pp. 188, 202); but the printed text is unreliable.) Stranger still, why has he passed over the interesting fact that the contraction of the Book of Leinster ("p. 354, col. 4") is lengthened into *Ferna* (not, observe, into *Fernann*) in the *Lives of Saints from the Book of Lismore* (p. 301)?

Finally, as to the corrections excluded by the editorial *non possumus*, it is fairly open to question whether they are completely disposed of by this facile method. For instance, two dates are quoted as at first hand from the Annals of Innisfallen. But the editor refuses to say whether they are given in the MS., or have been arrived at by independent investigation. In the latter case, it is a somewhat noteworthy coincidence that they are the same as those placed on the margin by O'Connor (*R. H. S. ii. Ann. Innisf.* 33). At all events, they are palpably erroneous, and only prove that O'Connor had not mastered the rudiments of native chronology. After this, it is perhaps superfluous to observe that, so far from acknowledging the error of the Ulster dates, the editor now produces two others similarly vitiated.

The fate portended in the concluding paragraph I have endeavoured to avert by anticipation in the February issue of the *Irish Ecclesiastical Record*.

B. MACCARTHY.

P.S.—In the editor's letter (p. 328, line 42), the correction *et necessitatibus* is wrong. Read *et de necessitatibus* (Ps. cvi. 6).

MADHOJI SINDIA.

Fairport: Feb. 17, 1891.

In connexion with the paragraph in the *ACADEMY* of February 14, relating to Sir M. E. Grant-Duff's portrait of the great Mahratta statesman and warrior, it may be of interest to some of your readers to know that an interesting picture of that leader of men will be found in Robert Mabon's work, entitled *Sketches illustrative of Oriental Manners and Customs*, published by subscription at Calcutta on February 1, 1797. The portrait in question forms Plate V. of this scarce work, a collection of nineteen hand-coloured copper-plate engravings, oblong 8vo in size.

It is titled, "The late Mahadajee Scindia, the celebrated Mahratta Chief, seated in his Tent." Mabon, who worked for James Wales, the artist, associated with the Daniells in their *Oriental Scenery and Antiquities* (London: 1793-1807) thus describes the plate:

"This famous warrior and able statesman, at the time I visited him, was encamped near Poona with

a part of his army. He was seated in his tent much in the same manner I had seen the Peshwa at the Durbar of Poona—viz., sitting on the ground, cross-legged, a round pillar behind him, and square ones on each side, on one of which was placed his sword. He was surrounded by a vast number of people dependent on him. On his right sat his nephew, Dowlat Row Scindia, behind him his chourae bardar, and a man with a silver cup for his saliva: his office was, when occasion required, to hold the cup near Mahadajee Scindia's mouth, and present him with beetle nut when he desired it, instead of putting it in his hand, after wrapping the nut carefully with a little chunam in a leaf, he thrust it in the mouth of the chief. That immense riches which I saw about the Peshwa, Prince of the Mahrattas, was not to be found here. The only thing of value which he wore was a string of very large pearls appended from his neck. On paying the usual compliment, I was seated near him: he was black, rather inclined to corpulency. On my departure a shawl and beetle-nut, according to custom, was presented me."

All the plates in Mabon's book are well executed, and constitute a valuable contemporary record of historical importance. The titles of some others are: Plate II.—"Savoy Mahadowrow-Pundit Purdhun, late Peshwa of the Mahratta Empire, seated on the Musnud, at the Durbar of Poona, in which is introduced Nana Farnavese."

Plate III.—"Savoy Mahadowrow, late Peshwa of the Mahratta Empire, exercising the Long Spear, with other Bramin Chiefs, near Parbuttee at Poona."

Plate IV.—"Savoy Mahadowrow Pundit Purdhun, late Peshwa of the Mahratta Empire, mounting his elephant on his return from Parbuttee to the Durbar."

I have never been able to find out who Robert Mabon was. It may be possible to identify him with the "unknown artist," said to have been a wandering Italian, to whom is ascribed Sir M. E. Grant-Duff's portrait of Madhoji Sindia.

ALDOBRAND OLDENBUCK.

A REFERENCE WANTED TO PLOTINUS.

7, Cheyne Gardens, Chelsea: February 9, 1891.

Can any student of Plotinus give me the reference for the following passage, which Schasler (*Kritische Geschichte der Aesthetik* i. 246) gives in his own rendering, but in quotation marks?

"(Und hiebei [the last quotation was from *Ennead*. vi. 7, 32] spricht er denn . . . den Gedanken aus, dass) 'der Maler beim Portraittiren sein Hauptaugenmerk auf den Ausdruck im Blick des Auges richten müsse, da sich hierin mehr als in der gesamten Gestaltung des Körpers, die Seele offenbare.'"

Müller (*Theorie der Kunst bei den Alten* 2, 315) seems to allude to the same passage. Neither of the historians gives a reference, and I have not been able to identify the passage, which would be of considerable interest.

B. BOSANQUET.

APPOINTMENTS FOR NEXT WEEK.

SUNDAY, Feb. 22, 4 p.m. South Place Institute: "Theosophy," by Mrs. Annie Besant.

7.30 p.m. Ethical: "The Ethics of Recreation," by Miss E. P. Hughes.

MONDAY, Feb. 23, 5 p.m. London Institution: "Hearing, illustrated by Types," by Prof. C. Stewart.

5 p.m. Hellenic: "The Life and Work of Dr. Schliemann," by Prof. Percy Gardner; "The Erechtheum," by Mr. H. W. Schultz.

8 p.m. Society of Arts: Cantor Lecture, "The Electric Transmission of Power," III., by Mr. Gisbert Kapp.

8 p.m. Richmond Athenæum: "Recreation," by Miss E. P. Hughes.

8.30 p.m. Geographical: "From Hai-phong in Tong-King to Canton, overland," by Mr. A. R. Agassiz.

TUESDAY, Feb. 24, 3 p.m. Royal Institution: "The Spinal Cord and Ganglia," VII., by Prof. Victor Horsley.

8 p.m. Civil Engineers: Discussion, "Electric Mining-Machinery," by Messrs. Llewelyn B., and Claude W. Atkinson.

8.30 p.m. Anthropological: "Religion and Family among the Haidas," by the Rev. C. Harrison; "The Anthropometric Laboratory at Dublin," by Profs. D. J. Cunningham and A. C. Haddam; "The Skull and some of the Bones of the Irish Giant, Cornelius Magrath," by Prof. D. J. Cunningham.

WEDNESDAY, Feb. 25, 8 p.m. Society of Arts: "Colonisation and its Limitations," by Mr. E. J. Ravenstein.

8 p.m. Geological.

8.30 p.m. University College: "St. Paul's Cathedral," by Prof. Roger Smith.

THURSDAY, Feb. 26, 3 p.m. Royal Institution: "Lulli, Purcell, and Searlatti," with Musical Illustrations, III., by Prof. C. Hubert H. Parry.

4.30 p.m. Society of Arts: Indian Section, "The Economic Development of Siam," by Mr. Robert Gordon.

6 p.m. London Institution: "Mrs. E. Barrett Browning," by the Hon. Roden Noel.

8 p.m. Electrical Engineers.

8.30 p.m. Antiquaries.

FRIDAY, Feb. 27, 4.30 p.m. Society of Arts: "The Science of Colour," III., by Capt. Abney.

5 p.m. Physical: "Proof of the Generality of certain Formulae published for a Special Case by Mr. T. H. Blakesley as Tests of a Transformer," by Prof. W. E. Ayrton and Mr. J. F. Taylor; "Further Contributions to Dynamometry," by Mr. T. H. Blakesley; "Electrostatic Wattmeters," by Mr. Swinburne; "Interference with Alternating Currents," by Prof. Ayrton and Dr. Sumner.

7.30 p.m. Civil Engineers: Students' Meeting, "Disintegrators," by Mr. Bertram Chatterton.

8 p.m. Browning: "Compensation—Thoughts suggested by some of Browning's Poems," by Miss Helen Ormerod.

9 p.m. Royal Institution: "The Art of Acting," by Mr. Percy Fitzgerald.

SATURDAY, Feb. 28, 3 p.m. Royal Institution: "The Forces of Cohesion," III., by Lord Rayleigh.

SCIENCE.

THE WORKS OF HORACE, Vol. II.—*The Satires, Epistles, and De Arte Poetica*. With a Commentary by E. C. Wickham. (Oxford: Clarendon Press.)

IN 1874, Mr. Wickham published Vol. I. of "The Works of Horace: Odes and Epodes." Eleven years later an English editor of Horace's Epistles pleaded as an excuse for the appearance of his work the loss of all hope that Mr. Wickham's Vol. II. would ever see the light. But *il ne faut jurer de rien*: some day we may even have the rest of Prof. Mayor's Quintilian. Thanks to "the unstinted and unselfish help" of that excellent scholar, Mr. A. O. Prickard, Mr. Wickham's notes on the Satires, Epistles, and Ars Poetica were published just when they had to bear upon the title-page the date of 1891. His former volume has been so widely used as to make it needless to enter upon the general character of the work. Suffice it to say that this remains essentially the same in Vol. II. as it was in Vol. I. There is the same fine taste and accurate scholarship, the same abundant evidence of long familiarity with every line and word of the poet, the same happy art in tracing the links of thought and grasping the spirit of a whole poem. Mr. Wickham is right in claiming that the analysis is an integral part of the commentary: it is often also the most original and helpful part.

A critic who has discharged the most welcome part of his duty by a hearty acknowledgment of conspicuous merit may be forgiven if the less agreeable function of indicating points on which judgments may differ claims more of his space. First, as to the settlement of the text. I think it is to be regretted that in this, as in the previous volume, Mr. Wickham has given no conspectus of the important variations of reading below the text, according to the fashion now so common, which some would like made imperative. In this respect an excellent example had been set by Prof. Palmer. Not many of the important differ-

ences of reading are ignored in the notes, but some are; and in many cases even slight differences are highly instructive. Then, again, we miss any definite statement of the comparative weight of MSS. Mr. Wickham does not dissent from the general tendency among recent Horatian scholars to accept the "*V-princip*"; and he hesitates to accept Keller's grouping of the MSS. into classes, though unfortunately the book was printed too soon for him to refer to Dr. Gow's final disproof of it. But, while on other points he agrees with the Berlin school, he is far from sharing their somewhat trenchant methods. A cautious conservatism leads him to defend the traditional reading, even in places where the sense seems to call imperatively for the emender's hand. If any conjecture can be called certain it is Palmer's on *Sat. i. 6, 6*; this is mentioned, but not even discussed. A conjecture hardly less certain is *cerebrique tumultu* in *ii. 3, 208*, first printed by Horkel, proposed independently by Dr. Gow, and probably occurring also to other scholars; this again is not mentioned. Close by, in *v. 201*, it is hard to see how anyone can resist the arguments in favour of *cursum*. On *i. 1, 95*, the difficulty of the reading *quidam* is hardly touched, much less met. In *ii. 6, 70*, Palmer's *lentius* is almost irresistible; but it is likewise ignored. In *ii. 5, 90*, *ultra* has by far the best authority, and is not impossible; but Mr. Wickham silently reads *ultra*, it is to be admitted in excellent company. This is, perhaps, one of the cases where the long delay in issuing the work has proved injurious. It is somewhat surprising to find in an edition issued in 1891 that there has been but little opportunity to use a first-rate commentary like Kiessling's, published in 1885. It is to be noted, by the way, that Hirschfelder's edition of Orelli (1884) seems to be similarly ignored. In *Sat. ii. 3, 318*, *num tantum?* is clearly right; but Mr. Wickham says nothing of it, although it is Bentley's reading. Perhaps it would be worth noting, on *ii. 3, 216*, that *Posillam* is apparently only quoted from V. Madvig's famous interpretation of *magis* in *Sat. ii. 2, 29*, though undoubtedly wrong, was surely worth mentioning. In *Sat. i. 8, 15*, the retention of *quo* implies, as Mr. Wickham says, that *in* is understood; but the sense calls for *ex*, which cannot be supplied. Peerlkamp's neat correction *qui*, of which nothing is said, removes all difficulty.

It is hardly needful to remark that positive errors are few and trifling. Mr. Wickham need not have gone out of his way to sanction the common mistake that *census* means "income," which leads the schoolboy (and others) to believe that the poorest Roman senator had £8000 or £9000 a year. Exact philology will not allow us to call *divisse* or *surrece* contracted forms, nor to derive *assa* from *ardeo* (the poor *assa nutrix*!), nor to identify *lymphæ sans phrase* with *nympha*. It is unkind that when the printer has given "disyll." it should be branded as a misprint in *Sat. i. 5, 67*, though it is happily spared on *Ep. ii. 2, 120*. Mr. Wickham departs without advantage from the usual convention of using † to mark

corruptions, and uses it to denote conjectures (e.g., *Ep.* ii. 2, 89, and 114). It would have been better to reserve it for impossibilities like *Pyrria* and *diu palūs*. The note on *Sat.* ii. 2, 74, sadly needs revision.

The points raised above have been for obvious reasons drawn from the Satires rather than the Epistles; but perhaps it is not only closer familiarity with the latter which leads me to think that here Mr. Wickham's commentary is even more masterly in its clearness and sobriety. On the interesting question of the date of the *Ars Poetica*, it may be worth while placing on record that the judgment of that admirable critic, Prof. Sellar, in one of the latest communications with which he favoured me, inclined to the view which Mr. Wickham also prefers, that it stands latest in date of the works of Horace.

It would be tedious to discuss the cases in which Mr. Wickham's choice of a reading may seem open to question. He has usually strong reasons to give for the view that he prefers. But it is surely a very weak defence of *si raro scribis* (*Sat.* ii. 3, 1) to quote *perrupit Acheronta* from an Ode: *defendit* in *Sat.* i. 4, 82, would be much more to the point. Mr. Palmer banishes *tumidus* from i. 7, 7, as does Mr. Wickham in his text.

It is more difficult to feel sure in speaking about omissions in the explanatory notes. The judgment of an editor of Horace nowadays is shown as much in what he omits as in what he inserts. But has an editor no more to say on *solventur risu tabulae* than that "the general sense is plain, but the figure employed is uncertain"? It is at least possible to lay it down that *tabulae* cannot mean *tabellae*, and clear away one source of misconception; and we cannot go far wrong if we say that there must be a play upon the Twelve Tables, and some literal meaning of *tabulae*, either "planks" with Kiessling, or "bills of indictment" with Palmer. On *Sat.* i. 6, 75, Mr. Wickham's conservatism has led him to retain *oetonis*; but he should not have defended it by a vague reference to Becker's (not Bekker's) *Gallus*, without noting that in Goll's edition the basis of his argument is shattered, and that practically all good recent editors now follow the reading of the best MSS. The argument from the "assonance" is hard to follow; three verses lower down we have a line repeating *s* seven times.

In conclusion, it is only to be regretted that where so much has been done more should not have been added to secure completeness. The edition might have been a final one, so far at least as the present state of critical science goes; but this it cannot be held to be. Still less can it be said to make any contributions of marked value to the improvement of the text or the interpretation of the writer. It represents the judgment of a critic of exquisite taste and decidedly conservative tendencies on the material accessible to a diligent scholar some years back. For this we have every reason to be thankful. But there is much which the student will have to seek elsewhere, much which he cannot neglect without falling below the level of our present knowledge.

A. S. WILKINS.

SOME BOOKS ABOUT CHINA.

I-li; Cérémonial de la Chine Antique, avec des extraits des meilleurs commentaires. Traduit pour la première fois par C. de Harlez. (Paris: Maisonneuve.) This new work of the indefatigable professor of Louvain cannot fail to be received with gratitude by orientalists in general. It completes the translation of the three rituals of China; the two others being the *Tcheou-li*, translated by Ed. Biot (1851), and the *Li-ki*, by Prof. J. Legge in the "Sacred Books of the East" (1885). In contradistinction with the *Tcheou-li*, which concerns the duties of officials; and with the *Li-ki*, which is more than anything else an irregular collection of ancient fragments concerning the rites and the state compiled for the Han dynasty, the *I-li* is indeed the true ritual (throughout harmonious) of ancient China. It deals with the principal ceremonies and events of life in elaborate detail. Although re-cast in its present form at the time of the revival of literature under the Han dynasty, the enactments it contains belong by their style and circumstances to the middle period of the Tchou dynasty. The rites and rules, as well as the terms employed, do not fit any other time than the ninth and eighth centuries B.C. The *I-li* has been hitherto judged rather inaccurately by European scholars; and the present translation, which is easy and free, will cause it to be studied with interest by many. Printed by the new firm, J. B. Ista, at Louvain, the book is satisfactory in paper and neatness of type.

L'Ecole Philosophique moderne de la Chine; ou système de la Nature (Sing-li). By C. de Harlez. This work, which is reprinted from the forty-ninth volume of the *Mémoires de l'Académie de Belgique*, is intended to be an exposition of the views of Tcheou-tze, Tchang-tze, Shao-tze, Tchong-tze and Tchou-hi. The matter is clearly put forth and can be easily grasped by the reader interested in so tedious a subject. We can only congratulate the author upon his patience and devotion in making known the ideas of the philosophers of the middle ages in the Far East.

Notice sur la Chine. By Henri Cordier. (Paris: Lamirault.) The publishers of the *Grande Encyclopédie* have reprinted separately this article, which is intended to be a complete monograph of its subject. The whole matter is divided into sections, which can thus be conveniently referred to. Several of the sections, such as Demography, Ethnography, and Numismatics, are rather unsatisfactory, while Language might have been dealt with somewhat differently with advantage. Others, on the contrary, are treated with all the richness of information special to the sympathetic professor of modern history and geography of the Far East at the Ecole des Langues Orientales. Such, for instance, are the sections on Foreign Religions, Physical, Political, and Economical Geography, and Foreign Relations. The wood-cuts are too small and the map is not clear.

T. DE L.

CORRESPONDENCE.

στρατεία, στρατία, στρατιά.

Oxford: Feb. 16, 1891.

There is one very small point in the text of the new Aristotle on which it would be perhaps worth while to come to an understanding. I have little doubt myself that Mr. Kenyon is right in retaining the forms which he found in his MS., *στρατίαν* and *στρατίας*, and that he is wrong only in the accents. The accession of so high an authority as this MS. and the publication of the facsimile of Cod. Vaticanus (B) of the New Testament seem definitely to turn the scale in their favour. A full discussion of these

forms in *-ela* and *-ia* will be found in that repertory of exact scholarship, the "Notes on Orthography" at the end of Westcott and Hort's *Greek Testament* (p. 153). Dr. Hort sets down this particular form *στρατία* as doubtful, referring to Krüger on Thuc. i. 3. 4, and Stallbaum on Plat. *Phaedr.* 260 B; and in their text the Cambridge editors print *στρατία*. But I suspect that they would have decided differently if they had had the facsimile of the leading MS. before them. The word occurs twice in the New Testament. In the first place, 1 Cor. x. 3, the great mass of the uncials is in favour of *στρατία*, except B, which is quoted on the other side; but Tischendorf appears to be right in his suspicion that ε (which is written small under the right limb of τ) has been added by the (third?) corrector, who has also added the accent. In the other passage, 1 Tim. i. 18, B is not extant; but although SA have *στρατία*, the first hand of D, which on such a point is a good authority, has *στρατία*. I have not examined the readings in the Old Testament.

W. SANDAY.

SCIENCE NOTES.

PROF. HELMHOLTZ will celebrate his seventieth birthday on August 31. In honour of the anniversary, a marble bust of the professor will be prepared; and it is proposed that there shall be a Helmholtz medal, to be bestowed on the most eminent German and foreign physicists. An international committee has been formed for the purpose of carrying out these schemes. It will be remembered that Prof. Helmholtz's presence at the Montpellier commemoration last summer attracted much attention. He has now received from President Carnot the grand cross of the legion of honour.

THE fifty-fifth Hunterian Oration was delivered by Mr. Jonathan Hutchinson on Feb. 14, in the theatre of the Royal College of Surgeons. After paying a tribute to the memory of Matthews Duncan and John Marshall, a sketch was given of the life and work of Hunter (including a reference to his mother, who was also the grandmother of Joanna and Dr. Matthew Baillie). We may quote here the concluding words:—

"Lastly, in reference to our university schemes and curricula of education, let us remember Hunter's aphorism—that life precedes and causes organisation, not organisation life; and beware lest, by the premature imposition of a too artfully contrived organisation, we hinder the development of life."

M. G. LIPPMANN, a French physicist, claims to have discovered the means of photographing colours. He explained his discovery at the sitting of the Académie des Sciences on March 2. The method is of great simplicity. The plates are developed in exactly the same way as in ordinary photography, and the effect is permanent. M. Lippmann's description of his process is printed in the *Chronique des Arts*.

PHILOLOGY NOTES.

THE excitement aroused by the publication of "Aristotle on the Athenian Constitution" has somewhat unjustly diverted attention from the Greek papyri found by Mr. Flinders Petrie two years ago at Kurob in the Fayoum. These, as readers of the ACADEMY know, were entrusted by him to Prof. Mahaffy and Mr. Sayce, who, amid a mass of legal and financial documents, were fortunate enough to discover not only some fragments of the *Phaedo* of Plato, but also a considerable portion of the "Antiope," a last play of Euripides. Facsimiles of both of these, with full details, will shortly appear in the *Transactions* of the Royal Irish Academy. Meanwhile, Prof. Mahaffy

has published in *Hermathena* (London: Longmans) all the longer pieces of the "Antiope," amounting to a little more than 120 lines in all. They are printed in bold inscriptional style, which fairly simulates the neat uncial characters of the original. They are, therefore, now at the disposal of scholars, for the subsequent process of emendation. The same number of *Hermathena* also contains some critical notes on passages in the Hebrew text of the Old Testament, by Prof. T. K. Abbott, which mainly consist in the removal of interpolated glosses—e.g., the whole of the passage in Ps. xl. 8, "In the roll of the book it is written of me"; some further critical notes on the Clementine Homilies, by the Rev. Dr. J. Quarry; Juvenalia, by Prof. A. Palmer; and an ingenious speculation by Mr. J. B. Bury, that the Empress Irene had made an offer of her hand to Charlemagne, with the object of uniting the Eastern and Western Empires.

THE February number of the *Classical Review* (David Nutt)—which is a double number, commencing the fifth volume—is full of interesting matter for all tastes, except that the etymologist, as usual, receives but scanty encouragement. Mr. J. G. Frazer writes from Greece, testifying that swallows there build their nests not under the eaves, but among the rafters; and the same scholar's "Golden Bough" is most sympathetically reviewed by Mr. W. W. Fowler, who has the advantage over other reviewers in having also read Mannhardt. The increasing attention paid to palaeography is shown not only by a further instalment of Dr. Schwenke's apparatus critics to the "De Natura Deorum," but also by the reviews of foreign texts bearing the names of E. C. Marchant, W. Wayte, G. McN. Rushforth, W. Peterson, and W. E. Heitland; while Mr. Robinson Ellis writes upon the only specimen yet discovered of a Roman classic written in Tironian symbols. From the review, we should judge that Peck's American edition of Suetonius is worthy of introduction into this country. In archaeology, Prof. Pelham reviews Haverfield's "Ephemeris Epigraphica"; and Messrs. C. Smith and F. Ll. Griffith, of the British Museum, describe an early Graeco-Egyptian bilingual dedication. Finally, we have, with two other translations, a rendering of "Rose Aylmer" into Greek elegiacs, by Mr. C. E. S. Headlam.

MEETINGS OF SOCIETIES.

MANCHESTER GOETHE SOCIETY.—(Saturday, Jan. 31.)

PRINCIPAL A. W. WARD, president, in the chair.—Before a numerous audience of members and friends, Beethoven's music to Goethe's "Egmont" was successfully rendered by friends of the society, the connecting text by Bernays being read by the Rev. T. Quenzer. The president, in an introductory address, after remarking on the slow elaboration of "Egmont" by Goethe and on its adaptation in 1795, seven years after its first performance, by Schiller, dwelt on two points of view suggested by the drama: (1) Goethe's treatment of the historical groundwork, and (2) his presentment of the character of Egmont. The lecturer thought it probable that Goethe was attracted by the personality of Egmont rather than by the historical movement of the revolt of the Netherlands. Although the drama breathes throughout the deep aversion to a cruel despotism which in Goethe, as he himself remarked to Eckermann, was quite compatible with dislike of the French Revolution, there is in it no hint as to the duty of active resistance except in the seeming quibbles of the pettifogger Vansen, and in the desperate ecstasy of Clärchen. Goethe derived his material mainly from the old authorities which served Schiller shortly afterwards in his historical essay, *Der Abfall der Niederlande*, especially from

Strada, a Roman Jesuit, the conscientious writer of a History of the Insurrection, "after the manner" of Tacitus and Sallust. From Strada are taken many of Goethe's details, such as the account of the image-breakers in Flanders, Alva's jealousy of the Princess-Regent, the inimitable description of Margaret of Parma which Egmont gives to Clärchen. The figure of Alva's son, Ferdinand, and his attempt to save Egmont, though not taken from Strada, are historical. In his general treatment of his theme Goethe seized upon the essential character of the movement, conveying the true historical notion that the causes of the outbreak lay in the tyranny of Philip II.'s religious decrees and the fear of further oppression, while the subsequent chastisement of Alva's rule, in its turn, caused the prolonged struggle that followed. Not quite so easily as this historical framework does the historical Egmont accommodate himself to Goethe's hero. Strada, indeed, in his comparison of Egmont and Orange, recalls Goethe's characterisation of the two men in the famous scene of the second act. "Egmont," he says, "was a man of gay, open, and self-confident mind; the disposition of Orange was sombre, inscrutable, evasive. The former gained praise by his readiness of resource; but in the latter it was possible to put trust. Egmont was an Ajax, stronger in the field than in council; Orange a Ulysses, readier to contend indoors in debate than abroad in arms. . . . And to complete the unlikeness, Egmont was a man of extremely handsome features, strong-limbed, and full of dignity of aspect; Orange had a spare face, a bald head, and a sallow complexion. Both stood high above all others in the people's esteem, only that men loved Egmont, but Orange they worshipped." The truth is that Lamoral Count Egmont, Prince of Gavre, was, certain military gifts and courtly graces apart, a very ordinary man. He accompanied Charles V. as a lad on his African expedition, married a Bavarian princess, was made a Knight of the Golden Fleece, fought at the siege of Metz, and in 1554 headed the embassy to Queen Mary of England. In the ensuing war with France he held a high command, and gained the devotion of the army and the enthusiastic love of his people by the victories of St. Quentin and Gravelines. His pride and his grandeur, his extravagance and his joyous disposition, his pre-eminence in all manly exercises, blinded men to the fact that behind all these lay a disposition weak as wax, and a character unstable as water. Cardinal Granvella, the real author of Philip's policy in the Netherland, found out the true Egmont, and by a pregnant metaphor designated him as the friend of smoke. After joining Orange in the protestations against Granvella's policy addressed to the king, Egmont undertook an embassy to Spain, in which he allowed Philip's affability and promises of favours to blind him to his unyielding firmness of purpose in all matters of real importance. Towards the confederation of the nobles he maintained a doubtful attitude, and after the disturbances of the image-breakers, restored order in Flanders with merciless severity. But it was too late to avert his fate; he had already been doomed to destruction, with Orange, Hoerne, and other leaders of the nobility, before Alva's army began its northward march. A eulogistic letter from the king and Alva's courtesies lulled him into security; and, in spite of repeated warnings, he did not dare to fly. So he was caught easily; and hoping to the last through the dreary months of imprisonment, unresigned to his fate even on the scaffold, he died a martyr in spite of himself. This is the Egmont of history, but it is not Goethe's Egmont. Goethe's purpose is to exhibit his hero in the buoyant springtime of life; and this conception a figure like Clärchen could alone render complete. For him Egmont is a soldier crowned by victory, and a great noble whose voice carries weight in affairs of state; but first, and above all, he is the bright and genial child of nature, beloved of all—a man who leads his life with self-confidence and trust in human nature. He must be a patriot; for he is in instinctive sympathy with his people, whose sons he has led to battle, and whose cause he has espoused against the oppression of the foreigners. His statesmanship may fall as compared with that of an Orange; but if he knows not how to preserve his life for his country, he knows how to benefit her by his death.

NEW SHAKSPEARE SOCIETY.—(Friday, Feb. 13.)

DR. F. J. FURNIVALL in the chair.—Miss Grace Latham read a paper on "Julia, Silvia, Hero, and Viola," comparing Shakspeare's treatment of these characters. Julia, in "The Two Gentlemen of Verona," is the first of his complex studies of women. It is written in disjointed parts and many styles, beginning with brilliant comedy of intrigue, each scene developing different qualities to the exclusion of others, so that we are given the impression of many, instead of one person. Silvia is simpler and more consistent, but wanting in the detail of his later works. She is the strong, self-sustained, as Julia is the weak woman, needing support; and they form the starting-point of two of Shakspeare's principal feminine types. Hero is an over-disciplined example of the second of these. Her training has been an external tyranny, not an educating process carried on with the active co-operation of her will. Hence her power of independent action and self-assertion is gone. She fails in the great crisis of her life, and Don John's slander triumphs for the time. Hero is also a specimen of a character chiefly displayed through hints and indications, whose dramatic capabilities lie more in the situations given to it than in any strength or brilliancy of its own. Viola has the strong passion of Julia and the nervous timidity of Hero, with a power of endurance all her own. Her faculties have been developed and harmonised by a discipline carried to the farthest possible point by her own indomitable will. Infinitely complex though this character is, no part is elaborated at the expense of the rest, the dominant qualities running right through it, no matter how much the style of writing may be changed. Miss Latham also pointed out the extreme difficulty of this character, arising from its subtlety. The reader is tempted to lay too much stress on its poetry, the actress on its comedy; and it is necessary to avoid this—to draw a line between Viola, the romantic, passionate, poetic woman, and Cesario, the fashionable spoilt page, the real and the assumed characters, which form the dramatic side of the part. Associated with these is the soul-life of the tender-hearted, thoughtful girl, not forcible enough to bear alone the weight of the piece as a heroine must do, but adding greatly to the beauty of the part, its interest and value as a study of an ideal woman.

RUSKIN SOCIETY.—(Friday, Feb. 13.)

THE REV. J. P. FAUNTHORPE, in the chair.—Mr. Henry E. West read a paper on "Some Views of Art according to Ruskin, and otherwise," which subject he approached from a lay standpoint as one who, while admiring the beauty of Ruskin's teaching, saw room in the world for widely divergent theories of art. The views expressed by the great English art critic could not be too much studied in the light of truth to nature and appreciation of beauty. To make all handicraft noble by setting up an ideal of beauty, to endeavour to bring beauty into the lives of all men and women, to make art and life go hand in hand: such is Ruskin's creed and his practice. In art, however, there is room for teachers who do not use the same methods; and energy, force, passion, have their parts to play—like life, they must be viewed as parts of a whole. We shall not quarrel with realism, if it is picturesque, nor banish the classic, because it has not been a sufficiently good customer of the tailor or the draper. Just as in the poetic artist we prize that passionate love of nature, undisciplined; but firing our hearts at once, as in Swinburne, twenty times more than the declamatory morality of Cowper, so many of us must welcome creative art, free but divine, though its language be not that of the pulpit. In fine, art of all kinds is wide—wide as humanity—and should not be narrowed in the interests of any one virtue, but to the interpreter of nature, one touch of which makes the whole world kin.—A discussion followed, in which Messrs. Robjols, Viney, Peartree, Southey, and the chairman took part.

FINE ART.

Manual of Archaeology. By Talfourd Ely. (Grevel.)

A MANUAL of Archaeology is much needed. Mr. Ely's book has, however, no claim to be called by such a title. It is not a Manual of Archaeology, but an Introduction to the Study of Greek Sculpture, a subject with which Mr. Ely is manifestly familiar, and which he treats, if not with much insight, yet with sufficient and commendable erudition. Unfortunately, to justify the unjustifiable title he has chosen, he has been induced to devote nearly half his space to a superficial discussion of matters with which he has only a second-hand acquaintance, while whole regions of archaeological science are left untouched.

In his own department the merits of the book are so considerable that no greater service can be rendered to the author than to point out, in a friendly spirit, the shortcomings which should be remedied in future editions. In a book advertised as a Manual of Archaeology, we are entitled to expect that some account should be given of the results of the recent archaeological surveys of France, Palestine, and India, of Jain temples, of Buddhist caves, and of the archaeological treasures of Burma, China, Japan, Yucatan, Mexico, and Peru. Coming nearer home, the catacombs of Rome and the unique collection in the Lateran Museum of Christian Archaeology should not be left unnoticed; something should be said of Gnostic gems, of Scandinavian and Irish brooches, of Celtic crossiers, bells, and reliquaries; of the so-called Runic crosses, and the sculptured stones of Ireland, Scotland, and Northumbria; of monumental brasses, armour, painted glass, and of the contents of such collections as the Grüne Gewölbe at Dresden, the Cluny Museum at Paris, and the Arsenal at Venice.

To Roman archaeology, one of the two main departments to which Mr. Ely promises to give special attention, he should have allotted more than three pages, one of which is occupied by certain familiar lines of poetry which have nothing to do with Roman art, and by a superfluous "illustration" which fills half a page, but is not even described in the text. Only two lines are devoted to amphitheatres, baths, aqueducts, triumphal arches and columns; while such characteristic works of Roman magnificence and style as the Pantheon, the theatre of Marcellus, the baths of Diocletian, and the Antonine column are left unmentioned. Even this superficial sketch of Roman archaeology is inexact; the Tabularium, built in 78 B.C., being classed with the Servian walls as belonging to the very earliest epoch, while the substructures of the Palatine, which do belong to this period, are not mentioned.

The vast subject of Prehistoric Archaeology occupies less than six pages of text. The lake-dwellings are dismissed in eight lines, kitchen-middens in four, barrows in one, nurhags in another. Brief as is this summary, Mr. Ely has contrived to say enough to make it possible to gauge the limitations of his knowledge. Thus, all the lake-dwellings are assigned to the

Neolithic age; whereas most of them belong to the age of bronze, and several come down to that of iron. We are told that the Neolithic implements were "often of jade," whereas jade, and even jadeite, is extremely rare. Cromlechs and Dolmens are assumed to be identical, despite the convenient distinction laid down by the French archaeologists, and now generally adopted.

It would have been wiser to have omitted the chapter on Egyptian archaeology, which is superficial and inadequate, displaying no first-hand acquaintance with the subject, but mainly compiled from Maspero, with the introduction of a few inaccurate statements, which a real knowledge of the subject would have made impossible. Thus, a plan, taken from Maspero, of the most perfect of the group of temples at Karnak, is labelled "Plan of the Temple at Khonsu," as if Khonsu had been a place instead of being the name of the moon-god in the great Theban triad. And yet Mr. Ely boasts in his Preface that "accuracy of detail has been conscientiously attempted." This makes it the more necessary to give a few more instances of similar slips. Mr. Ely gives Maspero as his authority for the statement that the Hittite "language was much in vogue in the fashionable world of Egypt." Turning up the reference to Maspero, which is given in a note, it appears that Mr. Ely has misunderstood his own authority. Maspero, after speaking of the Hittites, goes on to mention "the dialects of Syria," and enumerates as a proof of Semitic influences a number of purely Semitic words which appear in the records of the XIXth Dynasty. Mr. Ely can hardly have supposed that biblical Hebrew was the language spoken by the Hittites, and he should have been able to recognise ordinary Hebrew words.

More excuse may be made for the unguarded repetition of Maspero's statement that, in the human-headed sphinxes of the Hyksos period, found at Tanis, "the nose is aquiline and depressed at the tip." If Mr. Ely had examined the three Hyksos sphinxes in the *ci-devant* Boulag museum he might have discovered that in two cases these aquiline noses are modern restorations, so modelled in conformity with the now exploded theory that the Hyksos were eagle-nosed Semitic Bedouins. The nose of the third sphinx, which has fortunately escaped mutilation, is, however, of a wholly different type, tip-turned, flat, broad, and stumpy.

Far too sweeping is the statement that "till Roman times the ancient world is for us in great part a blank." Even leaving Herodotus and the Old Testament out of account, it may be affirmed that we have more authentic knowledge of the early history of Egypt, Assyria, and Babylonia than of the early history of Rome. The greater monuments of Thebes, their wall-faces forming a picture gallery of the Asiatic exploits of Egyptian monarchs, are all older than the Exodus, the account of the campaign of Shishak against Rehoboam seeming quite modern in comparison with the records which surround it. It might be said that the monumental history which is re-

corded on the Theban walls ended centuries before any authentic history of Rome begins. So also the monumental history of Nineveh and the records in her libraries cease at about the date assigned to the foundation of Rome.

Mr. Ely devotes a whole chapter to the art of Judaea, about which even specialists know next to nothing, and about which he necessarily knows still less. Thus, he informs us that "the exact form of the seven-branched candlestick was hotly disputed, till it occurred to some of the disputants to notice its image on the arch of Titus." This sneer is wholly undeserved. Reland, the earliest writer on the subject, in his book *De Spoliis Templi*, which was published in 1716, engraves prominently the representation of the candlestick from the Arch of Titus, and bases his whole argument upon it. The discussion among "the disputants" to which Mr. Ely apparently refers turned merely on the point how far the descriptions given by Josephus and in the Talmud could be reconciled with the representation on the Arch.

The account of the discoveries at Jerusalem is confusing and confused. We are told that the substructures of the Haram "unearthed by English explorers" prove that "the architecture of the Temple was essentially Egyptian in character." Yet, in spite of its Egyptian character, this massive masonry is referred to "the Tyrian artists who in B.C. 1013 began the building of Solomon's Temple." Mr. Ely might have known that De Sauley's crude opinions have long been overthrown, the drafted masonry of these substructures, by comparison with the remains of the palace erected by Hyrcanus at 'Arak el Emir being proved not to be older than 176 B.C., and almost certainly of Herodian age, the influence being Greek and not Egyptian.

Among the existing remains of Solomon's work Mr. Ely includes "the eastern portico long known as Solomon's Porch." There are no existing traces of any such building. When the Crusaders reached Jerusalem they found the ruins of Justinian's Church of St. Mary, which was completed in 532 A.D., to which ruins they gave the names of Solomon's Temple and Solomon's Porch. The nave of the church was widened and enlarged by the Crusaders, and is now known as the Mosque el Aksa. Another portion of the ruins of Justinian's Church was supposed by the Crusaders to be the Solomon's Porch of the New Testament, a porch which Josephus, following the popular legend, erroneously attributed to Solomon. We are next informed that the "Egyptian monolith" near Siloam has been referred to Solomon's age. This information is given on the authority of Lenormant, who took it from De Sauley. It is another of De Sauley's dreams, the curved cornice, which suggested the idea of an Egyptian origin, being also found in the so-called Tomb of Absalom, which is Graeco-Roman in style. This "Egyptian monolith," instead of being the oldest tomb near Jerusalem, as Mr. Ely, following the dangerous guidance of Lenormant, affirms, is now believed to be somewhat later than the tomb of the Beni Hezir, which, with its Doric columns and triglyphs,

is not older than the first century B.C. If Mr. Ely had consulted the publications of the Palestine Exploration Fund, which have dissipated so many of the old illusions, instead of following the obsolete conjectures of De Sauley and Lenormant, he would have avoided these and other errors.

The account of the Moabito Stone is not so accurate as could be wished. It is not, as we are told, the oldest inscription in Phœnician characters, one of the Baal Lebanon inscriptions being considerably older. Then we are informed that "the villagers split the stone into fragments, and each pocketed one." The larger fragments in the Louvre are too massive to be "pocketed"; and the fragments were not pocketed by each villager, but were distributed among the different families of the tribe as charms to be placed in their granaries, in order to serve as blessings on the corn. In the account given of the inscription Mr. Ely confuses Mesha's own statements with the narrative contained in the Book of Kings. Mr. Ely says the inscription "tells of the deeds of Mesha against Omri, Ahab, and Ahaziah"; whereas the inscription only mentions Omri and his son, while the name of Ahaziah, introduced from the Book of Kings, should rather have been Jehoram.

The Eshmunazar Sarcophagus, we are told, "shows by its inscriptions that it was appropriated from an Egyptian owner. This is not stated or shown in either of the two well-known inscriptions; though the sarcophagus is in the Egyptian style, and was probably made in Egypt. Mariette fancied that he saw on the base traces of hieroglyphics; which no one has been able to decipher, and no one but himself to see. But the position assigned to them shows that they cannot be records of any earlier appropriation, although, if they exist, it is possible they may be the trade-mark of the maker or the exporter.

The chapter on Etruscan archaeology is meagre, and, to some extent, obsolete. Thus we are told that "the Etruscans have carved their writings on their tombs, but all efforts to interpret their meaning have as yet proved fruitless." This statement might have passed muster twenty years ago. Now, however, thanks chiefly to the labours of Deecke and Pauli, the grammatical suffixes have been detected, and the common recurrent words have been determined, so that most of the mortuary inscriptions can be read with certainty.

The statement, that on "Etruscan mirrors the letters of inscriptions are always Etruscan and not Greek," is misleading. The Etruscan was an old Greek alphabet of the Chalcidian type, and on some mirrors—for example, on the famous *Patera Caspiana*, representing the birth of Minerva, which is proved to be Etruscan by the Etruscan names of the deities, every one of the twenty letters is of the Chalcidian type.

It is pleasant to be able to praise almost unreservedly that portion of the volume which deals with Greek art. Here Mr. Ely is evidently at home; and the descriptions of statues and buildings have been compiled with considerable pains, exhibiting the merits as well as the defects of the school

in which the writer has been trained. More attention is paid to details than to principles. The cardinal principle of the evolution of type has not been fully grasped. Thus, the stages by which the later types of Aphrodite were gradually evolved from that of the Cypriote Astarte are not worked out. Though the evolution of the Greek temple from a wooden structure is fully admitted, we have the contradictory suggestion that the horizontal lintel, the Doric column, and the arrangement of the temple may have been borrowed by the Greek architects from Egyptian temples or the rock-cut tombs at Beni Hassan. A brief account is given of Lydian architecture, while that of Lycia, which throws so much light on the evolution of the Greek temple, is not described.

Mr. Ely essays to adopt the affected spelling of Greek names now in fashion, forgetful of the fact that the alphabet he uses is that of Italy and not of Greece; and like those whose example he follows, he is necessarily inconsistent. He writes Cyrus and Croesus. Why, then, Dareios; or, if he must needs be pedantic, why not Dāryavush? If Themistokles, then why Sophocles? If Hephaistos, Heraion, and Polykleitos, why Mycenae and Piræus? Dioskuri, Paconios, Dionysos, and Hymettos are mere mongrels—neither one thing nor the other.

Each chapter is headed in somewhat professorial style with a list of "books recommended." Books obsolete or untrustworthy are sometimes "recommended," while indispensable works are omitted. The publications of the Palestine Exploration Fund are not recommended. Semitic epigraphy is treated without reference to the Corpus or even to Schröder. For Rome and Etruria Martha's Manual, a very second-rate book, is recommended, and Otto Richter and Fabretti are passed over. As to prehistoric archaeology no mention is made of the indispensable works of Cartailhac, De Mortillet, Nilsson, and Anderson.

The book is advertised as containing 114 illustrations. The illustrations are there, most of them good, a few indifferent. Many are old friends, borrowed without acknowledgment; and in several cases, instead of the illustrations being engraved to illustrate the text, the text seems to have been written up to fit illustrations that were available.

Full credit should be given to the publishers for the way in which the book has been got up, type and paper leaving nothing to be desired; but they should have protested against the misleading title. A Manual of Archaeology in 258 pages of large type is an impossibility. Such a task is not within the compass of any single scholar. Like Dr. Ivan Müller's *Handbuch* or Roscher's *Lexicon*, it could only be accomplished by the associated labours of many specialists. Even compilation from popular French manuals requires an amount of independent knowledge, ranging over such a wide field, that no one man is likely to possess it. Mr. Ely, therefore, should not be blamed so much for having necessarily failed, as for having essayed a task on the face of it impossible. At the same

time, he deserves to be thanked for having given us several really valuable chapters on a department of archaeology of which he is fully competent to treat. It is unfortunate that the high level attained in these chapters throws into relief the deficiencies of the rest. If the whole book, like some parts of it, had been merely a popular and sloppy compilation, it might have been judged by an altogether different standard; but, if one-half of a book appeals to scholars, and the other half only to the "general reader," it would be a poor compliment to the author not to place him in the higher category, and to require throughout the knowledge and minute accuracy which we are entitled to demand from experts.

ISAAC TAYLOR.

NOTES ON ART AND ARCHAEOLOGY.

AN exhibition of drawings acquired for the British Museum during the last seven years or so has been arranged in the cases recently occupied by the Japanese drawings. It will be opened early next month.

THE Earl of Carlisle has been elected an hon. member of the Royal Society of Painters in Water-Colours; Mr. Charles Robertson a member; and Messrs. Charles E. Fripp, E. R. Hughes, and Thomas M. Rooke, associates.

THE exhibitions to open next week include a collection of prints illustrative of the French revival of etching, at the Burlington Fine Arts Club in Savile-row; and a series of water-colour drawings by Mr. Charles J. Watson, entitled "Through Normandy," at Mr. Robert Dunthorne's, in Vigo-street.

THE series of articles on "Nottinghamshire Crosses," which were contributed by Mr. A. Stapleton to the *Antiquary* during 1887-9, have been re-written. They are to be reprinted in the *Mansfield Advertiser*, after which 100 copies will be published in book-form.

The second general meeting of the Hellenic Society for the present session will be held at 22, Albemarle-street on Monday, February 23, at 5 p.m., when the following papers will be read: "The Life and Work of Dr. Schliemann," by Prof. Percy Gardner; and "The Erechtheum," by R. W. Schultz.

THE committee of the Society for the Preservation of the Monuments of Ancient Egypt, having obtained permission from the Egyptian Government to undertake the repair of the Great Temple of Karnak, has decided to appropriate £500 towards that purpose, and also to issue an appeal for subscriptions to a special fund. The work will be entrusted to the Public Works Department, of which Sir Colin Scott Moncrieff is chief; and it will be carried out under the personal supervision of Col. Ross, in consultation with Grand Bey, the architect to the department. The hon. treasurer of the special fund is Mr. F. G. Hilton Price, of Child's Bank, Temple Bar.

WE quote the following from the Cairo correspondent of the *Times*:—

"Further details about the recent discovery of antiquities at Luxor state that three galleries have been opened, situated at the bottom of a shaft 48ft. deep. One gallery was found to be empty; the others contained 152 mummies intact, of which 149 are of the XXth and two of the XIXth Dynasty. There have also been found 110 cases containing statues and votive offerings, 77 papyri, and statues of Isis, Nephtis, and Osiris, and also large quantities of other valuable treasures. The entire find has been loaded without injury into barges for transport to Cairo, after being catalogued by M. Grébaut."

MUSIC.

RECENT CONCERTS.

THE second of Señor Albeniz's series of concerts took place at St. James's Hall last Thursday week. The reading of the Schubert Trio in B flat was somewhat sentimental, while that of Beethoven's Sonata in C sharp minor by the concert-giver was tame and unpoetical. Señor Albeniz was far more successful in a Scarlatti piece which he gave by way of encore. Señor Arbos, the new Spanish violinist, played two solos: the Adagio from Spohr's ninth Concerto and Bach's Fugue in G minor. His intonation is good and his technique sound, and, moreover, he is a highly intelligent artist. Miss Marguerite Hall and Mr. Courtice Pounds were the vocalists.

On the evening of the same day Mr. Henschel gave his fifth Symphony concert, and the date (February 12) being so close to the anniversary of Wagner's death, the programme was almost entirely devoted to the works of that master. The performance of the "Meistersinger" Overture was not altogether a happy one, but the "Parsifal" Prelude, with exception of the "Faith" phrase for brass, went remarkably well. The "Ride of the Valkyries" makes a good closing piece, but should not have come after the solemn Prelude. Herr Richter has sometimes followed with a Liszt "Rhapsody." This is quite as bad, though perhaps not so cruel as to kill Wagner with Wagner. One of the great attractions of the evening was the Monologue and Duet from the second act of the "Meistersinger." Mr. and Mrs. Henschel sang with great charm and dramatic feeling, and the orchestra for this excerpt was under the intelligent guidance of Mr. Hollander. The performance of the "Eroica" left something to desire. The opening movement, however, was interpreted with much power. The hall was crowded.

The Crystal Palace Concerts recommenced last Saturday afternoon, when Herr Stavenhagen gave a crisp rendering of Beethoven's pianoforte Concerto in B flat. Though published as No. 2, it was actually written before the one in C, known as No. 1. As in most of the composer's early works, the influence of Mozart here makes itself strongly felt; but the music is decidedly bright and pleasing, and it is strange that the work has not been heard at the Palace since it was played here by Mr. Franklin Taylor in 1870. The performance of Schumann's D minor Symphony, under Mr. Manns's direction, was superb; it is only here that full justice is done to the

orchestral works of this master. The programme included Miss Ellicott's clever Dramatic Overture, written for the Gloucester Festival of 1886, and Bizet's "Carmen" Suite. Mme. Fanny Moody and Mr. C. Manners were successful as the vocalists.

Mr. Augustus Harris gave the first of his "Lenten Oratorios" at Covent-garden Theatre on Saturday. The work chosen for this opening evening was the "Elijah." The experiment is a novel and interesting one, and seems likely to succeed. The band and chorus, six hundred in number, were excellent; but the tenors and basses were so placed that their voices did not come out well, and, besides, the conductor (Mr. A. Randegger) did not have them under perfect control. The performance was a good one. The principal vocalists were Miss Anna Williams, Miss M. Mackenzie, and Messrs. Lloyd and Watkin Mills. The last-named sang the "Prophet" music with more vigour than at the last performance of the Oratorio at the Albert Hall. There was a very large audience.

Beethoven's Quartet in E minor (Op. 59, No. 2) was finely interpreted at the Popular Concert on Monday evening by Messrs. Joachim, Ries, Straus, and Piatti. M. Max Pauer was the pianist, and in his solo, Rheinberger's Toccata (Op. 12), displayed skill and intelligence. There is more science than inspiration in this clever piece; and the pianist, perhaps, pleased the audience better in Beethoven's "Andante favori," which he gave by way of encore, and with much taste. The programme included Spohr's "Larghetto and Rondo" (Op. 67, No. 2) for two violins, played by Messrs. Joachim and Straus. Mr. Hirwen Jones was the vocalist.

Mr. Max Pauer gave a pianoforte recital at Princes' Hall on Wednesday afternoon. His performance of Bach's interesting Toccata and Fugue in F sharp minor was excellent. He also deserves much praise for his intelligent and expressive reading of Beethoven's poetical Sonata in E (Op. 109), although the theme of the last movement was taken at a little too slow a rate. In two of Schumann's "Paganini" Studies, in Mendelssohn's Prelude and Fugue in F minor, and in an Etude in F by the same master, Mr. Pauer showed off his fine technique to immense advantage. But he was not so successful in Grieg's Ballade in G minor; for he has not yet caught the wayward spirit of the Scandinavian composer. The programme also included pieces by Rubinstein and Liszt, and "Walzer" by the concert-giver.

J. S. SHEDLOCK.

TRISCHLER & CO'S LIST.

Now ready, at all Libraries and Bookstalls.

LADY DELMAR. 1 vol. By Thomas Terrell and T. L. WHITE. This exciting story of London life has already been dramatised by Mr. Sydney Grundy. Handsomely bound in scarlet cloth. 354 pp. Crown 8vo, 3s. 6d.

AN AMERICAN WIDOW. 3 vols. By ALBERT KEVILL-DAVIES. A vivid and piquant story of American life in London. The SCOTSMAN says:—"It is cleverly written and ingeniously contrived. ... A very clever sensational melodrama."

The EVENING NEWS and POST says:—"A capital exposé of the American invasion of England by young ladies in search of husbands amongst the sedons of our nobility. Throughout the whole three volumes there is not a single dull chapter."

The FIGARO says:—"It is both clever and original, and treats with conspicuous ability a topic which is discussed with avidity on both sides of the Atlantic."

The SUNDAY TIMES says:—"Few better novels than this have been published lately."

HOLLY. 2 vols. By Nomad, Author of "The Railway Foundling," "The Milroys," &c. In speaking of this author's last work, "The Railway Foundling," the DAILY TELEGRAPH says:—"It is a story that must be read to be understood. There is vivacity and adventure in it, and, good as the authoress's previous work, 'The Milroys,' was, it is not too much to say this is better."

The SCOTSMAN says:—"The readers among whom 'The Railway Foundling' and 'The Milroys' have been popular novels will probably be charmed with Nomad's new work of fiction. 'Holly' is as lively and artless, as light and readable, as its predecessors."

THE BLACK DROP. By Hume Nisbet, Author of "Bail Up," &c. Extra cloth, 2s. 6d.

ALWAYS IN THE WAY. By T. J. Jeans, Author of "The Tommiebag Shootings," with nine Full-Page Illustrations by Finch Mason. Cloth extra, 3s. 6d.

RITHERDON'S GRANGE. By Saumaurez DE HAVILLAND, Author of "Strange Clients," &c. Picture bds, 2s.

TRISCHLER & CO., 18, NEW BRIDGE STREET, E.C.

THE GOLDEN LAKE: a Story of Australian Adventure. By W. CARLTON DAWES, Author of "Zanthia," &c. With eight full-page illustrations by Hume Nisbet.

MORNING POST: "A welcome addition to the fiction treating of 'The Great Land of Australia,' the effect of which is increased by Mr. Hume Nisbet's numerous illustrations."

SUNDAY TIMES: "A very strong and well-written story of Australian life, told with a swing and 'go' which make it very entertaining reading."

SCOTSMAN: "A clever and entertaining narrative of travelling adventures in the unknown interior of Australia. Mr. Dawes's inventive talent is lively, and his literary faculty genuine." Extra cloth, with bevelled boards, 6s.

THE PRISONER OF CHILOANE. By Wallis MACKAY. With 80 illustrations by the Author.

THE WORLD says: "A brightly written book."

MORNING POST: "Bright and attractive."

THE SATURDAY REVIEW: "Mr. Mackay is as good with pencil as with pen."

THE SCOTSMAN: "Written in a bright, spirited style, and the illustrations are full of fun and movement."

THE SPECTATOR: "Much that is worth reading in Mr. Mackay's book." Foolscap quarto, handsomely bound in cloth, bevelled edges, 7s. 6d.

A MAIDEN FAIR TO SEE. By F. C. PHILLIPS, Author of "As in a Looking Glass," and C. J. WILLS, Author of "In the Land of the Lion and Sun." Copiously illustrated by G. A. Storey, A.R.A. Foolscap quarto, beautifully bound, with gift top, 6s.

THE ROMANCE OF A LAWN TENNIS TOURNAMENT. By Lady DUNBOYNE, Author of "Thro' Shine and Shower," &c. A charming story of country life. Picture cover, 1s.

THE TYPE-WRITTEN LETTER. By R. H. SHERARD, Author of "Rogues," "Agatha's Quest," &c. Limp cloth, 1s.

LITERATURE.

"PRIME MINISTERS OF QUEEN VICTORIA."—*Lord Melbourne.* By Henry Dunckley. (Sampson Low.)

It must be with a sharp pang of envy that the modern politician traces the political career of William Lamb. In times divided from our own by little more than two generations of men, times within the memory of persons still living, it was possible to be a member of parliament without the drudgery of caucuses or the bond-service of leagues and federations, to vote according to your caprice or even according to your conscience, indifferent to the humours of constituencies, to follow your party and be no slave, to attack your party and not be outlawed, to leap suddenly into high office without the previous immodesty of perpetual self-advertisement, to lead a party and never be its servant, to be the first minister of the crown and neither its tyrant nor its sycophant. Mere Whigs dwelt in this Arcadia *fortunati nimium*. Their family, their clique, or their purse, gave them a seat. During the long years of opposition they might please themselves as to what use they made of it. No leaders troubled them with remonstrances; there was but rarely need to coax constituents or solicit mandates. Whether they chose to support Lord Sidmouth's policy, or to deprecate Mr. Plunket's proposals, to demand resumption of cash payments, or to support a Corn Bill, their seat in the Commons and their exclusion from office were equally assured. Lapse of time, old age, death, began to disintegrate the Liverpool phalanx; even from the Tories the flowing tide ebbed at last. A fortunate crisis and a bold venture into the eddies of intrigue gave the young Whig a brief spell of office; and then came 1830 and suddenly he was a minister, a hero and the leader of a people. A few years of anxious but useful labour, abundance of great opportunities much chequered by failure, and he enters the pantheon of the Queen's prime ministers, and his life is written by Mr. Dunckley.

Something like this was the lot of Lord Melbourne. He entered parliament at twenty-six; he took office at forty-eight; he was fifty-five when he assumed the prime ministership, and sixty-two when he laid it down; and all the time it was no easy matter to say how he came to such high places, or by what virtues he so well justified his occupation of them. He never "stumped" the country; he had no "magnetism," nor any magic of eloquence; his statecraft was only common sense; his industry was industriously cloaked with indolence; and yet he was an excellent

home secretary and a good prime minister, and all with one half the labour, and, as the modern politician may think, less than half the talent that is needed now to secure a Vice-Presidency of the Council or a Governorship of Madras. Even after death his works still follow him. His fame receives solemn interment in Mr. McCullagh Torrens's book and kindly resuscitation in Mr. Dunckley's, and political students feel towards him the gratitude of tired men for his whimsicalities and the affection of cynics for his unostentatious amiability.

Except ample means, there was in Melbourne's case hardly anything which might thoroughly account for the success of his career. His family was neither very old, nor very noble, nor very distinguished. His education was exceedingly desultory. He attached himself to no particular leader and piqued himself upon no particular attainments. But, as he himself said, "The Whigs are all cousins," and those Whigs who were not his own cousins were his wife's. Through her he was connected with Gray and Spencer, Ponsonby and Althorp; and his own alliances extended even further afield. Huskisson had married a cousin of his, and through Huskisson he was in touch with Canning. Swayed by all these influences in his first political decade, he was a somewhat oscillating politician. He was introduced to Brooks by Mr. Fox himself; but after a while he drifted towards the small quasi-radical party, of which Whitbread and Althorp were leaders, and later on veered towards Canning and the new Conservatism. He was slow to throw himself into the cause of parliamentary reform, but when he had adopted the cause he showed himself much more of a Radical than many a more ardent reformer. Yet he was not intrinsically of the stuff of which fighting Radicals are made. To one kind of Radical a law is something to be repealed; to another it is something to be broken. The Whig was devoted to certain principles of politics, or perhaps of political sentiment, which he had learned in his youth and embraced with conviction; he differed from the philosophic Radical in having less reason but, perhaps, more passion—so far as a member of a buckram aristocracy can be said to be passionate—for the faith that was in him. But, by nature, Melbourne was none of these. He did not wish to break the laws; he came of a respectable family newly raised to the peerage. He was not eager to repeal them, for he had no enthusiasm for change in itself, or perhaps for anything else; and repealing laws was taking a world of trouble for a purely problematical gain. He had not any special faith in principles, for his training was chilling to all faith and relaxing to every principle. He was by nature of the stuff of which Conservatives are made. He had studied the history and theory of the constitution with care, and had no mind to destroy it for nothing. He thought a familiar injustice often more tolerable than any will-o'-the-wisp of perfect right; and he was too *blasé* in private to expect much of the future in public. But his lot was cast in with the Whigs in an

adventure in which to be thoroughgoing without faintheartedness was the only path of safety; and his clear and logical understanding carried him far beyond many of his fellow Whigs, and contributed not a little to the successes of the Whig administrations. His "Why can't you let it alone?" when his colleagues proposed to him projects of reform, was not the indication of a lazy man or of an unprincipled man; it meant that he was too deeply impressed with the complex difficulties of things as they are to be sanguine of his own powers of arriving at a new world of things as they should be. But his policy, when he was willing to move and could get his own way, was thoroughgoing and beneficent. There is so much of feebleness and discredit about the later ministerial days of Melbourne and his colleagues that one is apt to forget how much of honest intention and genuine achievement is really theirs. Because they were "filled with the virtue of patience, and wholly lacking in the grace of resignation," because they were entangled in difficulties with crowns and courts, and hampered by the opposition of the House of Lords, their merits are apt to be overlooked. Yet, in fact, they carried an ample share of English reforms; and no government has ever more genuinely attempted to deal fairly with Ireland, though the cost to their own popularity was present and certain, and the thanks of the Irish members and their countrymen were both future and contingent.

These things Mr. Dunckley points out clearly and justly in this book. His drawing of Melbourne is clear, reasonable, and sympathetic; and he is peculiarly successful in writing with tact and judgment about the difficulties into which he fell with his own wife, and with the wives of other people. He speaks kindly of the follies of Lady Caroline, and extends to them the forgiveness which the husband himself freely gave. In the other matter he is content to say, what is all that history can usefully record, that Melbourne was acquitted by the non-suit of a judge and the verdict of a jury. But it is to be regretted that the book is either no longer or so long. The best parts of it—those which are personal to Melbourne—are, in the main, excellent. But why a chapter on his early political life, when party allegiance sat lightly upon him, should be headed "Political Land-Surveying," and another, describing his incomparably kindly and judicious assistance to the Queen at Windsor after her accession, should be labelled "Regius Professor," it passes the wit of reviewer to divine. Even their author cannot suspect these phrases of wit, and the choice lies between regarding them as meaningless or as misleading. There are many passages in the book, introductory, explanatory, and didactic, which would have fitted in very well if the scheme of the book had been that of a general history; but in a particular biography, as they stand, they seem rather irrelevant. There is an account of the Coke family, which is curious but remote; and we have sketches of Althorp and of Huskisson, which are well enough but not more appropriate than brief biographies of Lord Eldon, Mr. Canning, Mr. Herries,

or Lord Grey. Stanley's zeal in the coercion debate of 1833 is a thing always worth recalling, but it has, perhaps, less to do with Melbourne than with any other minister of the time. Quite a large proportion of the pages contain no mention either of Melbourne's name or of his works; and they do not sufficiently explain his policy or position to justify their presence in a short book where every line is wanted for the subject itself. Add to this, that there is some undignified English—"drawing the long bow" (p. 57), "showing the white feather" (p. 58), "setting the Liffey on fire" (p. 120), "new combinations were on the cards" (p. 139), "the symbol of royal authority was travelling post-chaise through the Highlands" (p. 179) (which means that Brougham took the Great Seal with him to Scotland)—and there is an occasional lapse into the diction of a morning paper:

"In due time the Queen was crowned. Happily we have among our recent memories an event which eclipses the splendour of her coronation. It is lost in the stately magnificence of her jubilee, and in the sentiments of loyalty and gratitude and chastened pride which it called forth in all parts of the land."

These are blemishes inconsiderable in themselves, but all the more striking in contrast with the general merit of the book. In a second edition, perhaps, they can be removed; but in the first they justify a critic in following George Primrose's cousin in praising the works of Pietro Perugino, and observing that the picture might have been better if the painter had taken more pains.

Yet it would be ungracious to conclude by reference only to the comparatively few demerits of this *Life*; and Mr. Dunckley's description of what is, on the whole, Melbourne's best title to recollection, his personal services to the Queen from 1837 to 1839, is worth quoting at length:

"The Queen could not be left to grope her way alone through the difficulties of her new position. To instruct her in its technical duties was an easy matter—a month's experience would suffice for that. But it was desirable that she should understand her duties in a much larger sense: that she should learn something of the history and principles of the constitution, that she should know the several parts assigned to the Lords, the Commons, and the Crown, and the practical as distinct from the theoretic relations in which they stood to each other. No pedagogue could do this . . . It was suggested that the Queen should be furnished with a private secretary . . . who should assist her in routine duties and offer occasional advice; but it was felt that such an arrangement would be inadequate, and for many reasons undesirable. The position and qualifications of the Prime Minister supplied an easier solution of the difficulty. Melbourne had in fact already undertaken the task. The Queen naturally looked to him for advice, not only on matters of state, but in what was expected of her in discharging the everyday functions of royalty. He thus slid by degrees into an office without a name, which combined in itself the duties of private secretary and tutor. They were distinct from those which belonged to him as the head of the government, and he knew how to keep them well apart. The disinterestedness, the self-negation, the absolute loyalty with which he acquitted himself in this delicate position were admitted by those of his eminent contemporaries who were best qualified to form an opinion. It is a remarkable tribute to his

character that his political rivals regarded him without jealousy or an atom of suspicion. There were some mutterings of discontent among inferior men, but no dissatisfaction was expressed by Wellington or Peel. They knew that he had undertaken a difficult but indispensable task, one which was imposed upon him by the position he occupied and of which they themselves, when they came into office, would reap the benefit. He was a Whig no doubt, perhaps he was something less; but at any rate he was an honest-hearted Englishman, in no merely conventional sense a gentleman, in whose perfect honour no one hesitated to place entire reliance."

J. A. HAMILTON.

A Vision of Saints. By Lewis Morris.
(Kegan Paul & Co.)

A Vision of Saints carries out a design, long entertained by the author, of "attempting for the beautiful Christian legends and records what has so often been done for the mythology of Greece." The poet, like Dante, passes through heaven in the company of an angelic guide, who relates the history of certain saints, selected presumably as specially representative of Christian heroism and endeavour. The stories of the Sleepers of Ephesus and of Saint Christopher are first told, with some apology for their legendary character; a sketch of Antoninus Pius follows; and then succeed in chronological order a series of nineteen biographies of Christians, beginning with Saints Perpetua and Felicitas, and ending with Father Damien. This outline of the plan of the poem will indicate the two points of view from which it invites criticism—first, as a representation of the meaning and history of Christianity; and secondly, as a work of poetic art.

Considered as a representation of Christianity, Mr. Morris's poem lacks breadth of view: it contents itself with a picture of one aspect or type of Christianity. The author is undecided whether he shall deal with the legends or the records which his preface classes together in spite of their essential difference. He begins with seven biographies of martyrs and saints which, viewed as a selection of representative Christians, are clearly legendary. There is nothing of Ignatius, Polycarp, Origen, or Cyprian; the great names of historic Christianity are avoided. A representation of Christianity, which tells the stories of Alexis and Dorothea, and says nothing of Cyprian: is obviously inadequate except as a representation of legendary Christianity. But the eighth saint is Francis of Assisi, and after him come Elizabeth of Hungary, Saint Roch, and Catharine of Siena. Two of these are historic in the truest sense. But Mr. Morris deals with Francis and Catharine from the legendary rather than the historic side; they are not brought before us in their historical reality. After Catharine we come suddenly upon George Herbert, and, leaving legends behind us, conclude our heavenly survey with pictures of Bunyan, Martyn, Mrs. Fry, and Father Damien. This short sketch of the contents of the *Vision* is sufficient to show that it identifies Christianity too closely with a spirit of aloofness from the joy and energy of life—a spirit of self-

renunciation and self-denial which conceives of these virtues as ends in themselves. Christianity from this point of view is eloquently and sympathetically presented, but it is not a Christianity which nowadays will satisfy all of us. Mr. Morris tells the painful story of Alexis with sympathy and power; but most of his readers could have spared Alexis altogether for an adequate presentation of Catharine of Siena, whose influence and place in the history of her time Mr. Morris entirely fails to appreciate.

We must turn now to the value of *A Vision of Saints* as poetry. It is written throughout in singularly clear and graceful blank verse. The flow of verse is less spontaneous and slightly more conventional in diction than the *Epic of Hades*; there is no passage quite so musical as parts of Mar-syas, nor is there any rhetoric so passionate and strong as the conclusion of the earlier volume. The movement and cadence are still Tennysonian, but any obvious imitation is avoided. Mr. Morris's blank verse does not rise to the highest level of poetic art: a few lines of "Tithonus" at once make us impatient of his best efforts; but among poets of the second rank he takes an important place. Throughout his long poem his verse is never trivial: passages of dignified narrative, of graceful description, of eloquent pathos, succeed each other in pleasant alternation, without any failure of ear or relaxation of artistic effort on the part of the poet. In imaginative and dramatic power the poem is disappointing. The even excellence of the versification tends to emphasise the absence of discrimination and distinction in the portrayal of the characters. Although many martyrdoms are described with pains and sympathy, we are yet left with a dim and conventional idea of what an early Christian martyr thought and felt. A line or two from the opening of Mr. Browning's "A Death in the Desert" will reveal to us the absence of any passionate reality in Mr. Morris's sketches of the primitive Christians; Lord Tennyson's "St. Simeon Stylites" will convince us of the comparative shallowness of his historical criticism and of his powers of thought. Mr. Morris succeeds best when he gets away from the earlier, more legendary stories. John Bunyan's life could hardly, in the space the author allows himself, be more justly and eloquently told; the account of Father Damien is at once more strongly felt and more freshly poetic than anything else in the book.

We have two other comments to make upon the poem as a whole. We have been struck by the feebleness of the poet's own comments on the words of his angelic guide. They seem to be inserted because the machinery of the poem requires them; but this machinery whereby Mr. Morris very foolishly compares himself to Dante is conventional and meaningless. On the other hand, the restraint Mr. Morris has put upon himself as regards the length of his biographies, the care and taste shown in the selection and grouping of incidents, and the lucidity and interest of his narrative, are admirable. As mere stories, most of these sketches could not easily be surpassed, and their graceful music is sure to be widely popular.

RONALD BAYNE.

Across East-African Glaciers: an Account of the First Ascent of Kilimanjaro. By Dr. Hans Meyer, translated by E. H. S. Calder. (George Philip & Son.)

WITH this handsome volume, embodying a full account of Dr. Meyer's successful expedition to Kilimanjaro in the autumn of 1889, the first chapter in the historic life of the twin-crested African monarch has been worthily closed. To be sure Kibo alone was actually scaled; but Kibo is by far the higher of the two peaks, its elevation being now determined at 19,720 feet. Even rugged Mawenzi was ascended to an altitude of 16,140 feet, or within 1430 of the summit; and both were so carefully studied from every standpoint that our knowledge of this huge volcanic mass may now be regarded as complete in all its salient features.

To accomplish this result has taken some forty years of intermittent essays, from the time Kilimanjaro was first sighted and roughly sketched by Rebmann in 1848, the intermediate stages being broadly indicated by Von der Decken's partial exploration of 1861-2, New's ascent to the snow-line in 1871, Johnston's six months' residence on the Chagga slopes and determination of glacier ice on Kibo in 1884, and Dr. Meyer's two previous expeditions of 1887 and 1888. Partly to the experience of African travel acquired on these occasions, and partly to the able co-operation of his associate, Herr Purtscheller, a seasoned Alpine climber, Dr. Meyer was indebted for the triumphant issue of his third attempt, which will always rank high in the annals of mountain exploration. No less than sixteen days altogether were spent between the altitudes of 15,000 and 20,000 feet, that is to say, in a rarified atmosphere where the proportion of oxygen falls as low as 55 or 50 per cent., and even less. Yet

"in that time we had made four ascents of Kibo and three of Mawenzi; we had reached the culminating peak of the mountain, ascertained the existence of a great crater at the summit, discovered the first African glaciers, and made a tolerably thorough survey of the higher altitudes, the results of our explorations being recorded in a fairly complete series of photographs, sketches, notes, and specimens."

In the introductory chapter Dr. Meyer renders ample justice to the merits of all his predecessors, with one notable exception. For some inexplicable reason Mr. H. H. Johnston has been signalled out for much unwarranted animadversion, couched in language at once ungenerous and, it must be added, in the worst of taste. No one, scarcely even Dr. Meyer himself, has done better service in this region than Mr. Johnston; yet he is sneered at because he stops to refresh himself with "some brandy and water from his flask in order to restore his sinking courage"; his "facile pen" is said to be "completely at the mercy of his ardent imagination"; his accounts of the commercial prospects of this region are "full of exaggeration," because the Germans, with their lack of experience and semi-military colonial administration, have so far been disappointed with their acquisition. A day's march of apparently not more than eighteen miles is sceptically described as

"herculean," because Dr. Meyer's party took "double the time to traverse the same ground." Lastly, his statement that at the beginning of the hot season (October) "a white rime settled on the grass," is called in question. This was at the altitude of 8600 feet; yet in the middle of the hot season (November 1) Dr. Meyer himself found "hoar-frost on the ground" at about the same altitude (8710 feet)!

Such German polemics, where none were needed, might advantageously have been confined to the German edition of a work which, apart from this blemish, is both eminently readable and of great scientific value. Besides the sections devoted to Kilimanjaro, it contains specially interesting accounts of the little known highland districts of Ugweno west of Lake Jipé and of Kiboso and Uru west of Moji, the territory of Johnston's friend Mandara. In Ugweno the acquaintance was made of Naguvu, a local potentate who

"had just returned from some distant merry-making, and, to say the least of it, seemed slightly elevated. His effusiveness was quite overwhelming. 'Long ago, when I was a boy,' he said, holding out his greasy paw, 'a white man came to see our valley' (Dr. Kerslen, the companion of Von der Decken), and now that I am old, here is another. The first *mzungu* [white man] went away, and returned to his own people, but I want you to stay with us always. With powerful medicines you will make my young men strong to conquer all the land of Ugweno; and in return you shall have as much food and as many wives as you please."

Historic justice requires it to be added that Naguvu really was a magnanimous African prince, "unusually good-hearted," and of "unbounded hospitality," sending presents of a goat and "a fine fat cow," receiving, however, in return, "cloth, beads, powder, and percussion-caps." Brotherhood was of course made, though by a somewhat repulsive process; and then a demand was made for the German flag, as a potent charm against all earthly evils. On this point the explorer hastens to add that

"this was the only occasion on which a native chief received the national flag at my hands; and I must beg my readers to understand that I have no sympathy whatever with those travellers who, wherever they go, seem to make it their mission to leave the German colours streaming in their wake. In East Africa, which has been partitioned out by international agreements, the practice is superfluous, if not indeed ridiculous."

The social changes going on among Bantu or Negroid peoples, unknown to the outer world even by name twenty years ago, are well illustrated by what was witnessed in the territory of Mareale, one of Mandara's neighbours on the Chagga slopes.

"What formerly had been an open space in front of his very unpretending hut was now enclosed by a castellated wall about twelve feet high, with a single low and narrow opening. Within the court so formed stood the huts of Mareale's wives and children, and beside them a handsome house in the coast style with a gable roof. The interior was divided into several apartments, comfortably furnished as sitting and bed-rooms, partly with Indian and partly with European furniture. The only objection was that, owing to the entire absence of windows, all the rooms were pitch-dark,

what light there was being supplied by a smoky fire in the middle of the floor."

Besides his house, Mareale is now also the proud owner of a sewing-machine, a "needle-drum" as he calls it, which he prizes above everything else, because "nobody has anything like it in the whole of Chagga." Political economists need not despair of the commercial future of a continent whose indigenous populations have already begun to appreciate such products of civilisation as fine houses, European and Indian furniture, and sewing-machines. Mareale, when shown his photograph, at once recognised the likeness, on which Dr. Meyer remarks that he was the only Negro he ever met who seemed capable of even faintly grasping the true nature of a photograph. But this is not the experience of Dr. Junker, who, on the contrary, was struck by the remarkable quickness of the Makaraka (Niam-Niam) populations, showing themselves in this respect far superior to the Nubians and Arabs themselves.

From the Uru district—that is, from the west—the very finest view was obtained of Kilimanjaro:

"Without doubt Kibo is most imposing as seen from the west. Here it rises in solitary majesty, and the eye is not distracted by the sister peak of Mawenzi, of which nothing is to be seen but a single jutting pinnacle. The effect is enhanced by the magnificent flowing sweep of the outline, the dazzling extent of the icecap, the vast stretch of the forest, the massive breadth of the base, and the jagged crest of the Shira spur as it branches away towards the west. Rising from the plains, the whole mountain is visible from base to summit in one unbroken line—beautiful in its absolute simplicity and serene grandeur, yet with a beauty which depends for its impressiveness on exquisite proportion and harmonious balance of parts, rather than on the more picturesque elements of varied form and colour. It is beauty of the symmetrical, the severe, the sublimely solitary."

Dr. Meyer raises the difficult question of the treatment of refractory carriers, and sensibly enough solves it in principle by suggesting the golden mean between too great leniency and excessive severity. But, so far as can be judged from the circumstances as described by himself, his practice seems to have decidedly inclined towards the latter course. References to the "stick" and *kurbash* (a rhinoceros-hide lash) are painfully frequent. We read that "they were an indifferent lot, constantly in need of the whip to bring them to their senses"; and that Dr. Meyer himself had daily "to mount the judge's chair and to mete out condign punishment to evil-doers at the hands of the Somál, ten to twenty lashes being the quantum for ordinary offences." Once the butt-end of a gun sent an unfortunate Zanzibari "sprawling on his back" for ill-using a cow that objected to go quietly to the shambles, and this was not unnaturally followed by "a general outburst of amazed indignation."

In a thoughtfully written chapter on the prospects of the German East African Protectorate, the author advocates the adoption of some system of compulsory labour, such as "that in vogue in the Philippine Islands." The native "must be trained in the school

of hard work, and he must be forced to work if he cannot be prevailed to do so voluntarily." These are also Dr. Junker's views, and it is at all events evident that the "sentimental disease" has not yet made much head in the Fatherland. But if the *kurbash* is still to flourish, and compulsory labour be superadded to their other grievances, the natives may perhaps fail to see the advantage of the new order of things.

As may be seen from the foregoing specimens, the translation is well executed, fluent, and idiomatic. The transliteration also has been carefully attended to, though Djagga appears wrongly on the maps, with Jagga for Chagga in the text. The double plural "brackens" occurs in one place, despite of Tennyson's,

"But when the *bracken** rusted on their crags;"

in another "must" seems to stand as a past tense for *musste*; elsewhere we have the usual "water-shed" for "water-parting" or "divide"; "gladsome green" also sounds strange, and "gallery forests" perhaps stranger. The latter expression, originally used by Piaggia, was adopted by Schweinfurth, and thus found its way into English translations of German books of travel. But it seems scarcely admissible, and some better expression might perhaps be found for the selva of forest growths characteristic of so many Central-African rivers. The work is splendidly illustrated with many woodcuts, and a score of coloured plates prepared by Mr. E. T. Compton from photographs by the author. There are also three fine maps embodying the results of the surveys, but defective in some of the topographical details. A re-formed (*remanié*) glacier observed on the slope of Kibo as low down as 15,910 feet does not appear on the large-scale map of Kili-manjaro.

A. H. KEANE.

Studia Biblica et Ecclesiastica: Essays, &c.,
by Members of the University of Oxford.
Vol. II. (Oxford: Clarendon Press.)

It is now a little over five years since the first volume of the *Studia Biblica* was published, and was duly reviewed in the ACADEMY. The book seems to have met with a kindly reception among the few periodicals and reviews to which its rather recondite learning appealed. One chief reason of this general note of welcome was that it indicated what promised to be a new departure among the leading scholars of our chief university. It seemed an attempt to do away with the reproach so often made against our oldest and wealthiest seat of learning that its contributions to original research are so meagre in proportion to its means and its numbers. I fear it must be added that the fair promise has hitherto been belied by a scanty performance. The accumulation, "in rather a leisurely way"—as the editors with unconscious irony phrase it—of seven essays in five years—a little over one monograph per annum—is certainly not a magnificent output of Biblical

and ecclesiastical essays for the largest and richest university in the world. The professor or *privat-docent* of the smallest German university would regard with immeasurable scorn a return so disproportionate to the outlay. No doubt this volume represents only a fraction of the general harvest of learned production by members of the university. But there is no other collection that I am aware of which professes to garner the occasional gleanings of Oxford scholars in the large field of Biblical and ecclesiastical lore; and in those departments at all events the learned Teuton would have a right to stigmatise it as meagre. His natural inference as to the extreme backwardness of Biblical studies in England would be further confirmed by the editors' expressed fear that the publication of these essays would prove unremunerative. He might even ask whether a university whose foundations are supposed to be connected with the study of Scripture, and whose cognisance is an open Bible, can be said to justify its *raison d'être* when a collection of essays on Bible subjects by qualified scholars fails to find support in a community of some 12,000 members.

On examining this volume he might perhaps make a further unfavourable comment. He might find fault with the subjects of most of the essays and the tone and methods of the authors. He might allege that they seem pervaded by a petty and narrow literalism which delights in the accumulation of critical minutiae and rarely rises to important issues. It is too often the effect of minute verbal scholarship that its microscopic vision of petty details of grammar or orthography incapacitates the student for the true perspective and appreciation of large general views. It is, perhaps, needless to add that this kind of research accords with, even if it be not the result of, the generally conservative instincts of our Oxford savants. While the *bonus textuarius* is expending all his energy in the elucidation of a single word in some late—and, for true exegesis, worthless—MS., he cannot at the same time consider how far the passage in which it occurs is genuine, or, that being granted, how far it is a valuable outcome of Christian tradition. While so many important and vital issues of Biblical scholarship are being discussed with ever increasing assiduity and temerity, it is surely a mistake to spend arduous labour on the minor literature of its earliest documents. Here, too, the principle applies: "The life is more than meat and the body than raiment."

Passing to the contents of the volume—the more important of which I purpose taking in the order in which they occur—the first essay is Dr. Neubauer's on "The Authorship and Titles of the Psalms according to Early Jewish Authorities." As might have been anticipated from its authorship, it is a learned and interesting contribution to a subject which in times gone by has greatly exercised Biblical commentators. On some such principle as *omne ignotum pro magnifico* the Hebrew titles to the Psalms have been regarded as supplying a key not only to the age and authorship of those compositions, but also to the music to which they were chanted; and many a superstruc-

ture of ingenious guesswork has been erected on those bases. Dr. Neubauer shows conclusively that nothing—worthy of being called knowledge—can be asserted on the subject. His summary seems to me of importance, especially as the attention of Bible students is at present being directed to the book of Psalms. He says:

"From all these different expositions of the titles of the Psalms it is evident that the meaning of them was early lost; in fact, the LXX. and the other early Greek and Latin translations offer no satisfactory explanation of most of them. Of the best Jewish commentators like Ibn Ezra and David Qamhi, the former treats them as the opening words of popular melodies, the other as names of instruments, both confessing that the real meanings are unknown. . . . Thus when all traditional matter is exhausted the only remaining resource is the critical method, which, however, on the present subject has as yet made no considerable progress."

Dr. Neubauer's paper is followed by what I feel compelled to pronounce the most important contribution in the volume—"The Origin and Mutual Relation of the Synoptic Gospels," by Mr. F. H. Woods. After an exhaustive examination of his subject, Mr. Woods arrives at what seems to be a growing consensus on the part of most students of our Gospels, viz., "that the original basis of the Synoptical Gospels coincided in its range and order with our St. Mark." For this he adduces six reasons of varying strength and incidence, the accumulative force of which it seems to me impossible to withstand. Mr. Woods also enounces other conclusions incidental to his main theme, of which it may be said that they are characterised by some measure of likelihood. Nothing, however, can be more cautious than his method or more guarded than his statements. He agrees with Holtzmann in surrendering the needless hypothesis of an Ur-Marcus, but he gives no indication of his opinion as to the sources whence Matthew and Luke filled up what they regarded as *lacunae* in Mark. Probably those sources were more numerous and varied than we are apt to suspect. There might, e.g., have been more than one collection of written sayings (*λόγια*) like that assigned to the Ur-Matthaeus. The oral traditions, also, may have varied either according to the Apostles to whom they were traditionally ascribed, or according to the particular churches by which they were received and accredited. Mr. Woods must be congratulated on his very able treatment of a subject on which the last word has by no means as yet been spoken. To add to the merits of his essay, he has appended an excellent synoptic table, "showing the relation between St. Mark and the two other Synoptical Gospels." Though composed for the purposes of his argument, this table has an independent interest and utility of its own. It is an invaluable introduction to the comparative study of the Gospels, and throws no small light on the principles of selection or rejection which it is obvious governed their composition.

The next paper of importance is Dr. Bigg's essay on "The Clementine Homilies"—the earliest example of that species of fiction of

* Is not the *n* still felt as a plural ending in this word as well as in "oxen"? Cf. A.S. *bracu*, pl. *braccan*.

which *Robert Elsmere* is, among ourselves, the latest illustration, i.e., the controversial novel. The general subject of the Clementine writings bristles, I need hardly say, with doubtful and contentious matter—quite beyond the scope of a literary journal to meddle with. Here it is enough to say that to already existing theories as to the origin and authorship of the Homilies Dr. Bigg adds another, which he supports with equal ingenuity and learning. Briefly, his theory is that the Homilies were made up by a re-cast on the part of an Ebionite and Arian editor, probably of Syrian nationality, of an orthodox Grundschrift, which formed the original basis of all the Clementine writings. That the Clementine Recognitions and Homilies owed their existence to an anterior work now lost has long been an accepted conclusion of the critics, so that Dr. Bigg has something like a consensus of scholars on which to build his hypothesis.

A word of recognition must also be given to the fifth essay by Mr. Bebb on "The Evidence of the Early Versions and Patristic Quotations in the Text of the Books of the New Testament." This is, in part, a republication of the author's Ellerton Prize Essay (1888). It is less an account of results than of methods and principles, and therefore has little interest for the general reader.

On the whole, the second volume of *Studia Biblica* may claim to demonstrate the vitality of Biblical studies in Oxford. But it also proves, as already suggested, that the life is not quite the vigorous, warm-blooded, prolific life which ought to characterise a well-nourished, intellectual organism like the university of Oxford.

JOHN OWEN.

THE NATIONAL EPIC OF THE GEORGIANS.

Der Mann im Tigerfelle. Von Schota Rustaweli. Aus dem Georgischen übersetzt von Arthur Leist. (Dresden & Leipzig: Pierson.)

HERR ARTHUR LEIST is a courageous man. He has already published a volume of selections from the Georgian poets of the nineteenth century (*Georgische Dichter*, verdeutsch, Leipzig, 1887). It was no trivial feat to render into German verse some of the charming lyrics of Orbeliani, Prince Ilya Chavchavadze, and others; but the rich oriental colouring of their poetry loses little or nothing in Herr Leist's resetting. Let us take for example the lines beginning: "So hör' ich wieder dein vergess'nes Rauschen," or "Im Schlummerlicht der blassen Vollmondstrahlen."

In the present case Herr Leist has ventured upon nothing less than a translation of the romantic epic of the twelfth century, of which the Georgians are so justly proud. So little is known of the literature of this people that it will probably be a cause of amazement to many that such a work exists. Of the author we have but scanty details. At the conclusion of his poem he tells us the place of his birth, to quote Herr Leist's translation:

"Ich, der ich diese Dichtung niederschrieb.
Mit hellem Geist und warmen Herzenstrieb.
Stamm aus dem Land Meschetien und dort.
Liegt Rustawi, mein kleiner Heimatsort."

Rustavi is in the neighbourhood of Akhal-

tsikh. We are told that the poet was sent to study at Athens, and on his return was made Queen Tamara's secretary. During the reign of this sovereign (1184-1212), Georgia reached the height of its prosperity; hence the great estimation in which she is still held by her countrymen, who are in the habit of assigning to the period of her rule all buildings of former times still standing. Rustaveli is said to have died at Jerusalem, as a monk, in 1215; what professes to be his portrait is still shown in one of the monasteries.

He called his poem *Vepkhevis Tkaosani*, or "The Man in the Panther's Skin," which garment the hero Tariel is represented as constantly wearing. This Herr Leist translates "tiger's skin." The word, indeed, may mean either according to Chubinov's Lexicon; but we are inclined to follow the scholars who approve of the other rendering, among whom is Prof. Tsagarelli, of St. Petersburg, now the most competent authority upon this language. It has been incorrectly rendered into Russian (and elsewhere) "The Panther's Skin"; but the termination *osani* implies wearing. We are told in one of the quatrains of the poem that on him (Tariel) was a dress of the skin of the panther; a hat of the same skin covered his head.

Up to the present time only portions of this poem have made their appearance in any European language. Thus, a translation into Russian of the beginning has appeared; in the Biblioteka Warszawska, vol. iv., a certain Casimir Lapezinski has given a sketch of the poem in Polish; and a version into French has been promised, but we cannot say whether such a work has ever appeared. The poem narrates the love of Avtandil for Tinatina, daughter of the Arabian king, Rostevan; and that of Tariel for Nestan Daredjan, daughter of the Indian king, Parsedan.

Although the action of the poem takes place in an ideal locality, we meet with the familiar names of Arabia, India, and China. Rustaveli himself says that the subject is taken from the Persian (see quatrain 16), and that he has simply translated it into verse, making no abridgment. But in quatrains 727-728 he forgets this, and makes his hero, Avtandil, speak to Tinatina, the daughter of the Arabian king, in pure Georgian. No Persian original of the poem has been found as yet, and most critics think that the poet's assertion was a mere trick to conceal the allusions to Queen Tamara, with whom he was in love. The poem is written in quatrains, each line of which consists of six feet, and concludes with the same rhyme. Such an apparent monotony does not annoy the ear of a Georgian. Now and then a vowel appears to be added to a line to make the rhyme more complete; at the beginning of the fourth line of each quatrain is found the word *da*, meaning "and," which is not reckoned among the syllables of that line. There is a strongly marked *ictus* in the middle of each verse.

The poem was printed at Tiflis in 1712, by King Vakhtang, after the establishment of a press there. In order to disarm the hostility of the ecclesiastics, he furnished it

with a mystic commentary. The clergy had always been antagonistic to the poem, on account of the absence of any pious expressions in it; and the Catholicos Anthony is said to have ordered copies of it to be thrown into the River Kur.

We must now see how Herr Leist has handled this difficult poem, written in a language which so few have been able to master, and the principles of which still remain an unsolved enigma. He has, of course, been obliged to abandon the quatrains; these could never be made agreeable to a Western ear. He has begun his translation in a metre, the scheme of which is a b a c d e f e; but it seems to us that the *ottava rima* would be best suited to it. This Herr Leist afterwards abandons and translates the bulk of the poem into blank verse, a metre which is rather prosaic, unless the pause in the line be carefully varied, as Milton has done. The conclusion of the poem is given in heroics.

"The Man in the Panther's Skin" has always enjoyed immense reputation among the Georgians, and many of its lines have become proverbs. It has been preserved in several MSS., and some copies were exhibited at the Tiflis exhibition in 1881. No edition of it appeared between that of King Vakhtang in 1712 and that published at St. Petersburg in 1841 under the editorship of the great Georgian scholar Brosset, Zach. Phalavandishvili, and Chubinov, the author of the dictionary. Complaints, however, have been made of the incorrectness of this text. The year 1887 saw the appearance at Tiflis of a very handsome edition, with plates by an Hungarian artist Zichy, somewhat in the style of the late Gustave Doré, and perhaps not very successful.

We have space only for a short sketch of the plot; but our readers may like to have it. Rostevan, the old King of Arabia, resigns his crown in favour of his daughter Tinatina. He is, troubled, however, with the thought that there is no hero in his whole kingdom who is equal to himself in courage. Accordingly, one of his captains, Avtandil, gets up a great hunting expedition, with a view of showing the king his own bravery and familiarity with weapons. At the hunt the attendants of the king find in the woods a young man weeping, clothed in a panther's or tiger's skin, who seems to the king a mysterious person. In vain does he send his attendants to discover the cause of his trouble; for the youth hides himself in the recesses of the forest. The king is still curious and dissatisfied, and is represented as being so distressed about the matter that his daughter, Tinatina, promises her hand to the man who will find out the cause of the youth's sorrow. Avtandil, who has long been in love with her, determines to go in quest of the mysterious stranger. After three years' search he finds out who he is, and is rewarded with the hand of the princess, and the piece concludes with their marriage festivities. A large part of the poem is occupied with an episode in which the love of Tariel, the youth in the panther's skin, for Nestan Daredjan is narrated, and there are a great many other digressions.

The plot is simple, perhaps too simple for our Western tastes, and therefore it will, probably, be regarded as a curiosity and little more. The long quatrains do not seem harmonious to our ears, and Georgian is a somewhat rugged language. Still, to the philologist, Georgian has considerable attractions. The structure is peculiar, more especially that of the verb, which throughout reminds us of Basque, although the absence of any community of vocabulary prevents us from attempting to group these languages together. They seem to show the verb in an earlier stage than we can find it in any Aryan language; it has not yet been differentiated from the noun. Moreover, Georgian has one great advantage over Basque; it has a fairly rich literature, dating from the eighth century, whereas that of Basque is of the most fragmentary kind.

As a specimen of Herr Leist's manner as a translator, we will give the concluding verses. We cannot help saying that we wish he had translated all the poem in similar heroics, reminding us somewhat in their style of the quaint and fantastic poem "Pharonnida," by William Chamberlayne, published in 1659, now almost forgotten.

"Zu Ende ist nun diese Heldenmär;
Die Harfe bebt noch, doch sie klingt nicht mehr.
Schwach ist nur meiner schlechten Harfe Klang,
Weit überrönt von David's Psalmensang.
Die Märe, die von fernem Land erzählt,
Von Herrschern einer unbekannten Welt,
Fand ich und da sie meinen Geist ergötzt,
Hab' ich in Verse sie für Euch gesetzt;
Besungen hat Choneli Amiran,
Den Sohn der hoheitsvollen Daredschan
Schawteli, der des höchsten Lobes wert
Hat Abdull Meschi durch Gesang verehrt:
Tmokweli, der als Dichter höher steht,
Verherrlichte im Liede Dilarget
Und Taryel, den Ungemach gequält,
Hab' ich, Rust'weli, mir zum Held erwählt.

To give an idea of the Georgian, we append the four lines corresponding to the last eight lines of the above quotation:

"Amiran Darejanis dze Moses ukia Khonelsa,
Abdul Mesia Shaythelsa leksi mas ukes romelsa;
Dilargeths Sargis Thmogvelisa mas ena daush-romelsa,
Tariel missa Rusthvelsa, misthvis tsremil-sheush-robelsa."

It will be seen that Herr Leist's version somewhat expands the original; but he has done his work well, and must be heartily congratulated upon the accomplishment of so difficult a task. He has made the Georgian poet known to the western world.

W. R. MORFILL.

NEW NOVELS.

Her Love and His Life. By F. W. Robinson. In 3 vols. (Hurst & Blackett.)

Consequences. By Egerton Castle. In 3 vols. (Bentley.)

Jack Warleigh. By Dalrymple J. Belgrave. In 2 vols. (Chapman & Hall.)

Rhêa. By Pascal Germain. (Spencer Blackett.)

That Fiddler Fellow. By Horace E. Hutchinson. (Edward Arnold.)

A New Lady Audley. By Austin Fryers. (Sonnenschein.)

In *Her Love and His Life* is given the best

portrait in the whole Robinsonian gallery—the character that will, at all events, be to Mr. Robinson what Jean Valjean is to Victor Hugo. Mike Garwood, *gamin* and artist *in posse*, with a thief for a father and a drunkard for a mother, can hardly be said to arrive at the dignity of sainthood. But it may be said of him that, by means of art and love and a certain dignity of character, which must in some mysterious way have mingled with his family blood, he becomes strong, self-reliant, and capable of self-sacrifice at least in the stoical sense. As is usually the case with Mr. Robinson's novels, *Her Love and His Life* contains some strong characters in addition to the hero. Three of these are exceptionally well drawn: Mike's father, the convict and thief, who almost murders his son, and yet has a sneaking pride in him, and from whom that son inherits his turn for art; his disreputable, tipsy, and almost insane mother; and his uncle, Sampson Kerts, the serpentine-worker and narrowly religious moralist. The Consterdines, father and daughter, would have deserved to be added to this group, only Rudolph is too hollow and pompous a humbug to have had for a daughter so very genuine and straightforward a girl as Patty. Sir Felix Durant, the scientist, successful in his profession but a failure in love, is also a very showy and ambitious sketch. But there is an air of unreality about him. He is a trifle too able, too magnanimous, too everything; and, for that matter, Mike Garwood is also represented as being too decidedly a genius. There are some very effective scenes in *Her Love and His Life*, especially the interview between Rudolph Consterdine and James Garwood, when the latter is in a condition bordering upon delirium tremens, and the desperate attempt of Mike to rescue his mother on a wild night at sea. Altogether, this is as remarkable and satisfactory a story as Mr. Robinson has ever published.

Consequences is notable for a very powerful plot well worked out, even although the incident on which that plot hinges, and by which George Kerr, an English gentleman, with a house in Mayfair, is transformed into a Confederate Colonel with a distinguished record, can hardly be said to be quite original. But this is the only thing that lacks originality in the story. George Kerr's sham suicide, his transformation into David Fergus, and his guardianship—disguised as Fergus—of his own son Lewis are all as decidedly fresh as they are admirably contrived. Then the paternal solicitude which is of the essence of the story is happily—in a sense also unhappily—relieved by the sub-plot, in which the chief parts are taken by that remarkable specimen of the scholar and gentleman Charles Hillyard and his mistress Miss Wren. This stormy and original young woman looks like one of Mr. Robinson's heroines borrowed for the special purposes of *Consequences*, although her talk is sometimes Readish rather than Robinsonian. Hillyard is a trifle too Mephistophelean for so cultured and well-connected a man; but it is a genuine treat to find him all but succeeding in circumventing so old and wary

a bird as Colonel Fergus. The author of *Consequences* ought, however, to have made his story end more happily; his sole excuse is that tragic, or essentially tragic, endings are fashionable. This particular termination seems, however, decidedly forced. It is unnatural that the girl whom the younger Kerr loves should exhibit a preference for his elderly father; even in that case it seems unnecessary that the wind-up should be "Shoulder to shoulder under the promise of a glorious noon, went father and son together across the moorland, on their way out into the world." This is more rhetoric; whereas the author of *Consequences* is not, as a rule, given to rhetoric, but, on the contrary, writes clear, crisp, vigorous English. The descriptions of London life and of German student doings and duellings are piquant and realistic in the best sense.

Whether regard be had to its excellences or its weaknesses, *Jack Warleigh*, which is described as "a tale of the turf and the law," but which might also with equal reason be termed a tale of the schoolroom and the bar-parlour, looks like a novel which ought to have been published a generation if not half a century ago—and that in spite of the South African War, which is rather needlessly dragged into it near the close. The old grammar-school in the country town with its easy-going prosperity, "not of the restless kind one finds in a manufacturing town, but something that seems more solid and suggests the three per cents."; the irascible but generous and gentlemanly head-master; that head-master's pretty daughter; a wildish but essentially good lad, who is destined, of course, in the long run to marry the pretty daughter—these are in reality the stage properties of the novel of the old but not unreadable school. *Jack Warleigh* is, for a hero, a good deal of a weakling; and even for a time, at least, and in respect of his affairs of the heart, behaves almost in a Tittlebat Titmousish fashion on coming into his fortune; while his relative and namesake, Cecil, is a decidedly stagey villain—stagey even in that love for the woman who becomes his wife which is his single redeeming feature. As for the scoundrelly "lawyer" Lukes, and the murderous "Colonel" Beamish, they are but the ordinary blacklegs of the turf—painted a trifle blacker than usual. Here and there the plot falters very perceptibly. But, taken all in all, *Jack Warleigh* is a good railway or seaside novel, and would have been still better with a little condensation.

It is not easy to understand why the author of *Rhêa* styles his book a "suggestion," although it is "suggestive" in several passages, especially in one where Mdlle. Jeanne de Sabran and Mr. Boothby discuss the subject of English ladies' dinner-dress. The author who, for some reason which it is not easy to divine, dedicates his book to the memory of Emerson, would, one is tempted to think, be French in the Zola or Maupassant sense, if he durst. He makes an American newspaper-man of the name of Boothby stumble upon a young woman in

the Palace of Fontainebleau, notable at the moment for the crimson roses in her hair and the contrast these present to the ivory white of her dress—"well-fitting, soft woollen stuff; one of these deceptive Parisian seductions which look so simple and cost so much." This lady, he learns from an undesirable acquaintance of the name of Zelfer, is a Miss Haldane, who has written amatory verses and is supposed to have been desperately in love with the hero of them. Boothby manages to make the closer acquaintance of Miss Haldane, and, finally, makes love to her in an unguarded moment with Zulu violence. She is accidentally killed, and Boothby, who had originally intended only to "make copy" out of her for his American editors, very nearly dies himself. In the end, however, he is seen recovering, and with the help of a queer company of Sisters and Fathers who—at least, the Fathers—mix up slang and devotion in the most marvellous way, "labouring and sweating till He comes," seems likely to develop into a better man than he appears in the beginning of the story. *Rhea* looks like the work of a clever young American—or, perhaps, *Américaine*—who is full of the "ideas" and theories that are floating about on the other side of the Atlantic, but has not yet quite mastered them.

That Fiddler Fellow is an interesting failure. There is nothing and nobody in it that, at least from the author's point of view, is quite real and natural, except the father, who "thanked God" when his daughter showed "a healthy, lively interest" in golf, and who seems to have been a typical Scotchman in this sense, that he was capable of swimming over a grave crisis in his history on a tide of whiskey. But as for the miserable Italian fiddler-fellow and the hypnotic trick by which he gets McPherson's daughter to accomplish for him the murder of young George Craigie, they are not at all in Mr. Horace Hutchinson's way. He is no doubt quite capable of writing a good rollicking breezy story of championship golf, into which he might introduce "pulling" and "pressing," "foozling" and "bad lies," "stimmie" and "niblick," and all the useful but not specially ornamental jargon of his favourite game. But his attempt here to combine the pastimes and legends of old St. Andrews with the sickly and revolting modernity of one phase of the Parisian life of to-day has not even the negative merit of being a good bit of caricature.

There is an irritating waste of power in *A New Lady Audley*, which is, to all appearances, the work of a new and a very young writer. There are not a few evidences that Austin Fryers could write a more than moderately readable story with a dash of fun in it if he (or she) chose. But what good can come of parodying—at least at this time of day, when the parody as well as the original has lost the favour of freshness—the old life of Audley with the hero, the heroine, and the amateur-detective, so very thinly disguised as Sir Thomas, Lady Sibyl, and Ridley Audley? No doubt, Austin Fryers has introduced some novel cha-

acters into the old plot; at all events, Macnamarri, who looks as if he had been imported from one of the works of the late Mr. Fergus, and to some extent even the detective Rambelow have the look of originality. The plot itself is well managed, or would be, if one were not so painfully conscious at every stage that it is merely a parody. Finally, some good fun is poked, more particularly in the early chapters, at certain artistic affectations of the time.

WILLIAM WALLACE.

SOME SCOTCH BOOKS.

Scenes and Stories of the North of Scotland. By John Sinclair. (Edinburgh: James Thin.) A more enjoyable and thoroughly Scotch book than this has not been published for many a day. Mr. Sinclair has at his command a wonderful treasure-house of racy stories of ministers and ministers' men, and of hundreds of other "worthies" and "characters." He is also one of the most enthusiastic and successful of Scotch landscape-painters in words. He confines himself to the extreme North, with which he is connected by birth and breeding; and, indeed, all that he has to say is concentrated round some half-dozen places of interest—Loch Duich and the Black Rock in Ross-shire, the island of Lewis, Assynt in Sutherland, the Caithness coast, the town of Thurso, and the Shetland Islands. Mr. Sinclair is a mine of historical and social information, as well as of anecdotes of persons; and his digressions, in which he gives free play to his ethical and other conservatism, are delightful. The illustrations, especially the coloured illustrations of the three Thurso characters—"Peelans," "Moozie," and "Boustie"—are quite as good as the letter-press, and higher praise could not be given. In a word, Mr. Sinclair's volume is the most successful Scotch book that has been published since Dean Ramsay's *Reminiscences*, and even to that book it is in some respects superior.

Yarrow: its Poets and Poetry. By R. Borland (Dalbeattie: Thomas Fraser). The object which the minister of Yarrow has had in view in preparing this work for the press has been, as he explains in his preface, to bring together the more notable and interesting ballads and poems which Yarrow has inspired, and to "give such brief biographical sketches of the various poets as may prove either interesting or instructive to the general reader." Mr. Borland has, of course, a large number of writers to quote from and write about; as there is hardly a Scotch poet or poetaster that has not raved about Yarrow. His difficulty must have lain in making a selection from the abundance—it would not be altogether correct to say the wealth—of the material at his disposal. This he has overcome in a manner which is almost unexceptionable. He has given selections from all noteworthy writers on Yarrow, from the authors of the old ballads down through the author of "The Flowers of the Forest," Sir Walter Scott, James Hogg, William Wordsworth, and Professor Wilson, to Mr. Andrew Lang, Principal Shairp, and Mr. Alexander Anderson. Mr. Borland is not an ambitious stylist; but he writes good plain English, and is seen to great advantage in what he says, for instance, on Wordsworth and Hogg. The selections have been made with great judgment. Altogether, this is a volume of which it may be said without any exaggeration that every lover of Yarrow ought to have it on his shelves.

Sketch-Book of the North. By George Eyre-Todd. (Glasgow: William Hodge.) The greater number of these papers have already appeared

in periodicals; but the author has done wisely to collect them and publish them in the form of a volume, for they throw a good deal of fresh light upon Scotch scenery and humble life. The author is, to judge from internal evidence, a young man with a love of Scotland and a keen eye—the eye, perhaps, rather of an artist than of a man of letters; and he describes in commendably brief sketches what he has himself seen in the north. A list of some of the titles—"Among the Galloway Becks," "Loch Lomond Iecbound," "An Arran Ride," "Where the Clans Fell," "A Loch-side Sunday," "In the Shadow of St. Giles," and "A Cast of Flies," are among them—will serve to indicate the variety of the contents. Mr. Todd has not many stories to tell; but when he gives anything of the kind, as when he describes "the return of the native" in "A Weaving Village," he recalls Christopher North. Very pretty, too, as well as simple, is his account of a forest wedding. But he is seen to most advantage when giving a landscape in words. In "By a Western Firth," he shows the power, not, perhaps, of Richard Jefferies, but of the American writer Burroughs. Mr. Todd is sure to do better work than this, good though it unquestionably is. A word of special praise is due to the paper, which it is pleasant to handle, and to the type, which it is a delight to read. Both are very much above the average.

Whistle-binkie. (Glasgow: David Robertson.) Here we have a new edition of an old book so full and elaborate as to be, in itself, practically a new book. The songs contained in the original *Whistle-binkie* were published in separate series extending over a period of fifteen years, the first dating as far back as 1832. The present publisher indicates the objects of the original issue very clearly when he says:

"When the first portion of *Whistle-binkie* was issued from the press, our Scottish firesides were still greatly under the influence of the old chap-books, which, while they embodied much genuine poetic feeling, expressed in terse and graphic language, were yet permeated and marred by much that was coarse and indecent—these last two characteristics being, indeed, the chief features of many of them. It was the purpose and glory of *Whistle-binkie* to exhibit, to cherish, and to preserve all the tenderness, the refinement, and the genius of the national muse, without the coarseness and licentiousness by which it had been debased."

The original object of the publication of *Whistle-binkie* has, undoubtedly, been accomplished. As the book has grown and grown, a good deal of rather inferior verse has naturally found its way into it. But the amount of undoubtedly good, though not first-class, poetry dealing with the strong point of Scotchmen and Scotland—the domestic affections—is marvellous. Mr. Robertson has, in these two volumes of small—almost too small—type, performed a service to his countrymen which can fairly be said to be unique. Biographies of some of the authors who are represented in the book are also given. These are models of good taste.

Auld Scots Ballants. Edited by Robert Ford. (Alexander Gardner.) Mr. Ford is a painstaking and, on the whole, discriminating collector of Scotch ballads. A year ago he issued a small volume in paper covers under the title of *Rare Old Scotch Ballads*; and this he has followed up by what he terms "merely a 'reel-rall' budget," comprising a number of rare and curious "blads" of verse, together with the "pick and wale" of the more popular of the ancient ballads of Scotland. On some of the pieces which Mr. Ford here gives for the first—or almost the first—time he prides himself perhaps too much. Such is "Thrummy Cap," written by John Burnes or Burness, a cousin-german of Robert, of whom we are

told that "partly on account of an injudicious marriage, and partly on account of a love of intoxicating liquor, his career was far from being a prosperous one." It is a sufficiently simple story in verse of how a "sturdy bardeoch chiel" rewarded a man who gave him hospitality by discovering certain rights to property; but the versification is occasionally such as to make it almost incredible that the author's cousin should, as is alleged, have approved of a production containing hundreds of bald lines like:

"I've some fears we've lost oor way,
Hooever at the neixt hoose we'll stay
Until we see gif it grows fair,
Gin no, a'nieht we'll tarry there."

Mr. Ford's book will not be appreciated and consulted for pieces like "Thrummy Cap" so much as for curious old rhymes like "The Wife of Beith." In its way it is a sort of Scotch poetical dictionary, and probably the best book of that kind which has ever been published.

Scotia Rediviva. By J. Morrison Davidson. (William Reeves.) This is essentially a political pamphlet, having for its object the enactment of Home Rule for Scotland. We are debarred, therefore, from criticising its leading contents, or pronouncing favourably or unfavourably on its general object and character. At the same time, there are portions of the book which are, at least to the extent of nine-tenths, historical; thus Mr. Davidson gives biographies of various important personages, including Wallace, George Buchanan, and Fletcher of Saltoun. In these, he shows himself to have the gift of a flowing narrative style. He has also at his ready command nearly everything in good prose and in enthusiastic but somewhat indifferent verse that has been written about Scotland. All who are interested in the question of Home Rule for Scotland, and not a few who are interested merely in the history of the country regarded from the popular point of view, will find *Scotia Rediviva* a valuable little reference-book. Besides, Mr. Davidson is an essentially good-natured controversialist, even although he has strong opinions upon a whole host of subjects, and delights in applying the Carlylian term of "hyaena" to Scotch peers.

Sonnets and Poems. By William Garden. (Gall & Inglis.) Mr. Garden obviously belongs to the tolerably large class of minor Scotch poets—it would savour of injustice to dub them poetasters—who deal conscientiously and laboriously with every subject that arouses their susceptible, but not very ambitious, fancy. Mr. Garden is grammatical and simple, and deals with everything in Scotland, and a good deal beyond it, that will stand his treatment. His finer frenzy comes to nothing worse than:

"The time-tried Kirk o' Scotland is the nation's
glorious croon,
Foul fa' ilk selfish enemy wha'd try to pu' her
deon!
Deep-rooted in the nation's heart, she'll stand
seure, until
The latest mirk o' time shall hush the kirk-bell
o' Newmill."

He is, like most minor Scotch poets of his school, at home in domestic scenes. Tannahill, rather than Burns, is his master. He is seen at his best in such pieces as "The Twinnies" and "Oh, blessins on the Bairnies, A'," which are written in Scotch; and "Sister Mary," which is written in English. He comes to grief decidedly, however, when he tries the Wordsworthian stanza, as in:

"And evermore
On sea and shore,
God's wondrous glory lies,
While wind and wave,
With deep-toned stave,
Chant solemn harmonies."

On the whole, Mr. Garden would do well to leave poetry alone—at least for a time.

College Echoes. By David Cuthbertson. (Paisley: Parlange.) This is a sufficiently lively collection of enthusiastic Edinburgh undergraduate sketches, for the publication of which, however, there is no such excuse as the possession by the author of such a humour as that of Mr. J. M. Barrie. Some of the would-be facetious stories have a juvenile look, such as that of the professor with a daughter named Aggie who, when she came to him with the intelligence that she had received an offer of marriage, responded *Teum* age, and was taken not at his Latin, but at his English, word. There is a good deal of "liquoring up" in this little book, but there is also a good deal of lecturing. Indeed, the morality may be called the best element in it.

NOTES AND NEWS.

THE first two volumes of the Correspondence of the Prince de Talleyrand are to be published in Paris to-day (Saturday). But, owing to copyright difficulties, we understand that Messrs. Griffith, Farran & Co. will not be able to issue the authorised English translation until a week or two later.

SINCE the publication of Mr. Froude's *Letters and Memorials of Jane Welsh Carlyle* many new letters have been printed, which throw additional light on Mrs. Carlyle's character—a character which, together with the story of her life, has always excited much interest and discussion. It has long been felt that the subject might, with advantage, be viewed impartially through a woman's judgment. As a result of this feeling, Mrs. Alexander Ireland has, after long preparatory study, written *A Life of Jane Welsh Carlyle*, which will contain several characteristic letters hitherto unpublished, including one in facsimile, and a portrait. The work will be published by Chatto & Windus, in one volume.

THE late Dean Church's personal reminiscences of the Oxford Movement will be published by Messrs. Macmillan next week, in one volume, at a net price. It contains a record of the principal phases of the movement during the twelve decisive years, 1833 to 1845, with character-sketches of Newman, Keble, Hurrell Froude, W. G. Ward, &c.

MESSRS. GILBERT AND RIVINGTON will shortly publish a book entitled *Synopsis*, being a Synoptical Collection of the Daily Prayers, the Liturgy, and Principal Offices of the Greek Orthodox Church of the East, translated with assistance from the original, and edited by Katharine Lady Lechmere. The work will have an introduction by Mr. J. Gennadius, the Hellenic minister at the Court of St. James's; and the collection will present an English version, in many respects new, of the most usual prayers and offices of the Greek Church, some of which will appear for the first time in the English tongue.

MR. C. WISE is engaged on a History of Rockingham Castle and the Watsons, which will be issued by subscription shortly through Mr. Elliot Stock.

MESSRS. PERCIVAL & Co. will publish next week a novel, in three volumes, entitled *The Dower of Earth*, by Ethel Glazebrook, wife of the head master of Clifton College. The same firm will also issue shortly a new novel, in one volume, by Mrs. Macquoid, entitled *Drifting Apart*.

A Ride to India is the title of a new book which Messrs. Chapman and Hall will publish in a few days, by Mr. H. de Windt, author of *From Peking to Calais*. It will be illustrated

from sketches made by the author, and will also contain a map showing the route taken.

The same publishers announce the second instalment of the account of Dr. W. Junker's travels in Africa. The first volume, which was published last year, contained the record of his travels during the years 1875-1878. The forthcoming one covers the years 1879 to 1883. It will be illustrated with numerous full-page plates and smaller illustrations in the text. It will, like its predecessor, be translated by Prof. A. H. Keane.

MESSRS. G. P. PUTNAM'S SONS will issue immediately the third volume in their "Heroes of the Nations" series: *Pericles and the Golden Age of Athens*, by Mr. Evelyn Abbott.

A NEW novel by Mrs. Needell, entitled *Unequally Yoked*, will be published next week by Messrs. Oliphant, Anderson & Ferrier, in one volume. The same publishers also announce *Mrs. Romaine's Household*, by Evelyn Everett-Green; and *My Brother Basil*, by Mrs. E. Neal.

IN connexion with the Wesleyan centenary, Messrs. James Nisbet & Co. will publish immediately a Life of John Wesley, by the Rev. James Ellis.

MR. HODGES has ready for publication *Order in the Physical World and its First Cause*, from the French, by T. J. Slevin; and Mr. Prichard's translation of *Piconio on St. Paul's Epistles*, Vol. III., completing the work.

THE first two editions of Lucas Malet's *The Wages of Sin*, which were themselves equal to five ordinary editions of a library novel, being now completely exhausted, the book is for the moment out of print. Messrs. Sonnenschein have, however, a third edition in active preparation, which will be ready in the course of a few days.

AN interview with Mr. Justin McCarthy, accompanied by a specially-drawn illustration of his study at Cheyne-gardens, Chelsea, will appear in No. 388 of *Cassell's Saturday Journal*, to be published on March 1.

THE March number of the *Bookworm* will contain articles on the "Pupilla Oculi," by the Rev. F. E. Warren; "How Eastern Books Begin and End," by Mr. W. A. Clouston; and "A Volume of Apothecaries' Lore," by Mr. W. Roberts.

THE following have been specially elected members of the Athenaeum Club by the committee: Mr. George du Maurier, Dr. William Ogle, and Mr. Hamo Thornycroft.

IN consequence of the illness of the lecturer originally arranged for by the Sunday Lecture Society, Miss Amelia B. Edwards has kindly undertaken to deliver her lecture on "The Literature and Religion of the Ancient Egyptians" at St. George's Hall on Sunday next, March 1, at 4 p.m.

DURING the whole of next week, Messrs. Sotheby will be engaged in selling a very interesting collection of books, &c., brought together from several quarters. Part of it, by an unpardonable blunder, is described on the cover and again on the title-page of the Catalogue as "the chief portion of the library of the late J. Nichol, emeritus professor of English literature at Glasgow." On a reference to p. 7 it will be seen that this part includes the library of Mr. John Nichol's father, J. P. Nichol, late professor of astronomy at the same university. The most interesting lot here is the original MS. draft of J. S. Mill's *System of Logic*, which the author presented to Prof. J. P. Nichol. Among the rest we have only space to mention a number of proof-sheets of Tennyson's poems, with autograph corrections; a series of eighty-three drawings by Thackeray, including seven in water-colour, which have never been out of the possession of the owner; a set of Byroniana, in

263 volumes; a beautiful copy of the first edition of Walton and Cotton's *Complete Angler*; and a large number of volumes made valuable by autograph letters and MS. additions.

M. GEORGES PILOTELLE has been good enough to send us a copy of his French translation of Marat's medical treatise, which he entitles "De la Presbytie Accidentelle." As conjectured in the ACADEMY of last week, it turns out to be identical with *An Enquiry into the Nature, Cause, and Cure of a Singular Disease of the Eyes, &c.* (n. d.; but the preface is dated "Church Street, Soho, 1st January, 1776). M. Pilotelle is disposed to think, from certain phrases in the preface, that the work was originally written in French; but we are not convinced by his arguments. For the rest, the reprint is a magnificent example of typography and paper.

MESSRS. MACMILLAN have done well in issuing *The Statesman's Year-Book* for this year several weeks earlier than usual. When a Manual of this kind has proved itself to be indispensable, the sooner it appears the better, even at the expense of excluding some of the latest statistics. We notice, however, that the editor has been able to give the general results of the American census. Apart from minor changes, the feature of this issue is the attention that it has been necessary to pay to Africa. Zanzibar is added to the British empire; and a table, specially compiled by Mr. E. G. Ravenstein, exhibits the partition of Africa according to inhabitants and square miles. Many will be surprised to learn that France has secured a considerably larger area than England, but the latter has nearly twice as large a population. Though we recognise that Mr. J. Scott Keltie will have a heavy task next year to incorporate the census not only of the United Kingdom, but also of India and the colonies, we must implore him to subject the section dealing with finance to a thorough revision. No doubt the varying sets of figures issued by the Treasury are very perplexing; but the difficulties have been solved by the compiler of the corresponding article in *Hazell's Annual*, from which we have learnt the source of some of the misleading entries. Also, Mr. Goschen's scheme of local finance should not have been altogether omitted. The chapter on India, we notice, has been vastly improved under the new editorship.

Correction: In the review of G. A. Smith's *Isaiah*, in the ACADEMY for Feb. 21 (p. 183 col. 2, line 12), for "a work of Isaiah's" read "a work of Josiah's age."

UNIVERSITY JOTTINGS.

MR. F. Y. EDGEWORTH, of Balliol College, has been elected to the Drummond chair of political economy at Oxford, vacant by the death last October of J. E. Thorold Rogers. Mr. Edgeworth, who is the secretary of the newly-founded British Economic Association, had previously succeeded Prof. Rogers on his resignation of the Tooke chair of political economy at King's College, London; and he has long been lecturer in logic at the same institution.

WE regret to hear that Mr. F. T. Palgrave, professor of poetry at Oxford, has been prevented from lecturing this term by ill-health.

THE proposal to confer the honorary degree of M.A. on Mr. Henry Bradley will come before Convocation at Oxford on Tuesday next.

THE Hon. and Rev. A. T. Lyttelton has been appointed Hulsean Lecturer at Cambridge for the present year, in succession to the Rev. Llewelyn Davies.

THE first of the Rev. C. Gore's Bampton

Lectures will be given from the university pulpit at St. Mary's on Sunday next, March 1.

CANON CHEYNE, the Oriel professor of the interpretation of Holy Scripture at Oxford, proposes to deliver two public lectures on "Possible Zoroastrian Influence on the Religion of Israel."

FOR the meeting of the Cambridge Philological Society, held on Thursday of this week, contributions were promised from Prof. Mayor and Dr. Sandys upon "Aristotle on the Constitution of Athens"; and notes on the subject-matter of the treatise, or elucidations of the text, were invited from other members.

MR. ALBERT DICEY, Vincian professor of English law at Oxford, announces a course of public lectures on "The Comparative Study of the Constitution."

THE teachers' training syndicate at Cambridge recommend that an application be made to the Committee of Council on Education, to allow the establishment of a day training college for men, confined to matriculated students of the university.

FROM the annual report of Manchester New College, now domiciled at 90, High-street, Oxford, we learn that the proposed new buildings in Mansfield-road are estimated to cost altogether about £50,000, towards which £31,439 has already been paid or promised. We observe that the regular income of the college is derived from land to the extent of nearly one-third. A benefaction is announced of £3000 from Mrs. W. Hollins, the interest of which is to be applied towards objects calculated to increase or improve the social or academical advantages of the students, or to promote their physical welfare.

IT is perhaps worthy of note that the Craven and Waddington scholarships at Cambridge have just been awarded to men bearing the following names:—R. J. Grote Mayor and Th. Llewelyn Davies.

MESSRS. MACMILLAN will publish immediately an edition of the *Historics* of Tacitus, by the Rev. W. A. Spooner, fellow and tutor of New College, Oxford. The Introduction consists of seven essays, dealing with such questions as the MSS. and earlier editions of the work, the materials used by the author, and the condition of the provinces at the time. An analysis is prefixed to each book, and there is also a particularly full index.

MESSRS. METHUEN have in the press *Oxford and Oxford Life*, a sort of modern version of *Pass and Class*, well known to a former generation. It is edited by Mr. J. Wells, fellow and tutor of Wadham.

PROF. KARL PEARSON, the newly-appointed professor of geometry at Gresham College, will give an introductory course of four lectures on "The Scope and Concepts of Modern Science" on Tuesday, Wednesday, Thursday, and Friday of next week. The lectures are free to the public, and commence at 6 p.m.

A CORRESPONDENT calls attention to the absurd explanation given of "Silent Sister" in the new edition of *Webster* (p. 1711):—

"A name given to Trinity College, Dublin, because, unlike Oxford and Cambridge, it has no representative in Parliament."

As a matter of fact, Trinity College, as being by itself a university, has been represented in Parliament since the reign of James I., and is, indeed, the only college with such a franchise. The name "Silent Sister" is, of course, a relic of the time when Trinity College dons could be not unjustly accused of publishing nothing.

ORIGINAL VERSE.

IN QUIETNESS SHALL BE YOUR STRENGTH.

Cleanse, cleanse your soul from sin and soil,
And poetry will in it grow;
Quell in it greed and hate's turmoil,
And music from its depths will flow.

Still, still in tranquil mood advance,
From ever-changeable scene to scene;
Atoms and molecules may dance,
But man should hold a constant mien.

Mad, mad, my masters, is the age,
It plunges down, like Phaeton's team;
Consumed by fear and lust and rage,
We have forgotten how to dream.

Less, less of golden store be mine,
So that I may have quiet hours
In which to train my cottage vine
And pick the priceless wayside flowers.

J. C.-B.

MR. BALFOUR AT TRINITY COLLEGE, DUBLIN.

THE following is the text of the Latin speech delivered by the Public Orator (Prof. Palmer) at Trinity College, Dublin, on the occasion of conferring the honorary degree of LL.D. upon Mr. A. J. Balfour:

"Honoratissime Vice-Cancellarie, Domine Praeposite, Totaque Universitas:

"Quanto studio auctoritatem comprobaveritis Senatus Academici, cui placuit impigerimum fortissimumque virum Arthurum Iacobum Balfour, quantum in nobis est, honore adficere, testis hic virorum illustrium seminarumque primarium concursus, quantum nunquam antea fieri meminimus, nisi cum Reginae filius comitis nostris interesset.

"Quattuor fere anni sunt ex quo difficillimum rei publicae partem hic suscepit. Quae provincia infesta multis, huius gloriae principium fuit. Ubi alii famam perdiderant, hic invenit. Et si nobis nondum licet exclamare

'Iam redit et Virgo redeunt Saturnia regna', attamen satis superque causae est cur huius gratias vel maximas agamus. Nam hoc quadriennio faciem Hiberniae puene aliam reddidit. Vindex legum libertatisque extitit, fidem publicam revocavit, bonis animos auxit, concordiae fundamenta jecit. Omnibus ordinibus aequae studuit. Vias per regiones remotas munientas curavit, quibus egenis operariis mercedem, agri cultoribus itinera ad mercatus opportunos paravit. Nuper autem miscellis hominibus calamitate frugum perculsis subvenit, famelicos pavit, algentes vestivit. Quibus meritis animos popularium mirum in modum conciliavit, ique qui modo probra in eum temere atque inconsulto jecerant, laudes ejus libenter audiunt: restat, credo, ut Patrem Patriae ipsi salutent.

"Sed de his haecenus quae ad publicam potius quam privatam laudem pertinent. Illud, V.V.DD. vobis non minus hunc commendabit, quod summae sapientiae regiones tetigit, quique in republica gerenda nunquam haesitaret, dubitationi locum in philosophia asseruit. Quid quod musicam, artium principem, ut pauci excoluit? Seria haec: sed otium quoque ut recte disponent, multis exemplo fuit. Nam ut Maecenas post anxias super orbe atque urbe curas trigone se recreare solebat, ita hic, non circo, non alea, sed pila Scotica, ludo, si quid video, viro gravi strenuoque conveniente, reficitur.

"Quem ad quae maiora destinant fata nescimus. Quodsi vota facere licet, optandum est ab dis immortalibus, Aademicis, ut quicumque erit ille cui volvenda dies deferet regnum huius pulcherrimi Imperii a majoribus nostris multo sanguine ac labore parti, talis semper sit, qualem hic in Hibernia se praestitit, in consilio sagax ac benignus, in agendo firmus atque intrepidus. Tali duce atque auspice de patria nostra nunquam desperandum erit."

CORRESPONDENCE.

"ARISTOTLE ON THE CONSTITUTION OF ATHENS."

Trinity College, Dublin: Feb. 23, 1891.

P. 6, 1. ult.—ἦσαν δ' οὐχ ἅμα πάντες οἱ ἐννέα ἄρχοντες. This could not express the fact that the archons had different offices or courts. Now, Mr. Kenyon's ἔκισαν was probably a *vox propria* for the archons' office or court. Cp. ἦδη δὲ ἐσπέρας οὐσας καὶ οὐκ οὐσας Μετρίδας αὐτοὶ πρὸς τὸ τῶν ἀρχόντων οἴκημα [office] καὶ καταλαμβάνει τοὺς ἔρχαντας ἐξιώντας (Dem. *Mid.* 542). *Domus* is used in the same sense in Juv. xiii. 160.

P. 11, 1. 5.—τοὺτους δὲ δεῖν εἶναι τοὺς πρυτάνεις καὶ τοὺς στρατηγούς καὶ τοὺς ἱππάρχους τοῦ γένους μεχρὶ εὐθυών. . . . τας δ' ἐκ τοῦ αὐτοῦ τέλους δεχομένους οὐκ οἱ στρατηγοὶ καὶ οἱ ἱππάρχοι. Here, as in many other places of this and the other works of Aristotle, words have got into the wrong place. I would read τοὺτους δὲ δεῖν κρατεῖν τοὺς δεχομένους (τοὺς στρατηγούς καὶ τοὺς ἱππάρχους) τοῦ γένους μεχρὶ εὐθυών. Compare p. 140, 1. 11—κρατεῖν μεχρὶ ἀρχῆς τέλους. The writer uses γερῶν p. 141, 1. 2.

P. 14, 1. 5.—The words misrepresented by the unmeaning καὶ γὰρ ἐπλάσαν seem to be part of Solon's poem, and to describe the distracted state of Athens, perhaps καὶ γὰρ ἐπ' ἡλαίνι. The subject of the subsequent verbs is Σόλων, and the words p. 15, 1. 10—τὴν τε φιλαργυρίαν τὴν θ' ὑπερη-

φανίαν—should be displayed as a pentameter verse.

P. 16, 1. 6, for [μετὰ δὲ] οὐ πολὺ, read ὕστερον δὲ (or μετὰ δὲ ταῦτα) οὐ πολὺ, "not long afterwards."

P. 16, 1. 17.—μετεκρούσας may be right. The idea of a balance underlies the word, as in παρακρούσας; and "he shifted the balance of affairs" would be a not unnatural way of saying "he changed the face of politics."

P. 20, 1. 3.—It is impossible that an inscription should consist of two pentameters. Read

ἵππον Διφίλου Ἀνθεμίαν ἐνέθηκε θεοῖσι;

and, in the next lines, read ἐπιμαρτυρῶν for ἐκμαρτυρῶν, and for σημαινόντων either σημαινόντων or σηματούσαν.

P. 25, 1. 1, for τὴν πρόφασιν [ν τοῦ κολάζ] εἶναι, read τὴν πρόφασιν τοῦ ἐκτινέσθαι.

P. 25, 1. 6.—τὸ αὐτόματον has no construction. Read [ἀγαπῶ]ντας τὸ αὐτόματον, "content to let things take their course"; or περιμένοντας. Cp. Plut. *Sol.* 20.

P. 27, 1. ult. for τ[ρ]εῖς καὶ ἐξήκοντα, read, perhaps, ὡς κατὰ ἐξ. The abbreviated symbols for καὶ and κατὰ are very alike.

P. 30, 1. 6.—

οὐδὲ μαι τυραννίδος
ἀνδάνει βία τι [ρὲς] εἶν οὐδὲ πει[ρ]ᾶς χθονὸς
πατρίδος θεοκοῖσιν ἐσθλοῖς ἰσομοίριαν ἔχειν.

For θάκοισιν, read κακοῖν, the meaning being "nor does it please me that the good should have merely an equal share with the bad of the rich soil of our country." Cp. *Soph. Oed. Tyr.* 810—οὐ μὴν ἴσση γε, "not merely an even penalty." What he desired was that the good should have far more than the bad.

P. 30, 1. penult.—The meaning given to ἀξονήλατον in the note is impossible. Can there be an allusion to the revolving axes on which the Laws of Solon were engraved? If so, ἀξονήλατων (from ἀξονήλατω) would be a poetical synonym for νομαθεῶν, and would be taken with ἐπαυδάμην; or perhaps we should read οὐνεκα ξενήλατον = "treated like a stranger and banished." See 1. 8 of this fragment.

P. 32, 1. 2, probably we should read

αὐθις δ' ἂ τοῖσδ' ἐν ἄτεροι φρασάτατο.

P. 41, 1. 20.—μέγιστον δὲ πάντων ἦν [των ἀρεσκο]μένων. This is, of course, impossible. Perhaps τῶν προσαγομένων or προσαγομείων, as προπάσθαι exactly means *sibi consiliare*.

After τῶν προσαγομείων, I suppose τὸν δῆμον to have fallen out of the archetype before τὸ δημοτικόν.

P. 45, 1. 10, for ἐφ[υ]εν, read ἐφευγεν.

P. 80, 1. 6, surely ἐδρόμενος is the tense demanded, not εἰρισκόμενος.

P. 88, 1. 3.—ἔταν τοῖς ἀποῖσι γίγνεται μετὰ τῶν ἄλλων βουλευέιν. Probably we should read τοῖς αὐτοῖς, "the same senators, the old members." We find (p. 156) that the office of senator was the only civil office which could be held twice.

P. 91, 1. 4.—τῇ ναυμαχίᾳ ρικάντας. Read τὴν ναυμαχίαν.

P. 97, 1. 1, read κατὰ τὴνδε τρόπον.

P. 120, 1. 9, we should probably read τὸν [πρί]μενον καὶ ὀπίσθον ἂν πρῆται; and, in 1. 21, ἐν γραμματεῖσι λευκωμένους.

P. 121, 1. 12.—The supplement seems to be καὶ [παραδίδου]σιν.

P. 122, 1. 18, 19, the correction of τρέφειν to τρέχειν is suggested by *Eth.* ii. 6.2—ὁμοίως ἢ τοῦ ἵππου ἀρετὴ ἵππον τε σπουδαῖον ποιεῖ καὶ ἀγαθὸν δρεμεῖν καὶ ἐιεγεῖν τὸν ἐπιβάτην καὶ μείναι τοὺς πολεμίους.

R. T. TYRRELL.

[A SECOND edition is now in our hands of the newly discovered fragment of "Aristotle's" *Constitution of Athens*. It is, so far as we can discover, very little altered from the first edition, though a few small amendments have been silently made. The passage in c. 50, which formerly ran ὁχετοὺς μετεώρας εἰς τὴν ὁδὸν ἔκρουν ἐχομένας, now runs ὁχετοὺς μετεώρους κ.τ.λ.; but it is to be supposed that this is not its final form. Furthermore, there is a list of nine *Corrigeunda*, not introduced into the text, but given on a fly-leaf—a list which few persons will consider adequate. We subjoin these

corrections for the benefit of purchasers of the first edition. (1) P. 23, 1. 7, for ἐλογίσαστο read ἐπαίησαστο. (2) P. 30, 1. 8, for θάκοισιν read κακοῖσιν. (This renders Mr. Kenyon's note on the passage superfluous.) (3-4) P. 32, 1. 15, for ἂν τορδᾶς read ἀντορδᾶς, and for ἐξελὶν read ἐξείλεν. (5) P. 43, 1. 3, after ἰδῶν insert εἶναι. (It was suggested in the ACADEMY for February 14 that some verb is missing after ἰδῶν; and we could wish now to be told whether the εἶναι has been invented for the occasion, or whether it is really based on anything in the papyrus.) (6) P. 44, 1. 21, for Ἀρεῖον, read Ἀρεῖον. (7) P. 92, 1. 4, for χωρησάμενοι, read χρησάμενοι. (8) P. 103, 1. 14, for καρδία, read καὶ διὰ. (9) P. 124, 1. 7, for συνοικεῖ, read συνδιαικεῖ. Here, again, one wishes to know whether this is an emendation, or whether the space for two extra letters has now been found in the MS. On the whole, it seems to us a matter of regret that the second edition should be so small an improvement. If held back for a little time longer, it might have gained much more largely by criticism on the first edition.—En. ACADEMY.]

THE ETYMOLOGY OF "FIANN" AND "FÉNE."

London: Feb. 16, 1891.

Although I cannot claim to be one of the "Celtic experts" whom Mr. Nutt invites to criticise Prof. Zimmer's theory as to the origin of the Ossianic Saga, I venture to present briefly some of the difficulties in accepting that theory, which occur at once to the comparative philologist.

To quote Mr. Nutt's letter in the ACADEMY of February 14: "It is hardly too much to say that the hypothesis turns upon the word *fiann*. But," as he cautiously adds, "is the suggested derivation a likely one?" Prof. Zimmer regards *fiann* as a loan-word from the Old-Norse *fjándi*, pl. *fjándr*. Now, first, the vocalism of the words is different, the *ia* in the monosyllabic *fiann*, gen. *féinne*, representing a primeval diphthong *ei*, while the *ja* in *fjándi* represents the *iya* in the dissyllabic *fiy-and-a*. Secondly, the genders are different, *fiann* being feminine, *fjándi* masculine. Thirdly, the declensions are different, *fiann* being a stem in *a*, *fjándi* a stem in *i*. Fourthly, the meanings are different: *fiann* is a collective, meaning a body of warriors or hunters, while *fjándi* means (a single) enemy. In short, two words beginning with the same letter can hardly be less alike. Moreover, if *fiann* were a loan-word, we should expect, from the analogy of the modern *péatar* = O.N. *piátr* "pewter," something like **féann*, or **féinn*, gen. **féinn* or **fénnia*, with the meaning of "foe."

The etymology of *fiann* (whence *fiannas*, *fénnid*) seems clear. As *siann* "chain" comes from the root *si* "to bind," so *fiann* is derived (by the *ai*-suffix, as the msc. *fián* "a hero,"* by the *no*-suffix) from the root *vei* or *vi* "to drive, to hunt." This root is inferred from the Lith. *veju*, *viĵau*, *vyti* "to hunt," the

Church-Slavonic *voj* "warrior," the Old-Norse *veidr* "hunting," and possibly the Lat. *vē-na-ri*. See Fick's *Wörterbuch* iv. 302, where these and other cognates are collected. From the same root comes the Old-Irish *féne* "Irishman," an Old-Celtic *veinios*, the gen. pl. of which occurs in the so-called Fiacc's Hymn. This poem is certainly not later than the beginning of the ninth century, and there is no reason for regarding it as interpolated. From *féne* is derived *fénechas*, the name for the Old-Irish law. A British cognate may be *Gwynedd*

* The oldest instance of this word (gen. *fián*?) is in the Book of Armagh, 14a. 2, "Iuglavit me fían maice Maice con." There was a similar fem. *a* theme, *fíán* (dat. *fíin*) synonymous with *fiann*, and also descending from a primeval *veinā*. A suffixal *n* is constantly doubled in Irish after a long vowel. The *Féna* of the Book of Armagh, 18a. 1, seems to be another collective in *-aio*.

"North-Wales," which Prof. Rhys equates with Irish *fine* "family," but which may just as well be = *Féne*, as Welsh *gwyl* is = Irish *féil*, *gwylled* = *féile*, *gwylld* = *féid*, and probably *gwych* = *Fiace*. So the Welsh loanword *gwysig-en* is = Lat. *vésica*.

The other etymologies proposed by Prof. Zimmer and mentioned by Mr. Nutt may be dismissed with few words.

The Irish *Lothlind** (or *Laithlind*†) and *Lochland* cannot be borrowed from the name of the Danish island *Láland*, first, because this theory leaves the *th* and *ch* unaccounted for; and, secondly, because *Lothlind*, or *Laithlind*, and *Lochlann* mean Norway, not Denmark. The etymology of these Irish words is obscure. All that can reasonably be stated is that *Lothlind* seems cognate with the Welsh *Lledlyn*, which Pughe says means the Baltic; and that *Lochlann* is certainly cognate with, or borrowed from, the Welsh *Llychlyn* "Norway." Popular etymology has doubtless affected all these Celtic names.

The name *Rus mac Tricim*, L. U. 118b. 1 (rectius *Ross mac Trichim*‡) cannot be borrowed from Prof. Zimmer's imaginary "*Rus Tryggvason*": first, because an Irish *ch* never represents a Norse *gyv*; and, secondly, because the name *Trichim* existed in Ireland long before the Norsemen settled in that country. This is proved by the occurrence of the gen. sg. *Trichim* in fo. 18b. 2 of the Book of Armagh, a MS. written A.D. 807.

The Irish divinatory practice which Prof. Zimmer calls *teim luegda*, citing the corrupt copy of Cormac's glossary in the Lebar Brece, cannot possibly take its name from the alleged Old-Norse nom. pl. *teinar lægðir*, acc. pl. *teina lægða*, first, because the *ei* of *teinar*, *teina* is a diphthong, which would have been represented in Irish by *ái*, *ae*, or *í*; § whereas the *ei* of *teim* is merely an *e* unaltered by the *e* of the suffix *-men*; secondly, because the Irish hard *m* cannot represent a Norse *ar* or *a*; and, thirdly, because there is no evidence that the Irish practice in question had anything to do with twigs (*teinar*). It consisted, so far we know, in reciting a kind of metrical charm or spell. A fourth objection, namely, that the expression *teinar lægðir* is a mere invention of Prof. Zimmer's, I leave to be dealt with by the Germanists. I have good authority for stating that it is not to be found in the Old-Norse literature. *Teim* (or *teum*) is a genuine Irish word. It is glossed by *taitneamh* "light, radiance," in O'Donovan's Supplement; and it is doubtless derived from the Old-Irish *ten* "fire." As to *laegda*, it is (so far as I know) only a solitary scribe's corrupt spelling of *laeda* or *láido*, the gen. sg. of *laid* "song," an aspirated *g* being inserted as in *deceal-g-ter*, Harl. 5280, fo. 66a, *lu-g-na* borrowed from Latin *luna*, Egerton 90, fo. 17a. 1, &c. Compare a *teim-láido*, an *teim laoda*, tri *teim laido*, tria *teim laoido*, Cormac's Glossary, Laud 610 and H. 2. 16, s.vv. *linbas forosnai* and *Mugéime, tre thenm-láide, tria teim laoda*, ibid. s.v. ore treith. So *teim laida*, Laud 610, fo. 91a. 1 = *tedm* (corrected in the margin to *teim*) *leoda*, Book of Ballymote, 295b. 17: *teim-luidha*, Rawl. B. 512, fo. 114 b. 1.

WHITLEY STOKES.

* The dat. sg., written *loth lind*, occurs in the St. Gall Priscian, 112, in the upper margin.

† Gen. sg. *Laithlinne*, A.U. 847, *Laithlinde*, A.U. 852.

‡ The omission of the mark of aspiration over the *e* of *Tricim* in L. U. 118b. 1 is a mere scribal error, such as occurs hundreds of times in that MS. Compare *co Dichoim mac Trichim*, do *Rus mac Trichim*, Trip. Life, p. 38; *brathair do Thrichim*, ibid. 218.

§ Compare the Irish *stáig* "steak," now written *stóig*, from Old-Norse *steik*, and the Irish *i. i. inis* "island," from Old-Norse *ey*.

PROF. EARLE'S "FLEXIONAL INFINITIVE."

Oxford: Feb. 16, 1891.

Prof. Earle, in a most interesting book which he has lately published, called *English Prose*, attempts in his second chapter, which treats of the Import of Grammar, to give an account of what he calls "the flexional infinitive." In this section an explanation is offered of the nature of some of our words ending in *-ing*—an explanation which I believe to be thoroughly unsound. The professor says that, besides participles and verbal nouns, there are words in *-ing* which are neither the one nor the other, but are either verbs in the infinitive mood or gerunds. In support of this doctrine, Mr. Earle cites an Englishing of the French *raison d'être* by Matthew Arnold, who speaks of "the main title on which Puritan churches rest their right of existing." Here, he says, we have a case of a flexional infinitive, for the word in *-ing* represents the infinitive of the original French, which could very well have been translated by an infinitive in English. Matthew Arnold might have rendered *raison d'être* by "right to exist." And the professor of Anglo-Saxon goes on to make this astounding statement that "in this case the *-ing* as truly represents the old infinitival termination *-an*, as 'Abingdon' represents an earlier form of *Abbandūn*!" With regard to the illustration from Abingdon, it may at once be said that we have not here a normal development of sounds: *ing* from Old English *an*, but an instance of the force of analogy. The rare element *an* has been assimilated to the far commoner *ing*, occurring in the numerous names of places ending in *-ingdon* *-ington*, such as Huntingdon, Kennington.

There is a German proverb, "*Lieben und Singen lässt sich nicht zwingen*," which may be Englished "*Loving and Singing are not to be forced*." There is a Spanish proverb "*Amar y saber no puede ser*," which may be Englished "*To love and be wise is impossible*." Now can Mr. Earle really be serious in asserting that the word "loving," which renders the German infinitive *Lieben* in the former proverb, and is the equivalent of the infinitive "to love" in the second proverb, may therefore be held to be the true phonetic representative of the old Anglo-Saxon infinitive form *lufian*? We cannot think that the professor has given the matter due consideration; for he must be aware of the fact that the true phonetic representative of Anglo-Saxon *lufian* is at the present day *love*, through the Middle English stages, *lurien*, *luen*, *lovien*, *loven*. It is utterly impossible that Old English *lufian* could have had "loving" as its true formal representative in modern English. The fact is that the professor has in this matter confused two things which ought to have been kept quite distinct—the form and the function of a word. In form, our "loving," in whatever syntactical way it may be used, is not the equivalent of *lufian*, in spite of the case of Abingdon. In function, the verbal noun "loving" and the infinitive "to love" may be absolutely identical. The infinitives in the line, "*To err is human, to forgive divine*," are precisely equivalent in function to the verbal nouns in the proverb, "*Loving and singing are not to be forced*." But this is a very different thing from saying that the modern sound *-ing* represents the old sound *-an* of the Anglo-Saxon infinitive. Of course, our *-ing* is the true representative of the Anglo-Saxon *-ung*; it has no other phonetic source. It is from this old suffix *-ung* that we really have the modern form of our active participles in *-ing*, as any one may easily infer who will read the passages cited by Dr. Murray in the New English Dictionary (s.v. *a* (1), p. 3, col. 2, sect. 13).

A. L. MAYHEW.

APPOINTMENTS FOR NEXT WEEK.

- SUNDAY, March 1, 4 p.m. South Place Institute: "Edward Irving and the Rise of the Catholic Apostolic Church," by Mr. J. E. Carlyle.
4 p.m. Sunday Lecture Society: "The Literature and Religion of the Ancient Egyptians," by Miss Amelia B. Edwards.
7.30 p.m. Ethical: "Our Duty to our Neighbour," by Mrs. Bryant.
MONDAY, March 2, 5 p.m. Royal Institution: General Monthly Meeting.
5 p.m. London Institution: "The Telescope," by Sir Howard Grubb.
8 p.m. Society of Arts: Cantor Lecture, "The Electric Transmission of Power," IV., by Mr. Gisbert Kapp.
8 p.m. Victoria Institute: "Deontology," by Mr. H. J. Clarke.
8 p.m. Aristotelian: Symposium, "Has Optimism or Pessimism the Deeper Roots in Human Nature?" by Messrs. F. C. Conybeare, E. W. Cook, and the Rev. P. G. Waggott.
8 p.m. Richmond Athenæum: "Hypnotism and the Unconscious Self," by Mr. Frank Podmore.
TUESDAY, March 3, 3 p.m. Royal Institution: "The Spinal Cord and Ganglia," VIII., by Prof. Victor Horsley.
8 p.m. Biblical Archaeology: "The Falasha Jews in their Ethnical Relation to the other Abyssinians," by the Rev. A. Löwy.
8 p.m. Civil Engineers: "The Subterranean Water in the Chalk Formation of the Upper Thames, and its relation to the Supply of London," by Mr. J. T. Harrison.
8.30 p.m. Zoological: "A Collection of small Mammalia made by Mr. F. J. Jackson, in Eastern Central Africa," by Mr. O. Thomas; "The Butterflies collected by Mr. F. J. Jackson in Eastern Central Africa," by Miss E. Sharpe; "The Comparative Osteology of the United States *Columbiga*," by Dr. R. W. Shufeldit.
WEDNESDAY, March 4, 4 p.m. Mrs. Jopling's Art School: "The Poets as Painters," by Miss Elsa D'Esterre-Keeling.
8 p.m. Society of Arts: "Modern Flour Milling," by Mr. J. Harrison Carter.
8 p.m. Elizabethan: "Thomas Dekker," by Mr. Ernest Rhys.
8.30 p.m. University College: "The Art of Legislation," by Mr. T. Ralegh.
THURSDAY, March 5, 3 p.m. Royal Institution: "Modern Chemistry in relation to Sanitation," I., by Prof. C. M. Tidy.
4 p.m. Archaeological Institute: "Our Lady of Pity," by Mr. Edward Peacock; "Some Tombs in Crete of the Age of Mycenae," by the Rev. J. Hirst; "Objects found in the Thames," by Mr. H. S. Cowper.
5 p.m. London Institution: "Sea Fishes," by Prof. E. Ray Lankester.
8 p.m. Linnean: "A Morphological and Systematic Account of the Fucaceae Genus *Turbellaria*," by Miss E. Barton; "New Species of *Culex*, with Observations on the Position of the Genus," by Mr. George Murray; "The Genus *Leoneonema*, a Parasitic Crustacean," by Dr. John Lowe.
8.30 p.m. Antiquaries.
FRIDAY, March 6, 4.30 p.m. Society of Arts: "The Science of Colour," IV., by Capt. Abney.
8 p.m. Philological: "The Non-Chinese Languages and Writings of China," by Prof. Terrien de Lacouperie.
8 p.m. Geologists' Association.
9 p.m. Royal Institution: "Electromagnetic Repulsion," by Prof. J. A. Fleming.
SATURDAY, March 7, 3 p.m. Royal Institution: "The Forces of Cohesion," IV., by Lord Rayleigh.
3.45 p.m. Botanic: General Fortnightly Meeting.

SCIENCE.

THE WOELFFLIN CELEBRATION.

Commentationes Woelfflinianae. (Leipzig: Teubner.)

THIS is a collection of dissertations on various points of Latin and Greek philology, written in honour of Prof. Edward Woelfflin, of Munich, who has recently attained his sixtieth birthday. The contributors are drawn mainly, if not exclusively, from those scholars who have forwarded in any way the *Archiv für Lateinische Lexicographie und Grammatik*, a work which has received the express commendation and support of Prof. Mayor, of Cambridge, and which is now in the eighth year of its existence. Prof. Mayor has himself sent a *Commentationacula* on some *Addenda lexicis Latinis*; from Oxford Prof. Nettleship and the present writer, from France M. Havet, have contributed short papers.

The contents are of the greatest variety. They amount in all to fifty-two articles. The volume thus gives a good general idea of the manifold lines which German philology, especially in Latin, is taking at the present time. To begin with one of the most important, palaeography, J. W. Beck has a notice of two Leyden MSS. of Florus · Edward Hauler

on the Nonantulan (or Sessorian) palimpsest fragments of Pliny's Natural History, formerly in the library of Santa Croce in Gierusalemme, now in the Public Library, at Rome. To the history of this MS. (perhaps of the sixth century, A.D.) many new facts are here added, which greatly extend the knowledge of it that can be obtained from Sillig's edition; and even Detlefsen, it seems, has not said the last word on the subject.

Wilhelm Schmitz sends a paper on some fragments of Jerome, Augustin, and Isidore, written in Tironian *notae* of the eighth or ninth century; and a facsimile of them, photographed from the MS. at Bern (Miscell. 611), is published at the end of the volume, forming a very interesting supplement to the literature of this obscure province of palaeography. Karl Fricke contributes a careful disquisition on the MSS. of the *anonymus Valesii*.

Lexicography is more largely represented, as is natural in a work designed to honour a lexicographer. P. Geyer writes on the use of *loco = ibi*; G. Götz some *lexicologische bemerkungen*; Prof. Nettleship on the words *cognomen cognomentum*; Joh. Hümer on *paropsis, parapsis*; A. Zingerle on the Græco-Latin explanations of words in Hilary of Poitiers's Commentary on the Psalms; Emanuel Hoffmann on the *Triarii*; Ludwig Brehner sends some *Addenda lexicis linguae Græcæ*; Stowasser discusses the word *surus*.

Disquisitions on Pomp. Mela and Corn. Nepos, on the *Bellum Alexandrinum*, on the three last books of Ammianus Marcellinus, on Caesar, on Martial's *Liber Spectaculorum*, on Horace, on Ausonius, on Propertius, on Lucilius, on the Digest, on Terence, on Cicero's Letters to Atticus, on Boetius, on Seneca's relation to Prudentius, on Manilius, on the work known as *de viris illustribus*, are contributed by Wagener, Landgraf and Hartel, Petschenig, Schiller, Remm, M. Hertz, Brandes, Otto, Havet, Kübler, Dziatzko, Böckel, Schepps, Weyman, the present writer, and Opitz. Karl Schenkl has a paper on the fragments of the Greek Comicæ, Karl Stittl on Archaism. My own paper deals with some remarkable marginalia found in the 1510 edition of Manilius, and seemingly written at least before 1600; they anticipate in many cases the conjectures of Scaliger and Bentley, and form an Epimetrum in my forthcoming *Notes Manilianæ*.

History is represented by O. Seeck's "Erhebung des Maximian zum Augustus," and J. Meibers "Des Dio Cassius Bericht über die Seeschlacht des D. Brutus gegen die Veneter." Literary history by T. H. Schmalz on "The Character and Language of C. Matius," the friend and correspondent of Cicero; by R. Schöll on Maternus; and by Karl Wytkes "Two Small Contributions to the Literature of the Renaissance."

In comparative philology, G. Gröber's *Verstümmung des h, m, und positionslange silbe im Lateinischen*, and Suchier's *quietus* in Romance languages seem to stand alone.

Ecclesiastical writers figure more prominently: Dracontius, Cyprian, the author of the now well-known treatise on dice, and of the poem on "The Passion of the Lord" ascribed to Lactantius.

The articles on Chinese by von Karolsfeld, on the Saturnian metre, on parataxis of words in the Greek Tragici, and on imperial rescripts, are all worth reading.

ROBINSON ELLIS.

MATHEMATICAL BOOKS.

American Journal of Mathematics. Vol xiii. No. 2. (Baltimore: January, 1891.) This number opens (pp. 97-144) with the conclusion of Oskar Bolza's memoir on "The Theory of Substitution Groups, and its Applications to

Algebraic Equations." Part ii. is occupied with Galois's theory of algebraic equations, and treats of Galois's resolvent, the same mathematician's equations, and Abelian equations. There is an index of contents, which enables the reader to find his way about, and a reference index to the explanations of the many novel terms used. The remainder of this number is taken up with several short papers. Among these are "Some Properties of a Group of Numbers" (pp. 145-152), by M. D'Ocagne, connected with Bernoulli's numbers, in continuation of a former paper in the volume for 1887. "Sur les lois de forces centrales faisant décrire à leur point d'application une conique quelles que soient les conditions initiales," by P. Appell (pp. 153-158) does not aim at originality, but is a simplified treatment of a problem discussed by MM. Darboux and Halphen; Dr. H. Taber writes on "Certain Identities in the Theory of Matrices" (pp. 159-172). This paper is also connected with a previous one by the same author (Vol. xii.). "Systems of Ray's Normal to a Surface," by W. C. L. Gorton, is a supplement to §7 of a previous paper (Vol. x. p. 347). Prof. F. Morley's note on "The Epicycloid" is a treatment, by the method of circular co-ordinates, of known properties of these curves. The closing notes (pp. 185-192) are "Reduction of a Differential Equation," by H. P. Manning; "A Simple Statement of Proof of Reciprocal-Theorem," by J. C. Fields founded on the Gaussian Criterion; and "Related Expressions for Bernoulli's and Euler's Numbers," by the same author.

Logarithmic, Trigonometric, and other Mathematical Tables. By H. H. Ludlow, with the co-operation of E. W. Bass. (New York: J. Wiley.) These are a compact set of the following tables: logarithms of numbers, important constants and their logarithms, logarithms of trigonometric functions, natural sines, &c., and squares and square roots of numbers. The tables are prefaced with a brief introduction. The tabulations (to seven places) are to the nearest half-unit. They have been carefully compared with the tables of Sehron, Bruhn, and Brenner.

Manual of Logarithms. By G. F. Mathews. (Macmillan.) This work at once suggests the similar treatise by Prof. Wolstenholme; but, whereas the latter was limited in the main to the solution of triangles and allied problems, the present work treats of logarithms in their "connexion with arithmetic, algebra, plane trigonometry, and mensuration." It is the best book we know on the subject, and can be thoroughly recommended to all and sundry. The great number of examples (close upon 1300) will afford ample practice, and the typical examples fully worked out will show a student how his work ought to be put on paper.

Notes on Trigonometry and Logarithms. By the Rev. J. M. Eustace. (Longmans.) There is nothing sensational in the work before us. It is a compilation—and, we think, a good one for its purpose—of the portions most needed to be studied by ordinary pupils. It fact, the compiler strives to act in the place of a private tutor to one who is not blessed with that useful help. We have read the text, and have detected only a few slips. On p. 10, Euclid's Cor. to i. 32 is not quite correctly cited; p. 89, line 9, for $b+a$ read $b-a$; a superfluous Q.E.D. has crept into pp. 90, 137, which, though it is not wrong, looks out of place; on p. 126, 2SP is wanted; on p. 137, for 24 read 21; on p. 182, read $9x$ for 9^x ; on p. 206, in the "Compass" figure, read E by N for E by E; on p. 209 is a bad figure, which does not at all fit in with the question; on p. 210 two objects are said to make an angle with each other, whereas what is meant is that the distance between

the objects subtends an angle at the person's eye; on p. 226, 7 up, for L read P; on p. 230, two A's are given in the same figure. These are the only errata we have noticed, so that the text is very carefully printed. The treatment of logarithms is very satisfactory, and the collection of exercises is not only very large but, moreover, interesting. We have not, however, yet tested their accuracy, or the correctness of the accompanying answers.

Elementary Algebra. By W. W. Rouse Ball. (Cambridge: University Press.) This work is one of the series of elementary text-books which are being brought out at the instance of the Syndic of the University Press. The author's aim is to treat the subject from a purely elementary point of view; and so he does not go into any extensive detail in his handling of such matters as permutations and combinations, the binomial theorem and the exponential theorem. He keeps steadily before him the requirements of the Cambridge Local and the Oxford and Cambridge Schools Examinations, so that the student will find ample material for the exercise of his powers in working out the numerous papers set for the above-named examinations. Many readers will find enough matter supplied them here without reading a higher text-book. Mr. Ball is to be congratulated on the successful achievement of a task which we fancy must have been hardly to his taste, at any rate by no means so congenial to him as those historical studies which, we trust, he has only abandoned for a time. We commend his book from a practical acquaintance with it. The printing is, of course, excellent. Answers accompany the text.

Elementary Algebra, with numerous Examples. By W. A. Potts and W. L. Sargant. (Longmans.) If there is little that calls for special commendation in this small book, so there is little that calls for blame. In fact, it is merely an outline of a work the details of which are left to be filled in by a tutor or by a more complete text-book. A useful feature is the collection of school entrance examination papers and of other examples on the lines of these papers. The authors just touch upon quadratic equations. Answers to the questions accompany the text.

Key to Arithmetic in Theory and Practice. By the late J. Brooksmith. (Macmillan.) This portly volume represents a tremendous amount of work, and will be a boon to student and teacher. The examples are worked out *in extenso*: there is no shirking. We can give the book no higher praise.

Solutions of the Examples in Elementary Algebra for Schools. By H. S. Hall and S. R. Knight. (Macmillan.) These solutions are just what are wanted by mathematical masters, who cannot command the time necessary for the immediate working-out of many of the exercises whilst engaged with their classes. They are still more valuable, perhaps, for that large class of students who cannot avail themselves of a teacher's guiding hand.

Demonstrations of Arithmetic. By Clement Davies. (Hutchinson.) The major part of this work is written "in the form of question and answer for the use of pupils preparing for examinations." It consists of twelve sections on abstract arithmetic and of eight on concrete arithmetic. At the end are exercises and answers, and in the text numerous selected problems fully worked out. The book is likely to be of service to candidates who wish to make a rapid revise of the subject. In the wording of some of the questions, though brevity does not result in obscurity, it does occasionally result in an inelegant form of expression. A very slight revision would correct this blemish.

Mental Arithmetic. By J. G. Holmes. (Clifton: Baker.) A handy book of examples, mainly with answers. A chapter on percentages and profits is likely to be useful to boys preparing for a business career.

OBITUARY.

GEORGE BERTIN, M.R.A.S.

It is with much regret that we record the death of Mr. George Bertin, a devoted student of Assyriology in all its branches. Though yet comparatively young, his health had lately broken down, partly from overwork, and partly from those disappointments which attend the unendowed student in obscure departments of learning. As recently as last December he was lecturing at the British Museum; but the illness from which he had long been suffering gained rapidly upon him, and he died on Wednesday, February 18, at his residence, 58, Fortress Road, N.W.

Mr. Bertin was a Frenchman by birth, though we have heard that the family were of Italian descent, and originally spelt their name "Bertini." His grandfather was Jean Victor Bertin, well known as a landscape painter and teacher of painting in the early part of the century. His father was an avocet and homme des lettres. The son was born in 1848, and educated in Paris, where he was first attracted to Assyriology by attending the lectures of Prof. Jules Oppert at the Sorbonne and Collège de France. He settled in London in 1869, and was soon afterwards naturalised as a British subject. Henceforth he devoted all the time that could be spared from the necessary pursuit of bread-winning to his favourite study. He used to speak with affectionate regard of Mr. Sayce as his English teacher; but, in truth, he was mainly self-taught, having acquired his extensive knowledge of the languages of ancient Babylonia direct from the storehouse of tablets in the British Museum, under the charge of his friend, Mr. Th. G. Pinches.

Mr. Bertin was a member of several learned societies—the Royal Asiatic, the Anthropological Institute, the Society of Biblical Archaeology, the Royal Historical, &c.; and it was in their Transactions and Proceedings that most of his researches appeared. These dealt with such subjects as "The Tense and Voice Formation of the Semitic Verb," "The Pre-Akkadian Semites," "The Origin and Development of the Cuneiform Syllabary," "The Bushmen and their Language." So far as we are aware, the only book he published was *A Grammar of Akkadian, Uramic, and Proto-Medic*, in Trübner's "Series of Simplified Grammars" (1889). But for some time past he had been engaged upon an elaborate work, to be entitled "The Populations of the Fatherland of Abraham," which, we believe, is left so far advanced that it may be seen through the press by another hand.

While Germany is steadily annexing Assyrian to her own domain, as she has long ago done with Sanskrit—both which languages were first revealed to Europe by Englishmen—we can ill afford to lose even the humblest labourer in this neglected vineyard.

J. S. C.

CORRESPONDENCE.

σπαρτεία, σπαρτία, σπαρτιά.

Caius College, Cambridge: Feb. 23, 1891.

Under the above heading Prof. Sanday has touched upon a point which, though minute, is not without interest for students of the Greek Bible. Since he does not enter upon the readings of the Greek Old Testament, may I be permitted to add a few lines?

A hasty inspection seems to show that the word in one or other of its forms occurs twenty-seven times in the LXX. of Cod. Vaticanus (B), all the occurrences being in the canonical books; and that σπαρτεία is written *prima manu* seventeen times, σπαρτιά (or σπαρτία) ten times. The two forms appear to be used without discrimination. In the majority of instances σπαρτεία = סַפְרִיָּה, while in Num. x. 28 סַפְרִיָּה is represented by σπαρτιά (? σπαρτία). It is noteworthy, however, that B writes σπαρτιά uniformly in the Pentateuch and in the Prophets (exc. Hosea xiii. 4), but σπαρτεία in 2, 3 Kings, 1, 2, Chronicles, and Nehemiah. Since Dr. Ezra Abbot has shown that the first scribe of B ended his work at 1 Kings xix. 11, and the second wrote on to the end of 2 Esdras, it follows that, with the exception of the passage in Hosea, all the instances of σπαρτεία are due to the same scribe. One is tempted to infer that the use of one form or the other depended on the taste of the scribe, and that no difference of meaning was recognised. I have not gone into the readings of Codex Alexandrinus with equal care, but I believe it will be found that the case is reversed; in A, σπαρτεία is the form adopted in the earlier books, while σπαρτιά predominates in Kings, Chronicles, and the Prophets.

With regard to accentuation, I venture to write either σπαρτεία or σπαρτιά in the Old Testament, with the possible exception of Num. x. 28.

The whole question of the termination of this class of nouns is one of the most perplexing which an editor of the LXX. is compelled to face. The practice of the great uncial codices in the New Testament, so carefully ascertained by Dr. Hort, is not always consistent with the practice of the same MSS. in the Septuagint.

H. B. SWETE.

Ellesborough House, Tring: Feb. 21, 1891.

Would Macaulay's New Zealander have a right to decide whether Pope wrote "ate" or "eat" on the strength of the fragment of one of his essays copied into an Irish farm-ledger with entries of judicial rents—unless, indeed, the fragment included some of Mr. Courthouse's notes? Is there any better reason to think the new-found Constitution of Athens a very high authority on Greek spelling, or, indeed, an authority at all for the spelling of the time of Aristotle?

No doubt some MSS. are authorities on doubtful points of spelling because they clearly follow the practice of a much earlier time than their own. Very possibly Codex B is one of them—in spite of repeated mis-spellings (due to habitual slovenly pronunciation) of words which are not doubtful. But why are we to assume that the unknown person who, in some unknown part of Egypt, began to copy the remains of a book he took for Aristotle's on the back of some old farm-accounts, or the more illiterate copyists whom he employed to finish it, spelt, after an interval of at least four hundred years, exactly as Aristotle or his scholars spelt at Athens? Granting that the owner of the papyrus at any rate spelt as well as it was usual to spell in Egypt—did he, or everybody else who cared enough about an old book to copy it, copy the spelling minutely, or was spelling immutable all over the Hellenised world for centuries? When we come to the New Testament we may ask further, Was it ever uniform? Did the tentmakers of Tarsus and the silversmiths of Ephesus spell just alike, or had each local peculiarities of their own? If they had, St. Paul spelt like the one, and St. John or his amanuenses spelt like the other, though no doubt such insignificant and unedifying singularities were early effaced.

G. A. SIMCOX.

SCIENCE NOTES.

THE following have been appointed presidents of sections for this year's meeting of the British Association, to be held at Cardiff, beginning on August 19: A.—Mathematical and Physical Science, Prof. O. J. Lodge; B.—Chemical Science, Prof. W. Chandler Roberts-Austen; C.—Geology, Prof. T. Rupert Jones; D.—Biology, Mr. Francis Darwin; E.—Geography, Mr. E. G. Ravenstein; F.—Economic Science and Statistics, the Rev. Dr. W. Cunningham; G.—Mechanical Science, Mr. T. Forster Brown; H.—Anthropology, Prof. F. Max Müller.

PROF. C. MEYMOTT TIDY will, on Thursday next, March 5, begin a course of three lectures, at the Royal Institution, on "Modern Chemistry in relation to Sanitation."

THE next volume in the "Contemporary Science" series, published by Mr. Walter Scott, will be *Bacteria and their Products*, by Dr. Sinas Woodhead, the recently appointed director of the pathological laboratory of the two Royal Colleges of Surgeons and Physicians in London. It will include a full discussion of the causes of hydrophobia, cholera, diphtheria, consumption, &c., dealing specially with Prof. Koch's discoveries; and it will be copiously illustrated with micro-photographs of bacteria, &c.

MESSRS. A. & C. BLACK, of London, no longer of Edinburgh, have issued a reprint, from the original plates, of the zoological articles contributed by Prof. E. Ray Lankester to the *Encyclopædia Britannica*. They deal with Protozoa, Hydrozoa, Mollusca, Polyzoa, and Vertebrata; and to them have been added a few articles by other writers on kindred subjects. In a preface, Prof. Lankester points out the more important additions to knowledge that have been made since the articles were originally published.

FINE ART.

THE ANNUAL GENERAL MEETING OF THE EGYPT EXPLORATION FUND.

THE fourth ordinary general meeting of the Egypt Exploration Fund since its incorporation as a society (its eighth since the foundation of the Fund in 1883) was held on Friday afternoon, February 20, in the large room of the Zoological Society, 3, Hanover-square, the president, Sir John Fowler, Bart., K.C.M.G., in the chair.

There were present Prof. Reginald Stuart Poole, LL.D., vice-president of the Fund, Miss Amelia B. Edwards, LL.D., vice-president and honorary secretary; H. A. Gruber, Esq., F.S.A., honorary treasurer; Helier Gosselin, Esq., secretary; E. Maunde Thompson, Esq., C.B., LL.D., principal librarian of the British Museum; T. H. Baylis, Esq., Q.C.; A. S. Murray, Esq., LL.D.; Barclay V. Head, Esq., D.C.L.; Mrs. Tirard, Miss H. M. Adair, and Miss Bradbury, members of the committee; and several of the local honorary secretaries.

The proceedings were opened by the chairman, who called upon the secretary to read the list of members of committee who were retiring in rotation, and the list of members recommended for re-election. The president then declared the order of business (following the election of members of committee and other officers) to be as follows: (1) report of the hon. treasurer; (2) report of the hon. secretary; (3) archaeological survey and other business.

Mr. R. S. Poole, before the business was discussed, drew the attention of the meeting to the great loss which the society had sustained in the death of the late Canon Liddon, one of their most valued and eminent members of Committee. From Canon Liddon, although he could not very frequently attend their meetings,

the committee had received a never failing sympathy and support. He was a man of such profound knowledge, and of such a noble simplicity of character, that his association with the work was a continual source of strength to his colleagues. Mr. Poole concluded his eloquent tribute by saying that he refrained from further eulogy, knowing well that such reticence would have been most acceptable to the late Canon himself.

Mr. Grueber, hon. treasurer, then read his financial report for the year 1889-90, and presented the balance-sheet, which marked another period of success in the annals of the Fund. Upon comparing their present position with that of former years, it would be seen that, financially, the Fund continued to make steady progress. To keep it up to this high level, he need scarcely say, was no light task; and the credit of this prosperous state of affairs was due now, as before, to the great organising powers and unremitting exertions of their hon. secretary; to the continued brilliant services of their hon. treasurer for America; and also to the hearty co-operation of the several local honorary secretaries. The items of the balance-sheet then before the meeting might be briefly summarised in the following manner: The total expenditure for the year 1889-90 had been £2250 6s. 8d., which was made up of the following items: (1) M. Naville's expenses during the spring of 1890, when surveying the site of Ahnas-el-Medineh and conducting negotiations with the Egyptian Government, £141 3s.; (2) transport of sculptures excavated at Bubastis in the year 1889—namely, conveyance from Bubastis to Alexandria, canal dues, salary of Count d'Hulst, &c., £960 1s. 4d.; (3) transport of sculptures from Alexandria to their various destinations in Europe, Australia, and the United States of America, £416 7s. 8d.; (4) expenses of Dr. Farley Goddard (the American student), £150; (5) wood-blocks, wire-rope, and other appliances used in the removal of the sculptures, £14 2s. 2d.; (6) expenses of printing, publishing, and illustrating *Naukratis II.*, *The City of Onias*, and *Two Hieroglyphic Papyri*, and issuing new editions of *Pithom* and *Tanis I.*, also packing and despatch of same, £239 14s. 2d.; (7) rent of office and office expenses, £328 18s. 4d. Total receipts for the same year (1889-90), £3283 8s. 10d., the chief items being: (1) Subscriptions and donations, £3154 17s. 2d., which might be thus subdivided—(a) European subscriptions, £1017 11s. 10d. (from this amount, however, must be deducted £43 for subscriptions paid in advance); (b) American subscriptions, £1523 (which included £173 for the American student's fund); (c) from the University of Pennsylvania, £240—i.e., subscriptions £150, and transport expenses £90; (d) special supplementary transport fund, contributed by various public bodies and private individuals to meet the expenses of conveyance of sculptures from Bubastis, £316 3s. 10d.; (e) special survey fund, £101 1s. 6d.; (2) sale of publications and reports, £108 9s.; (3) proceeds of lectures given by Miss Barlow, Canon Bell, and Mr. W. W. Morrell, local hon. secretaries of the Fund, £20 2s. 8d.

Mr. Grueber, in remarking upon the magnitude of the sum expended upon the transport of sculptures from the site of Bubastis, reminded the meeting that, in consequence of the wanton and rapid destruction of these invaluable relics of antiquity at the hands of the Arab population, the committee had brought away no less than 44 of the best preserved of these sculptures, that being 28 in excess of the number originally proposed. As compared with the financial report of last year (1888-89), the results were as follows: In 1888-89, the gross expenditure was £2936, as against £2250 6s. 8d. for 1889-90; and the gross

receipts for 1888-89 were £2997 11s. 8d., as against £3283 8s. 10d.; the home receipts through subscriptions for 1889-90 being £79 15s. 11d. in excess of those in 1888-89, and the American subscriptions for the same period having increased by £100. In the last item, in the case of England, he did not include the large contributions to the special transport fund; nor in the American account the student's fund, or the contribution of the University of Pennsylvania towards the carriage of sculptures. As regarded the available assets at the close of the two periods, the cash balance for 1888-89 was £2593 12s. 10d., and the cash balance for 1889-90 was £3626 15s., showing a difference of £1033 2s. 2d. in favour of the present year. Mr. Grueber concluded by saying that it was fortunate he had so good a balance to show, seeing that the society had now entered upon what promised to be a successful, but at the same time a costly, undertaking, namely, the archaeological survey of Egypt, an enterprise for which the committee had already incurred liabilities to the extent of £500.

Mr. Pollard moved the adoption of the report, complimenting the hon. treasurer on the clearness of his statement. He took occasion to speak warmly in favour of the new archaeological survey, urging the members present to follow his own example in subscribing to this new enterprise.

In seconding the report, Mr. Baylis congratulated the society upon the excellent manner in which their finances were managed by the committee, and upon the new and important undertaking upon which they had embarked in the archaeological survey of Egypt. Having himself travelled in Egypt, he could testify to the great need of such a record as was now in progress. He could, indeed, conceive of no work more valuable alike to those who travel in Egypt and to those who stay at home. As regarded the *Memoirs* annually issued by the Fund, he could not say too much in praise of the excellent paper and the beauty of the type and illustrations. These books were undoubtedly of the full value of the standard subscription; and, regarded as a mere investment, were highly profitable to the subscribers.

The president expressed his hearty concurrence in all that Mr. Baylis had said with regard to the value and importance of the archaeological survey, which would still further extend the usefulness of the society, and he urged all members present to interest their friends in the labours of the Egypt Exploration Fund. He hoped that every year would continue to show increasing prosperity. He must add that the work of the committee was invariably conducted with the strictest economy. The money was as well spent as possible, every farthing being used to the best advantage. The president then called upon the hon. secretary for her customary statement.

Miss Amelia B. Edwards, hon. sec., began by congratulating the society in the first place, and Sir John Fowler in the second place, on the fact that his great scientific achievements had received their well-deserved recognition at the hands of his sovereign, he having been created a baronet since the members had last met. There could be no doubt that to a generous man no gratification he might derive from honours bestowed during his lifetime could possibly equal that which he felt in the knowledge that he could transmit those honours to his posterity. Sir John Fowler could now transmit that honour to his eldest son, and Miss Edwards was pleased to know that he had still yet more sons to be as proud of him as this society was proud to have him as their president. In reference to what her friend, Professor Poole, had said regarding the great

loss which the society had sustained in the late Canon Liddon, Miss Edwards wished to draw attention to the fact that they had also lost a few other eminent persons; namely, the late Bishop of Durham, who was not only an eminent churchman, but a great Hellenic scholar, and who had always been ready with his sympathy and support; also, the late Sir George Burns, Bart., founder of the great Cunard line, who had not only been a generous subscriber and donor to the funds of the society, but had repeatedly caused large consignments of antiquities and memoirs to be conveyed to America, free of cost, by the Cunard line of steamers, thus indirectly aiding the treasury in a most practical and substantial manner. The society had also to deplore in Colonel Adair the loss of a distinguished officer and subscriber.

Miss Edwards then went on to say that it was her duty on these occasions briefly to report what had been done by the society since the last general meeting, and to state what was the line of work laid down for the new season. The members were, of course, aware that, in consequence of M. Naville's illness, no excavations had been conducted during the season 1889-90. M. Naville had, however, paid a short visit to Egypt last spring for the purpose of surveying the site of Ahnas-el-Medineh, and of concluding arrangements for the present year with the Khedivial Government. They would be glad to hear that M. Naville was now in Egypt, having joined Count d'Hulst at Ahnas early in January. The ancient city represented by the extensive mounds of Ahnas is known as the Heracleopolis of the Greeks, and is cursorily mentioned in the Bible as "Hanes;" it represents the capital of that very obscure period in Egyptian history covered by the VIIIth, IXth and Xth Dynasties. M. Naville and Count d'Hulst had been working in the outlying necropolis for the last three weeks, with no very encouraging results. They had opened more than a hundred tombs, all of which had, however, been plundered in ancient times, and again used for interments during the Roman period. By that time they were doubtless trenching the area of the great temple, with what results it would remain to be seen. Although a Great Temple of Bubastis was not to be discovered every year, Miss Edwards trusted that the new excavations would not prove fruitless, and that some valuable historical results might be obtained.

The subject of the Archaeological Survey having been already mentioned by previous speakers, Miss Edwards would only add that this survey was actually in progress, being conducted by Mr. Percy E. Newberry, a rising Egyptological scholar, and Mr. George Fraser, a skilled surveyor. These gentlemen had taken up their abode in one of the unpainted rock-cut sepulchres of Beni Hasan, and were actively engaged in copying, tracing, and photographing the scenes and inscriptions which enriched the more famous of these historic tombs. They had already cleared out the accumulated rubbish of centuries, thus restoring the admirable proportions of these excavated chambers, and bringing to light inscriptions which had never yet been read. Mr. Fraser, having cleared out several of the tombs, and discovered in one of them evidences of an original interment in the shape of a skeleton and a funerary tablet of the XIIth Dynasty, was then engaged in surveying the entire terrace—a task by no means easy, owing to the steep slope of the cliff and the difficulty of fixing his points. Mr. Newberry and Mr. Fraser had recently been joined by Mr. Blackden, an artist who was engaged in reproducing the colours of some of the more important subjects which had been outlined by Mr. Newberry on the scale of the originals.

Miss Edwards then referred to the production of M. Naville's *Bubastis*, which, with its fifty-four plates, including a large number of autotypes, had cost in production and delivery nearly £500, and which was one of the most magnificent volumes yet issued by the society. A separate volume on the Festival Hall of the Great Temple of Bubastis was in active preparation, M. Naville being at the present time engaged in drawing the processional subjects, which would be arranged so far as possible in their original sequence, broken, however, by inevitable lacunae where the sculptured blocks were either missing or defaced.

The sale of past Memoirs, as reported by the hon. treasurer, was steadily increasing; and, as Miss Edwards had predicted some two or three years ago, the society had become a society not only of excavators, but of important publishers and booksellers. The sum of £108 9s. had been received through herself during the past year by sales of books alone, irrespective of copies disposed of by Messrs. Trübner & Co. Among new subscribers to the Fund during the past year, she was glad to report no less than twenty-four public libraries, including the library of the Science and Art Department, South Kensington, and the libraries of the Fitzwilliam Museum, Queen's College, St. John's College, and Trinity College, Cambridge. Miss Edwards hoped that before long there would be no great college, cathedral, or public library in England which did not subscribe for the works of the Fund.

The staff of local honorary secretaries went on increasing and prospering. The society now numbering no less than thirty-four of these invaluable unpaid officials; besides one in New Zealand, one in Australia, one in Canada, one in Mexico, and one in Switzerland. She was glad to see that an organisation of local honorary secretaries had also been taken in hand by the Rev. Dr. Winslow, the society's zealous and active vice-president and honorary treasurer for America. Dr. Winslow had already established thirty-seven local hon. secretaries in various parts of the United States, the majority of whom, she was happy to say, were ladies. Miss Edwards believed that this was a field in which woman's work was calculated to be eminently successful. She held that ladies made the best beggars in the world, and that their begging was always likely to be more fruitful than that of gentlemen, because the gentlemen did not like to refuse them. Of the increasing prosperity of the Fund in America, there could remain no doubt, when tested by the report just read by the hon. treasurer, showing a return of £1350 on the part of the Rev. Dr. Winslow, and a further sum of £240 from the University of Pennsylvania.

Miss Edwards concluded by an earnest appeal for the claims of the Archaeological Survey—a work rendered doubly necessary at the present time by the rapid and wanton destruction to which the monuments of Egypt were being subjected at the hands of native plunderers, unscrupulous dealers, and iconoclastic tourists. The society could not hope, it was true, entirely to arrest this work of mutilation and destruction; but it could at least preserve a faithful record of that which yet remained of these precious relics of the most ancient civilisation in the world. Also, by drawing attention to the beauty and value of those relics, they would exercise a certain moral pressure, not only upon travellers, but upon all classes of officials, thus hampering the hands of the unscrupulous destroyer, and compelling a greater reverence for the monuments themselves.

The president then proposed a vote of thanks to Miss Edwards for the encouraging and interesting account which she had just given of the work and prospects of the Fund. He only

regretted that England should in any respect lag behind America in the matter of organisation or subscriptions. He would have preferred that when America had thirty-seven local hon. secretaries, England should have had forty, and that the English subscription-list should not have fallen behind that of America in its amount. He was quite sure that the Americans themselves would not feel hurt by his desire that the parent society should maintain its lead; and he hoped by the time they should re-assemble for the next annual meeting, such a special effort would have been made in this direction that the balance of numbers, as well as of cash, should be on the side of the old country.

Prof. Poole then referred to Mr. Griffith's interesting paper read at the last meeting, containing the suggestion of the beginning of a new era by a systematic survey of the monuments of Egypt yet above ground. Prof. Poole felt that the survey of existing monuments, which were rapidly being destroyed by the ignorant Arab peasant and by the modern tourist, was a very important work. He, therefore, desired to draw the attention of the meeting to the double duty undertaken by the Fund in its work of discovery and preservation. These two labours were of parallel importance. Prof. Poole considered it was only necessary to glance at the reports that had appeared in the newspapers for the past few days of M. Grébaut's great discovery at Thebes of the tombs of the high priests of Amen Ra, to show how much remained to be achieved by the explorer. There was, in fact, no part of Egypt in which a skilled excavator might not hope to find his labours rewarded. Prof. Poole urged the meeting to support the work just commenced by Mr. Newberry and Mr. Fraser; for there had never yet been made a complete and accurate copy of Egyptian inscriptions, even the best known works having been mainly made before photography was available, and consequently they needed abundant correction. Mr. Newberry was doing all that could be done by tracings and photographs to make such a record of the tombs of Beni Hasan in Middle Egypt. Between the time of the old pyramid builders and the XVIIIth Dynasty stood the XIIth Theban Dynasty (circa 2200 B.C.), of which these tombs were the most important extant record, and of which no thoroughly satisfactory copy existed. Several of the tombs were painted with most interesting scenes of daily life, and of intercourse with foreigners, one group of whom had been incorrectly supposed to represent Joseph and his brethren. The Survey publications would be illustrated by coloured plates of the most important scenes, particularly the skilful delineation of plants, quadrupeds, and birds. The preparation of these volumes would be costly; and though the hon. treasurer had given them a cheering account of the monetary condition of the Fund, Prof. Poole felt strongly that this work ought to be well supported in order to be worthily carried out. Miss Edwards had desired him to say that whether these publications should be annual or not could not be determined till the committee saw their size and could estimate the cost of bringing them out, but their hearty wish was to treat the subscribers as handsomely as possible. On his own account, without reference to his position as a vice-president of the Fund, Mr. Poole was sorry to see money being drawn from the general fund for the purposes of the Survey, and what he should prefer would be that the special archaeological survey should be supported by a small and separate income, say of £500 per annum. Established upon such a foundation, he felt that the Survey might be carried on for very many years to come, and that it might so survive its original founders.

Mr. Baylis, Q.C., then proposed a vote of thanks to the chairman for the admirable way in which he had conducted the business of the meeting. Mr. Arthur Cates seconded this resolution. The president expressed his acknowledgments, adding that it gave him the greatest possible pleasure to be of service to the Fund; and although he was unable to attend many of the committee meetings, when he was really required he was always at the disposal of their hon. secretary.

THE ROYAL SCOTTISH ACADEMY.

THE present exhibition of the Royal Scottish Academy presents few features of a very striking or original character; for several of the more prominent London exhibitors whose works usually figure on the walls are this year absent, and the current work of the Scottish painters does not include subjects of any exceptional importance. An exceedingly fair average, however, is maintained; and several of the younger painters, especially certain of the younger landscapists, show marked symptoms of increasing power.

One of the chief attractions of the galleries is the "Fallen Monarch" of Mr. J. M. Swan, a largely-drawn, broadly-painted picture of a dead lion. Opposite this hangs Mr. J. R. Reid's "Smugglers," a work no less well known in London, in which a bold and energetic conception has been realised with less of quietude and completion than might have been desired. The same artist's earlier and soberer picture, "The Yarn," occupies a place of honour in the Great Room, fronted by Mr. Tom Graham's "Last Boat," a vigorous rendering of lashing wave and wanly fading yellow sky.

Probably the finest piece of marine painting in the rooms is the "Ocean" of Mr. W. M. Taggart, in which, with no more complex elements than a space of blue-green water, the sand against which the waves subside, and the sky that overhangs them, this painter has produced a fresh and lovely subject, full of clear, sharp, subtly varied colouring. Mr. M. Taggart is not less successful in such of his landscape work as "Autumn Sunshine in Sandy Dean," where the dazzling play of light over the sheaves and upon the figures of the children that sport on the road that skirts the cornfield is caught with wonderful dexterity, and with curious freedom of apparently careless handling. Mr. J. Lawton Wingate shows several of those landscapes of moderate size in which we find him at his best. His "Drinking-Place, Mid-Day, October," is a thoroughly delicate rendering of quiet, softly-diffused sunlight; and in the sky of "At the Wa' gann o' the Winter," and in the relation of trees, hayricks, and buildings to that sky, we have an example of extreme subtlety and refinement of tone. Mr. W. D. McKay's most important contribution is an extended view of "Luffness Links," distinguished by much quiet fidelity of cloud-painting; and Mr. J. Campbell Noble is represented by several of his vigorous renderings of brilliant sky effects, seen above potently coloured spaces of sea.

Mr. G. O. Reid, the most accomplished of the Scottish *genre*-painters, exhibits several vivaciously-touched interiors with last-century figures—among the rest the finished sketch for his "Voltaire" picture, previously exhibited on these walls. And Mr. Hugh Cameron, in addition to several silvery pictures of children on the shore, sends a subject from Hogg's "Kilmeny," a carefully rendered scene of autumn gloaming, with the girl—who has been spirited away and lived in fairyland—returning through the familiar glen to what was once her home.

Mr. C. Martin Hardie shows an impressive figure-piece, "The Land o' the Leal," the deathbed of an aged cottar, with the last radiance of a golden sunset streaming through the window, and surrounding, like an aureole, the bowed head of his wife, who sits holding the hand of her expiring husband. Mr. Otto Leyde has several pictures of children, showing delicacy and refinement of flesh-painting. Mr. R. Payton Reid, with considerable tenderness of tone and lighting, but with less rich fullness of colouring than has been his wont in the past, treats a gently idyllic subject in his flower-crowned "Phyllis" seated by her "Corydon." Mr. T. Austen Brown's essays a curious colour-experiment—a contrast in green and blues—in his "Cottage garden"; and attains considerable strength of subdued and harmonious colouring, united to firm and yet free handling, in his "Feeding Calves."

In the department of portraiture the most sound and excellent work comes from Mr. George Reid. His full-length of Mr. Wellwood Maxwell of Munches is admirable in its homely truth of attitude and expression; his three-quarter length of Mr. T. Graham Murray, the well-known Edinburgh Writer to the Signet, is full of characteristic energy of expression; while we have much dignity of pose in the attitude and richness of hue, combined with delicate gradation in the costume, of the seated portrait of Lord Trayner, portrayed in his justiciary robes. Mr. J. H. Lorimer exhibits the delicate and admirable likeness of his father shown last year at the New Gallery; and from Mr. E. A. Walton, of Glasgow, one of the more recently elected Associates of the Scottish Academy, comes his attractive "Girl in Brown," which has also been visible in London. Mr. Robert Gibb is represented by a number of portraits, the most striking of which is the half-length of Mr. Harry Young, of Cleish; Mr. W. E. Lockhart shows two works, one of them a full-length of Mr. Macdonald, Master of the Merchant Company; and Mr. Robert McGregor has a successful bust of Mme. de Greiner.

The works of sculpture include M. Rodin's spirited bronze head of Mr. W. E. Henley; Mr. John Hutchison's marble of the late Professor William Wright, of Cambridge; and Mr. John Rhind's delicate and expressive bas-reliefs of "Literature" and "Liberality," for the Chambers Memorial now being erected in Edinburgh.

Among the more remarkable contents of the Water-Colour Room are the Spanish subjects landscape and figure, by Mr. Arthur Melville—his "Gitana Dancing Girl," in particular, a brilliant study of vivid crimsons under dazzling sunlight; the admirable "Border Keep" of Mr. Tom Scott; and the landscapes of Mr. R. B. Nisbet, which are distinguished by much of the tranquillity and simple concentration of the earlier school of English water-colour.

NOTES FROM EGYPT.

Dehahiah Istar, Luxor: Feb. 4, 1891.

My voyage up the Nile this winter has, from a variety of causes, been somewhat barren of results. At El-Hibeh, the ancient fortress of the XXist Dynasty, a little to the north of the modern Maghagha, we found that a ruined temple was being excavated which had been built by Shishak, the conqueror of Jerusalem. The ruins lie on the south side of the mounds.

At Karnak Mr. Wilbour and myself went over the famous list of the towns of Palestine given by Thothmes III. I was particularly anxious to examine the third name, which follows those of Kadesh and Megiddo. Previous copyists had made it *Kh-a-a-i*, but a study of the Tel el-Amarna tablets had convinced me that it ought to be the city called by them

Khazi. We gather from them that Khazi was in Northern Palestine, and the seat of an Egyptian governor who ranked next in importance to the governor of Megiddo. We found that the name given at Karnak is *Kh-z-a-i*, corresponding exactly to the name given by the cuneiform despatches. Our predecessors had mistaken a very plain representation of the bird which denotes the letter z for the eagle (*a*).

It is curious that no one seems to have noticed that the name of Jerusalem heads the list of conquered towns in Judah enumerated by Shishak at Karnak. It is called Rabbath, "the capital," just as the capital of the Ammonites was commonly called Rabbath by their neighbours, or as to this day the capital of Gozo is called Rabato, while the same name is often applied to the old capital of Malta.

Let me conclude with a suggestion for Old Testament students. We learn from Judg. iii. 8-10, that the Israelites were oppressed for eight years by the king of Aram-Naharaim. The period of oppression would chronologically agree with the reign of Ramses III. in Egypt; and it was in the time of Ramses III. that Egypt was assailed by a league, which included the people of Nahrina. Nahrina is the Aram-Naharaim of the Bible, and the attack upon Egypt would explain the presence of a king of that country in the South of Palestine.

A. H. SAYCE.

Luxor: Feb. 10, 1891.

On February 6 a discovery was made in the necropolis of Thebes, second only in importance to the discovery of the royal mummies at Dehr-el-Bahari by M. Maspero in 1881. About half a mile from Dehr-el-Bahari a pit has been found containing several hundred magnificent mummies. These, like the royal mummies, had evidently been removed from the tombs and concealed in this receptacle, as a precaution, by the servants of the priests, probably at the same time and for the same reasons which caused the royal mummies to be placed in the receptacle where they were found by M. Maspero. This removal is believed by M. Maspero to have taken place in the reign of Aamuth, son of Shashang, of the XXIInd Dynasty (circa 966 B.C.).

The coffins hitherto found all belong to the XXist Dynasty, and are those of the priests of Ra-Amun and their families. The pit is about forty-five feet in depth, at the bottom of which are two corridors filled with coffins and treasures of every description. In the lower corridor—which as yet has only been explored—it is computed that there are some 200 coffins, and the second corridor is believed to be not less extensive. The shaft is forty-five feet deep, its mouth is about twelve feet in diameter, and its sides of rough limestone. One of M. Grébaut's native assistants, who was superintending the work of hauling up the mummy cases, told me that he had been the first actually to enter the corridor where the mummies and treasures lie. The shaft had then been excavated only as deep as the mouth of the corridor; and he crept in on his hands and knees, and stood in what he describes as being like a palace of enchantment. The corridor, he said, is some ten or twelve feet high, and 250 feet long. It runs in a northerly direction from the shaft towards the Theban hill. At the end there is a short corridor branching from it at right angles; and at some height above the floor at the end is the entrance to a second very long corridor, full of treasures, which has been sealed up for the present by M. Grébaut. My informant went on to describe the wonderful sight in the corridor. Groups of mummies are placed at intervals in families. The number in each group varies from two to six or seven, father, mother, and children; and around them, exquisitely arranged,

are vases, models of houses, models of *dahabiehs*, cases and boxes full of *ushabtis*, statuettes, and every conceivable treasure of ancient Egypt. Without even a speck of dust upon them, this profusion of treasures had remained unlooked at by any eye for nearly 3,000 years. He said that photographs had been taken of the place in its undisturbed state, which he declared to be that of a perfectly kept and well arranged museum.

At the present time, thirty or forty men are working all day with ropes and pulleys, hauling up the mummy cases; and in four or five days everything will be cleared out and carried on board M. Grébaut's steamers and barges, several of which are waiting to be filled. Long processions of natives, staggering under their burdens and escorted by mounted and well armed police, are now to be seen wending their way across the desert from the pit's mouth to the river bank.

E. TAYLOR.

We also quote the following from the Cairo correspondent of the *Times*:

"The site of the discovery is east of the temple of Queen Fatasou, in a small spot previously undisturbed, amid the excavations made by the late Mariette Bey and Brugsch Pasha. A well-shaft of 15 mètres leads to a doorway blocked with large stones, opening on a gallery 73 mètres long, whence a staircase descending 5½ mètres conducts one to a lower gallery 12 mètres in length, both lying north and south. The lower gallery gives access to two mortuary chambers, 4 and 2 mètres square respectively. At the top of the staircase is a transverse gallery, 54 mètres long, lying east and west, the object of which is unknown. The total underground area is about 153 mètres, excavated in the limestone rock to over 65 ft. below the surface. The same disorder reigned among the contents of the tombs as was found when the famous royal mummies were discovered nine years ago. Sarcophagi were piled upon sarcophagi; and alongside were boxes, baskets of flowers, statuettes, funeral offerings, and boxes crammed with papyri. There is every indication that the place, though originally constructed as a vast tomb, was chosen for hurried concealment in time of tumult. Some of the exteriors of the mummy-cases are unusually richly decorated with religious subjects, carefully depicted; others of large size enclose mummies in a broken condition, and were apparently procured hastily, as the spaces for the occupants' names are left unwritten upon. The contents of the papyri are as yet unknown, but hopes are entertained that the writings are of permanent historical interest and have been thus hidden to avoid destruction. The mummies are priests and priestesses of Ammon, Anubis, Seti, Mentou, and Queen Aahotep, numbering 163, the latest belonging to the XXist Dynasty. Seventy-five papyri were found in boxes, in the form of statuettes of Osiris. Each mummy is also expected to contain more or less valuable MSS. The collection is *en route* in barges by the Nile, and will probably reach Cairo in a few days."

CORRESPONDENCE.

"A MANUAL OF ARCHAEOLOGY."

Hampstead, N.W.: Feb. 21, 1891.

I suppose I ought to thank the gods that, out of many notices of my *Manual* in the press, two only have been unfavourable.

Of these, one was by an anonymous writer who, while endeavouring to convict me of blunder, himself fell into grievous error. This appeared in a weekly paper from which correspondence and protests are carefully and judiciously excluded. With the *ACADEMY* things are far otherwise; and the review of the book in question bears a signature respected in learned circles.

Though not so unacquainted with the literature of the Lake-dwellings, I fairly laid myself open to the reviewer's censure by assigning all

such dwellings to the Neolithic period; what was intended to exclude was the Palaeolithic age.

No one, again, can feel more than I do the meagreness of my account of Roman and Italian art; but I found the modest allowance of a couple of hundred pages I had proposed for my little volume already exceeded before finishing with Hellenic work. My object, indeed, was to produce an introductory sketch, not an encyclopædia.

Canon Taylor's appreciation of the chapters on Greek art is, of course, gratifying. It is, however, somewhat difficult to feel grateful for his treatment of other portions of my book. The learned reviewer occasionally hovers on the brink of the inaccurate, one might almost say of the unfair. Thus, pouncing on a slip unnoticed in revising, he says:

"A plan . . . is labelled 'Plan of the Temple at Khonsu,' as if Khonsu had been a place instead of being the name of the moon-god in the great Theban triad."

Your readers would hardly suppose (what is really the fact) that only four lines lower on the same page I have used the words: "the god Khonsu!"

Canon Taylor expends more than twenty lines in condemning my statements that "Till Roman times the ancient world is for us, in great part, a blank"; and in emphasising the importance of the monuments of Egypt, Assyria, and Babylonia. But this is just what I have myself done in the next two sentences. Of course, the "great part" referred to lay outside those empires. However, I have already trespassed too much on your space.

TALFOURD ELY.

NOTES ON ART AND ARCHAEOLOGY.

MR. SOLON'S expected work on *Ancient Art Stone Ware* is now ready for the press. Like his *Art of the Old English Potter*, it will be illustrated with etchings, by the author, as well as with 200 engravings in the text after his drawings. Mr. Solon has been engaged on this work for some years, and has been able to obtain for purposes of illustration the best specimens in the celebrated collections of M. M. Oppenheim and Thewalt of Cologne, H. Hetjens of Aix-la-Chapelle, Dr. Figdor of Vienna, and other important connoisseurs. This book will be printed "for the author" at the Chiswick Press, and the edition will be limited to 300 copies. The price to subscribers will be ten guineas for copies on Japanese paper, of which only thirty will be printed, and five guineas for the other 270, which will be on thick hand-made paper. The plates will be destroyed when this edition has been printed.

THE Archbishop of Canterbury has accepted the presidency of the Palestine Exploration Fund, of which the late Archbishop of York was president from the foundation of the Society in 1865 to his death.

THE exhibitions to open next week include those of the Royal Society of Painter-Etchers, in Pall Mall East, and of the Royal Scottish Society of Painters in Water-Colours, at the Dowdeswell Galleries in New Bond-street; and a series of water-colour drawings by Mr. E. P. Bucknall, entitled "English Woods and Forests," at Messrs. Buck and Reid's, also in New Bond-street. Messrs. Obach & Co., of Cockspur-street, will have on view a complete set of the etched and engraved works by, and after, Meissonier; and the exhibition of drawings, &c., recently acquired by the department of prints in the British Museum will also be open to the public next week.

On the three last days of next week, Messrs. Sotheby will offer for sale an extensive collection of the engraved works of Bartolozzi.

THE STAGE.

TWO PLAYS.

THE return to the London stage of Miss Mary Eastlake—too long absent—has been welcomed at a couple of *matinées*. These have been given at the New Olympic; and in the performance of the new play Miss Eastlake has had the advantage of the co-operation of certain members of Mr. Wilson Barrett's company—notably of the assistance of Mr. George Barrett. Miss Kate Phillips—joining the company for the purpose—has also been of much use. But let us to the play itself. It is called "A Yorkshire Lass," and is by Mr. Wilton Jones, whose name comes before the public not at all for the first time as the author of a piece which is full not of delicate characterisation but of stirring incident. Mr. Wilton Jones's construction is unequal. In parts it shows the hand of a very skilled mechanic; in other parts—as where, on more than one occasion, the scenes open with the talk of servants who are but the exponents of the position of more important persons—it betrays either some carelessness or some absence of resource. This, however, is but a detail. Had we to blame it for some more capital offence, the offence we should single out would be that the play forces upon us too plainly the author's reminiscences of Mr. Robertson's "Ours," and of more than one other well-known piece. Yet even here it is not difficult to be indulgent. The play is not written for a literary public; it is not its chief business to attain novelty of view or effect. It must be hearty, sympathetic, here and there broadly comic, full of action, at times more than a little sensational—all indeed that a good bouncing English melodrama is wanted to be—and it attains its ends. Miss Phillips and Mr. George Barrett, whom we have named already, are received gladly by the playgoer, but for Miss Eastlake, as the suffering heroine, a yet more cordial greeting is reserved. Miss Eastlake plays with conviction, with real force—as one to whom experience has taught her art.

A somewhat dull performance of Ibsen's "Rosmersholm" introduced that heavy drama—from which I had expected a good deal—to an English audience at the Vaudeville on Monday afternoon. "Introduced" is hardly the word, however; for many persons came duly provided with the book of the play—Mr. Charles Archer has translated it into at least as good English as any which, except Mr. Gosse's, has been placed at Ibsen's service—and the audience consisted, for the most part, to judge by the appearance of it, of those to whom the views of Ibsen, as hinted at in certain of his plays, are likely to commend themselves. "Who are these people?" it may be asked. Well, they are not the large public, the steady-going playgoers on whom a manager's prosperity depends, and who, without fine taste perhaps, yet like all manner of wholesome meat, from "Hamlet" to "The Rivals," from "Lights o' London" to "Carmen up to Data." They are not

ordinary cultivated people—the refined professional classes—who, in a generation that has given to England Browning and Tennyson, Newman and Liddon, somehow do not quite unanimously echo Rosmer's opinion, "There is no judge over us." Whether they are "the very poor," the enlightened East-enders, for instance—just now the faddists' court of final appeal—those to whose subtle intelligence and chastened hearts a great revelation is in the very nature of things most likely to be vouchsafed—we really cannot say. Miss Farr, the actress—to judge from an interview which a reporter of an evening paper had with her—apparently thinks that they are. *Nous n'en savons rien*. But about one matter we must disabuse the leading lady with promptitude. She counts on "the smart people," it would seem, as a possible audience. Singular and unjustified ambition! She will, of course, never get them. Smart people do not like anything so dull as the play with which we were regaled on Monday. The play contains good things, sensible things—most of them are said by Parson Kroll, however; and he, because he is a parson, must, in the generous Ibsenite creed, necessarily be a hypocrite. Strange career of the world! Rosmer—if we understand him at all—is unremittingly foolish; and even the knavish Rebecca—who is guile at the beginning and guile almost at the end—crowns the edifice of her life with a suicide which might indeed have been merely wrong and mad, but which, with her, is also inconceivably stupid. "Rosmersholm" is not very dramatic. It is hardly at all literary. It is not comic, except where, apparently, it aims particularly not to be. It is without beauty, without poetry, without sense of vista. It is not even dexterously doctrinaire.

In the performance, Mr. Wheatman and Mr. Hudson—as a Scandinavian Radical editor, and an "emancipated" schoolmaster who gets drunk in drawing-rooms and who borrows money—interest us now and again, and almost induce us to credit the Scandinavian with some conservative intention which the true Ibsenite must have unwittingly overlooked. Miss Farr talks persuasively, but is yet unintelligible in her general presentation of Rebecca's character. She may be a believer, but she does not illuminate. And Mr. Benson, whom we have seen do better things, was earnest, but violent—he came too soon to the end of his resources. If this was a pleasant afternoon for anybody, it can only have been for one who likes to take his pleasure *moult tristement*. The farce is almost played out.

FREDERICK WEDMORE.

MUSIC.

RECENT CONCERTS.

SIR C. HALLÉ'S orchestral concert, on Friday, February 20, was a great success. Cherubini's "Anacreon" overture was brilliantly performed, the gradations of tone being particularly fine. Mme. Neruda, who was indisposed, was therefore not at her best in the Mendelssohn Concerto, yet there was some very finished playing in the last movement. She was recalled twice at the close. Beethoven's "Pastoral" Symphony was not altogether satisfactory in the matter of

tone, but the "Storm" was effective. The programme included Mozart's graceful Romanza from "Eine kleine Nachtmusik"; Liszt's "Rhapsodie" (No. 4) in which the violin solos were ably rendered by Mr. Hess; and Wagner's "Tannhäuser" overture, vigorously interpreted.

Mlle. Eilona Eibenschütz appeared last Saturday afternoon at the Crystal Palace, and made a highly favourable impression. She played Chopin's Concerto in F minor and two solos—Rubinstein's Barcarolle in G, and the Paganini-Liszt "Campanella" Etude; also a Scarlatti piece by way of encore. The programme included Beethoven's Symphony in F, of which Mr. Manns gave one of his grandest readings.

The foggy weather interfered with the audience at Monday's Popular Concert; but those who attended heard a very fine performance of Bach's Sonata in E (No. 3), for pianoforte and violin, by Miss Fanny Davies and Herr Joachim. Miss Davies appeared also to advantage in Chopin's E flat Polonaise. The programme included a Haydn Quartet and Bennett's graceful Chamber Trio in A, not performed at these concerts since 1876. Miss Bremer was the vocalist.

Miss Florence May gave a concert at the Royal Academy of Music on Tuesday evening, the whole of the programme being devoted to the music of Brahms. A special feature was the rarely-heard pianoforte Concerto in B flat (No. 2), the solo part of which was played

with much skill by Miss May. The orchestral accompaniment was represented by two pianofortes. This is a special arrangement by the composer himself, but the effect is by no means satisfactory. One pianoforte is bad enough to represent an orchestra: two seem worse. The accompaniments were played by Mr. S. Kemp and Mr. S. Webb. The Sonata in A for pianoforte and violin was performed by Miss Shinner and the concert giver; the rendering of the charming middle movement was the best. Mr. William Nicholl was the vocalist.

Master Jean Gerald gave a third Recital at St. James's Hall on Wednesday afternoon, and again his wonderful playing was greatly enjoyed and admired. It is almost impossible to believe that so young a child can be such an accomplished artist. An attractive feature of the concert was the singing of M. Eugène Oudin, in songs by Meyerbeer, Gounod, Kjerulf, and Goring Thomas.

A performance of Gounod's comic opera, "The Mock Doctor," founded on Molière's "Le Médecin malgré lui," was given at the Avenue Theatre on Thursday afternoon by the students of the Royal Academy of Music. The music is bright and clever; and altogether it is a work most suitable to the object in view, viz., that of giving the students the opportunity of a public appearance. Certain allowance must be made for a performance of this kind; but, altogether, it was one of considerable merit. The two servants to Geronimo were well represented by

Messrs. Fletcher and Delsart. Miss Hannah Jones, as the Nurse, obtained a well-earned success. The Sganarelle of Mr. E. A. Taussig also had many good points. The chorus and orchestra were both excellent. Mr. Randegger was the conductor. J. S. SHEDLOCK.

MUSIC NOTES.

MUCH interest was excited last week in musical circles at Rome by the concert given by Signor Alessandro Costa. This composer is known but little out of Italy, and, indeed, in the capital itself mainly among musical enthusiasts. A beautiful "Suite" met with an enthusiastic reception, I. (Andante) and IV. (Allegro e Finale) being particularly admired. This composition will shortly be published. The second portion of Signor Costa's concert consisted of sections of his Oriental opera "Sumitri," founded upon a Brahminical legend. The music of this opera is essentially original, as well as charming and occasionally powerful; and none the less so from the fact that the composer has evidently been influenced by Wagner. The "Prelude" was accepted as in every way noteworthy; and the songs and dance of Sumitri, as a wandering dancing-girl, were singularly charming. It is hoped that this fine opera, about which rumour has already had so much to say, will ere long be heard upon the stage at Milan, and possibly thereafter at the opera houses of Paris and London.

TRISCHLER & CO'S LIST.

Now ready, at all Libraries and Bookstalls.

LADY DELMAR. 1 vol. By Thomas Terrell and T. L. WHITE. This exciting story of London life has already been dramatised by Mr. Sydney Grundy.

The DAILY TELEGRAPH says:—"A remarkable novel." See also leading article on this dramatic story of human nature in DAILY TELEGRAPH of February 25.

The DAILY NEWS:—"A complex story of life in London, with many exciting incidents."

PRECISELY:—"Lady Delmar" is distinctly a book to read; it is vivid with variety, culminating in interest, and original in treatment."

Handsomely bound in scarlet cloth, 354 pp., crown 8vo, 3s. 6d.

AN AMERICAN WIDOW. 3 vols. By ALBERT KEVILL-DAVIES. A vivid and piquant story of American life in London.

MORNING POST:—"An American Widow" is very amusing, very brightly written, and original."

The SCOTSMAN says:—"Is cleverly written and ingeniously contrived. A very clever sensational melodrama."

The EVENING NEWS AND POST says:—"A capital exposé of the American invasion of England by young ladies in search of husbands amongst the scions of our nobility. Throughout the whole three volumes there is not a single dull chapter."

The FIGARO says:—"It is both clever and original, and treats with conspicuous ability a topic which is discussed with avidity on both sides of the Atlantic."

The SUNDAY TIMES says:—"Few better novels than this have been published lately."

HOLLY. 2 vols. By Nomad, Author of "The Railway Foundling," "The Milroys," &c.

In speaking of this author's last work, "The Railway Foundling," the DAILY TELEGRAPH says:—"It is a story that must be read to be understood. There is vivacity and adventure in it, and, good as the author's previous work, 'The Milroys,' was, it is not too much to say this is better."

The SCOTSMAN says:—"The readers among whom 'The Railway Foundling' and 'The Milroys' have been popular novels will probably be charmed with Nomad's new work of fiction. 'Holly' is as lively and artless, as light and readable, as its predecessors."

THE GOLDEN LAKE: a Story of Australian Adventure. By W. CARLTON DAVE, Author of "Zantia," &c. With eight full-page illustrations by Hume Nisbet.

MORNING POST:—"A welcome addition to the fiction treating of 'The Great Lone Land of Australia,' the effect of which is increased by Mr. Hume Nisbet's numerous illustrations."

SUNDAY TIMES:—"A very strong and well-written story of Australian life, told with a swing and 'go' which make it very entertaining reading."

SCOTSMAN:—"A clever and entertaining narrative of travelling adventures in the unknown interior of Australia. Mr. Dave's inventive talent is lively, and his literary faculty genuine." Extra cloth, with bevelled boards, 6s.

ALWAYS in the WAY. By T. J. Jeans, Author of "The Tommieboy Shootings," with nine Full-Page illustrations by Finch Mason. Cloth extra, 3s. 6d.

TRISCHLER & CO., 18, NEW BRIDGE STREET,

THE PRISONER OF CHILOANE. By Wallis

MACKAY. With 80 illustrations by the Author.

The WORLD says:—"A brightly written book."

MORNING POST:—"Bright and attractive."

The SATURDAY REVIEW:—"Mr. Mackay is as good with pencil as with pen."

The SCOTSMAN:—"Written in a bright, spirited style, and the illustrations are full of fun and movement."

The SPECTATOR:—"Much that is worth reading in Mr. Mackay's book." Folscap quarto, handsomely bound in cloth, bevelled edges, 7s. 6d.

A MAIDEN FAIR TO SEE. By F. C.

PHILIPS, Author of "As in a Looking Glass," and C. J. WILLS, Author of "In the Land of the Lion and Sun." Copiously illustrated by G. A. Story, A.R.A. Folscap quarto, beautifully bound, with gilt top, 6s.

THE BLACK DROP. By Hume Nisbet,

Author of "Bail Up," &c. Extra cloth, 2s. 6d.

RITHERDONS GRANGE. By Saumaurez

ne HAVILLAND, Author of "Strange Clients," &c. Picture bds, 2s.

THE ROMANCE of a LAWN TENNIS

TOURNAMENT. By Lady DUNBOYNE, Author of "Thro' Shine and Shower," &c. A charming story of country life. Picture cover, 1s.

THE TYPE-WRITTEN LETTER. By R. H.

SHERARD, Author of "Rogues," "Agatha's Quest," &c. Limp cloth, 1s.

E.C.

In the SECOND WEEK of MARCH will be PUBLISHED

THE FIRST VOLUME OF

THE MEMOIRS OF PRINCE de TALLEYRAND.

Edited with a Preface and Notes by the DUC DE BROGLIE, of the French Academy.

Translated by R. LEDOS DE BEAUFORT.

With an Introduction by the Hon. WHITELAW REID, American Minister in Paris.

To be completed in 5 volumes.

With Portraits and Autographs. 8vo, cloth, price £1 1s. net.

☞ The Second Volume will be ready about a Fortnight later.

GRIFFITH FARRAN OKEDEN & WELSH, LONDON AND SYDNEY.

THE NEW REVIEW.

MARCH.—Price Ninepence.

A SONG BY LORD TENNYSON (Poet Laureate).

THE RISE AND FALL of MR. PARNELL. By TIMOTHY M. HEALY, M.P.

MR. GLADSTONE CLOSE at HAND. By Dr. PARKER.

A MODEL CITY. I.—The Water Supply. By Sir THOMAS H. FAIRER, Bart.

ON THE DESIGNING OF COSTUMES for the STAGE. By PEACOCK ANDERSON.

ORGANISATION OF PUBLIC ELEMENTARY EDUCATION and the FREE QUESTION. By the Hon. E. LYCLIFF STANLEY.

SHAKESPEARE'S IGNORANCE? By EDMUND O. VON LIPPEN (of Halle).

WANTED, a NEW CHARTER. By H. W. MASSINGHAM.

MISTAKEN LABOUR LEGISLATION. By GEORGE HOWELL, M.P.

FOLIOS and FOOTLIGHTS. By L. F. AUSTIN.

CONTINENTAL COMMENTS—

FROM FRANCE. By JOSEPH REINACH

(Member of the French Chamber)

" BERLIN. By GEORGE VON BUNSEN.

" ROME. By R. BOSCHI

(Member of the Italian Chamber).

London: LONGMANS, GREEN, & Co.

THROAT IRRITATION

AND

COUGH.

Soreness and Dryness, tickling and irritation, inducing cough, and affecting the voice. For these symptoms use **EPPS'S GLYCERINE JUJUBES**. In contact with the glands at the moment they are excited by the act of sucking, the Glycerine in these agreeable confections becomes actively healing. In boxes, 7½d.; tins, 1s. 1½d., labelled "JAMES EPPS & CO., Homoeopathic Chemists."

SATURDAY, MARCH 7, 1891.

No. 933, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Political and Social Letters of a Lady of the Eighteenth Century, 1721-71. (Griffith, Farran & Co.)

THE writer of these letters was a typical Englishwoman, energetic and courageous, yet instinct with sympathy and kindly feeling. Her father was Admiral Byng, the first Lord Torrington, whose memoirs were recently published by the Camden Society; and her brother was the unfortunate John Byng, who alone of England's admirals has been condemned by a court composed of his compeers in the naval service to death for misconduct. While still a girl, not yet arrived at the seventeenth year of her age, she was married to a gentleman of Bedfordshire whose family property all but adjoined the lands belonging to her father. Within a few years she was left a widow; and it soon became necessary for her to undertake the management, in the interest of an only child, of a family property difficult to cultivate, and moreover heavily encumbered with charges. These troubles she surmounted; and her son on his marriage found himself the master of a good estate, and the head of a household regulated by his mother "on a basis of great economy and excellent management." Less than three years passed away when two grandchildren, deprived through their mother's death of maternal control, were left under her care. With indomitable vigour she accepted this new burden, and discharged her duties with unflinching zeal. On her death, at the age of eighty-two, her two grandchildren were happily settled in life, and another generation had come in the person of a great-grandson, afterwards Sir John Osborn, Baronet. There was anxiety enough and to spare for her in the family of her adoption, but such care dwindled into insignificance when compared with the dishonour cast on her brother, Admiral Byng. When that anxiety seized her, she made strenuous efforts to save him from a coward's death. Her appeals to the Duke of Bedford and the Lords of the Admiralty on her brother's behalf, his last letter of affection to his "dear, dear sister," and the paper of vindication which he wrote a few minutes before his death, are all printed in this volume. It also contains a sympathetic note from Voltaire, enclosing a testimonial in favour of Byng from the Duke of Richelieu, who commanded the French fleet on that occasion. In this disastrous year of 1757 Mrs. Osborn's cup of sorrow must have been full to overflowing.

In the first of the letters here printed Mrs.

Osborn, then a young widow of six and twenty, was luxuriating in the gay throng of lords and ladies who sought for health or pleasure at the Hotwells of Bristol, or the Pump-room of Bath. She had visited "Mr. Southwell's house, which is within five miles of this place of Bristol," and, as "Vanbrugh was the architect, a clumsy lump of building it is;" words which recall the satirist's epitaph, bidding earth to lie heavy on Vanbrugh, "for he laid many a heavy load on thee." She was one of the ladies at the ball when "the gentlemen borrowed the Long Room at the Custom House, nine couple," and balloted for their partners when there were some misfits; and the "worst then fell to my lot" is her disappointed expression. At Bath there was a still grander ball with "all ye great ladys" and as "Gay [the name is erroneously printed *Gray*] ye poet lodges in our house so he supt with us;" and Mrs. Osborn had the advantage of becoming acquainted with those eminent in literature as well as in fashion. Pleasure soon gives way to business; for the profits of the estate are paid into Chancery, and there are interminable delays over the investment, so that she cries out in her haste, "they are all rogues." At last the business is completed, and Mrs. Osborn pays a round of visits to the great houses—Boughton, Drayton, and Kimbolton in the Midlands. Life at Southill in Bedfordshire passed so dully that she could "know nothing but from newspapers," and could only explain to her correspondents that she did not "love to live quite so free from the hurry of the world." A break occurs in this monotony when she made a tour of three months' duration in France and Belgium with a lady friend. The journal still exists among her papers in the picturesque house, Chicksands Priory, of the Osborn family at Bedfordshire, a charming view of which in its present state adorns this volume; but no portion of it is now printed, and no explanation of this omission is supplied. In its present form this book numbers less than two hundred pages; and some extracts of what this acute lady saw in her travels, and the reflections which she drew from the novel sights around her, might well have been added. Very rarely, indeed, has a critic to complain that a book is unduly small.

The families of Osborn and Byng were frequently immersed in election contests. One letter written so early as 1726 describes the visit of her brother and the other Whig leaders in the county to Bedford on a conference with the Duke of Bedford, who by accident or design had frightened the whole party by requesting their presence "at a Tory inn." Rumour said that the duke proposed running "good Tories," and the lady's conclusion was that he must be "a giddy, hot-headed creature"; but matters were ultimately settled in the right groove, and her own brother, with the marvellous name of Pattee Byng, was returned in the Whig interest. Another letter describes the poll for the county in 1734, and the rage of the electors for the town of Bedford at the absence of any rivalry for their votes. A third sets out the intrigues over the representation of the county in 1767, when

the seat was vacant through the death of the young Lord Tavistock by a fall from his horse. Her son had married in 1740 a daughter of the Earl of Halifax—the editor must surely be in error in saying that the lady was a daughter of the peer who took the name of Dunk; and by the alliance with that ambitious peer, politics and elections became still more necessary to his existence. That nobleman was one of the historic three who spent between them a quarter of a million of money over the contest locally known as the "spendthrift" contest for Northamptonshire in 1768—an election described at length some years ago by Canon James, and ultimately settled through the disgust of the voters at being fobbed off with claret when the port in Lord Halifax's cellars of Horton ran out—and he set up his nephew, Sir George Osborn, as his candidate. These letters add some picturesque touches to the struggle. We see Lord Halifax paying a state visit with all his family to the Northampton races, the meeting there of two of the peers "on extreme good terms," the opposition of an independent county baronet, the trouble when "the Spencer interest broke faith several times." Never since the fall of Sir Robert Walpole were the elections so fiercely contested as in 1768. From Mrs. Osborn went up the despairing cry that "the landed interest is beat out," and that the Nabobs from the East reigned in the place of the old country squires. "Sums unheard off," she exclaims, "are now given for Cornish Burreughs;" but if their price rose high, the convenience of transfer from one occupant to another justified the increase. It was in the North-Cornwall constituency of Bossiney that Mrs. Osborn's son, whose troubles at Northampton so distressed her, found a haven of refuge; and it was while representing its one or two electors that he was rewarded with the place of groom of the bed-chamber.

The troubles during the last century are vividly set out in these pages. The panic which seized on London society over the invasion of the young Pretender, and the disturbing rumours which sprang up every hour, are described at considerable detail. Twenty years pass away, and there succeeds the decay which befell English statesmen during the nominal rule of the Butes or the Graftons. "So many things are vacant and no acceptors: Treasury, Navy vacant; Vice-Treasurership of Ireland, with several other things that is amazing, goes begging"; and to fearful hearts like Mrs. Osborn, it seemed as if England were drifting on the breakers. Still she kept retailing to her son on his foreign mission the gossip and the scandal which circulated in the upper circles of English life. She tells of the old lady, who was "maddish," and left Lord John Cavendish £40,000, though she "never saw him but once in her life, only because he was a Patriot." She prattles on the prospect of Pitt coming into a reversion of £9,000 a year, on the possible death of young Villiers, who is "inclined to be wild, and has not had the small pox and Pitt is lucky. Therefore everyone concludes the Boy is to dye." What an amazing picture is sent to this son of the two brides of 1767! One

exulting in "her head a yard high, and fill'd or rather cover'd with feathers to an enormous size, fitter for a masquerade than a drawing room"; and her rival sets off with "a headdress as high, but built up like a rock with diamonds, and indeed she is so much cover'd with jewels that they compare her to a lark wrapped up in crumbs."

Everywhere throughout the volume we light upon amusing illustrations of our national character, and we are thankful to the writer for her keen appreciation of the striking and humorous incidents that occur at all times in everyday life. After we have read her last letter on the birth of her great grandson, written when she was nigh on eighty years old, we feel as if we have parted from an old friend. It is remarkable that two such exceptional women should have been associated, one by birth and the other by adoption, with the family of Osborn.

W. P. COURTNEY.

"GREAT WRITERS."—*W. M. Thackeray.*
By Herman Merivale and Frank T. Marzials. (Walter Scott.)

It is difficult for an admirer of Thackeray to speak harshly of this book; it is impossible for him to praise it. In the first place, notwithstanding certain great exceptions, two men cannot write one book; but, when one man continues a book begun by another, the ease is desperate. All harmony and design is lost; and, to adapt the logical phrase, the method is that of difference, not of agreement. Mr. Merivale contributes seven chapters, and Mr. Marzials five. Mr. Merivale has written the Life of Thackeray down to about the year 1835; and he has also completed a sketch of Thackeray's friends and of his more intimate life, which concludes the book. All the rest belongs to Mr. Marzials. But for the fact that Mr. Merivale had full access to private papers, and has been able to give us a certain amount of valuable information, we could wish, while regretting the necessity which prevented Mr. Merivale from doing complete justice to himself, that his chapters had been suppressed. He shows a generous and loyal devotion to Thackeray; but he writes with an irritating air of caprice and pique, in a tone of personal gossip and pleasantries, which recall much that is least admirable in Thackeray himself. This too easy manner betrays him into bad taste and much irrelevant stuff of this kind. Mrs. Jameson, a well-known author, published certain views not very ingenious, yet perfectly defensible, upon Thackeray's portraits of women. Mr. Merivale quotes Mrs. Jameson's protest: "Oh, Mr. Thackeray, this will never do!" and then continues—

"Yes; but it did! *Infelix foemina et impar!* Never prophesy until you know. How small the shade of Mrs. J. must feel. [Note here the blank, verse so impertinent, in every sense of the word.] Oh these unhappy hole-pickers! Why not cherish a little healthy hero-worship, and thank God for a great man when we get him? And what becomes of the hole-pickers when they die? Do they have to go on doing it?"

No expression of dissent is too strong for a condemnation of that style in criticism.

And it is constantly breaking out; in every other sentence Mr. Merivale inflicts upon the reader, who wants a plain story, and can make his own comments, the most infelicitous flights of wit and the most approved sentiments of morality. Were Mr. Merivale writing "A Talk about Thackeray" for the magazines, this manner might be in place; biography, before all else, should be simple and straightforward. We heartily agree with Mr. Merivale's praise of the classics; and it is the more surprising to find a writer, who presumably loves his Horace, speaking of "a monument more lasting than the *sounding brass*." Horace did not so poorly compliment his Muse, as to put her in competition with a trumpet. Nor did we expect to find recorded of Thackeray, as though it were his own, a witticism told of Dr. Clarke and Beau Nash, by both Goldsmith and Boswell.

Mr. Marzials has done his share of the work with much of the skill and discretion which he brought to the Lives of Hugo and of Dickens, although his critical work is better than his biographical. One passage is worth quoting for its excellent style and truth. After dwelling upon *Esmond*, he explains Thackeray's classical perfection by saying that Thackeray was himself a great classic of the Augustan school of Queen Anne. And he explains his own conception of a classic by the instance of Newman, whom Thackeray admired, and of Newman's farewell sermon at Littlemore.

"Now the point to which I particularly wish to draw attention is the restraint shown in such a sermon. Try to realise the position. . . . Think for a moment how an emotional writer or speaker would have expressed himself on such an occasion—with what passion of regret, what eloquence of self-justification, what tearfulness of farewells. Newman condenses his feeling into one paragraph, or, at most, two; and there gives it expression in language tense indeed and vibrating with emotion, like the string of a violin beneath the finger of a master, but with an emotion chastened and restrained. In this chastening and restraint dwells, as I take it, the classical spirit. They were the special "note" of the great writers of Queen Anne's day—of the serene Addison, of Steele, of Bolingbroke, of Gay, of Congreve, even of Swift. . . . All these men wrote habitually for "The Town," for a limited and educated public, and forewore coarse effects—I mean here intellectually coarse—as unsuited to those whom they addressed. What they cultivated was measure rather than force, felicity and neatness rather than eloquence, good sense rather than imagination, sensibility rather than passion. They worked, to put it shortly, within a restricted sphere, excluding from their view many of the elements, even the nobler elements, of humanity; but the work they turned out was, from its very limitation perhaps, all the more perfect. And Thackeray worked in the same spirit."

Mr. Marzials proceeds to draw out the likeness: Thackeray's exquisite purity of style, its music and simplicity; his slight regard for "the beauties of nature"; his slight concern with social problems and abstract speculation; his slight interest in the "great Romantic poets"; "when he wanted to spend a happy morning with his daughter he read Goldsmith's 'Deserted Village,' not the works of these later men." All this is well and truly said.

The book, regarded as a biography, is too miscellaneous and disconnected to be criticised in that light. At present, there exists nothing better. The refined and delightful papers now being published by Mrs. Ritchie in *Macmillan's Magazine* do but renew the old regret, that the biography may not be written by the one competent writer. Her portrait of Thackeray and Miss Brontë is beyond all praise, so delicate is it, and yet so powerful.

There are two points upon which it may be worth while to say something: the satire of Thackeray, and his art. Either is constantly misunderstood; and, without dogmatism on the matter, one may try to clear it from prejudice and misconception. It is commonly held by the unreflecting that your satirist is bitter, your humourist a jester. Men talk of Thackeray's cynicism and of Lamb's merriment, as though the one has no sympathies and the other no sorrows. Before Carlyle and Landor wrote, men talked of Dante's savagery and scorn. It is as though a writer must needs be a man of iron, without "bowels of mercy," unless he show himself lachrymose and sentimental. And yet there are "thoughts which do often lie too deep for tears." Mr. Pater has written excellently, as he always writes, upon this matter:

"The author of the *English Humourists of the Eighteenth Century*, coming to the humourists of the nineteenth, would have found, as is true pre-eminently of Thackeray himself, the springs of pity in them deepened by the deeper subjectivity, the intenser and closer living with itself, which is characteristic of the temper of the later generation; and therewith, the mirth also, from the amalgam of which with pity humour proceeds, has become, in Charles Dickens, for example, freer and more boisterous."

As mere matter of fact, laughter and tears, humour and pity, satire and pathos, lie very near each other; so near that Heine and Sterne pass from one to the other by some sort of natural instinct, and often labour to expose the fact unhappily. Thackeray, in his lightest social satire, mordant and stinging, does more than strip a pretension or ridicule an absurdity. Under the brilliant wit and superb scorn lies the haunting thought of pity for "Man, the admirable, the pitiable." He has distinguished between the attitudes of Swift, Addison, and Steele towards humanity; the terrible contempt of Swift, the pensive serenity of Addison, the simple tenderness of Steele. Combine the three, and there is Thackeray: too clear-sighted to accept delusions, too reverent to despair, too kindly to be always glad. Turning once more to Mr. Pater, we read in two passages of

"that old-world sentiment, based on the feelings of hope and awe, which may be described as the religion of men of letters . . . religion as understood by the soberer men of letters in the last century, Addison, Gray, and Johnson; by Jane Austen and Thackeray, later."

After pages of literally tremendous denunciation and scorn, he brings us back to the universal and elementary affections, pity and charity, and hope, in words, as Mr. Lang has noted, of incomparable music and beauty. And this, not out of a weak con-

cession to sentiment, but because it is verifiable and true, the testimony of experience. Nothing could be less true than the assertion of M. Taine:

"Il fait dans le roman ce que Hobbes fit en philosophie. Presque toujours, lorsqu'il décrit de beaux sentiments, il les dérive d'une vilaine source."

It is precisely because Thackeray, discerning so well the abundant misery and hollowness in life, discerns also all that is not miserable and hollow, that he is so great. He has neither the somewhat bestial pessimism of M. Zola, nor the fatuous gaiety of M. Ohnet. Like any classic, he stands the test of experience, of psychology. We have mentioned together Swift, Addison, and Steele; we might take Lucretius, Virgil, and Horace. Each has left a picture of patrician life, glittering and tedious. Lucretius, contrasting the splendour without and the gloom within; Virgil, the restlessness and haste with the placid peace of the country; Horace, content to let it all go by, neither envying nor despising. Something of each, again, is in Thackeray: an English classic not less true and real than the classic Romans.

Most of the disputes about Thackeray's art, in the strict sense of art, are occupied with the personal note in his novels: with the intrusion, as some call it, of his personality. Art, we are told, is impersonal; and we believe it. But if that imply that no novel should reflect its author's spirit, then no artistic novel has yet been written. It is a question of words: each writer has his manner of work and habit of mind; let him follow those faithfully, and the result will be good, if he be an artist. Who wishes away Fielding's enchanting chapters between the books of *Tom Jones*? Or who wishes to find essays by Flaubert between the chapters of *Madame Bovary*? Each follows his own way, and there are many ways in art. Thackeray's reflections and discussions do not spoil his story, because they are not mere moralising, which the reader might do for himself. Whenever a reader stops, and says to himself, that the writer might have credited his readers with wits enough to see such and such a thing, without being shown it, then the writer has been superfluous. A sentence instead of a word, a chapter instead of a page, are unpardonable sins: but who can say, that he could have done Thackeray's reflections for himself? And they do not occur in the course of actual narration: Rawdon Crawley confronts Lord Steyne, Lady Castlewood welcomes Esmond at Winchester, without any dissertation from Thackeray. At least, let us call these passages of personal meditation a wrong thing done exquisitely; beyond that we refuse to go.

Let us end with a letter of Newman, published since his death: a voice from the dead, one immortal upon another:

"I write . . . to express the piercing sorrow that I feel in Thackeray's death. You know I never saw him, but you have interested me in him, and one saw in his books the workings of his mind—and he has died with such awful suddenness. A new work of his had been advertised, and I had looked forward with pleasure to reading it; and now the drama of

his life is closed, and he himself is the greatest instance of the text of which he was so full, *Vanitas vanitatum, omnia vanitas*. . . . What a world this is! How wretched they are who take it for their portion! Poor Thackeray! it seems but the other day since we became Catholics; now all his renown has been since that; he has made his name, has been made much of, has been fêted, and gone out, all since 1846 or 1847."

"Qualibus in tenebris vitæ quantisque periculis Degitur hoc ævi quodcumque!"

Thackeray and Newman both knew that: but that was not all they knew.

LIONEL JOHNSON.

The Scope and Method of Political Economy. By J. N. Keynes. (Macmillan.)

IF the wide welcome given to Prof. Marshall's *Principles* six months ago was a real sign of approaching agreement among economists in regard to general doctrines, it is not unlikely that the present volume may be generally accepted as an Eirenicon on the subject of method in particular. It offers, not indeed compromise, but certainly conciliation. The old way of abstraction and deduction is still to be the first stage of the study; but the "realistic" and historical methods are to find a place in the later stages. What Prof. Sidgwick has attempted on another field in his *Methods of Ethics*—where, of three competing methods, we are told to give one the primacy, but not to deny the others a place of their own—Mr. Keynes tries to do in the region of economics.

In a sense it is true that his book simply sums up the views about scope and method which have in the last twenty years been gradually taking shape in the minds of English and American economists under the influence of Jevons, Marshall, and Walker. But to do this well was no easy task; and it has been well done. The author writes with ample knowledge not only of the older economists but also of their modern critics, both English and foreign; and his book is in great part an attempt to re-state the doctrine of economic method in such a way as to meet the objections of the German historical school of economists. Books on economic method are perhaps fewer in number than any other kind of economical literature. The older English economists seldom or never analysed their own methods. Even Senior, who is free from that reproach, treats the matter briefly and incidentally. Mr. Lunt's bright little treatise (New York, 1888), seems unknown on this side of the Atlantic. John Mill's *Essays on Unsettled Questions in Political Economy*, and his *Logic*, together with Cairnes's *Logical Method of Political Economy*, have furnished Mr. Keynes with his real prototypes, at least in the shape of special books on the subject. That the writer is well trained for his work is known to all readers of his previous logical and economical productions. His language is clear, logical, and forcible, so concise indeed (though a reviewer may not blame so rare a virtue) that his book suffers very considerably by a short summary.

The main positions may be described as follows: The "scope" of political economy means the distinctive phenomena with which it deals and the special kind of knowledge

it seeks to gain about them. Now, political economy may be conceived in three different ways: either (1) as dealing with "the systematic knowledge of what is," and, therefore, as a positive science, investigating uniformities; or (2) as discussing criteria of what ought to be, and, therefore, as a regulative or (to use Prof. Marshall's phrase) "normative" science, investigating ideals; or (3) as discussing rules for the attainment of a given end, and, therefore, as an art, formulating practical precepts. These three conceptions exclude each other. Mr. Keynes tries to show that the first of them is to be chosen—political economy in the strict sense is a positive science—while the other two conceptions are properly of the ethics of political economy, and the art of political economy, respectively. No economist desires to stop short at the theoretical study; but the "plurality of causes" makes a deductive treatment necessary, and the very intensity of our social sympathies and antipathies is a reason for separating our theoretical studies, in the first instance, from concrete applications. There is otherwise a danger of a philanthropic or other emotional bias; we lose the race by turning aside to the apple. Besides, there is good hope of eventual agreement among economists about abstract theory; there is none such about their answers to social questions, involving a particular ideal of society, say the individualistic or the socialistic ideal. "If economic theories are relative, economic precepts are more relative still." Mr. Keynes shows the difficulty of building up an art of political economy; and his arguments would seem to apply with almost equal cogency in the case of an economic ethic.

What then, in detail, is the scope of theoretical economics? It is described by our author in terms that recall Mill's essay on "The Definition and Method of Political Economy" (*Unsettled Questions*, Essay V.) Economical science is concerned with the facts about wealth only so far as they are social, and (our author adds afterwards) so far as they are in keeping with "the rules of conventional morality in matters of business." For example, the law of diminishing returns from land, as a bare physical fact, is not an economic law; it is an economic premise, not an economic conclusion. So it is with the principle of the increase of the numbers of the people; and so it is with the psychological fact that men prefer a greater to a less gratification. By wealth itself we are to understand "all potentially exchangeable means of satisfying human needs," whether services or material goods. Economic activities are those that relate to the production and distribution of wealth so defined; and political economy treats of "the phenomena arising out of the economic activities of mankind in society." The division of the subject into Production, Distribution, Exchange, and Consumption is not accepted without qualification; the interdependence of economic facts makes an absolute division impossible.

It has been urged (for example, by Comte) that the interdependence of social phenomena in general is so complete that we cannot safely or usefully separate the consideration of one class of them, like the

economic, from the consideration of all the rest. Here the question of method becomes important. Mr. Keynes thinks that the older economists were justified in taking economic facts separately and considering them by the light of an abstraction; their chief fault was, not in so beginning, but in so ending. It may be remarked that, though the desire of gain has been the chief abstraction, it has not stood alone. In Malthus's Essay another abstraction held the chief place; and it was treated in the same way as the desire of gain is treated by modern economists—starting with a particular desire in its abstractness, we were gradually introduced to more and more concrete phases of it till we were finally landed in our own everyday world. This is exactly how Mr. Keynes would have us to proceed in all economical inquiry. To use his own illustration, he would have us begin in the way recommended by Mill in his Essay, and he would have us proceed afterwards in the way actually followed by Mill in his *Political Economy*.

No doubt the inquiry will remain in a sense abstract so long as it remains economic at all. It is the economic aspect we are looking at even when we are taking things in the concrete; and the complicating elements, disturbing causes, &c., are viewed, not in their general aspects, but so far as "complicating" and so far as "disturbing" the conditions and causes which we had first considered in a simplified form. But a special study of economic phenomena is counted necessary even by members of the historical school; and, as a matter of fact, these economists never contrive to avoid the use of deductive arguments in their own writings. The historical school, however, falls into three groups, a right, a left, and a centre—represented, say, by Roscher, Schmoller, and Wagner, differing from each other in the degree in which they allow or disallow deduction. Their common feature is their definition of the scope of political economy as ethical and descriptive, and of the method of it as "realistic" and historical. Theoretical economics, as expounded by Mr. Keynes, is not in its first stages "realistic": it finds the facts too large for one mouthful; it proceeds in the first instance deductively. But in its later stages it enlists every available instrument, whether it be history, or contemporary description, or statistics, or any other means of arriving at facts and "uniformities." In regard to the use of mathematics, Mr. Keynes allows that economic inquiries, relating as they do to quantities, will in their deductive stage readily lend themselves to mathematical treatment; but he refuses to allow that the mathematical method has any pre-eminent suitability or peculiar fruitfulness in the economic region. The position of statistics is the subject of his concluding chapter, and is treated at some length. His finding is that the theory of statistics "demands a distinct treatment, though it seems hardly appropriate to speak of it as an independent science." This is remarkably like the judgment of certain groups of the historical economists on the position of political economy itself.

Some readers may complain that many of

the most important discussions are not completed in their own part of the book, but appear, disappear, and reappear at intervals throughout the whole of it. But, perhaps, the very nature of the subject makes this arrangement unavoidable. The various aspects of rival theories can only present themselves as the various branches of the subject-matter come severally into view. The fault (such as it is) is well remedied by a good index.

J. BONAR.

The Philosophy of Fiction in Literature.

By Daniel Greenleaf Thompson. (Longmans.)

THERE is something which is half amusing and half pathetic in the conscientious thoroughness displayed in the pages of this book by Mr. Daniel Greenleaf Thompson. Heretofore, to say nothing of his *System of Psychology*, he has devoted himself to such grave themes as the Problem of Evil, the Religious Sentiments of the Human Mind, Social Progress, and so forth; and in descending to a lighter topic he cannot all at once rid himself of the heaviness of hand acquired in the pursuance of these severe studies. Like his predecessor in philosophy, Descartes, with his memorable *cogito, ergo sum*, Mr. Thompson made up his mind to begin at the beginning; and his beginning is laid on such a deep foundation of experience that it is clearly impossible to burrow beneath it. Here are his opening sentences:

"When I have finished *Romola*, by George Eliot, the first and most obvious thing to be noted upon reflection is that the book has interested me sufficiently to cause me to read it through. If, then, encouraged by this experience, and believing a novel to be a novel, I take up *Sir Charles Grandison*, I may find, after reading a portion, that I grow tired, lay the book down, and refuse to recur to it. I am bored, and the thought of continuing is irksome. Clearly, then, all tales are not interesting."

Alas, this is only too true; but there is something appalling in the spectacle of a writer who will only accept it as the conclusion of a personally undertaken induction. And when Mr. Thompson, proceeds, with similar laboriousness of investigation, to work his way to the equally unassailable conviction that "whether a book is to us readable or not depends on our respective mental constitutions," the reader naturally begins to wonder how long is the list of truisms which the author has set himself to demonstrate. It is very long indeed; for to Mr. Thompson the unpardonable sin is the taking of anything for granted, of supposing that anything can be too obvious to need statement. In his first chapter he prepares the ground for his philosophical structure by gravely informing his students that "literature involves the preservation and communication of thought," that "in order to please, regard must be had to the sources of pleasure in the human mind," that "even absurdity is sometimes very delightful," that "many people have read novels in which they were not interested, impelled thereto by a strong feeling of duty"—a word of wisdom which will come home

to many a reviewer—and, lastly, that "clumsiness, crudity, tediousness, tautology, commonplace, and many other offences against good taste have to be carefully avoided"—a word of wisdom which might be profitably pondered by the author himself.

Our only acquaintance with Mr. Thompson has been made through some of his previous works, in which certain great problems are treated with unflinching thoughtfulness and occasional felicity. We are told nothing of the considerations which led him to write upon fiction; but we should imagine that he has begun the study of novels somewhat late in life, and that, being so fascinated by his new pursuit as to feel impelled to write upon it, he has mistaken interest for aptitude, and has really supposed himself capable of saying something fresh and illuminating. We might even think that he had undertaken his task in ignorance of the work of his predecessors, were not his pages besprinkled with quotations from Messrs. Besant, Howells, James, de Maupassant, Zola, and other distinguished persons who, either as producers or critics of novels, have spoken *ex cathedra* upon the art of fiction; and, as a rule, the most interesting pages in the book are those in which Mr. Thompson's authorities are most obviously in evidence, he himself becoming a mere chorus.

To this remark, however, exceptions are provided by those portions of the work which deal with the "realism" or "naturalism," so called, of M. Zola and his school. Here indeed Mr. Thompson displays such an acquaintance with the most important principles of aesthetics, and with the true method of applying them, as to make us wonder all the more at the empty triteness of his earlier chapters. We do not mean that anything is said which has not, in substance, been said before—the noble army of magazine-writers have rendered that feat impossible of performance—but that Mr. Thompson has thought the matter out for himself, and has expressed his thought with point and vigour. His criticisms of M. Zola's method, from the purely artistic point of view, as a method which sacrifices vital truth by ignoring the perspective of life, are admirable, and, it seems to us, unanswerable; but we prefer to quote his pointed comments upon the scientific pretensions of the great realist and his followers. "We do a work," says M. Zola, in his *Lettres à la Jeunesse*, "identical with that of the men of science." To which Mr. Thompson replies:—

"In the first place, it should be seen that scientific fiction is, strictly speaking, a contradiction in terms. So far as fiction is science it ceases to be fiction; so far as science is fictitious it ceases to be science. If science be all in all, would it not be better to leave out the fictitious element altogether from literature and devote ourselves to exact descriptions of actual persons, types, and conditions? . . . Would not M. Zola have realised the ends he professes to seek more completely if he had given us his notes upon which he built *Pot Bouille* and *La Terre* rather than the books themselves? We have shown how his 'experiment' is nothing but hypothesis. To be truly scientific, should not this be left out and the exact results of observation be given clearly and concisely? What need of Buteans, of Nanas, of Paulines, of

Etienne, to be manufactured with so much trouble, when at the end they are only supposititious and hypothetical characters?"

Of course these queries will be pronounced eminently Philistinish; but one of the most objectionable characteristics of the Philistine is his indecent habit of putting questions which the children of the light can only answer by a pitying sigh that is somehow not as impressive as it ought to be. Some of us who have lately discovered, with some surprise, that the mark of Dagon appears upon our foreheads, may think that Mr. Thompson's utterances upon the great "nudity" and "sex" questions are words of truth and soberness; and even the finer, freer spirits, are shut out from the usual remark about the "young person" by the author's emphatic repudiation of his or her claims to a vicarious domination over art. To these spirits Mr. Thompson's book will be throughout a vain thing—"philosophy falsely so called"; but others will be almost able to forgive his frequent wearisome platitudes in virtue of the sturdy common sense of the pages in which he really has something to say—and says it.

JAMES ASHCROFT NOBLE.

THE ART OF WAR IN THE MIDDLE AGES.

Die Entwicklung des Kriegswesens und der Kriegführung in der Ritterzeit. By G. Köhler, General-Major z.d. Vol. III., Parts I., II., III. (Breslau: Koebner.)

IN reviewing the third volume of General Köhler's valuable and voluminous work, I am placed in an unenviable position, owing to the fact that his pages are thickly strewn with polemical passages against myself. Not only has General Köhler deigned to notice at length writings of mine during the few last years, but he has exhumed a little book written so far back as 1883-84 for a university prize, in order to fall foul of some of my conclusions. I am not at all concerned to defend my views of that date. Being a Bachelor of Arts of one year's standing at the time, it was hardly to be expected that I should have read all the chronicles which the General has consulted in ten years' work at his subject. But I am somewhat vexed that he should, while never saying a good word for my work, utilise it again and again. If he condemns it as worthless, he ought not to quote it as an authority. Yet he does so continually; the first page of his third volume (part i.) is simply analysed out of my pages 38-40; so, too, are 215-16 of vol. iii., part ii. He has followed me in choosing Adrianople as the first and Manzikert as the last limit of his dealings with the Byzantine army; he quotes from me such points as Nicephorus Phocas' observations on cavalry, and Maurice's counsels on military service; all this without a word which enables the reader to see how far he is indebted. To quote a reproach that the General makes to me on another point, "das finde ich nicht gentil."

No personal feeling, however, can prevent a full acknowledgment of merits of General Köhler's book. He has consulted a vast body of chronicles, as well as all the modern books bearing on his subject. Nothing in Latin, German, French, English, or Italian

has escaped him. Only in Greek is he a little to seek, quoting Latin or French translations in place of the original text, and, when he does venture on a word, producing forms such as *περιτραχήλιον*, *πρωστρεγος*, *δρονγγος*, *στρατεγος*, *βάνδων* (as a nom. sing.), while queer distortions and lack of accents seem to prove an insufficient acquaintance with the elements of the tongue. Unfortunately, too, the French translations of Byzantine authors which he employs are vile. But it is not in the breadth of his researches alone that General Köhler wins praise, but in his careful "*Kritik der Quellen*." There is hardly a writer in the province of the art of war who has not to plead guilty to the charge of having filled up *lacunae* in his earlier authorities by wholesale use of later ones. The practice is so tempting that it is almost universal. General Köhler has conscientiously tried to avoid it, and succeeded far better than most; but even he occasionally lapses into sin—quoting Wace, for example, as an authority for the arrangement of the divisions of the English army at Hastings, and Henry of Huntingdon for details of sixth century battles between Briton and Saxon.

Two sections of this third volume of the work are worthy of particular praise—the chapter treating of the growth of the knightly class in Europe, with a comparison between the very different shapes that it assumed in France, Germany, and England respectively; and the section which deals with minor tactical points, and the combination of the arms in a mediæval host. Some of the broader deductions of the General, however, seem somewhat controvertible.

The chief of these points, on which General Köhler's views will not be accepted by English critics, is the value of the English bowmen. He declares that he has given them all the importance that they deserve, and not undervalued them in comparison with the archery of the Continent. But his final verdict is that they were "unable to withstand the attack of a really courageous cavalry, and could be beaten even by a good infantry unsupported by cavalry, as for example at the fight of Nogent-sur-Seine." Their victory over the Genoese at Crecy he carps at in the following words:—

"In the duel between bow and arbalest at Crecy, the former came off best. But we must remember that the conditions handicapped the Genoese; not only were their limbs tired with the march, and their bowstrings damp with the rain, but they had left their pavises, which would have been of the greatest service, behind with the baggage. Their ill-luck can not therefore be generalised into a fair criterion of the relative value of bow and arbalest, and contemporaries never took it so. Neither France nor Germany abandoned the cross-bow for the bow in consequence."

The tendency of the paragraph is, unmistakably, that, given fair conditions, the General believes that the bow was little, if at all, superior to the arbalest. The touch about the pavises is particularly absurd; a soldier who cannot fight without a portable barn-door to stand behind, is useless in nine-tenths of the operations of war. The pavise, except for purely defensive work on a long-occupied position, or for siege

operations, was a mere snare and burden; and troops which adopted it condemned themselves to immobility. Where do we hear of men who fought with cross-bow and pavise beating off an attack of cavalry, or dropping their missile weapons and throwing themselves forward for a charge against a disordered enemy, as did the English archers at Auray and Agincourt. As to General Köhler's statement that, if the bow had been the better weapon, France and Germany would have taken it up, we can only observe that he forgets that a lifetime of practice was taken to form the English archer, and that as a matter of fact both Scotch and French kings *did* try to organise a natural archery, but (in spite of Juvenal des Ursin's ridiculous boast) to no effect. Again, he asks: "If the bow was so good, why did the English give it up in favour of the arquebus in the sixteenth century, while that firearm was still so imperfect?" The answer is that the English did *not* give up the bow till the seventeenth century. On many occasions in the sixteenth century the bow beat the arquebus—e.g., when the Norfolk insurgents of 1549 drove off Somerset's German hackbut-men, and as late as 1642 there was great talk of arming the London Militia with the bow instead of the musket.

Of course, the English archery had their weak side. Able to turn off almost any front attack, they were liable to be rolled up by an attack in flank, as at Bannockburn, or cut to pieces if they were caught in disorder before they had formed their line of battle, as at Patay. But any troops, however good, can be beaten if their general is sufficiently incompetent, or if, by the fortune of war, they are surprised on unfavourable ground. Granted that their commander was of average merit, and the line well guarded on the flanks either by natural obstacles or by good heavy infantry, the archers could hold their own. The penetrating power of the arrow, too, was greater than General Köhler allows: he says that it could not pierce the knightly armour of the late fourteenth or early fifteenth century. But there is evidence to prove that it could; for example, Henry Percy, at Shrewsbury, was killed by an arrow in the breast, which went fairly through breastplate and hauberk; Colart de Forges, at the fight of St. Vincent-lez-Laon, by one which went through his leg harness.

While giving General Köhler all credit for his industry and thoroughness, and acknowledging that in many places he has overthrown received opinions, I am constrained to observe that his love of polemics carries him into many unjustifiable statements concerning other writers' views. To point out all the instances where he capriciously finds fault with statements of mine which are correct would take too much time. A few examples will suffice. He says that in my account of the battle of Durazzo I commit a "gross error" in stating that the Varangian guard got far ahead of the rest of the Byzantine army (iii., sec. 3, 104). Now Anna Commena says that they *ικανὸν τῆς Ῥωμαϊκῆς παρατάξεως ἀπέστησαν, δι' ἀπειρίαν καὶ θερμό*

τητα δὲύτερον βεβαδικότες—words which are quite conclusive in my favour. The passage which he quotes against me relates not to the battle at all, but to the drawing up of the emperor's army before it set out to march to the field. Again, in speaking of Hastings, he says that I make the English shieldless in my account of the battle. Now, in speaking of the Bayeux tapestry in connexion with the details of the fight, I have especially mentioned (bottom of p. 97) the shields of the English; but the general quotes one sentence of mine, "the Danish axe, if wielded with both hands, precluded the use of a shield in hand to hand combat," and says that I thereby deny that the army of Harold bore shields. To this the only reply is that more than half Harold's army were light troops who did not carry the axe at all, and that those who did carry it were able, while still holding their shields, to use the axe *with one hand*, though not with the power which the employment of both hands would have given.

I must acknowledge, on the other hand, that there are points on which General Köhler quite rightly corrects me. The position of the English dismounted knights at Crecy is one; the tactical importance of the lessons of the Crusades another; the details of the armament of the Byzantine lancer a third. More might be found.

I must apologize for having dwelt so long on General Köhler's polemics against myself. In spite of the manifest unfairness of the bulk of his objections, I shall only add that his work is a most valuable contribution to the history of the art of war, and that nothing shall prevent me from bearing full testimony to the fruitful results of his prolonged researches.

C. OMAN.

NEW NOVELS.

Rupert Alison. By Gertrude Forde. In 3 vols. (Hurst & Blackett.)

Glencoonoge. By R. B. Sheridan Knowles. In 3 vols. (Blackwood.)

Prisoners and Captives. By H. S. Merriman. In 3 vols. (Bentley.)

Holly. By "Nomad." In 2 vols. (Trischler.)

A Royal Physician. By V. B. Johnson. (Fisher Unwin.)

The Begum's Daughter. By E. L. Bynner. (Sampson Low.)

WE mean no unkind flippancy by asking Miss Forde whether she does not think, on reflection, that an *index purgatorius* (an article of which we hear, for the first time, in her book) would be a little, a very little, invidious? Not, indeed, that it could classically mean an index to Purgatory; but then classically or unclassically it could hardly mean anything else, and really a Bottin or Webster of those regions might hurt obvious and not unamiable susceptibilities. This is not the only oddity we find in *Rupert Alison*. Men do, as Mr. Calverley says, "go mad and beat their wives" from even less amiable causes than that which

he assigns. But Miss Forde gives no reason why Major Alison should have behaved to his wife in the improbably brutal fashion she describes; or rather, the only reason that she does give occurs later and is unintentional. Mrs. Alison dropped down dead of joy on hearing that her son was fourth wrangler (the exact distinction, by the way, of Frank Fairleigh); and a wife so excessively disproportionate in her passions may have been very trying in conjugal matters. In other words, there are some amiable absurdities in Miss Forde's book. Her hero, though an excellent fellow, was certainly a prig; but he had a very lucky escape of the beautiful Edna Montgomery, to whom he said "You look like a very lovely young girl." Afterwards, the fortunes of him were more according to the priggishness than to the excellence; for the other young woman whom he ought to have married went out as nurse and teacher to South Africa, though she loved him and he her, and he became a "thoughtful" independent member of parliament, and he married a young Italian who could not have been at all amusing and who talked in heroics. And last of all the luck returned and he died. The book, though rather tempting to not too serious criticism, is a fresh and generous one.

Glencoonoge is a very pleasant book, if only (and, indeed, not only) for the reason that it is most unlike other books of its class. Mr. Sheridan Knowles's shield is blank, and we do not know whether he has done anything before; but in any case he may not improbably do something better still than this. His autobiographic, or, if there were such a word, authistoric hero is, according to a trick recently borrowed by Mr. Norris and others from Thackeray in his *Lovel the Widower* mood, rather a *fanfaron* of the uninteresting, at least for a considerable time; nor can we say that we greatly care for the loves of Conn Hoolahan and the beautiful book-keeper (*anglice*, barmaid), Jane Johnson, which seem at first likely to engross the book. The offensive behaviour of the English tourists at the *Harp*, *Glencoonoge*, may be taken from the life; for unfortunately Borrow's "low Englishman" is not extinct. But Mr. Sheridan Knowles must excuse us if we remember a certain party who were met at Glengariffe forty or fifty years ago, and whose behaviour was in a milder form something like this. Still, the general flavour of the book is fresh and quaint: the descriptions both of places and people are new from the mint, and are not the battered *clichés* with which we are only too familiar in novels. Moreover, Alicia O'Doherty—with whose "brown eyes, black hair, and creamy white face," Mr. Horace Shipley is, rather after the manner of Francis Osbaldestone (how vile and odious are these comparisons!) blessed at the last—is a great deal too good for him. But the heroines always ought to be too good for the heroes, and, therefore, this is quite as it should be. Father John Moriarty, the priest, is also an agreeable person. If Mr. Knowles knows him in the flesh, one cannot but regret that celibacy is enjoined in the Roman Church; for his kind appears to be getting dangerously few in

Ireland of late years, and might be propagated with much advantage.

The hopes of the reader of *Prisoners and Captives* fall, rise, and fall again as he begins and proceeds with the book. One of the opening statements, "the stillness of the atmosphere was phenomenal," makes him, as he reads, grumble, "It would have been much more surprising if it had been noumenal." Then his fears are dissipated by a really powerful scene, in which a slave-catching English schooner comes to the rescue of a merchantman, the whole of whose crew, except one, are down with yellow fever; and by some others of promise, if not exactly of merit. And then hope sinks once more, never fairly to rise again, when he finds that Mr. Merriman is at what we fear is an ingrained trick of dragging Nihilism into his story. "In England," the author says, at vol. ii., p. 175, "the whole question of the future of Russia is as little studied as its present state is known." Well, we don't know that anyone is to be much blamed for not studying the future, the conditions of such study being not exactly scientific; but if Mr. Merriman will take the word of indifferent honest men, we can assure him that by some, at least, of us the present state of Russia is very well known indeed. Well or ill-known, we can further assure him that it is a very bad "subject to write novels about," which he complains that people think it good for, unless it be taken as a mere picturesque element in the story without any personal prejudice or prepossession interfering. Mr. Merriman has such prejudice; and it has made what might be a story of considerable interest one of interest only second-rate, or even third-rate. As a whole, his American hero is a nuisance, and not a new nuisance; and his English heroes are not very much better. But his heroines have merit; some of his situations (for instance, a fire at a theatre) are well hit off; and he has some knack at character.

The opening of *Holly* is not encouraging. It introduces us to two very vulgar young men, who call a friend's servant "Coachy," and take their hats off to young ladies whom they do not know; to a Scotchman, strong in dialect, who says, "imperence," like any cockney; to a wicked hero who is not only a base deceiver, but commits the further crime, unexcused by any natural weakness whatever, of reading to his sisters about evolution; and to an author who talks about "fictional theory." "Nomad," however, performs, in a certain fashion, better than she promises; and her story of Philip Dene's wickedness, how he managed it, how he won for some time, and then lost frightfully, will probably be not unwelcome to a considerable number of the readers for whom it was intended. A different class may, among other things, be repelled by the difficulty of answering the question—"Granted that 'Nomad' has arranged a rather ingenious reason why Gerald Lonsdale did not marry Holly Brereton, why has she neglected to show any reasonable cause why Holly Brereton married Philip Dene, not loving him?"

Miss Virginia Johnson's story of the Tyrol

is a little German in style as well as in scene, but by no means unpleasantly so. Its descriptions are very good, its personages far from uninteresting; and there is a very ingenious representation of the way in which a toad can oblige a friend—a human friend—if it feels disposed to do so.

Those who remember *Agnes Surriage* may be surprised to find so devoted a student of old colonial days as Mr. Bynner apparently travelling out of his line. But the Begum was not an East Indian Begum, as far as this story is concerned. The scene of the book is New York, the "temp. of tale" is the end of the seventeenth and the beginning of the eighteenth centuries, and the whole action is purely American in interest as well as character. The very frontispiece (for the book is well illustrated) is a "description of ye towne of New Yorke, anno domini 1690"; and the opening chapter is an account, both careful and lively, of the ways and chafferings of the market place in that still really Dutch though politically English settlement. There is even a Rip at an early period of the story; though it is almost painful to find that his surname is Van Dern and not Van Winkle. But the connexion is not merely verbal, for there is something of Irving in Mr. Bynner, combined with more of the late Mr. Harrison Ainsworth in his earlier days. If he cannot be said to have exactly achieved the historical novel, the most difficult perhaps of all the kinds, he has at any rate made a fair attempt at it. The story of Leister's conspiracy is very well told.

GEORGE SAINTSBURY.

CURRENT THEOLOGY.

MESSRS. EYRE & SPOTTISWOODE (acting up to their reputation as Her Majesty's Printers) and the Cambridge University Press have this week jointly issued a facsimile of the original MS. of what is called the Annexed Book of Common Prayer. This MS. has a curious history. It represents the changes adopted after the failure of the Savoy Conference in 1661. These changes were first made in MS. in a copy of the black-letter Prayer-book of 1636, afterwards known as the Convocation Book. The entire book, with all the alterations and additions, was then copied out fair, in order to receive the written assent of Convocation, and finally to be annexed to the Act of Uniformity passed in 1662. At the end are appended the signatures of the members of Convocation of both provinces; and from a facsimile given of the binding, it is evident that the book was actually attached by six strings to the Act. But after the lapse of years the two became separated, and it was at one time thought that the book was lost. Accordingly, to meet the convenience of the Royal Commission on Ritual of 1867, a facsimile was made of the Convocation Book, which, though in fact the original, is in law only secondary evidence. However, on search being made, the Annexed Book duly turned up in its proper custody, in the library of the House of Lords; and there it has been photographed, leaf by leaf, for the present facsimile. Though only in the handwriting of one or more clerks, this document must always retain a supreme interest for ecclesiastical historians, as being the one authentic original of the liturgy still in use in the Church of England. The present magnificent volume reflects the highest credit upon its

publishers, who have, as regards binding, followed the style of the earlier facsimile of the Convocation Book (1871). The edition is limited to 750 copies, all of which have, we understand, been already disposed of.

CANON OVERTON'S brief Memoir of *John Wesley*—the second volume of the series on "English Leaders of Religion" (Methuen)—must be acknowledged by those within and without the pale of Methodism to be admirable alike in tone and in style. Wesley and his latest biographer have many points in common. They both belonged to Lincoln College, Oxford; and with Canon Overton rests the spiritual charge of the parish in which Wesley's father presided, in which Wesley himself was born, to which he often returned. This intimate acquaintance with the scenes in which much of Wesley's life was spent enables the present writer to contribute some few facts which had escaped the observation of the industrious Mr. Tyerman. In considering the vexed questions which surround the career of the founder of Methodism, a commendable moderation is everywhere conspicuous, though a complete assent may sometimes be withheld from the conclusions. The prevalent belief that his mission to Georgia was a failure is combated with vigour, if not with absolute success. One of the best passages in this volume sets out the means by which Wesley obtained, and succeeded in retaining for so many years, his marvellous hold on the minds and actions of myriads of followers; and the argument is worthy of adoption. The chapter on Wesley's literary work, the innumerable publications which he threw off on State politics, theology, medicine, and several other subjects, contains an abundance of information, and furnishes in its laborious detail a striking contrast to the scant attention which would have been given to such a matter a few decades since. Many previous writers have described the actions or discussed the motives of John Wesley, but the modest Memoir by Canon Overton has justification for its existence.

"THE EXPOSITOR'S BIBLE."—*The General Epistles of St. James and St. Jude*. By the Rev. Alfred Plummer. (Hodder & Stoughton.) It is possible to admit that Dr. Plummer has written a very able and interesting exposition of the Epistles of James and Jude, without agreeing with all his conclusions as to their date and authorship, and, indeed, several other matters. If there is any New Testament composition which bears its comparatively late origin plainly written on the face of it, one would be inclined to say it is the Epistle of Jude, and that of his "brother" James is probably, in point of time, not far from it. Yet Dr. Plummer has no difficulty in persuading himself that both these Epistles belong to the apostolic age, and are the genuine writings of James and Jude, the brethren of the Lord. He considers that that of James may be placed anywhere between 45 and 62 A.D., but, on the whole, is inclined to put it before the Council of Jerusalem, thus making it the earliest book in the New Testament. On the supposition of its genuineness, this certainly seems the likeliest place for it; otherwise, how account for its total silence on most of the points of controversy between the Jewish and Gentile Christians? On the other hand, if this was its place, how explain its polemic against Paul's doctrine of justification? Dr. Plummer's answer would be that there is, in fact, no such polemic, and that on the question of faith and works Paul and James are thoroughly at one. More satisfactory is his treatment of the Epistle in its literary relations—its dependence on Ecclesiastical and Wisdom and its affinities of phraseology with some of Paul's Epistles, and with 1 Peter. Its relation-

ship to Hermas he does not touch on. Dr. Plummer is evidently a good deal exercised about Jude's inspiration, and how it can be reconciled with his use of apocryphal scriptures and his belief in their genuineness. He, of course, indulges in the usual commonplaces about not prejudging what qualities an inspired writing ought to possess, &c., instead of examining the features which such writings actually present, as if it were possible to tell whether a particular writing was inspired or not, unless it were first settled by what marks an inspired writing may be recognised. That these Epistles are canonical is, indeed, certain, since they are found in the Canon; but it cannot be said of either of them that it is a book "of whose authority there was never any doubt in the Church." These, however, are not questions of primary importance for the expositor, who might fairly enough take for granted the inspiration and authenticity of the documents of which he treats; and we should be sorry to be thought not to do justice to the scholarly ability with which Dr. Plummer brings out the meaning of the two Epistles which he undertakes to expound. His book, though here and there, perhaps, too controversial in its tone, is, on the whole, an excellent example of scriptural exegesis, and a worthy addition to the "Expositor's Bible."

It would be easy to say much in praise of the *Textbook of the Jewish Religion*, by M. Friedländer (Kegan Paul & Co.), from a literary and even from a religious point of view. Since, however, this is but an outline of a larger work on the same subject, we will confine ourselves to the remark that this small book embodies in an equal degree thought, learning, and experience. Not every one can be so wisely temperate in communicating religious instruction as to keep the door open for further disclosures of truth. The substance and the form of this little book have been determined, no doubt, by the Chief Rabbi's Code; but how few could have produced this clear and instructive summary? Many Christians, and even those who do not venture to call themselves such, will desire to have precisely what is here offered—viz., a detailed and yet brief and handy sketch of the fundamental doctrines and usages of the orthodox Jewish faith. We use the word "orthodox" designedly, well knowing that in Judaism, as in Christianity, there is a foundation below that which even liberal-minded orthodoxy pronounces to be fundamental. The analysis of the Jewish Prayer-Book is noticed in the preface as a special feature of the book. It supplements that admirable edition of the Prayers which was published lately in a cheap well-printed volume, and may be commended to Christian scholars at the outset of a historical study of Judaism. As specimens of Dr. Friedländer's definitions we quote the following: "The process by which the prophets learn the Will of God is called *Inspiration*, and the prophet is called an *inspired man*; that is, a man endowed with the *Spirit of the Lord*." "It was in ancient times the custom to anoint persons when appointed to important offices, such as kings, priests, and prophets. 'Anointed' became, therefore, in Hebrew identical with 'appointed.' Cyrus, e.g., was 'anointed' to conquer Babylon and liberate the captive Jews. The Israelites are the 'anointed of the Lord,' to teach all mankind by their own good example the true faith and the true worship of God." On p. 44 some little modification seems necessary. The young student is told that "there were also inspired men who had no message for their fellow-men, and were not prophets." But if these men were at all "inspired" to know the will of God, must they not have had some message for their fellow-men? Possibly this "text-book" will, after all, prove a more satisfactory

work than the larger treatise, precisely because it admits of a certain amount of variety of interpretation.

"BY-PATHS OF BIBLE KNOWLEDGE."—*Early Bible Songs*. With Introduction on the Nature and Spirit of Hebrew Song. By C. A. Drysdale. (Religious Tract Society.) Mr. Drysdale's name is unknown to us. He has chosen a subject on which the highest scholarship and the most graphic literary power might well be employed. The songs of the Old Testament, from Herder's time onwards, have been recognised as the most characteristic blooms of the Israelitish genius. Moreover, Biblical studies, illuminated by the critical spirit, have gone so much in advance of popular handbooks that wise and skilful popularisers are almost more needed now than first-class bishops and archbishops. Alas, Mr. Drysdale's aims are set too low! "In the following pages," he warns us, "the critical is necessarily subordinated to the spiritual; historical and other literary matter being made subservient to the higher aim of vivifying the ideas and enforcing the principles of these early Bible songs." But what are the ideas and principles of these fragments of ancient poetry? and how can they be ascertained except by criticism? and what is that scholarship higher than that of the so-called "higher criticism," which will deal with "grave and delicate" literary and historical questions "fearlessly" and with a "reverent simplicity"? The preface seems, in fact, to point at a compromise, and not at a reconciliation between the Church and historical inquiry. Still, though earnest and historical Bible students will not get much help from this little book, ordinary readers who have not much time, nor as yet much developed critical instinct, will be thankful for these essays on the Structure and Spirit of Hebrew Song, the Song of Moses at the Red Sea, the Deuteronomie Song, the Songs of Deborah and Hannah, David's Even-song, and the four secular songs of the Sword, the Well, the War-flame, and the Bow. We do not know whether Mr. Drysdale is a trained Hebrew scholar.

A Translation of the Treatise Chagigah from the Babylonian Talmud. With Introduction, Notes, Glossary, and Indices. By W. Streane (Cambridge: University Press.) Would that the little band of Cambridge Talmudic scholars could be induced to furnish cheaper and less abundantly illustrated editions of Talmudic treatises, either in Hebrew or in an English version, or in both! Those who know Mr. Lowe's *Palestinian Mishna*, and Dr. Taylor's *Sayings of the Jewish Fathers*, and who now add to their library Mr. Streane's careful translation of Chagigah, will understand our remarks. Most of the shorter footnotes in the latter work are indeed necessary; but all mere illustrations, whether from Longfellow or from the Books of Maccabees, together with a part of the introduction and of the glossary, might well have been omitted. By inserting matters of this kind, the translator of Chagigah lays himself open to much criticism. For why are German, and especially German-Jewish, works so little referred to? Even Herzfeld is only cited in the course of a quotation from Dr. Taylor. And though Mr. Morison may be an excellent compiler, and Prof. Margoliouth a learned theorist, why should the second-hand Haggadic specimens of the former and the ingenious paradoxes of the latter be thrust upon the young student of the Talmud, simply, as it would seem, because they come from English writers? Still, the book is welcome, not only for its own sake, but as a monument of the teaching of the late Dr. Schiller-Szinessy, who was so much respected as Reader in Talmudic in Cambridge. There is much of

interest in this treatise; and, if we mention a few suggestive passages, it is not with the idea that they are necessarily the most important. On p. 11 there is a striking illustration of Isa. lxx. 4, on p. 68 of Eph. iv. 13, and on p. 81 of John i. 48. Different views of Jewish authorities on the Creation are given on p. 60, where the notice of the views of Nachum on Gen. i. 1 is instructive for the history both of exegesis and of religious ideas. From p. 83 onwards we meet with the Hebrew Faust, Elisha ben Abuyah, whose story is full of curious details. How fine is R. Johanan's saying respecting him on p. 88! Should not "Christian hymns" (p. 86) rather be "Gnostic hymns"? But Wünsche's view of the passage seems to us more probable.

The Rise of Christendom. By Edwin Johnson. (Kegan Paul & Co.) The race of erocheteers seem just now to have transferred their activity from physical science to the more congenial field of theological criticism. Even France and Germany are not safe from them, much less England. Within the last few years we have had Herr Ernst von Bunsen telling us that the date of the foundation of Solomon's Temple was changed by the LXX. to bring it into accordance with the date of Buddha's death, and M. Maurice Vernes, in his *Résultats de l'Exégèse Biblique*, bringing down the composition of the most ancient Hebrew Scriptures to a post-exilic period. But for the external evidence there is no telling where he would have stopped. Mr. Johnson is less prejudiced. External evidence goes for nothing with him. According to his theory, the whole Bible was forged in the early Middle Ages. Islam gave birth to Judaism, and Judaism to Christianity. This is proved by the order of their holy days—Friday, Saturday, and Sunday. Jerusalem was not a Jewish city, nor did the Jews ever live in Palestine. Philo, Josephus, the Fathers, the older Byzantine historians, and whole masses of mediæval chronicles are pronounced forgeries, for no other reason than that they conflict with Mr. Johnson's theory. For the same reason all references to the Jews in the Greek and Latin classics are condemned as clumsy interpolations. It might be thought that the development of such a paradox would make the book amusing; but the *Rise of Christendom* is not amusing—it is deadly dull.

NOTES AND NEWS.

THE volume of Sir Robert Peel's early letters, already announced in the ACADEMY, will cover the period when he was Chief Secretary for Ireland (1812-18), and his first term of office as Home Secretary (1822-27). It is edited by Mr. Charles Stuart Parker, who was for some time private secretary to Lord Cardwell, one of the original trustees under Peel's will. The present trustees are Lord Hardinge and the Speaker of the House of Commons. The book will be published by Mr. John Murray shortly after Easter, and will be illustrated with a portrait.

THE Life of Archbishop Tait, by Dean Davidson and Canon Benham, will be published immediately by Messrs. Macmillan. It will be in two volumes, and will have two portraits.

THE second volume of Mr. S. R. Gardiner's *Student's History of England* will be published in a few days. It covers the central period from 1509 to 1689, and will have nearly one hundred illustrations.

MISS MATHILDE BLIND has in the press a new volume of poems, which will be published in the course of the present season, under the title of *Dreams in Miniature*. It will contain about half a dozen narrative poems, such as "A Mother's Dream," "The Russian Student's

Tale," "A Carnival Episode," &c., besides a number of songs and lyrics.

THE Rev. Dr. J. C. Atkinson, rector of Danby—who will be known to many by his admirable Glossary of the Cleveland Dialect—has written a volume of reminiscences, which will be published by Messrs. Macmillan, under the title of *Forty Years in a Moorland Parish*.

MR. W. CLARK RUSSELL's *Life of Lord Collingwood* will be published next week by Messrs. Methuen, with illustrations by Mr. F. Brangwyn.

MR. WILLIAM HEINEMANN will publish immediately, in a revised form, the lectures which Mr. Hall Caine recently delivered at the Royal Institution on "The Little Manx Nation." Mr. Caine started this week on a visit to Tangiers, where he hopes to obtain material for a novel with an oriental background, which he has been contemplating; for his interest in Islam dates back long before he planned his prohibited drama of "Mahomet." By the way, it is curious that the strongest opposition to the performance of this play in England should come from a brother Manxman, Mr. Quilliam.

MESSRS. J. M. DENT & Co. will shortly issue Landor's *Imaginary Conversations*, in six volumes, with a portrait of Landor and other frontispieces. The first volume will appear in April, and it is hoped that the whole publication will be completed by December. There will also be 150 large paper copies for England. The edition will be edited by Mr. C. G. Crump, who has already edited *Pericles and Aspasia* for the Temple Library Series. It will be in the main a reprint from the complete edition of Landor's Works published by Chapman & Hall in 1876, which was edited by the late John Forster; but the text will be carefully compared with previous editions, and a bibliography added to each Conversation, showing the various forms in which it was originally published. There will also be short explanatory notes upon the subjects of the dialogues, and the more obscure allusions contained in them.

THE first volume of the new series entitled the "Camden Library" will be issued immediately by Mr. Elliot Stock. It is Mr. Hubert Hall's *The Antiquities of the Exchequer*.

The Log of a Jack Tar, the new volume of the "Adventure Series" already announced, will be published by Mr. T. Fisher Unwin immediately.

THE next volume of the Camelot series will be Miss Mitford's *Our Village*, with an Introduction by Mr. Ernest Rhys.

MESSRS. HUTCHINSON will issue immediately a new edition of Mr. Edward Jenkins's *Burney Geogheghan, M.P.*; or *Home Rule at St. Stephen's*. Mr. Jenkins, we may add, if not himself an Irishman, certainly married a wife from Ulster.

A CHEAP edition of the novel *John Westcott*, by Mr. James Baker, will shortly be issued by Messrs. Sampson Low & Co.

THE publications of the English Dialect Society for the year 1891 will be: (62) *Rutland Words*, collected by the Rev. Christopher Wordsworth; (63) A Supplement to the *Sheffield Glossary* (No. 57), by Sidney O. Addy; (64) *The Strong Verbs in the Modern Dialects of the South of England*, by Dr. Karl Bülbring, translated by A. W. Badham; and, if funds permit, one or both of the following: A Supplement to the *Dictionary of English Plant Names*, by James Britten and Robert Holland; *The Dialect of Idle and Windhill*, in the West Riding of Yorkshire, by Prof. J. Wright.

THE March number of the *Religious Review of Reviews*, to be published to-day, will contain articles on "John Wesley" (illustrated); "Has Christianity Failed?" by Ouida, with a reply

by Father Ignatius; "My Experiences as President of the Y. M. C. A.," by Mr. G. Williams; "Theism," by the Rev. C. M. Voysey; and a review of Prof. Pfeleiderer's new book.

THE India Office has printed a list of Government publications described as "on sale at the India Office, and at the Government Presses at Calcutta, Madras, and Bombay." As a matter of fact, the India Office will not sell single copies to a single purchaser, who is referred to certain authorised agents; and it is credible that none of the other provincial governments publish, except those specified? If so, we have a fresh proof that the old "presidency" system is not yet extinct. Revised editions of this list are promised half-yearly; and in future numbers the price and date of each work will be added. By the absence of such bibliographical details, the present issue is rendered almost valueless.

MESSRS. MACMILLAN have now issued the sixth volume of what, in compliment to the American printers, we must call the Riverside edition of the complete works of Mr. James Russell Lowell. The order of publication has been, in the main, chronological. First came four volumes of literary essays, representing the author's early critical studies, not only in books, but in character. They were followed by one volume of political essays, dealing with questions that have passed into the history of the United States. The present volume, which is entitled "Literary and Political Addresses," contains the comparatively scanty harvest of his later years; and it is of special interest to us in this country, for it covers the period of his residence here as Minister. Since he has returned home, and Matthew Arnold has died, no one is left to perform the particular function of commemorating in dignified and appropriate words the anniversaries of English literature. Here, for example, we have the addresses delivered on unveiling the busts of Fielding at Taunton, and of Coleridge in Westminster Abbey. Later in the volume, we are again taken back to America, and shown how burning questions of the day can be discussed in a philosophic spirit. And here as before, it is impossible to avoid the reflection, that we have no Englishman who precisely fills Mr. Lowell's place of veteran and impartial critic, a warm patriot, but free from partizanship and chauvinism alike—the ideal "professor in politics." The volume closes with an index to all the Prose works, occupying no less than 100 pages, compiled with American exhaustiveness, but printed with certain varieties of type that are not altogether pleasing to English eyes.

UNIVERSITY JOTTINGS.

THE vice-chancellor has appointed Sir Alfred C. Lyall to deliver the public lecture at Cambridge on Sir Robert Rede's foundation for this year. The subject chosen is "Natural Religion in India."

PROF. JEBB has accepted an invitation to deliver the second course of Turnbull lectures on poetry at Johns Hopkins University, Baltimore. The first course is just now being delivered by Mr. Stedman.

CAMBRIDGE, his later university, has anticipated Oxford in conferring upon Mr. Mandell Creighton the degree of D.D. Mr. Freeman will be sorry to hear that in the Grace his fellow-historian is officially described as "bishop designate" of Peterborough.

MR. W. R. DUNSTAN has been appointed by the delegates of the common university fund at Oxford to be lecturer in materia medica for a term of three years.

MR. W. R. MORFILL, reader in Slavonic at Oxford, was to deliver a public lecture to-day (Saturday) on "The Origin of the Russians, with special reference to the Chronicle of Nestor."

THE following is the Latin speech in which the Public Orator at Oxford (the Rev. W. W. Merry, Rector of Lincoln College) introduced Mr. H. Bradley for the honorary degree of M.A. on Tuesday, March 3:

"Sextus iam agitur annus ex quo ordinibus nostris adscriptum excepinus virum eruditum Iacobum Murray, cuius ope perfectissimum Anglici sermonis thesaurum e Typographico Clarendoniano iam tum emittendum curabat Academia.

"Adeo tamen inter manus cotidie succrevit vasta moles, mirabilis illa quidem et Universitate Oxoniensi haud indigna, tantumque laboris impendium magis magis postulavit, ut fieri non posset quin nova accesserent auxilia, ne molestae quaedam operi conficiendo obvenirent morae. Quae cum ita sint gratulor Academiae quae strenuum et doctum sibi virum libenti libentem adsciverit, qui cum propter luculentam antiquitatis cognitionem acutissimis sese iudiciis comprobaverit, tum praesertim in scientia linguistica tantam adeptus est laudem ut dignus haberetur qui Societati Philologicae praesideret.

"Duco ad vos virum insignem Henricum Bradley, de omnibus litterarum studiis optime meritum, ut admittatur ad gradum Magistri in facultate Artium, honoris causa."

THE University of Oxford has been asked to lend the portrait of Sir Martin Frobisher, in the Bodleian, for the Royal Naval Exhibition.

ON Saturday last, the senatus of Aberdeen university conferred the degree of LL.D. on the following: Dr. W. Bruce Dingwall; Mr. James Moir; Mr. Morrison, of Geelong; Prof. Daniel Oliver; Mr. Robert A. Niel; Sheriff Rampini; and Mr. R. Bowdler Sharpe.

AT the annual general meeting of the members of University College, London, held last week, the following were elected members of the council: Mr. Henry Craik, Mr. R. B. Haldane, Mr. Ludwig Mond, and Lord Reay.

THE committee formed to present Prof. Henry Morley with a testimonial, on his resignation of the chair of English at University College, London, has just issued its report. After paying for an illuminated address, and providing the capital for a medal to be given yearly with the principal English prize, the balance of the subscriptions (which is considerable) is to be handed over to Prof. Morley as a personal gift.

THE annual meeting of the London Society for the Extension of University Teaching is to be held at the Guildhall to-day (Saturday), at 3 p.m., when the Bishop of Durham will deliver an address on "Ideals." It is hoped that Mr. Goschen will also be present, and make a statement as to the future development of the society.

ORIGINAL VERSE.

KENNAK SANDS.

On Kennack Sands the sun
Shines, and the warm wind blows,
Moulding the banks anew
Where the sea-holly grows.
Waters softly blue,
And exquisitely clear,
Meet the o'er arching sky:
O'er them the sweet airs run.
There may'st thou idly lie
And still find new delights,
Watching the gulls' white flights
Above that lonely place;
Listen by hours, nor hear
A single human sound
To spoil the free, profound,
Aërial quietness.

But when thou'rt gone, the night
On Kennack comes, and soon
Lovely beyond dreams
Arises the round moon:
In whose trembling light
The rough splendour gleams
Of the crested sea.
Ah! could'st thou there thou be!
But mortal ears can hear not
What those pale sands hear then;
Sounds not of mortal birth,
Laughter, and dance, and mirth,
Of the golden-haired sea fairies
Mermaids and mermen.

On days when I have lost
My peace, and when my heart
Beats faster than it should,
Some chance sight will start
Pilgrim memory's feet,
Back she flies; and sweet
Kennack's lonely coast
Spreads before my mind.
The sea-sound calms my blood;
Fresh blows the cool sea-wind,
And murmurs in my ear:
*Peace hath left thee awhile,
But to delight her here.*

R. L. B.

MAGAZINES AND REVIEWS.

THE *Expositor* for March contains Prof. Sanday's second article on the origin of the Synoptic Gospels. It need hardly be said that he agrees with those who seek for the foundation of our Gospels in a written document, and is abreast of contemporary criticism. He also gives an interesting notice of Prof. Ramsay's work on the historical geography of Asia Minor. Prof. Marshall at last arrives at the point, and endeavours to prove his theory that at least certain portions of the Synoptic Gospels were translated from a common Aramaic original. Thus far we are not persuaded, nor does this article show well by the side of Prof. Sanday's masterly paper. A much more thorough scholarship is required to solve such a difficult problem, if, indeed, it be soluble. Dr. Petavel, apparently a French scholar, writes interestingly of the "house" (Vulg., *villa*) of Gethsemane. A lecture on Joel by that gifted scholar and preacher, the late Prof. Ehnslie, and an exposition of James i. 9, 10, represent the homiletical element in this number.

THE *Antiquary* of this month is hardly up to its usual level. The archaeological news, which has of late been an important feature, continues to be well arranged; but the articles are none of them of a character to enforce attention. Mr. R. C. Hope continues his series of papers on "Holy Wells," which, when completed and furnished with a topographical index, will form a useful handbook. Mrs. B. F. Scarlett gossips pleasantly on English heirlooms, and the Hon. Harold Dillon tells some interesting facts concerning English horses of the sixteenth century.

THE NEW RUSSIAN HISTORICAL SOCIETY.

Warsaw: Feb. 16, 1891.

TOWARDS the end of 1889, thanks to the efforts of some professors of the St. Petersburg University, a Russian Historical Society was founded, and its regulations were confirmed on October 1 by the Minister of Public Instruction. The society now numbers 163 members, and has just published the first volume of its Proceedings under the title *Istoricheskoe Obozrenie* or "Historical Review." I venture to give some account of the various contents of this interesting volume. Several articles are written by Prof. Carjev, who took a leading part in organising the society. In his introduc-

tory sketch on "The Investigation of some Theoretical Questions in Historical Science," Prof. Carejev points out that the problem for historians of the future is, not how to write history (*πῶς δεῖ τὴν ἱστορίαν συγγράφειν*), but how to comprehend its evolution, or, as has been said by a German author, "den concreten Mechanismus der Geschichte in allgemeine (abstracte) Untersuchungen blosszulegen und zu erläutern." Consequently, Prof. Carejev on the following pages discusses the greatest problem of the human mind—"the philosophy, history, and theory of progress." The next chapter is devoted by the same author to a general sketch of recent French publications on the Great Revolution. Other contributions come from S. V. Forsten, P. D. Pogodin, S. L. Stepanov, and Prof. A. T. Pavinski (of the University of Warsaw). Mr. Forsten opens his paper on "The Foreign Policy of Sweden in the Thirty Years' War" with an old assertion, that Gustavus's motive for interference was principally political, since the object of gaining important acquisitions of territory on the Baltic weighed more with him than sympathy for his suffering coreligionists. Though Mr. Forsten has made use of a large store of unprinted materials at Paris, Rome, and Stockholm, the whole question still remains very uncertain. Mr. Pogodin, whose article is entitled "Macaulay as Historian," does not seem to have truly appreciated the peculiarities of Macaulay's genius—the brilliancy of his rhetorical exposition, though touched with partisanship and with a tendency to paradox. Mr. Stepanov reviews the recent works of Fustel de Coulanges and Glasson on the origin of rural property under the Franks. Prof. Pavinski gives an interesting picture of the present state of Polish historiography. With all their faults, the historians of to-day have elucidated the mediaeval period of Poland, and thrown much light on its internal state and social relations.

CORRESPONDENCE.

"ARISTOTLE ON THE CONSTITUTION OF ATHENS."

Trinity College, Dublin: Feb. 27, 1891.

P. 33, l. 5.—καὶ πάλιν ἐτεῖ πέμπτῃ τὴν αὐτὴν αἰτίαν ἀρχαίαι* ἐποίησαν. The editor's suggestion, διὰ τὴν αὐτὴν αἰτίαν ἀρχὴν οὐκ ἐποίησαν, gives the required sense, but does not explain the corruption. Read τὴν αὐτὴν αἰτίαν ἀναρχίας. The omission of one *an* caused the corruption. ἀναρχία is the negative of ἀρχή, "archonship" (*cf.* Xenophon, *Hell.* ii. 3, 1).

P. 36, l. 1.—οὐ τὴν ἀλιγαρχίαν ἐξήτουν. Perhaps ἐξήλουν here and on p. 93, l. 6.

P. 42, l. 11.—[φωρὴ δ' ἐκκλησίαι] αἰσεν μικρόν. The restoration is certainly wrong. The alternative expressions are μικρόν or φωνὴ μικρὰ, and the verb should be ἐδημηγόρησε or ἐφώνησε, or something of that kind.

P. 43, l. 12.—ᾧτε δια[μπε]ρὶς ἐγεωργούντο. τοῦτο δ' ἐποίηι κ.τ.λ. This adverb and the middle verb are, of course, impossible. The MS. has ἐγεωργονταί. Possibly ᾧτε ἰδίους ἀγρούς ἐγεώργουν. καὶ τοῦτο δ' ἐποίηι κ.τ.λ.

P. 44, l. 20.—μέγιστον δὲ πάντων ἦν [τῶν ἀρεσκ]-μίων τὸ δημοτικὸν εἶναι τῷ ἦθει κ.τ.λ. It is hard to find a substitute for this unlucky conjecture. Perhaps τῶν ἐπαινουμένων.

P. 45, l. 7.—καὶ δὴ καὶ ὁ μάλιστα καθ[ή]κων πρὸς τὴς τυραννίδος. This is untranslatable. The MS. has πρὸς τ(ῇ) τ(ῇ) τυραννίδος. Perhaps read καθήκων πρὸς προτάτας τ. The law referred both to the tyrant himself and to those who were chiefly instrumental in establishing a tyranny. προτάται (almost "ringleaders") covers both. For the expression *cf.* Xenophon, *Hell.* v. 1, 36—προστάται γενομένοι τῆς εἰρήνης.

P. 46, l. 1.—ἦσαν δὲ δύο μὲν ἐκ τῆς γαμετῆς . . . δύο δ' ἐκ τῆς Ἀργείας κ.τ.λ. This would imply that the Argive Timonassa was only a concubine of Pisistratus; but Aristotle knew that she was his wife, for in the next sentence he tells us so—ἐγγενὲς γὰρ κ.τ.λ. The opposition is clearly between the first wife and the second. Read, therefore, ἐκ τῆς πρώτης γαμετῆς (or τῆς γαμετῆς τῆς πρώτης). The corruption (in either case) was due to the homoioteleuton τῆς.

P. 46 (*ad extrem.*).—The editor makes a difficulty about the antecedent of ἀφ' οὗ. Is not οὗ neuter?

P. 48, l. 15.—ἀλλ' ὁ λεγόμενος λόγος . . . οὐκ ἀληθὴς ἐστίν. But the MS. has ἀληθες. Read οὐ τέληθες.

P. 49, l. 5.—πέισας αὐτῶν τὸν Ἰππῖαν δοῖναι τὴν δεξιάν. Read αὐτῶν.

P. 53, l. 16.—ἐπίστευον ὁ δῆμος τῷ Κλεισθέει. ὁ δῆμος is clearly a gloss.

P. 56, l. 7.—προσηγόρευσε δὲ τῶν δῆμων τοὺς μὲν ἀπὸ τῶν τόπων, τοὺς δὲ ἀπὸ τῶν κτισμάτων. οὐ γὰρ πάντες ὑπῆρχον ἐπὶ τοῖς τόποις. The editor suggests that ἀπασί should be τόποι. Palaeographically οὐ γὰρ πάντες <οἱ κτισσάντες> ὑπῆρχον κ.τ.λ. would be a neat correction. All the original founders were not extant in local memories. On the other hand, if it is meant that some places were name-

less, we might read ἀπασιν ὑπῆρχ' ὀνόματα τοῖς τόποις.

P. 61.—Νικοδήμου ἄρχοντας, MS. Νικομήδους. I do not follow the editor's objections to Nicomedes. A dark suspicion crosses one's mind that the "Medes" are at the bottom of his note. He does not like a conqueror of Medes at Athens before Marathon, or at least before the Ionic revolt. Of what Medes was Tydeus thinking when he named his son Diomedes? If the MS. had Μηδονίκου, there would be some sense in the editor's note.

P. 78, l. 7.—καὶ χρόνον μὲν τινα διεδίδον. Perhaps διαβολῶν ἐδίδον (*scil.* Kleophon).

P. 91, l. 7.—διὰ τοὺς παροργισάντας, a very doubtful form. Read either ὀργισάντας or παροργισάντας.

P. 95, l. 1.—If μανίδι is right, this is far the earliest instance of μανίδι. I should be inclined to read μανικὸς ἄν. γῆρᾶν is also doubtful. π.θ.μερος should, of course, be πεθόμενος.

P. 101, l. 5.—τιμητὰς ἐλέσθαι τρεῖς ἐκατέρων. Read ἐκάτερον (*cf.* τὴν κεκτημένην, l. 3).

P. 102, l. 7.—τὴν ἀναγραφὴν. We should expect τὴν ἀπογραφὴν.

P. 103, l. 21.—ἡγοῦμενοι τοῦτο πρῶτον ἔρχειν δὲν τῆς δημοσίας. So MS.; but μὲν is printed after ἔρχειν in the text. There is no point in μὲν. δὲν is merely a slip for δύν, which is really wanted. "Deeming that it was right that this measure should begin the restoration of concord."

P. 105, l. 2.—δευτέρα δὲ καὶ πρώτη μετὰ ταῖτα [ἐ]χούσα πολιτείας τάξεις ἢ ἐπὶ Θησῶς γενουμένη. MS. πολιτείας ταῖν. Read κατέχουσα πολιτείας τάξεις.

P. 106, l. 3.—ὀδῶν δ' ἢ τῶν τετρακυσίων κατό-τασις. MS. ὀδῶν. Read ὀδῶν δ' ἦν.

P. 111, l. 10.—καὶ ὅ τι ἐν ἐκάστῃ τῇ ἡμέρᾳ, καὶ ὅ τι οὐ καθήκει οὕτοις πραγμάτων. The fourth and fifth letters of καθήκει are uncertain. Perhaps καθέξει. κατέχω might well have been a technical word in the sense required.

P. 112, l. 14.—περὶ ἐν ἐκάστῃ τῇ ἡμέρᾳ.

P. 127, l. 3.—ὁ ἐν ἀγορᾷ σίτος ἀργὸς ὥνιος ἐσται. We must either read ὁ ἐν ἀγορᾷ ἀργὸς σίτος, or regard ἀργός as a gloss.

J. B. BURY.

Prof. Tyrrell wishes to make two corrections in his letter in the ACADEMY of last week, which was printed without a proof:

P. 14, l. 5.—For ἡλαύνει, read ἡλαίει, "is distracted."

P. 120, l. 9.—For ὁπόσον, read ὁπόσου.

Prof. Tyrrell also adds the following fresh emendation:

P. 30, l. ult.—τυχῶν, read τυχεῖν.

With regard to p. 33, l. 5, Mr. J. A. Stewart, of Christ Church, Oxford, and Mr. W. S. Leam, writing from Flounders College, Ackworth, both suggest emendations very similar to that made above by Mr. Bury. The former remarks that the Berlin fragment, as translated by Blass (*Hermes* xv. 372) has διὰ ταύτην; and he therefore proposes διὰ τὴν αὐτὴν οἰλίαν ἀναρχίαν ἐποίησαν. The latter would read τὴν αὐτὴν ἐπὶ ἀναρχίαν.

Again, in p. 43, l. 12, Mr. Stewart suggests ᾧτε διετέλουν γεωργούντες, and ἀγροίκου for ἀ[πο]ρ[ο]ισ[ι]ς in the previous line; while Mr. Leam makes substantially the same emendation as Mr. Bury.

Mr. Stewart goes on: "P. 24, 2, 3.—ἐν τοῖς νόμοις τοῖς [Σ]όλωνος οἱ οὐκέτι χράνται (οἶον [εἰκὸς] γέγραπται. For οἶον εἰκὸς I would suggest οἶον."

"Some readers of the ACADEMY may not have seen the opinion which Prof. H. Diels has expressed in the *Deutsche Literaturzeitung* (February 14): "Am Anfang fehlen ein Par Columnen, am Schluss (col. 31-37) ist der Text verstümmelt, aber das Uebrige (30 col. = 62 Kapitel) liest sich ohne Mühe, da die kleineren Lücken hier von der Herausgeber, Mr. Kenyon mit Geschick und Glück ergänzt worden sind. Diese Leistung, die mit erstaunlicher Schnelligkeit vollbracht worden ist, verdient um so mehr unsere volle Anerkennung, als Gelehrte, die solcher Arbeit ferner stehen, das in der editio princeps glücklich Geleistete als selbstverständlich hinzunehmen, und auf das minder Gelungene den Finger zu legen pflegen."

[With regard to our own comments last week upon the second edition, we are informed that no

alteration has been made that would involve a departure from the MS. The only corrections are in places where the actual reading was wrongly given in the first edition. For example, the *elva* now inserted after *blær* in p. 43, l. 3, is here represented in the MS. by a short stroke, as often; and similarly the *ð* of *svandíokel* is an addition above the line. In short, the second edition does not profess to be a critical text any more than the first. It is rather a reprint, occasioned by the pressure of the public demand.—Ed. ACADEMY.]

THE FLEXIONAL INFINITIVE.

Oxford: March 2, 1891.

If, as Mr. Mayhew says, I am wrong in thinking that our old flexional infinitive is still surviving in the English language, I cannot take refuge in the extenuation which he provides for me, when he supposes that I have not given adequate consideration to the subject. I cannot back out of it by calling it a mere *obiter dictum*. On the contrary, this point has had my best attention, and the conclusion has been deliberately formed.

It was some time about 1866 that a friend asked me how to parse a word ending in *-ing* in some such connexion as that of Pope's line "Nature's chief masterpiece is writing well." I found myself puzzled. My friend was puzzled, a puzzled teacher had put the query to him; so we were all puzzled. The difficulty interested me, and I made a careful study of the matter. I collected instances; removing those which were manifestly participles or substantives, and retaining those which belonged to the problematical category, I carefully sought to track the history. I arrived at the conclusion that the flexional infinitive survives and is in active function among us, under the guise of a verbal noun or, to the superficial eye, of a present participle. When my *English Philology* appeared in 1871, it contained in the flexional division of the chapter on Syntax an explicit statement of the evidence in proof of this flexional infinitive. During the twenty years which have since elapsed, I have on three different occasions had to revise this book for a new edition, and always with the effect that the argument for the flexional infinitive has seemed to acquire some new illustration. The passage in my *English Prose*, which is the subject of Mr. Mayhew's animadversion, is only a cursory abstract of the case which may be seen in detail in *English Philology* (§ 580). I have gone into these particulars, not because they prove my view to be sound, but because they show that what I have published on this point is at least of my very best.

If I am wrong, I should be glad to be set right, and I am disappointed with Mr. Mayhew's letter in this respect, that it contains little of a guiding or corrective nature. He says that my error has been due to a confusion between form and flexion, but he does nothing to unravel the tangle, and show the problematical combination is to be accounted for. It is easy to frame indictments in abstract phraseology; what we want in criticism is concrete and cogent reasoning. I have made, it appears, a confusion between form and function; that is to say, as I presume, from the observation that some words in *-ing* have the function of infinitive or gerund, I have unwarily inferred that the form *-ing* is the linical representative of the old Saxon infinitive in *-AN*. My position is, that I have made this a question to investigate, and that I have convinced myself that it is so.

The question between us lies in a small compass. Mr. Mayhew does not deny the infinitival function, he only questions the legitimacy of the descent of the form. I never said that *-AN* ought to be represented by a modern *-ing*, that it was a regular proceeding,

one to merit the countenance and approbation of the latest school of exact phoneticians. I only said that, as a historical fact, it was so; and that the steps of the development are plain enough to follow. Mr. Mayhew gives a series of descending forms from *lufian* to "love," and the last of his series, that is the one just before "love," is *loven*. This, he says, is the regular and legitimate process of development; the regular process led to *loven*, and thence to "love." But when we made the last step by dropping the *n*, was there any law to forbid our retaining in certain structures the older and still flexional form, and doing it, too, without knowing it, and disguising the process to our own eyes by a mask very familiar in other instances wherein we have been apt to change *-an*, *-en*, *-in* into *-ing*?

J. EARLE.

THE OSSIANIC SAGA.

London: March 2, 1890.

In a letter which I have received from Prof. Zimmer, he takes exception to certain points in my summary of his article on the Ossianic Saga. I am anxious that his theory should suffer no prejudice from my imperfect exposition of it, and I hasten to give the substance of Prof. Zimmer's communication. The references are to the ACADEMY of February 14.

P. 161, col. 3, l. 49: Instead of saying "the signification of the word [*fiann*] was still further extended; in the form *Féne* it became equivalent to men, race, tribe," I should have said, "in the form *Féne* the word came to denote specifically one of the races inhabiting Ireland."

P. 162, col. 2, l. 46: "Caithil was a Mr. White." I ought, perhaps, to have made it plain that this sentence is a comment upon Prof. Zimmer's theory rather than a statement of it. I do not think the comment an unfair or misleading one, but Prof. Zimmer may legitimately think otherwise. Anyhow, I should have made it clearer that he looks upon "hviti" as a nickname, and not as a surname. The steps in the process are these: Caithil was nicknamed *hviti* "the white." The Irish retained the nickname, but translated it; and as the form it thus assumed in Irish, Find, is a frequent element in many Irish names (e.g., Findbar, Findlog, &c.), the recognisable part of the name, Find, persisted, and the unrecognisable part, Caithil, died out. Thus, the twelfth century scribe of the Book of Leinster fragment of *Cogadh Gaedhel* substitutes for the unintelligible Caithil the Irish word *carr*, "hero," in the passage describing Caithil's defeat by Olaf.

I should like to point out that Caithil's adversary, Olaf, did bear the nickname "hviti" (cf. Todd's *Cogadh Gaedhel*, p. lxx.), which is as definitely attributed to him in the Norse texts as Lodbrog is to Ragnar or Hárfagri to the consolidator of Norway. Is it not strange that the Irish texts never think of translating this standing nickname, but always speak of the Danish leader as Amlaibh simply? Supposing Caithil to have been nicknamed "hviti" (the point to be proved), why should the Irish have treated him differently from Olaf?

My note at the foot of p. 162, col. 2, is objected to by Prof. Zimmer. He had been arguing that the heathen practices attributed to Find implied the heathen nature of the latter. I summed up a portion of his argument in the words: "positive heathen practices could no more have occurred in South Ireland in the ninth century than in Germany of the twelfth or thirteenth century"; and I noticed how different this standpoint was from that of the modern folklorist. Prof. Zimmer would have me emphasise the distinction between conscious and unconscious heathenism. Traces of the

latter, he agrees, are to be found even to this day; but his point is that *imbas forosnai* is definitely described as an offering and appeal to idol-gods, that *teim lægda* is associated with it as one of the practices banished by Patrick as implying the renunciation of baptism (cf. Cormac, *sub voce*), that both practices are thus consciously heathen, and could not have obtained among the Christian Irish of the ninth century. I had intended to convey Prof. Zimmer's distinction by my use of the word "positive," but I feel that my concision did injustice to his argument. At the same time, I must point out that the reference to ninth-century Ireland begs the whole question, which is whether the oldest portions of the Fenian Saga are or are not a product of pre-Christian Ireland. If the native traditions are right, then the difficulty vanishes.

In answer to my objection that the Norsemen were hardly likely to describe themselves as enemies (*fiandr*), Prof. Zimmer again refers to a passage in the *Orgain brudne da Derga*. Ingeel and his fellow-pirates are attacking the house in which the high king of Ireland is passing the night. "Up, *fianna*," says he to his men; "let us attack the house." When they draw near, the king, hearing a noise, asks who is there. "*Fianna*," answers one of his champions. But the present text of *Orgain brudne da Derga* cannot be older than the tenth century, and the word *fianna* had a perfectly well-known meaning at the time of "warriors," "champions." There is nothing in the story to imply that its author intended by the use of the word to imply that Ingeel and his companions were Vikings.

To my objection that the theory in nowise accounts for the standing quarrel between Find and the Lochlanners, Prof. Zimmer answers that this quarrel is a special feature of the North-Irish and Highland Fenian texts, to be accounted for by the presence of "Lochlan-naich" in North-West Scotland as late as the fifteenth century, and by their conflicts with the Celtic population. I would only point out that if these local conflicts of the twelfth and fourteenth centuries so profoundly influenced the Scotch-Gaelic Fenian texts, it is, to say the least, remarkable that no trace of the conflicts between the Irish and the Anglo-Norman is to be found in the Irish Fenian texts.

Prof. Zimmer adds some interesting considerations upon the names Oscar and Oisín; but these I do not feel at liberty to communicate. Nor do I propose to anticipate the numerous objections to the theory as a whole which have occurred to me. Indeed, if, as Mr. Whitley Stokes shows, the etymologies upon which the theory is based be unsound, other criticism may well wait. I am intensely relieved to find there are such weighty philological objections to the *teim lægda teinar lægðir* equation. Assuming its correctness, I could not but feel its far-reaching consequences. If incorrect, much of Prof. Zimmer's argument goes by the board.

ALFRED NUTT.

London: March 2, 1891.

Dr. Zimmer's elaborate treatise on the above question has been noticed already by Mr. Alfred Nutt (ACADEMY of February 14) and by Mr. Whitley Stokes (*ibid.* February 28). Intending combatants, whether for or against the thesis supported with so much erudition and vigour, will make all the better play for having a reasonable amount of ammunition ready to their hands; therefore, if the recently announced "*Silva Gadelica*" sees the light, its contents will be found to embrace the Lismore recension of "*Agallamh na Senórach*," and the Adventures of Teigue, son of Cian.

STANDISH H. O'GRADY.

TUNIP AND NAHARINA.

Weston-super-Mare: Feb. 21, 1891.

The letters of Mr. Howorth and Prof. Cheyne raise interesting questions, which I will try to solve.

Mr. Howorth understands the inscription of Rameses II. to say that Tunip was between Kadesh and Aleppo. I think there is no ground for this, for the Shasu spies said "in the land of Khilibu, to the north of Tunip." Now, Tenuib [Tinnab, the same place] is described as "a large village belonging to Haleb" still—i.e., in the "land of Khilibu"; and the spies said falsely that the Kheta king was north of Tunip in the land of Khilibu, not that Khilibu itself lay to the north of Tunip. Prof. Maspero understands the matter thus, and marks "Tounipou (Tinnab)" accordingly in his map (*Hist. Anc.*, 4 ed.)

I have often thought the Tunubu of Tiglath Pileser I., Dhuibun of Shalmaneser II., had a name which (like so very many) travelled westwards to our Tunip. The etymology I know not; but is it Semitic? Mr. Sayce says:

"The land of Nairi or 'the rivers' denoted in the age of Tiglath-Pileser I. the districts at the sources of the Tigris and the Euphrates. In the time of Assur-Natsirpal and his successors, on the other hand, it was the country between Lake Van and the northern frontier of Assyria, and consequently lay to the south-west of the Nairi of the time of Tiglath-Pileser I." (*Records of the Past*, 2nd Series, I. 106, note 7).

With regard to Arethu among the allies against Rameses, I confess I have long doubted, with Mr. Howorth, whether it is the Phœnician Arvad. I do not, however, find it in Arpad, now Tel Erfad, as he does, but rather identify it with No. 123 of the Karnak List, and think the name may perhaps be found at Arâdâ, west of Aleppo (Sachau, 104). In this case Tuka (No. 124) would be Tokat, between Arâdâ and Turmanin, which I take for Termanna (No. 125).

Prof. Cheyne will see on referring to my former letter (*ACADEMY*, Feb. 14, p. 164) that I have not overlooked the letter from Dunip (Tunip) praying for help against the Kheta king, found among the "newly-discovered clay tablets." It is most interesting, and I will try to find some light on the *mat nuhashshe*, the copper region to the north. But I do not agree with M. Halévy about the position of Zobah. Allow me to quote what I have written in the *Babylonian and Oriental Record* on this:

"With regard to the identification of Zobah (Assyr. Tsubit, Tsubut), I have elsewhere suggested that the Zobat or Zibat which the lamented George Smith in his last notes describes as '4 miles round,' with 'extensive ruins,' must be that important place (see Delitzsch, '*Wo lag das Paradies?*' 267). Dr. Sachau's work gives further information. He calls the place Zébed. May not the hot-water spring, near the ruins, called el Hammâm, explain the name Hammath Zobah? And this may be the Hamattu mentioned after Tsubitu (*Wo lag*, &c., 278). Did George Smith mean to identify the ruins which he saw with the ancient Zobah when he wrote 'Zobah' as applying to them? He seems to have heard the name pronounced 'Zobat' or 'Zibat.'"

In concluding this letter, let me say how gladly I would put together my scattered researches on the most ancient geography of North Syria and adjacent regions in one compact volume, as kindly suggested by Mr. Howorth and Prof. Cheyne, but for the difficulty in England of publishing such results, except in transactions of societies and serials which are buried in libraries. My residence at a distance from London discourages me in applying to publishers; but I have often wished to publish a small volume with a map, for which

more material is available than would be generally supposed.

HENRY GEORGE TOMKINS.

P.S.—Mr. Howorth tells me that he did not write with regard to the name Tunip "it is Semitic," but "is it Semitic?" I raised the question of Zobah in the Palestine Exploration Fund's Quarterly Statement, April, 1885. The real position of Zobah is a very interesting point.

THE BIBLIOGRAPHY OF CYPRUS.

Larnaca, Cyprus: Feb. 7, 1891.

Prof. A. Sakellarios has just issued at Athens the first volume of a revised and enlarged edition of his *Κυπριακά*. He has done me the honour to insert on pp. 12-24 my "Attempt at a Bibliography of Cyprus," of which in 1889 I printed for private circulation a second edition. He omits only my lists of State papers and journals, and of the ephemeral literature dealing with the excavations of Signor L. P. di Cesnola. He preserves two misprints of mine, and adds seventy-eight of his own; and he writes this note—*ἐκ τοῦ καταλόγου τούτου τῶν Κ. Cobham ἡρῶσθαι τὰς πλείστας τῶν ἀνωτέρω ῥηθειῶν βιβλιογραφῶν τῆς Κύπρου*. True, 299 out of 301!

I do not for a moment grudge Mr. Sakellarios' readers any profit they can derive from my labours. But, had the author asked my permission, or informed me of his intention, to use them, I could have added not two, but ninety new titles, and an entirely new section on the cartography of the island.

I notice, also, that the *χάρτης τῆς Κύπρου ὑπὸ Ἀθ. Α. Ζακελλαρίου* is in scale and contour singularly like the map reduced by Mr. Stanford from Capt. H. H. Kitchener's Trigonometrical Survey.

Have we here another candidate for the *mot*, disowned for Molière—*je prends mon bien où je la trouve*?

C. DELAVAL COBHAM.

SWALLOWS BUILDING AMONG THE RAFTERS.

Sare, Basses Pyrénées, France: Feb. 25, 1891.

On p. 191 of the *ACADEMY*, February 21, a statement is made, taken from the *Classical Review*, that in Greece "the swallows build their nests not under the eaves, but among the rafters." They have the same habit here. The house from which I write, like most of the others, has fine eaves; yet the swallows do not build under them, but among the rafters of the *chai*, notwithstanding that their morning meal is sometimes delayed through the late opening of the outer doors, and that they are more exposed to the attacks of the cats, who make some victims among them every year. They have two broods each summer, and are so tame that the young, even when able to fly, have allowed my children to stroke them, as they sit on the lower door. There seem to be contrary traditions among the Basques about these birds, some regarding them as bringing good, others ill-luck, to the house.

WENTWORTH WEBSTER.

APPOINTMENTS FOR NEXT WEEK.

SUNDAY, March 8, 4 p.m. Smith Place Institute: "The Armenian National Church," by Mr. F. C. Conybeare.
7.30 p.m. Ethical: "Applied Economics," by Mr. G. T. Filcher.
MONDAY, March 9, 5 p.m. London Institution: "The Law of Joint Stock Companies," by Mr. Aubrey J. Spencer.
8 p.m. Society of Arts: Cantor Lecture, "Photographic Chemistry," I., by Prof. R. Meldola.
8 p.m. Richmond Athenæum: "The Fourth Estate," by Mr. J. Rigby Smith.
TUESDAY, March 10, 3 p.m. Royal Institution: "The Spinal Cord and Ganglia," VIII., by Prof. Victor Horsley.
8 p.m. Society of Arts: "Enamelling and Dampening," by Mr. J. Starkie Gardner.

8 p.m. Civil Engineers: Discussion, "The Subterranean Water in the Chalk Formation of the Upper Thames, and its relation to the Supply of London," by Mr. J. T. Harrison.

8 p.m. Colonial Institute: "Australasian Defence," by General Sir J. Bevan Edwards.

8.30 p.m. Anthropological: "Objects collected during the Voyages of Vancouver," by Mr. C. H. Read; "The Natives of Bowditch Island, Union Group," by Mr. J. J. Lister.

WEDNESDAY, March 11, 8 p.m. Geological: "Manod and the Moolwyns," by Messrs. A. V. Jennings and G. J. Williams; "Nantili and Ammonites," by Mr. S. S. Buckman; "The Tudor Specimen of *Eozoon*," by Mr. J. W. Gregory.

8 p.m. Society of Arts: "Electricity in Relation to the Human Body," by Mr. H. Newman Lawrence and Dr. Arthur Harries.

8 p.m. Cymruddorion: "Pennillion Cymreig," by Mr. Edward Anwyl.

8.30 p.m. University College: "Ice, Water, and Steam," by Prof. W. Ramsay.

THURSDAY, March 12, 3 p.m. Royal Institution: "Modern Chemistry in relation to Sanitation," II., by Prof. C. Meymott Tidy.

6 p.m. London Institution: "Succession of Ideals in the Ancient World," by Mr. W. M. Conway.

8 p.m. Mathematical: "Cusp-Loci, which are enveloped by the Tangents at the Cusps," by Prof. M. J. M. Hill.

8 p.m. Electrical Engineers.

8.30 p.m. Antiquaries.

FRIDAY, March 13, 4.30 p.m. Society of Arts: "The Science of Colour," IV., by Capt. Abney.

7.30 p.m. Civil Engineers: Students' Meeting, "The Lankashire and Ayrshire Railways," by Mr. W. A. P. Tait.

8 p.m. New Shakspeare: "Shakspeare's References to Natural Phenomena," by Miss Philipson.

8 p.m. Ruskin: "The Ruskin Museum at Sheffield and its History," by Mr. W. White.

9 p.m. Royal Institution: "The Culture of the Singing Voice," by Dr. Felix Semon.

SATURDAY, March 14, 3 p.m. Royal Institution: "The Forces of Cohesion," V., by Lord Rayleigh.

SCIENCE.

The Ion of Euripides. Edited, with Introduction, Notes, and a Translation into English Verse, by A. W. Verrall. (Cambridge: University Press.)

THERE must be, one imagines, a certain flutter among the Immortals when it becomes known, through the publishers' announcements, that some distinguished scholar is "engaged upon an edition" of their works. The ways of these lordly denizens of the nether world have been described for us by Aristophanes; and one can readily conjure up with his assistance the excitement of Aeschylus and Euripides when a fresh parcel from the Pitt Press is delivered at the portals of Hades. Sophocles, good, easy man—

εύκολος μὲν ἐνθάδ', εύκολος δ' ἐκεῖ—

is doubtless delighted with Prof. Jebb's sumptuous volumes, whose sober logic and graceful diction are exactly to his taste; and one pictures him smiling sweetly as he watches his brother dramatists plunging their paper-knives, with cries of astonishment, into the introductory pages of Dr. Verrall's "Ion" and "Agamemnon." It is a situation worthy of a second *Βάτραχοι*; and I commend it, feeling my own incapability to do it full justice, to the writer of next year's Tripos verses, if those airy *nugae* are still in fashion at Cambridge.

Let me hasten to add, however, that whatever pangs these celebrated personages may experience at the vagaries of their most recent editor, the classical public owes a deep debt of gratitude to Dr. Verrall for his labours in the well-ploughed field of the ancient drama. For whatever else he may be, he is assuredly never dull. His edition of the "Ion" (which forms the subject of these remarks), to use a vulgar expression, really beats cock-fighting. It is prefaced

by an Introduction of unusual length, which positively coruscates with paradoxes, and contains among many minor attractions a complete new play of twenty-two pages from the editor's own pen. The dialogue of this little piece, which serves as a dramatic exposition of his peculiar views upon the story of "Ion," if occasionally somewhat *risqué*, is never otherwise than amusing, and would run charmingly into Greek prose after the manner of Lucian. It is, in fact, admirably calculated to relieve the tedium of a college lecture; but though many will laugh over, it is to be feared few will agree with, its remarkable conclusions.

Briefly, they are as follows. The play is a studied attack upon Delphi and the Delphic god, who adds to the arts of the seducer the less agreeable accomplishments of lying and forgery. Ion was *not*, as he has generally been believed to be, the son of Apollo and Cræusa, but the offspring of a casual connexion between Xuthus and a Delphian woman (as described in ll. 544-63), who was, in all probability, *the Pythian priestess herself*. The recognition of Ion by Cræusa, on the evidence afforded by his cradle and its accompaniments, was brought about by an elaborate fraud on the part of the guardians of the temple. It was no better, in fact, than the ridiculous *ἀναγνώρισις* in "Box and Cox," which depended (as all will remember) upon the *absence* of a strawberry mark from the left arm of the long-lost brother. These astounding propositions are defended by Dr. Verrall with an immense amount of verbal ingenuity; but his arguments, which cannot be given here, fail altogether to produce conviction. The recent performance of the play at Cambridge triumphantly vindicated, in the present writer's opinion, the accuracy of the ordinary account of Ion's parentage. From the first scene, where Hermes gives a detailed description of the boy's birth at Athens and his subsequent transference to his father's shrine at Delphi, to the last, where Athene reiterates the tale and Cræusa makes her exit with her new-found child, any other explanation of the circumstances seemed wholly incredible. Dr. Verrall, it should be observed, acknowledges his obligations for "several most important hints" as to the meaning of the play to a mysterious H. B. L. It is impossible to congratulate him on the guide he has chosen, though no one can fail to admire the subtlety with which he expounds his strange thesis.

As the editor remarks in his preface, "the chief interest of the book will be found in the Introduction and Translation." Of the former I have already spoken; to the latter it is a pleasure to be able to give unqualified praise. Dr. Verrall's translations of the choruses in the "Birds" and "Eumenides" (prepared for two of the earlier performances at Cambridge) had already revealed his great skill in reproducing a Greek original for English readers: but in this complete rendering of the "Ion," with its exquisite lyrical passages, and its lengthy and intricate *στιχονομῖαι*, he surpasses his previous efforts. We need only quote the following extract from Ion's address to the birds (ll. 154-169),

which loses little, if anything, of the beauty of the Greek:

"There, see! the birds are up! they fly
Their nests upon Parnassus high,
And hither tend. I warn you all,
To golden house and marble wall
Approach not. Once again my bow,
Zeus' herald-bird, will lay thee low,
Of all that fly the mightiest thou
In talon! Lo, another now
Sails hitherward, a swan! Away,
Away, thou red-foot! Not the lay
Which ye to Phoebus' music sing
Should save thee from the fatal string.
Come, turn thy flight,
On Delos' mere alight;
Or thou shalt shed thy sweetest note
And death-song from thy bleeding throat."

The notes, Dr. Verrall tells us, are for the most part (though herein he is too modest) traditional, and the text is traditional throughout. On l. 379, where Wakefield reads οὐκ ὄντα, and H. Stephens ἀνόνητα, for the MS. ἄκοντα (*κεκτῆμεσθα τὰγαθά*), he keeps the original as "more poetical and epigrammatic," in which dictum the judicious reader will concur, "reluctant blessings" being too striking a phrase to lose. He has some capital remarks on the difficult passage (ll. 602-604)—

τῶν δ' αὖ λόγῳ τε χρωμένων τε τῇ πόλει
εἰς ἀζίωμα βὰς πλέον φρουρήσονται
ψήφοισιν—

where he explains λόγῳ (for the MS. *λογίῳ* and Badham's *σοφῶν*), coupled with τῇ πόλει, and following χρωμένων, to mean "thought," or "learning," and shows that *λογίῳ* was a gloss on *λόγῳ χρωμένων*; while he gives a new interpretation to the phrase *φρουρήσονται ψήφοισιν* by referring it to the game of draughts, the point lying in the double sense of *ψήφοι*, as "pieces" (in the game) and political "suffrages." In ll. 929-30—

(λόγων ὑπο)
οὓς ἐκβαλοῦσα τῶν παρεστῶτων κακῶν
μετῆλθες ἄλλων πημάτων καινὰς ὁδοὺς—

he takes *ἐκβαλοῦσα* as intransitive, "departing" or "swerving from" (might we not compare the English "flinging out"?), and constructs both οὓς and ὁδοὺς as limiting or defining accusatives with *μετῆλθες*, the story being the "new track" which Cræusa has taken.

His suggestion (ll. 1171, 1211, 1214) that the word *πρέσβυς* is used not as merely equivalent to *γέρων*, but in the sense of "emissary" or "deputy" (which it more usually bears in the plural *πρέσβεις*) is acute and ingenious. The same may be said of the note on l. 1410—

παῦσαι πλέκονσα λήφομαι δ' ἐγὼ κάλας,—

(where Tyrwhitt and other modern editors read *λήφομαι σ' ἐγὼ καλῶς*), Dr. Verrall deriving the image from two persons employed at rope-making, one "twisting" and the other "taking off" the walk the lengths of rope as they are finished.

This edition of the "Ion," to sum up, is to some extent spoilt by the wrong-headedness of its Introduction, according to which it will probably stand or fall in general estimation. At the same time, in respect both of its translation and its notes, it is an excellent piece of work, and worthy of the best traditions of Cambridge scholarship.

II. F. WILSON.

SOME PHILOLOGICAL BOOKS.

Etruskisch und Armenisch. By Sophus Bugge. (Christiania: Aschehoug.) In this work Prof. Bugge comes forward with a new solution of the Etruscan problem, or rather with a revival of the hypothesis of Robert Ellis which connected the language of the Etruscan inscriptions with Armenian. He admits that his previous attempts to explain the Etruscan language as Indo-European, and to connect it with the dialects of Italy, have been a failure. It is strange, therefore, to find him still so confident that the key to its mysteries is to be sought in the Indo-European family of speech, and still so sanguine that he has at last discovered the particular key which will fit the lock. But the old argument against all such attempts still holds good. If Etruscan had been an Indo-European idiom, the fact would have been universally recognised years ago. The characteristics of an Indo-European language are so clear, and are now so well known, that when once they are proved to exist in a language there is no further question about its admittance into the Indo-European group. Moreover, Prof. Bugge's theory necessitates the assumption that Etruscan and Armenian are in the same stage of decay and development. At the only time, however, when Etruscan could have branched off from the Thrako-Phrygian stock to which Armenian belongs, the stock was in an earlier and different stage. The addenda and corrections at the end of the volume supply the most convincing proof that Prof. Bugge's endeavour to explain Etruscan by the help of Armenian is but lost labour. One of the very few forms of Etruscan grammar that are known with certainty is the plural termination in *-r*. In the body of his book Prof. Bugge finds a parallel to this in Armenian; in the Appendix he has to confess that the plural termination in question has been borrowed by Armenian from one of the non-Aryan languages of the Caucasus. If, instead of comparing Etruscan with Armenian, he would follow Pauli's example and endeavour to decipher Etruscan by the help of its own resources, his work would be more serviceable to science. He has come to see that Etruscan is not an Italian dialect; let him go a step further and admit that it does not belong to the Indo-European family at all.

Das Zahlwort vier und neun in den chamitisch-semitischen Sprachen. By Leo Reinisch. (Vienna.) This is a very ingenious attempt, by a master of Hamitic philology, to discover the etymology of the numerals "four" and "nine" in the Semitic and the more remotely allied Hamitic languages. The conclusion at which he arrives is that the original word for "four" in this family of speech arose out of a "dissimulated germination of the biliteral root *tak*"; and that while the word for "nine" was formed out of this by the addition of the numeral "five" in the languages of Ethiopia, the "Nether-Kushite" dialects, together with Old Egyptian and the Semitic idioms, obtained their word for "nine" by a phonetic alteration of the word for "four." In the course of his inquiry Dr. Reinisch identifies many of the roots in Old Egyptian and Semitic, which he rightly considers to be related one to another.

Die Sprachschöpfung. By Th. Curti. (Würzburg: Stuber.) This is a most interesting little book, charmingly written and full of suggestiveness. The object of the author is to show that language has arisen out of the six following classes of "sentence-words": words expressive of sensations, words accompanying these, gesture-words, words representing the cries of animals, "cosmical words," and symbolic primitive words. An example of a "cosmical word" would be the Brazilian *tupi* from the interjection *tu*, which is used of the supernatural. The illustrations, by means of

which each class of words is explained, are numerous and apt; and many of Dr. Curti's remarks are worthy of quotation, as, for instance, that "only the more highly-developed languages are illogical." We have noticed two slips: *imma* (p. 40) should be Akkadian, not Assyrian, and *i*, "to go," does not form the optative in Greek.

Uralaltaische Forschungen. By W. Bang. (Leipzig: Friedrich.) This is an interesting little monograph. The author shows in the first part of it that the Mandshu verb is of purely substantival origin. Dr. Winckler adds some interesting remarks, in which he points out that the same holds good of the Finnish and Turkish verb. In the second part an attempt is made to form a large number of Ural-Altaic words into a group, containing the common element *ku*, *kl*, and the common meaning of roundness. Mr. Bang avows himself a supporter of Dr. Abel's endeavours to reduce Indo-European, Semitic, and Egyptian to a single type. But the reason he gives for being so is inadequate: the division, namely, of the animal world into five classes. Such a division in language would rather correspond to the morphological distinction of forms of speech as isolating, polysynthetic, agglutinative, incorporating, and inflectional. Analogies, however, are dangerous guides to follow.

Traité de l'Onomatopée. By A. Timmermans. (Paris: Bouillon.) Mr. Timmermans has lived a century too late. His ideas about the etymology of words belong to the age before Bopp. Words of all periods and of various history are classed together and confidently referred to some onomatopoeic source which is often obvious to the author alone. Even the word *silence*, it seems, is of onomatopoeic origin!

SCIENCE NOTES.

PROF. VICTOR HORSLEY will give a discourse on "Hydrophobia" at the Royal Institution on Friday, March 20, in place of Prof. W. E. Ayrton, who is unable to deliver his promised lecture on "Electric Motors, Motors, and Money Matters."

"YOUNG COLLECTOR SERIES."—*British Ferns, and Where Found.* By E. J. Lowe. (Sonnenschein.) Mr. Lowe is well known to be a man learned on ferns, and an original and painstaking inquirer into their nature and habitats. With him rests a large share of the credit of proving that ferns can be crossed, and his remarks on his favourite subjects must be listened to with respect. It is eminently a case for applying the old principle, *Peritis credendum est in arte sua*. This is true even of his startling theory that *Nephrodium aemulum* and *N. dilatatum* are really the same plant, with differences depending upon station. But Mr. Lowe's skill in writing hardly does justice to the depth and width of his knowledge. His little book is chockfull of information, but it somehow all wants putting into shape. It is not clear and orderly. We are not told at starting what ferns are, how they multiply, or how they are demarcated from other divisions of the vegetable kingdom. The language and the style will repel many who might otherwise be drawn to the study. And this is a thousand pities, for no one who regularly uses the book can fail to learn much from it. It is very complete, and traces *Asplenium Filix-foemina* into its numberless forms and subforms with unwearied patience. But the sudden remark that, if *Adiantum Capillus-Veneris*, var. *bulbiferum*, had come "under the keen eye of Mr. Drury," he would have seen another case of apospory" (*sic*) will take the young collector aback. The young collector does not know, and is not told, what "apospory" means. Nor are

the pictures always very helpful. That of *Gymnogramme leptophylla* (no longer, alas, "abundant in several places" in Jersey) is not at all characteristic. It fails to indicate that the inner and outer fronds are not quite alike.

MEETINGS OF SOCIETIES.

EDINBURGH MATHEMATICAL SOCIETY.—(Friday, Feb. 13.)

R. E. ALLARDICE, Esq., president, in the chair.—Mr. John Alison read a paper by Mr. T. Hugh Miller on "A Problem in the Theory of Numbers"; Mr. James Taylor read one by M. Paul Aubert on "A Geometrical Locus"; and Mr. A. J. Pressland continued his discussion of the triangle and its escribed parabolas.

ARISTOTELIAN SOCIETY.—(Monday, Feb. 16.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—Mr. G. F. Stout read a paper on "The Psychology of Belief." To believe is to be aware of objective existence. The general condition on which it depends is the limitation of subjective activity by the material on which it is exercised. This limitation consists on the one hand in the restriction and constraint imposed on the movement of attention by the nature of the objects attended to, by the fixation of these objects through the operation of external stimulant on the sense organs and the connexion established between them in the way of association. On the other hand, it consists in the limitation of voluntary movements by physical obstacles. The paper was followed by a discussion.

PHILOLOGICAL SOCIETY.—(Friday, Feb. 20.)

HENRY BRADLEY, Esq., president, in the chair.—The president read a paper from Prof. Rhys on "The Celt and other Aryans of the P group." The distinction between Irish and its allied languages on the one hand, and Welsh (with Cornish and Breton) and Gaulish on the other, is that the Irish had *q* where the Welsh had *p*. That there was an earlier Celtic race on the Continent using *q*, Prof. Rhys showed from Celtic names on inscriptions, some of which contained words known in Welsh with *p*. The same expulsion of an earlier *q* (or its representatives) by a later *p* was found in all the Italic dialects but Latin, and also in some Greek dialects. Now this substitution was made by a race connected in language with the earlier *q* Celts, and did not happen independently in several places at once. It was accompanied by other changes, as that of an older *u* into *i*, &c. And it was due to the conquest of the *q* Celts by a later race of *p* Celts, who, being originally non-Aryan, had preserved traces of their non-Aryan phonology—among these, the *p*—when they became Aryanised. They spread from a centre in the Alps, and drove the *q* Celts to the outer margin of their settlement.

MANCHESTER GOETHE SOCIETY.—(Wednesday, Feb. 25.)

PRINCIPAL DR. A. W. WARD, president, in the chair.—The Rev. F. F. Cornish read a paper on "Goethe and Frau v. Stein." The future Goethe biographer, Mr. Cornish said, will find it difficult, after the treatment of Goethe's life at Weimar from 1775 to 1786 at the hands of Lewes and other English writers, to convince his readers (1) that Goethe was for more than ten years almost entirely dependent, for sympathy and affection, on a woman eight years older than himself, married, the mother of seven children, and not even a beauty; (2) that this relationship was at all times a perfectly pure one. His difficulty will not arise from evidence to the contrary, for there is none; but from the supposed antecedent probabilities and the difficulty of proving a negative, while the strength of his case consists mainly in the tone of a correspondence of some seventeen hundred notes and letters. Charlotte v. Stein, *née* Schardt (b. 1742, d. 1827), was from her sixteenth to her twenty-first year Maid of Honour to the Duchess Amalia, and in 1764 married v. Stein, of Kochberg, subsequently Master of the Horse to the

Duke Carl August. Knebel describes her as possessed of true feeling, a placid and easy disposition, eagerness to learn, directness and naturalness, as free from enthusiasm and yet warm-hearted, in sympathy with all intellectual matters and of delicate tact; while Schiller, writing in 1787, says that a mild earnestness, sound understanding, feeling, and truth were of the very essence of her being. Carl August probably shared Zimmermann's opinion of Goethe, that he would be a noble instrument in the hands of a prince; and in November, 1775, Goethe arrived at Weimar as a visitor, to stay as a privy councillor and as the chief adviser of the duke. Of Frau v. Stein, Goethe speaks from the first in terms of undisguised admiration. To Wieland he says in April, 1776, that her power over him can only be explained by the transmigration of souls; while on her part she found it difficult to refuse her sympathy to a poet in whose works she was deeply interested, and whose over-wrought sensibility needed constant soothing and calming. They had countless things in common, the anxiety to promote a better understanding between the duke and his young wife, the cares of the Stein estate, the education of Frau v. Stein's children. Goethe, to whom even the social restraints of Frankfurt had at one time seemed intolerable, must, of course, have felt, on his translation to Weimar, that he had to cultivate the etiquette and formalities of court life; and in this irksome duty an assistance such as Frau v. Stein could render would be doubly welcome. Then there was the official difficulty. Had Goethe failed in his trial as a practical administrator, no power on earth would have kept him in Weimar. And though he did not fail, but plunged with eagerness into the midst of his work and soon became all but absorbed in it, yet he keenly felt the worry of small cares and the solitariness of his position. And lastly, there were the needs of the emotional side of his nature. It was in the main due to the influence of Frau v. Stein that, five years after his arrival at Weimar, he could look back to the red-heat of the Werther period as a thing of the past. One of the secrets of her power was that she provided Goethe with society, and soon it became a pressing need for him to escape to her from the insipid atmosphere of the court. To say that she was exacting, capricious, and a coquette is beside the point, in face of the fact that for twelve years he clung to her with the energy of desperation. Her sympathy extended to intellectual matters; they studied languages, read Spinoza, Strada, Quintilian, and discussed morals and art. But she did more than this. She supplied Goethe with an ideal, and the devotion to her became a religion with him. In her only of the women he had known Goethe could find all that he needed without the idealising process. The question arises whether the advantages which Goethe purchased by his devotion were not too dearly bought. He had, with few exceptions, become estranged from his earlier friends through his removal to Weimar. No man, as Goethe has said of himself, was ever more ready to say of these around him: "these are my father and sister and mother." This isolation, combined with his resolute application to official business, brought its usual effects: he was becoming a stranger to all the world but her. Besides, there was the haunting feeling that her love and society were only enjoyed on sufferance; and, lastly—what, perhaps, he felt most—his fountain of inspiration as a poet was drying up. Finally, Knebel, Herder, and Frau v. Stein became his only public—for her alone "Tasso" was written. It was a rude shock to Frau v. Stein when, in September, 1786, Goethe started from Carlsbad for Italy. The duke knew of his intention, but only Goethe's valet knew the route he had taken, and not a line of his reached Frau v. Stein before the middle of January, 1787. She felt his conduct bitterly: and his letters to her—published only in 1886—show how he felt her reproaches, while they dispose of the idea that by his departure Goethe had wished to break off a connexion of which he had grown weary. The true reasons for his Italian journey Goethe gives himself when, in January, 1787, he writes: "I can say nothing but that I have only one existence, and that I have this time wholly played and am still playing. If I come out of the trial sound in body and mind, and my nature, my spirit, my fortune survive this

crisis, I shall replace for you a thousandfold what there is to replace. If I fail I fail, but without this I should have been good for nothing more." On Goethe's return, after an absence of two years, the behaviour of Frau v. Stein was influenced by two feelings—resentment at the manner of his departure, and a foreboding that her reign was over. Stripped of all extraneous circumstances, the matter was decided by Frau v. Stein's requiring that Goethe should break off with Christiane, and by his definitely refusing to do so. The bird had tasted freedom, and would not enter the cage again.—The chairman, while in the main agreeing with the point of view of the lecturer, thought that perhaps less stress should be laid upon the help which Frau v. Stein gave Goethe in his social and official difficulties.—The hon. secretary then read some of Goethe's poems to Frau v. Stein, and one poem composed by the lady after Goethe's departure for Italy.

FINE ART.

FRENCH ETCHINGS AT THE BURLINGTON FINE ARTS CLUB.

RARELY has a choicer or a more enjoyable collection of its kind been brought together than that now to be seen in the gallery of this club, to which its promoters have given the appropriate name of an "Exhibition illustrative of the French Revival of Etching." In these columns it is, for obvious reasons, difficult to accord a just measure of praise to the two authors and originators of the display, Mr. Frederick Wedmore and Mr. Cosmo Monkhouse. A natural reticence must not, however, prevent us from pointing out that, while the former has borne the burden of the day in supplying from his own stores and obtaining from those of other connoisseurs the fine examples now grouped together, as in arranging them on the walls of the gallery, to the latter we owe an introduction to the Catalogue, which is remarkable for the suggestiveness and originality of its criticism, and not less so for an economy of space in which it is in agreeable contrast with some laborious and ill-digested treatises with which we have been favoured on previous occasions. The exhibition has been wisely confined to the most famous painter-etchers who have produced original work from the period of the romantic revival down to the present time. To have opened the doors to the vast series of magnificent etched reproductions which have of late years been executed in France would have been to render the show impossible within so small a space.

A beginning is made with the works of that precursor among romantic landscapists Paul Huet, whose "Maison du Garde" is chiefly remarkable for the impress which it bears of Constable's influence, while the curiously tentative "Le Midi" shows a striving to achieve with the needle what many of our own engravers of about the same time did so much better with the burin. Eugène Delacroix shows a very imperfect mastery over the technique of the etcher in the curiously *manqué* "Juive d'Alger"; while he appears somewhat more at ease, but by no means a master of the point, in the "Chef Maure à Meknez"—an interesting study combining his characteristic romanticism with a fair measure of realistic truth, and nearly approaching in style to the famous "Massacre de Seio." The sole etching executed by Delacroix's implacable rival and detractor, Ingres, is here. It is the magnificent "Monseigneur de Pressigny, Archevêque de Rennes," in which he uses the needle much as other masters have used the graver's tool, and with complete success as regards a noble and at the same time exquisitely subtle rendering of a grave and commanding personality. In respect of these qualities, this example of the art of Ingres at his best may, without heresy, be pronounced worthy to mate with the best things in Vandyck's "Iconographie."

To many the most fascinating section of the collection will be the carefully selected group of etchings by Charles Méryon. His unique, if limited, genius unites in an indefinable fashion a curiously patient realism in the reproduction of fact with a lurid and disquieting romanticism of conception which penetrates and lights up, as it were from within, its familiar subject-matter, yet without distorting it. It has always met with more numerous and more ardent worshippers in England than in his native country; perhaps because the English connoisseur can more readily condone, for the sake of the true imaginative quality, certain palpable shortcomings of execution, to which Mr. Monkhouse has impartially referred in his introduction. The famous "Le Stryge" is the most popular and the most fascinating—in the true sense of the word—of the artist's performances; but his artistic masterpiece is undoubtedly the pathetic and technically exquisite "Abside de Notre-Dame," one of the finest original etchings of modern times. Of this a brilliant first and second state—the first, in our opinion, vastly superior to the second—are here. The best purely architectural design is perhaps the splendidly bold and incisive "Galerie de Notre-Dame," while little, if at all, behind comes "L'Arche du Pont de Notre-Dame." As the poetic interpreter of the characteristics of old Paris, Méryon could not be better represented than by the "Rue des Mauvais Garçons," the "Pont au Change," and the weird "La Morgue"—marred though this last undoubtedly is by the grotesque groups of figures in the foreground.

It is doubtful whether Jean-François Millet has ever been seen to such advantage as an etcher as on the present occasion. His technique has been somewhat imprudently called coarse, because it is not lavish of subtle and delicate effects. It is rather incisive and synthetic, and in his best work of this kind suffices completely for the expression of his peculiar genius, in its massive strength and infinite tenderness. By no refinement of technical means could the artist's intention in the noble and almost monumental "La Cardense," be better expressed, and the same may be said of the equally broad but different style of execution applied to "La Grande Bergère." In "La Femme qui bat le Buerre," and especially the admirable "Paysan rentrant du Fumier," the etching-needle is used with a somewhat lighter touch and more variety.

To praise again after Mr. Monkhouse the magic subtlety of observation, the singular delicacy united to firmness of execution, of Jules Jacquemart would be to praise them less well. In the vivacity and skill with which he reproduces, or rather interprets, exquisitely-wrought armour and arms, goldsmith's work, vessels of precious agate and sardonyx, and highly-wrought wood-carvings, he has known no rival; while it is only by comparison with himself that he falls short in the presentment of the precious porcelains of the East and West. In the curious original subject, "Une Exécution au Japon," the daintiness of the rendering causes the horror of the motive to be half-forgotten.

M. Félix Braquemond is the only living artist whose work has been allowed to take its place by the side of that of the deceased masters of the century. As an original etcher, he appears to the highest advantage in the superbly broad and incisive "Vanneaux et Sarcelles," "Motifs d'un Service de Table en Faïence," and, above all, in the masterly "Le Vieux Coq." As a translator of other men he is seen in the "Erasmus" after the Holbein in the Louvre, which, good as it is, cannot vie in sympathetic truth of interpretation with Ferdinand Gaillard's incomparable engraved reproductions of kindred masterpieces.

That gifted amateur, the novelist, Jules de Goncourt, is represented by the delicately-touched "Le Taureau," and by the "Jeune Femme accrochant un Cadre," after Fragonard. Daubigny will not gain much by his appearance here as an etcher; while Corot, on the other hand, although evidently not a practised master of this mode, is able to express his fascinating artistic personality and his indefinable pathos in two "Etudes d'Arbres," and a "Souvenir d'Italie"; in which studies, however, there is very naturally to be found far less of that rare subtlety in suggesting what is apparently, but only apparently, passed over than in his paintings.

A very master of all the *procédés* of the etcher is the but lately deceased Maxime Lalanne, who was not only an exquisitely accomplished practitioner of his art, but wrote also an already classic *Traité de la gravure à l'eau-forte*. Somehow, however, his work, notwithstanding its technical accomplishment, has about it a kind of flavour of the glorified drawing-master, which prevents it from taking equal rank with that of the often less skilled *eau-fortistes* but greater individualities by whom he is here surrounded.

Meissonier, though in his long career he etched but few plates, shows an unexpected mastery in this side branch of his art. His elaborate yet broad and expressively engraved character-subjects, "Il Signore Annibale" and "L'Homme à l'Épée," have many of the fine qualities of his paintings, while they do not escape his characteristic defects of coldness, want of spontaneity, and narrowness of view. In one respect the etched is more agreeable than the painted work, since it suffers less by the harshness and hotness of colour which even Meissonier's most uncompromising worshippers must admit to be one of his greatest drawbacks.

CLAUDE PHILLIPS.

THE DISCOVERY AT THEBES.

THE following is the French text of a report by M. Grébaut to a private correspondent in England, which we publish with his sanction:

"NOTES SUR LES SOUTERRAINS DES PRÊTRES D'AMMON."

"La fouille a été ouverte le 31 janvier dernier à l'est du temple de la reine Hatason, à Deir el Bahari.

"On a vidé un puits de 15 mètres de profondeur. Au fond, du côté sud se trouvait la porte, fermée par un entassement de grosses pierres. Un premier corridor allant du nord au sud, après 76 mètres, descend par un escalier de 5^m 23, et se continue pendant 12 mètres encore jusqu'à deux chambres funéraires, l'une de 4 mètres, l'autre de 2. À la hauteur de l'escalier se trouve la porte d'un second corridor de 54 mètres.

"Tous ces souterrains étaient remplis de momies enfermées d'ordinaire dans de triples cercueils. Il y en a 163. Sur un certain nombre de cuves extérieures la place du nom est restée en blanc. Une dizaine de cercueils avaient été dorés: l'or est gratté, les mains, les visages dorés sont enlevés. Les sarcophages étaient posés en désordre. Dans plusieurs endroits ils étaient entassés les uns sur les autres. Les plus récents, et ceux là sont aussi les plus nombreux, appartiennent à la XXI^e dynastie.

"Tout cela démontre que nous avons trouvé une cachette faite dans le même temps et dans les mêmes circonstances que celle des momies royales de Deir el Bahari. Les dernières momies royales sont aussi de la XXI^e dynastie. Les cuves dorées des momies royales avaient été détériorées par les voleurs dans l'antiquité. Enfin les momies royales n'étaient pas toutes dans leur cercueils primitifs. Au moment d'un déménagement fait à la hâte, quand ces cachettes ont été faites, on a placé dans des cuves prises en magasin, les cercueils dont la cuve extérieure avait été brisée par les voleurs, et souvent on n'a pas en la temps, ou on n'a pas pris la peine d'écrire le nom, que nous trouverons sur les

cercueils intérieurs. Les noms écrits sur les cuves extérieures sont presque tous ceux de prêtres ou de prêtresses d'Ammon. Il y a pourtant un prêtre de la reine Aah-hotep, un prêtre de Set, etc. Ces sarcophages sont généralement d'une belle conservation. Ils sont d'une grande beauté, les décorations très fines, riches et jolies.

"Au passage, pendant qu'on transportait ces sarcophages, j'ai eu bien juste le temps de dresser un inventaire sommaire, en ne prenant que les noms, et en notant l'état de conservation. Cependant j'ai remarqué quelques personnages considérables. Un de ces prêtres était préposé au trésor royal, un autre était chef des troupes auxiliaires appelées Mashouash, etc. Il y a aussi un Pinedjem fils de Masaharta. Or, dans la trouvaille des momies royales se trouve un Masaharta de la famille des Penedjem (XXI^e dyn.). Il est probable que nous avons son fils. Beaucoup d'autres noms rappellent ceux de la famille des Pinedjem. Ainsi ceux de Isis-m-kheb, de Hont-tani, de Nesikhonsou, de Ra-ma-ka, etc., etc.

"En dehors des sarcophages nous avons ramassé 75 statuettes en bois renfermant à l'intérieur chacune un papyrus. Il y en a d'énormes. Bien que, à n'en pas douter, ce soient toujours des Rituels, il ne sera pas sans intérêt d'avoir le Rituel thébain des XX^e et XXI^e dynasties, bien caractérisé, bien défini. J'espère que parmi les papyrus dont les 163 momies doivent être munies, il y aura d'autres textes que le Livre des Morts. Les autres antiquités trouvées dans les souterrains avec les momies sont curieuses, sans offrir d'intérêt historique, sauf quelques stèles.

"La découverte est importante pour l'histoire à raison des généalogies et des titres d'une série de prêtres se succédant pendant plusieurs siècles; alors même qu'on ne trouverait pas sur les momies d'autres manuscrits que des livres funéraires. Pour les études religieuses la mine est des plus riches. Ces sarcophages de prêtres ne ressemblent pas aux autres. Les figures, les scènes, y abondent, et sont presque toujours nouvelles. On y trouvera l'explication de questions restées obscures et beaucoup de renseignements imprévus. En voici un auquel on ne s'attendrait pas. Sur un sarcophage de la XXI^e dynastie le dieu Shu qui soutient le ciel, est représenté sous la forme du dieu Bes qu'on croyait de basse époque.

"Les *Akhimou* dont parlent les textes, et que quelques uns ont cru être des étoiles, sont des quadrupèdes qui traînent la barque solaire. Il y en a huit, quatre sont blanches, quatre sont noirs. Chaque groupe de quatre est formé de deux blancs et de deux noirs. Ces quadrupèdes ne sont pas des chacals. Ceux d'un groupe ont les oreilles du sceptre *was*. Les renseignements de ce genre sont si nombreux que l'étude de ces sarcophages rendra certainement de grands services aux interprètes des textes religieux.

"Je pense commencer en Avril l'ouverture des sarcophages et l'étude des cercueils intérieurs qui nous permettra de dresser un catalogue plus exact de la découverte. Je m'attends à bien des surprises à ce moment. J'ai noté souvent un nom sur le couvercle, un autre nom sur la cuve extérieure. Il est probable que le cercueil intérieur donnera fréquemment un troisième nom qui sera le véritable. Le déménagement, quand on a formé cette cachette dans l'antiquité, a été fait avec une hâte extrême. On a enfermé les petits cercueils dans de grandes cuves qui appartenaient à d'autres momies, peut être détruites, et l'on a fait servir toutes les cuves et tous les couvercles qu'on avait sous la main. Je n'espère pas trouver de momies royales, car je n'ai relevé aucun indice. Cependant à l'heure actuelle nous ne savons pas ce que nous trouverons dans un certain nombre de ces sarcophages."

CORRESPONDENCE.

THE ANCIENT MONUMENTS OF EGYPT.

Cairo: Feb. 16, 1891.

Writing from Luxor, on January 13, I stated that the temples were unenclosed. On my return here I happened to meet the modeller of the Ghizeh Museum, who asked me, with an air of triumph, if I had seen the temples at Abydos and was content with the precautions that had been taken to guard them, he himself

having been there to direct the works. He is a very amiable young man, an excellent modeller, and I had not the heart to tell him how matters really stood at Abydos. What I found was this:—I had not long been in the temple of Seti I. when I was aware of dark objects popping up on the tops of the walls, the said objects, by pantomimic signs, expressing a desire for *baksheesh*. Presently a form appeared, furtively flitting about the columns, and then others, until at last I had a small crowd round me offering relics for sale. A remonstrance to the guardian resulted in an indiscriminate application of bastinado, and the crowd fled to the door, which was obligingly opened for them by another guardian. A similar performance was repeated several times during the course of my visit. It was the same at the temple of Ramses II. The fact being that my friend had placed doors to the temples at their entrances, but he had forgotten that access to them at the backs and sides was a feat that a cripple might perform with perfect ease. This truly oriental manner of doing business is typical of how affairs are managed at Ghizeh. A task has to be accomplished, and a gentleman is selected to look after it whose training and education has been in a totally different direction.

When first the attention of the authorities was called to the alarming destruction of the monuments, which has been in progress for many years past, a scheme was submitted to them which had been carefully considered by men having practical experience of the subject. This was at first ignored; but when pressed, as it has been on many occasions during the past five years, it has invariably been met with transparently trivial objections. It still holds good; and until sufficient pressure can be brought to bear on the Foreign Secretary to induce him to send a competent person from England to report on the state of the monuments, and to point out what is needed for their preservation, we may expect nothing more than the repetition of such futile botching as this Abydos job.

HENRY WALLIS.

NOTES ON ART AND ARCHAEOLOGY.

The Fine Art Society will have on view next week, in New Bond-street, a series of pictures by Mr. Alfred Parsons, entitled "Gardens and Orchards." The annual exhibition of the Royal Institute of Painters in Water-Colours will not open until the following week, but we may mention now that there will be two private view days, Thursday and Friday next.

MR. HOLMAN HUNT's latest great picture, "The Triumph of the Innocents," has, like the "Dante's Dream" of Rossetti, found a permanent home in the Walker Art Gallery at Liverpool. Towards the price £1500 has been contributed by the museum and arts committee of the city council; the remainder is to be raised by public subscription.

An interesting exhibition of bookbindings is now on view—and will remain open throughout next week—at the Caxton Head, in High Holborn. Mr. and Mrs. Tregaskis have carried out the happy idea of getting some forty copies of the same book—Kingsley's *Water Babies*, illustrated by Linley Sambourne—bound by as many different binders, English and foreign. Zaehnsdorf, Bedford, Riviere, Tout, and Morrell are all represented, as well as some of the most valued masters of the art in France, Holland, and Germany. There are also examples of the modern fashion of needlework bookbinding.

The magnificent collection of Japanese art formed by the late Philippe Burty is to be sold in Paris from March 16 to 20. The series of paintings and *kakemonos* is probably unrivalled.

WE hear from Luxor that the foreign tourists, chiefly English and American, now congregated there gave a complimentary banquet to M. Grébaut, on February 17, in honour of his great discovery, and also in recognition of his unflinching courtesy to visitors.

An exhibition in Paris of the works of Meissonier is spoken of. The place suggested is the Ecole des Beaux-Arts, and it is proposed to devote the profits to the erection of a statue of the painter.

THE Boston Museum of Fine Arts has at present on view an exhibition of books, water-colours, engravings, &c., by William Blake. A similar exhibition held there in 1880 was notable for the contributions of Mrs. Gilchrist. The present one includes a probably unrivalled collection of eight out of fifteen of the "Songs of Innocence" series, almost all lent by Mr. E. W. Hooper, though none of Mr. William Muir's admirable reproductions; a number of water-colours, the property of the museum; and a set of original sketches, which are said to have come to light on J. C. Hotten's death, and were then exported to America. Some of these are now in the possession of Prof. C. E. Norton, of Harvard. The Catalogue of the exhibition, which bears no name, is a scholarly piece of work. We may, however, assure the writer that the illustrations to Lamb's *Tales from Shakspeare*—whether engraved by Blake or no—certainly appear in the first edition (1807). And, as no complete list of Blake's engraved work has yet been compiled, we take this opportunity of mentioning that Stedman's *Narrative of an Expedition against the Revolted Negroes of Surinam* (first edition 1796) contains thirteen plates (engraved in stipple and printed in colours) by Blake, besides two or three others unsigned, which may possibly be attributed to him on internal evidence. The signed ones are those numbered 7, 8, 13, 18, 19, 22, 38, 42, 49, 52, 68, 76, and 80. Most of them represent naked negroes, some undergoing horrible tortures; two, the gambols of monkeys in trees; one, a boa constrictor being skinned; and one, some fruit. The book was published by J. Johnson, of St. Paul's-churchyard, for whom Blake did a good deal of work at this time; and some of the other engravings are by Bartolozzi and Benedetti.

MESSRS. DOWDESWELL & DOWDESWELL, of New Bond-street, have just published a large plate, upon which Mr. David Law is understood to have been engaged for some time past. It represents Balmoral Castle, as seen from the further bank of the Dee, which swirls along in sun and shadow in the foreground. The confused mass of towers and turrets, in the Gallo-Scottish style, are also touched by sunlight. Thick woods fill the middle distance; while all the artist's technical skill has been bestowed on the foliage of a tall birch which frames the scene on the right. Behind rise mountain ranges, half-obscured by a gathering storm. The treatment of the entire scene, the subordination of architecture to landscape, the balance of light and shade—all show the trained hand and eye of one of the foremost of our painter-etchers. Apart from the popular appeal of its subject—though Balmoral is not so easy of access as Windsor—this grand plate is a worthy memorial of Mr. David Law's mature powers.

THE STAGE.

"THE IDLER."

MR. HADDON CHAMBERS does not indulge us with new and revised views of life. He is not subversive; he is not didactic. He does not hold, as the major part of his artistic creed, that it is only the ugly that

is interesting. He brings on to the stage the bad and the good. He treats life as it is. He condescends to entertain as well as to instruct. He is without any other than an artistic mission. He makes good plots, creates real characters, and has the luck to see—at all events at the St. James's Theatre—that an almost perfect interpretation of his play goes far to ensure, on the part of the audience, a thorough understanding of what he has conceived.

The story of "The Idler"—built up with real ingenuity and resource—is, in its essence, simple. It deals with the temptation that besets and threatens for a while to overcome one Mark Cross, who, having, at a time when he could not marry her, loved a woman who had appeared to like him, returns, able to marry her, longing to do so, but finding her married by this time to a man she did not like, but loved. That is the *donnée* of the piece. Can he still possess himself of her? His first excuse for the thought lies in the fact that he believes her husband to have purposely slain a man with whom he had quarrelled in a land where revolvers are, at least, as common as watch-chains. He is convinced to the contrary. But he is not overdone with moral fibre. His love has become a disease. And the play is occupied with his struggle against the woman's conscience and his own. His own, though it does exist, is admittedly feeble. The woman, on the other hand, has a very good share of principle; and, though she likes the love-distraught gentleman, and pities him, her morality finds an ally in the circumstance that her attachment to her husband is profound.

All sorts of incidents, occurring ingeniously, seem, nevertheless, to make the efforts of Mr. Mark Cross anything but a forlorn hope. The lady's husband is to be accused of murder by the brother of the Western American whose life had indeed been taken. The brother is a millionaire, and that circumstance places at his disposal much assistance he would otherwise lack: it is not improbable that he will succeed in bringing Sir John Harding to what he considers to be "justice." But then again he is one of those millionaires who are, not unnaturally, susceptible to the attractions of English damsels, when English damsels are impersonated by *ingénues* like Miss Maud Millett. The millionaire wavers. Perhaps after all he will hardly seek to get Sir John Harding into custody, for Sir John Harding's wife is the sister of the English damsel. But we shall not finish the story. What he does, and what Sir John Harding does, and what the wife does to save Sir John Harding, and what the gentleman of occasional good intentions does to elope with the lady of whom he is so exceedingly madly enamoured—let the reader learn all that at the theatre itself. Let it only be said here that in his process of weaving what is a very stirring tale—what is, indeed, to some extent a melodrama of good society—Mr. Haddon Chambers has recourse, once or twice, to courses of action not true to the characters he represents. By this is his play weakened, when we come to think over it; though, at the time, one questions nothing—so cleverly are the incidents

dovetailed. But, to take an instance—the worst—and to have done with it, the conduct of Sir John Harding when he suspects his wife and his old friend is not very high-minded or very natural. The lady is not at home when he expected her to be. At his friend's house he finds her fan, and considers it damning evidence. He finds the lady herself, and it is all over. The real Sir John would not have attached such extreme importance to the whereabouts of that sceptre of the world, *l'éventail d'une belle*. And when he saw that the lady herself had of a truth been where the fan had been, he would have conceived it possible—under his own peculiar circumstances, as a man who might at any moment be charged with crime—that she was where she was, not for her pleasure, but in pursuance of his interests, which was indeed the case. We will not, however, end with fault-finding. The play is very strong, very interesting; it deals very deftly on the whole—and always healthily—with a theme that is difficult.

The acting is singularly finished and judicious, and lends the piece, unquestionably, a fascination which the naked MS. could hardly inspire. Mr. Alexander reaches to subtlety in his personation of Mark Cross. He makes the man tender, but, as obviously, untrustworthy. He gives him grace, and he denies him strength. The type is marked most cleverly. Mr. Herbert Waring plays with sympathetic directness the plainer downright part of Sir John Harding. He is forcible, yet restrained. He is completely unaffected. A new comer from America—Mr. John Mason—plays the millionaire who would avenge his brother, but whose heart hesitates because of the charms of the English damsel. Mr. Nutcombe Gould plays a smaller part with befitting carefulness, but the opportunity of much effect is denied him. Small, too, is the part of Miss Gertrude Kingston, nor does she force it into prominence. Lady Monckton—as the mother of Mark Cross—plays most skilfully. Miss Marion Terry and Miss Maud Millett are the graver and the lighter sisters. If the one is finely dramatic and fit to grapple—as she certainly is—with situations of great strength, which make great demands, the other can bestow interest and delicate charm upon a character which, as it left the hands of the author, was a little vague and thin.

FREDERICK WEDMORE.

"TWELFTH NIGHT" AT ST. ANDREWS.

THREE very spirited and well-balanced performances of "Twelfth Night" were given last week by the St. Andrews University Shaksperian and Dramatic Society—the same company which ventured last February upon the interesting and successful experiment of producing the "Aias" of Sophocles in the English version of Prof. Campbell. Though not so difficult or ambitious as a Greek play, the present performance was one to tax the powers of an amateur company. The result bore witness, in the case of nearly all the performers, to most conscientious study and intelligent appreciation of the characters, situations, and dialogue. Some of the leading

parts were played with real dramatic aptitude. The somewhat trying part of Malvolio was rendered with excellent judgment by Mr. Fergusson. Mr. Barclay played the Clown with refreshing ease and buoyancy; and his singing of the charming song "O mistress mine" was a distinct addition to the carousal scene with Sir Toby Belch and Sir Andrew Aguecheek. Mr. Marshall entered into the part of Sir Toby with real humour and abandon. The midnight scene referred to, where Malvolio surprises the two knights and the Clown singing catches with Maria for a listener, was perhaps the most effective in the performance; though the subsequent scene, where Malvolio reads the letter within hearing of his ambushed enemies, was also a piece of well-sustained acting. The play owed much to the lady amateurs who assisted the society on this occasion. Miss Heddle played excellently in the rather "unthankful" part of Olivia, while Miss Hallard's Viola was as sweet and charming a piece of acting as one need wish to see. If a criticism must be offered, it would be that she did not perhaps sufficiently enable us to forget Viola in Cesario. Miss Thomson brought just the needed archness and merry humour to the part of Maria. The excellence of the performance, it may be added, was in no small degree owing to the unwearied pains of Mrs. Lewis Campbell in superintending the arrangements of the piece and the training of the company.

S.

STAGE NOTES.

THE piece done at the Vaudeville on Tuesday morning—it is called "Our Angels," and is by Dr. Dabbs and Mr. Edward Righton—is clever enough in its way. It sustains interest; and though it does not present any fresh character with whom we may make acquaintance, or indulge us with any charm of poetry or even of brilliant comedy, it is, as a whole, well written, and it is very neatly constructed. Were we of a mind to be rough and plain about it, we might say no doubt that as a piece of literature it is not likely to hold its own very long, but that meanwhile it is exactly the kind of thing to be paid a good price for by an enterprising manager, and to be taken round the country with distinct success. It was played very well on Tuesday. Care had evidently been taken to get a good cast, and the better actors seemed to believe in their parts and in the play. Mr. Righton contented himself with quite a small character, which he played quaintly, with certain touches of nature, and with the ease that comes of experience. But the best men's parts—those of the polished scoundrel and the homely party who baffles him—fall to the lot of Mr. Lewis Waller and Mr. W. H. Vernon. Mr. Waller is sound and thorough; Mr. Vernon at once judicious and entertaining. The heroine was played with good taste and sincerity and warmth of feeling by Miss Beatrice Lamb—"the only blonde you ever saw who has the strength of a brunette," as someone who approves of brunettes has rather prettily said of her. Miss Lamb is often like Clytie, and perhaps still oftener like an Albert Moore. An extremely effective comedy-part is played by the clever Miss Fanny Brough, with all the resources—and they are many—that are at her command. She is most pleasantly acidulated. In brief, the interpretation all round, on Tuesday, was infinitely better than one is accustomed to expect at a *matinée*. The piece can hardly fail to be heard of again, and meanwhile more than one of those who performed in it may be happy enough to feel that they have covered themselves with honour.

On Saturday evening we were in the wilds of Notting Hill: the place, Ladbroke Hall; the

occasion, a trial performance of a charming little comic opera, called "Equality Jack"; the words by Mr. Poel, the music by Mr. Vinning. Captain Marryat has inspired both these gentlemen. It is long since we heard anything more tuneful or more spirited. It is long since a nautical play was done with better taste or with more neatness, whether as regards its musical composition, its libretto, or, we may even add, its interpretation. For, though the major part of the performers were amateurs, most of them were well fitted to their characters: there was no placing of square pegs in round holes; and Mr. Poel, the author, had drilled them as a born stage-manager. He has indeed real art in such matters. We cannot possibly name all the actors. It would be invidious to single out one or two of them. The piece has the curious characteristic of *The Lady of the Aroostook*, that there are many men in it and only one woman. At the Ladbroke Hall performance—and we should trust in any other—the part of the heroine, Nancy Spruce, falls to Miss Rose Mitchell, who has a distinct appreciation of light comedy. As a singer her voice is not great, but it is very pleasantly managed. We should like something more of a skirt dance—we do seem once to be on the verge of it—in the first act. In the second act, Miss Mitchell dances a hornpipe with great lightness and unusual grace. Of "Equality Jack" it is evident that we have not heard the last. It will have its day.

MUSIC.

RECENT CONCERTS.

MR. HENSCHEL gave the last concert of his fifth season at St. James's Hall, on Thursday, February 26. The programme opened with Brahms's clever and genial Academic Festival Overture (Op. 80). This work is admired here, but is naturally more popular in Germany where the student songs on which it is based are familiar to every hearer. Haydn's Symphony in B flat (No. 9 of the Solomon series) is delightful music, and the performance was good. The forerunner—or perhaps we ought to say one of the two great forerunners—of Beethoven may as a rule have been light-hearted, but he had his serious moments; and it has never been fully shown how much the Bonn master was indebted to him. The Wagner selections were the "Siegfried" Idyll, the "Good Friday's Spell" from Parsifal, and the "Tannhäuser" overture. Mr. Henschel is evidently in special sympathy with this music; but his

feelings at times get the better of him, and his good intentions are not always realised. Mrs. Henschel sang with much fervour her husband's effective "Hymne au Créateur" (Op. 41), and was much applauded. There was a good and enthusiastic audience.

An immense audience assembled at the Crystal Palace, on Saturday afternoon, to hear Herr Joachim. Just as the Beethoven Concerto commenced, the violinist broke a string, and there was an awkward pause; but the splendid performance of the work soon caused this small misfortune to be forgotten. Often as Herr Joachim has played the Beethoven Concerto, it may be questioned whether he ever gave a fuller revelation of the power and beauty of the music. He afterwards played some of the Brahms-Joachim Hungarian dances. The programme included Haydn's "Oxford" Symphony, the first movement from Mr. Wingham's Serenade in E flat, and Ponchielli's "Dance of the Hours." Mme. Bertha Moore was successful as the vocalist.

Mr. Augustus Harris gave the "Golden Legend" at Covent Garden on Saturday evening. Mme. Nordica was not in good voice. Miss Meredyth Elliott, the contralto, has a pleasing voice, but her singing lacked warmth. Messrs. Lloyd and Watkin Mills did justice to themselves and to their parts. The chorus sang well. Mr. Randegger conducted. There was a large attendance, and the music was evidently much enjoyed. Sir A. Sullivan just now is the most popular of English composers.

On Monday evening Brahms's Quintet in G (Op. 111), for two violins, two violas, and cello, was given for the first time in England at the Popular Concert. A new work from the pen of one of the greatest of living musicians naturally excites attention, and there was a large attendance. In the opening Allegro the thematic material is interesting, and it is developed with rare skill. The movement, however, although perfectly clear in form, cannot be taken in at a single hearing. We fancy that the music will increase in power as it becomes familiar. The short Adagio, with its plaintive theme, its questioning interlude, its characteristic variations, is the gem of the work. The third movement, Allegretto, has charm and delicacy. The Finale, to use a common expression, "smells of the lamp," and in places sounds ugly. But, again, it is too soon to form a definite opinion; it contains, in any case, clever writing. The Quintet was finely interpreted by Messrs. Joachim, Ries, Straus, Gibson, and Piatti, who were recalled

more than once at the close. Mlle. Eilona Eilenschütz was the pianist. She played Chopin's Etude in C sharp minor, from Op. 25 (although the one in the same key from Op. 10 was indicated in the programme-book). In this, and still more in the same composer's Scherzo in B flat minor, her reading was formal and cold. She gave Chopin's Valse in E minor as an encore. She took part in Beethoven's B flat Trio (Op. 97); but here again, although the technique was correct, her playing seemed perfunctory. Herr Joachim gave a magnificent rendering of Bach's "Chaconne," and of an encore movement by Bach. Mr. Orlando Harley, the vocalist, was well received.

Mlle. Jeanne Douste commenced a series of historical pianoforte recitals at the Steinway Hall on Monday afternoon. The scheme, suggested probably by the series of recitals given a few seasons ago by Rubinstein, is an excellent one. Students attending these concerts will be able to follow the course of pianoforte music from the age of Scarlatti, Couperin, and Bach, down to Liszt and other modern and living composers. Mlle. Douste was highly successful on Monday in many small eighteenth-century pieces. On Wednesday the programme was devoted entirely to Beethoven, and commenced with the Trio in C minor (Op. 1, No. 3). Mlle. Douste's rendering of the "Waldstein" Sonata was tame; and of all the Sonatas of this master none more than Op. 53 imperatively demands a *brío* style of performance.

J. S. SHEDLOCK.

MUSIC NOTES.

THE friends of the late Prosper Sainton are endeavouring to perpetuate his memory by the foundation, at the Royal Academy of Music, of a Violin and other Orchestral Scholarships. To this institution Mr. Sainton devoted no less than forty-five years of his life. The subscription list already amounts to nearly £500. Mr. Augustus Littleton, 1, Berners-street, is hon. treasurer.

THE first number of a weekly newspaper entitled *Musical News* is announced to appear on Friday, March 6. The proprietors include gentlemen connected with the Royal Academy, the Royal College, and the Guildhall School of Music.

M. YSAÏE, the Belgian violinist, will appear at the concert in aid of the funds of the Society for the Prevention of Cruelty to Children on March 20.

TRISCHLER & CO.'S LIST.

Now ready, at all Libraries and Bookstalls.

LADY DELMAR. 1 vol. By Thomas Terrell and T. L. WHITE. This exciting story of London life has already been dramatised by Mr. Sydney Grundy.

The *DAILY TELEGRAPH* says:—"A remarkable novel." See also leading article on this dramatic story of human nature in *DAILY TELEGRAPH* of February 25.

The *DAILY NEWS* says:—"A complex story of life in London, with many exciting incidents."

"*Lady Delmar* is distinctly a book to read; it is vivid with variety, culminating in interest, and original in treatment."

Handsomely bound in scarlet cloth, 354 pp., crown 8vo, 2s. 6d.

AN AMERICAN WIDOW. 3 vols. By ALBERT KEVILL DAVIES. A vivid and piquant story of American life in London.

Morning Post says:—"An American Widow" is very amusing, very brightly written, and original."

The *SCOTSMAN* says:—"Is cleverly written and ingeniously contrived. A very clever sensational melodrama."

The *EVENING NEWS AND POST* says:—"A capital exposé of the American invasion of England by young ladies in search of husbands amongst the scions of our nobility. Throughout the whole three volumes there is not a single dull chapter."

The *FIGARO* says:—"It is both clever and original, and treats with conspicuous ability a topic which is discussed with avidity on both sides of the Atlantic."

The *SUNDAY TIMES* says:—"Few better novels than this have been published lately."

HOLLY. 2 vols. By Nomad, Author of "The Railway Foundling," "The Milroys," &c.

In speaking of this author's last work, "The Railway Foundling," the *DAILY TELEGRAPH* says:—"It is a story that must be read to be understood. There is vivacity and adventure in it, and, good as the author's previous work, 'The Milroys,' was, it is not too much to say this is better."

The *SCOTSMAN* says:—"The readers among whom 'The Railway Foundling' and 'The Milroys' have been popular novels will probably be charmed with Nomad's new work of fiction. 'Holly' is as lively and artless, as light and readable, as its predecessors."

THE GOLDEN LAKE: a Story of Australian Adventure. By W. CARLTON DAVE, Author of "Zantha," &c. With eight full-page illustrations by Hume Nisbet.

Morning Post: "A welcome addition to the fiction treating of 'The Great Land of Australia, the effect of which is increased by Mr. Hume Nisbet's numerous illustrations."

Sunday Times: "A very strong and well-written story of Australian life, told with a swing and 'go' which make it very entertaining reading."

SCOTSMAN: "A clever and entertaining narrative of travelling adventures in the unknown interior of Australia. Mr. Dave's inventive talent is lively, and his literary faculty genuine." Extra cloth, with bevelled boards, 6s.

ALWAYS IN THE WAY. By T. J. Jeans, Author of "The Tommielug Shootings," with nine Full-Page Illustrations by Finch Mason. Cloth extra, 2s. 6d.

THE PRISONER OF CHILOANE. By Wallis MACKAY. With 80 illustrations by the Author.

The *WORLD* says: "A brightly written book."

Morning Post: "Bright and attractive."

The *SATURDAY REVIEW*: "Mr. Mackay is as good with pencil as with pen."

The *SCOTSMAN*: "Written in a bright, spirited style, and the illustrations are full of fun and movement."

The *SPECTATOR*: "Much that is worth reading in Mr. Mackay's book." Foolscape quarto, handsomely bound in cloth, bevelled edges, 7s. 6d.

A MAIDEN FAIR TO SEE. By F. C. PHILLIPS, Author of "As in a Looking Glass," and C. J. WILLS, Author of "In the Land of the Lion and Sun." Copiously illustrated by G. A. Storey, A.R.A. Foolscape quarto, beautifully bound, with gilt top, 6s.

THE BLACK DROP. By Hume Nisbet, Author of "Ball Up," &c. Extra cloth, 2s. 6d.

RITHERDON'S GRANGE. By Saumaurez DE HAVILLAND, Author of "Strange Clients," &c. Picture bds, 2s.

THE ROMANCE OF A LAWN TENNIS TOURNAMENT. By Lady DUNBOYNE, Author of "Thru' Shoe and Shower," &c. A charming story of country life. Picture cover, 1s.

THE TYPE-WRITTEN LETTER. By R. H. SHERARD, Author of "Rogues," "Agatha's Quest," &c. Limp cloth, 1s.

TRISCHLER & CO., 18, NEW BRIDGE STREET, E.C.

SATURDAY, MARCH 14, 1891.

No. 984, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

"EVENTS OF OUR TIMES."—*The War in the Crimea*. By General Sir Edward Hamley. (Seeley.)

THIS book, the first of "Events of Our Times"—a series in the hands of Messrs. Seeley—has not disappointed our exacting hopes. General Hamley is well known as the accomplished author of a really great work, *The Operations of War*, the best military treatise in any language, if we except Napoleon's unrivalled "Commentaries"; and he has given us in this volume an admirable account of the Crimean War of 1854-5. The narrative is just what it ought to be—a clear, compendious, but able description of the events of that remarkable contest, scientific enough for the student of war, yet quite intelligible to the general reader. General Hamley has, for the most part, placed the facts of the war in their true proportions. His reflections are, as a rule, just; and it is one of his distinctive merits that he can describe a great siege, one of the most memorable in the annals of war, without employing recondite terms of art which would "make Quintilian stare and gasp," and are to unprofessional readers unknown mysteries. His eye, too, for delineation is exceedingly good, and his sketches of the different parts of the theatre are clear, graphic, distinct, and complete. We shall differ from him in some particulars, especially in his estimate of Pélissier. But his judgments on Lord Raglan are sound and accurate; and, on the whole, an intelligent reader will learn more of the subject from this little volume than he will gather from Kinglake's bulky history—a false, unjust, and meretricious work.

We shall not follow General Hamley in his brief account of the events that led to the Crimean War; he is impartial to all the Powers concerned. He shows from official sources that the siege of Sebastopol was contemplated as early as June, 1854; but we can hardly agree with him that an enterprise of the kind held out a reasonable prospect of success, through a mere descent on the Crimean coast. His sketch of the departure of the allied fleets, and of the landing at Old Fort, is vivid and good; but the student of war will note that two armies disembarked in a region completely unknown, without supplies or the means of transport—one cause of the grave disaster that followed. General Hamley's description of the fight of the Alma is just and admirable in all respects, and exhibits his practical knowledge of war. The battle was the first great conflict of European armies that broke the repose of the long peace, if we omit the

events of 1848-49; and it was marked on all sides by very plain errors. Had Menschikoff taken a position on our flank, we doubt if we could have advanced at all. The allies would have been compelled to fight with their backs to the sea, and in a front parallel to a precarious base; and their enemy would have had his communications covered. The Russian general, however, resolved to stand, and to make a passive defence in front. But he carried out badly this vicious system—he did not secure his left at all, and he occupied the ground without skill or insight. On the other hand, the plan of the allied attack was ill-conceived, and a bad display of tactics. The assailing armies, beyond dispute, ought to have extended themselves to the enemy's right, and endeavoured to force him against the sea, where the slightest reverse would have been destruction. The chiefs did not see and understand their business. The French attack, again, was feeble and ill-designed: thousands of men were not engaged at all, and a whole army did little more than make a demonstration of doubtful value. Nor were we less faulty on our side. General Hamley very properly condemns the erratic ride of the commander-in-chief, absurdly made a subject of praise by Kinglake; and our attacks were desultory, badly combined, and imperfect. The dogged and fierce courage of the British soldier got the better at last of these shortcomings; and the line, as usual, beat the column, an experience as old as the days of Pyrrhus, if the line is composed of better men. But the Russians were very inferior in numbers; and the battle of the Alma was a mere victory, whereas it ought to have been a decisive triumph.

General Hamley properly rejects the theory—swallowed by Kinglake in order to sneer at the French—that Sebastopol would have fallen at once, had the allies, after the Alma, marched on the place. He shows that Todleben's view of the subject, advanced to magnify his own exploits, when fairly examined, is utterly untrue. The allies might perhaps have mastered the north of the fortress, but they could not have mastered the south side without the co-operation of the fleet; and the Russians prevented this by sinking some of their ships. Bad as a tactician, Menschikoff had strategic knowledge. He showed skill in closing the mouth of the harbour and covering the fortress on its most vulnerable side; and he acted rightly in marching towards Bakshisarai with his defeated army. General Hamley describes the well-known flank march; justly censures Lord Raglan for the scant precautions taken in a difficult and perilous movement; and asserts that the allied and Russian chiefs were alike to blame for faulty reconnoitring. He gives us an excellent account of the allied positions as ground was taken before Sebastopol; and examines and dismisses the view—we are afraid Todleben has extolled himself—that the place could have succumbed to a sudden assault. General Hamley properly shows how absurd was the notion that the allied fleets could have reduced the forts of the Russians. Wooden walls were no match for stone walls, even in the days

of the old round shot, and were certain not to resist shells; and our ships and those of the French were, beyond dispute, beaten. The first great act of the siege, however, was the bombardment of October 17. Our batteries certainly accomplished much and silenced the fire of those of the enemy; but we think it very doubtful whether an assault could have been tried, with good hope of success, even had the French batteries remained intact. General Hamley describes the stirring events that followed impartially, and in a very clear narrative. The Russian army in the field had by this time been strengthened. Balaklava and the adjoining tract was an outlying and vulnerable part of our lines, and the enemy soon made an effort against it. General Hamley gives us a striking account of the deeds of the Heavy and Light Brigades, unparalleled, perhaps, as feats of horsemen; but if this was magnificent it was not war, and he properly censures Lord Raglan's orders. This leads us to the great day of Inkerman, the most heroic, perhaps, of England's battles. Nothing can be better than the sketch in this work, it fairly shows that, had the Russian chiefs known how to make use of their overwhelming numbers, nothing probably could have saved the allied armies from a crushing reverse, if not from destruction. But the Russian attacks were, so to speak, strangled—masses of men were crowded on a narrow space, and could not make their superior force tell; time was given to the hard-pressed allies, and the enemy sullenly abandoned the field. But before the victory was won, the British army was subjected to a trial never endured before in its history, from Malplaquet to Waterloo; and its achievements deserve imperishable fame.

Survivors of the time recollect vividly the deep anxiety that prevailed in England when the intelligence arrived of the fight of Inkerman, with its glory and its evident perils. Three or four weeks passed, and the allied armies found themselves in a state not very much better than that of the Grand Army during the retreat from Moscow. General Hamley describes, with a graphic touch, the sufferings of our troops in that fearful winter, when famine and cold devoured thousands of victims, yet could not quench the spirit of our devoted soldiery. Making every allowance for the unexpected results of the hurricane of November 14, the disasters that occurred might have been foreseen; they flowed from the circumstance that two armies had landed in a remote nook of the East without a regular base or proper supplies, and undertook a siege of the first order without appliances of which they stood in need. Nevertheless, as the allies had the command of the sea, and easy communication with France and England, it seems to us that there was much negligence on the part of the War Offices of both countries. After the failure of October 17, and when it was resolved to winter on the Crimean seaboard, a little forethought might have averted, in part, the calamity that befell the two armies. General Hamley is probably right in excusing the ad-

ministrators on the spot from serious blame; and, in truth, the military organisation of England and France was, at the time, unequal to a great and sustained effort. While English and French regiments were wasting away, under the terrible effects of a Russian winter, the garrison of Sebastopol was greatly increased; and, with the Russian field army, it had suffered less than the worn-out enemies opposed to it. General Hamley observes that the Russian commanders ought to have crushed the allies had they attacked in force. Todleben, the soul of the defence, was an engineer, and in no sense a strategist; and, for our part, we have no doubt that the memory of Inkerman forbade an attack. General Hamley admirably describes the system of counter-approaches employed by Todleben; as the spring advanced, what had been only a fortress became an enormous entrenched camp, surrounded for miles by formidable works, which greatly increased the means of resistance. By this time succour had reached the enfeebled besiegers; the French army had become a very large force, and the English army had been greatly strengthened; and the second grand bombardment was tried in April. General Hamley correctly says, no doubt, that the zone of defence was much injured; but he rather hints than asserts that a fair chance existed to carry the place by assault. Considering what happened afterwards, we are convinced that an effort of the kind would have probably failed.

The belligerent forces were now divided into the besiegers within their trenches and lines, the garrison of Sebastopol in its entrenched camp, and the allied and Russian armies in the field. But the besiegers were hardly as strong as the garrison—the position of the latter was certainly the stronger; while the allies could oppose the Russians with a more powerful army. In this condition of affairs, we venture to say that, strategically, Louis Napoleon was right in urging that the allies should take the field, and attempt to operate against Sebastopol by striking at the communications of the Russian army; the fortress would fall of itself before long, and easily, were the effort successful. This advice, however, was rudely rejected by Pélissier, the French commander-in-chief, who had replaced the feeble Canrobert; and, with due deference to General Hamley, this strategy, we believe, was wrong, though we shall not pretend to say that the Emperor's plans, made at a distance, were more than correct in theory. Pélissier was a man of rugged nature, but a daring, resolute, and stout soldier; and setting his master's schemes at naught, he applied himself to "taking the bull by the horns," and pressing the siege, whatever the cost. He showed strength of character in all that he did; but his generalship, we think, was altogether faulty. The third great bombardment of the first week of June once more shattered the lines of the defence, and gave the allies possession of important outworks; but no assault followed, and it would have probably failed. Pélissier continued doggedly to pour "a fire of hell" into the beleaguered place. But the great attack of June 18, when a formidable

assault was at last tried, was defeated at every point with loss; and though Pélissier made several plain mistakes, we are inclined to think that it was even now premature. Lord Raglan died soon after this failure; and the French general went on "pegging away," much after the fashion of Grant in his march across Virginia to assail Richmond. By degrees the pressure of the besiegers told; and an expedition happily made against Kertch—almost the only strategic move of the allies—deprived the Russians of a great depot of supplies, and had a marked effect on the defence of Sebastopol. The summer months were passed in this way, and the power of the garrison declined by degrees as the energy of the attack increased. Meanwhile the Sardinians had joined the allies; and an effort made by the Russian field army to operate against the besiegers' flank was repulsed, with great slaughter, on the Tchernaya.

The last act of the drama was reached in September; and Sebastopol fell, after a protracted struggle, which had endured for not far from a year. General Hamley gives us a striking account of the agony of the beleaguered fortress: how the city crumbled into a waste of ruin; how the undaunted garrison sternly held out, though slaughtered by hundreds day after day; how the choking hospitals became scenes of horror worse than the Inferno of Dante. The final assault took place on the 8th of September. After a desperate fight the Malakoff fell; but it deserves special notice that the attacks failed at every other point of the zone of the defence, a clear proof that the strength of the place was enormous. With the fall of the Malakoff the tragedy closed. But the Russians made good their way to the northern side; and they were soon in communication with the army in the field, which still maintained an imposing attitude. The capture of the city, in fact, gave the allies only a colossal wreck; they had not nearly crippled their stubborn foes, and, strategically, their position was not as good as that of the Russians, brilliant as had been their success. This in our judgment condemns Pélissier; and, as a matter of fact, it became most doubtful how the war in the Crimea was to be prolonged should the Russians maintain a stand in the winter. The exhaustion, however, of the power of the Czar solved a problem otherwise difficult in the extreme; the military strength of Russia was broken, and peace was made in the beginning of 1856. The conditions of 1812 had, in truth, been reversed; it was the Russians who had to make immense marches, without proper supplies, through frozen deserts; and their losses reached, perhaps, half a million of men—much the same as the loss of the Grand Army—while those of the allies were comparatively small, cruelly as they had suffered in the winter of 1854.

The war as a whole did not create any military reputation of the first order. Todleben made a memorable defence, and displayed wonderful engineering resource; but no French, English, or Russian commander can be said to have shown supreme ability. The contest, however, fully brought out the qualities in war of three great races, and it

is this feature of it which gives it undying interest.

WILLIAM O'CONNOR MORRIS.

Gossamer and Snowdrift. The Posthumous Poems of Charles Mackay. (George Allen.)

CHARLES MACKAY's gift of song had a certain literal character, for he was essentially a song-writer. There were few forms of verse which he did not attempt, but the only one in which he excelled was this. His longer poems give one the impression of being laboured; his short ones—those which catch some feeling of the moment, some salient truth which all the world will recognise, and which express it in rhythmic words for the popular ear—are natural, forcible, and effective. We do not go to him as we do to Wordsworth for the inner secrets of nature, but he puts into admirable verse for us those more apparent *Voices of the Mountains* which strike every ear. This word "voices" had a use and fitness for him which he was not slow to see. He called another of his volumes *Voices of the Crowd*; and it is noticeable that nearly every poem of his which lives in the recollection is the utterance of some voice or other, which is audibly welling up from the hearts of men or from the world outside. It is the true function of the song-writer to catch these voices and give them emphasised expression. The everlasting hopefulness out of which great movements spring, and by which heroic labours are sustained, is the voice we hear in such songs as "Cheer, boys, cheer!" and the "Good time coming." They are pitched in a new key, but the truth they express is as old as human nature. Mr. Eric Mackay, in an introduction to this volume, says that armies have marched to the words of the first of these songs, and that "nations, dating from 1848, have found their watchword and their rallying-cry" in the second. The latter assertion seems a bold one, but who is to question its strict accuracy? There is no political economy in the "Good time coming"; it solves no social problems, and suggests no practical groundwork on which nations and constitutions and peoples can be established, but it breathes the spirit which goes to the making of all. In songs of this kind Charles Mackay is seen at his best. Its essential quality is not high, its range of expression is limited, but its power of impulse and of encouragement is unlimited. When he tried to give voice to profounder or remoter thoughts not easily articulated, he failed. An instance of such an attempt, and of the failure resulting from it, is furnished by his *Studies from the Antique*. They are studies of a dead antique; not of a living past. Let them be compared with Keats's "Ode on a Grecian Urn," and the difference will be seen at once. "Heard melodies"—says Keats in that poem—"are sweet, but those unheard are sweeter." While Mackay could reproduce with vivid effect the actual voices around him, he lacked the genius to give voice and fresh being to a long-forgotten age and its interests.

To be a poet of the present is perhaps distinction enough, but even that distinction must be qualified in Charles Mackay's case.

The present, more than any age since the world began, is a time of speculation, of anxious doubt, of bold conjecture. We accept none of the old theories without trying them; and some of them, after trial, we are disposed altogether to reject. Mackay did not share the modern spirit in these respects. He had no doubts or misgivings. The only problems that perplexed him were such as concerned the undue power of wealth, the helplessness of poverty, the prevalence of might over right. But his faculty of belief was almost as great as his power of hope, and his message to everyone was the assurance that everything would come right in the end. "Cheer, boys, cheer!" might have been added as a refrain to nearly everything that he wrote. One is glad to find in this collection of the poet's last poems verses that recall most of his styles. If there is nothing here that will be remembered as long as some of his more popular songs, there is much that will bear reading again and again. There is the same vigorous denunciation of craft, cunning, and hypocrisy, with which he made us familiar thirty years ago; the same high hopefulness and confident outlook to the future. But while the vigour is not abated, there is added a thoughtful grace, a charm which came with age, and which shows the placid contentment of a mind to which a long life brought more satisfactions than sorrows. In some of the more chastened verses in this volume, the poet reaches a profounder depth than he had explored before. This single quatrain, epigrammatic in its completeness, is an instance:

"Frail body! cease to sue for breath,
Thou canst not conquer in the strife:
Time was created but for Death,
And all Eternity for Life!"

The same quality is observable in the following poem, which also illustrates the tendency to hope all things, and believe all things, which is so marked in most of Charles Mackay's poetry:

"IMMORTALITY.

"Man never dies—but all men die,
Is this the immortality
We fondly crave? When we are gone
Are we as heedless as a stone
Of all that was or is to be?
Alas, for thee! Alas, for me!
The blooming rose, the mounting flame,
Might, could they think, repeat the same
Sad query to the passer-by,
And ask if they but live to die;
And if the life that moves them now
Is all the cruel fates allow.
Woe's me! like gudgeons in a glass,
We turn and twist, but cannot pass,—
In vain we'd work the problem out,
Our senses fail us and we doubt;
And when to doubt is but to grieve,
Is it not better to believe?"

There are examples here, also, of that trenchant style in which most of the *Voices of the Crowd* were written. Mackay's Muse had pity for the poor and contempt for the vulgar rich, but she had no tolerance for ignorance and brutality, even when they might plead poverty as a partial cause. The poem of "Gutterslush: Maker of Parliaments," from which the following extracts are taken, is a picture of the British working-man which is not often presented

for his contemplation, but which it is well he should sometimes see:

"Gutterslush, one of the million
Can neither read nor write,
But can drink and swagger and bluster
And, if he likes, can fight.
He labours for his daily bread,
And thinks the toil severe;
And spends the better half of his wage
In tobacco and in beer.

"His wretched, ragged helpmate
Works harder far than he,
To earn a crust for the starving brats
That clamber at her knee,
Or swarm in the putrid alleys
In the puddle and the rain,
To pluck up vice in the gutter,
Deadening heart and brain."

The "good time coming," however, is nearer than it was when these verses were written. Poverty and vice there will always be; but—in Mackay's own words—

"Justice is ever done,
However cruel and long
May seem the run of wrong,
And . . . all earth and heaven above
Live in God's land of light and love."

GEORGE COTTERELL.

Racing Reminiscences, and Experiences of the Turf. By Sir George Chetwynd, Bart. In 2 vols. (Longmans.)

Turf Celebrities I have known. By William Day. (White.)

SIR GEORGE CHETWYND'S book has been looked forward to with much interest by the racing world, as few men have such experience on the subject, or have felt in their own persons more of the triumphs and annoyances of the turf.

His first volume consists of a running commentary on the Racing Calendar from the year 1869 to the close of last year, interspersed with many amusing anecdotes of the celebrities with whom he made acquaintance during that period—jockeys, trainers, backers, and owners. Many of these stories are told with much verve and humour; and it must be said, to Sir George's credit, that his judgments on all classes of the racing world are passed in a kindly spirit, a spirit which sometimes carries him too far in the condonation of conduct, notoriously indefensible, that has done so much to bring disrepute on a noble pastime. Kindness, however, is certainly preferable to censoriousness, and there is nothing contained in Sir George's Reminiscences that should hurt the feelings of any one connected with the persons and transactions alluded to in his book.

The anecdote told of the notorious Mr. Fred Swindell is illustrative of Sir George's practice, and is simply inimitable in its genuine humour. That well-known character was very ill; and Mr. George Payne, a great favourite with the author and with the whole world of sport, meeting a friend of his, asked after the sufferer. "He's very queer, Mr. Payne, very queer," was the grave reply. "You don't mean to say he thinks he is going to die, do you?" asked Mr. Payne. "Well, Mr. Payne, it isn't quite that; what he is afraid of is, that if he does, he might not be asked up into the drawing-room." It cannot be denied that

there are many racing men unfit for drawing-room society either above or below.

Sir George's Reminiscences commence before Sandown and Kempton Races had been instituted, in days when half-mile scurries were in existence, and the big stakes open at the present time unknown. Of the jockeys of whom he speaks with the greatest enthusiasm, Fordham, Archer, and Tom Cannon, the last still adorns the profession, and fortunately no word has ever been said to sully his reputation. While quite sharing Sir George's admiration for the skill of those artists, it cannot be denied that both Fordham and Cannon have lost races from the besetting sin of great jockeys, the temptation to lie too far out of their course, which Mr. William Day justly declares is the worst fault that can be committed. It is only with perfect judgment of pace that the triumph of art, to appear out of the race till the finish, and then to drop as it were from the clouds and win, can be achieved. Well do I remember such a performance by Fordham, when he won the Goodwood Stakes on Gomera in 1867; but, at the same meeting, he threw away an absolute certainty by lying equally far from the leaders, certainly a quarter of a mile, and having to hustle his horse to make it up in a mile, instead of two and a-half miles, only reached his horses at the distance to die away again hopelessly beaten. Cannon's brilliant successes of this nature are innumerable, which it were needless to name; but often enough his backers are horrified to see him coming in quietly in the ruck of beaten horses, sitting as still as if he were riding in the park for pleasure, and not contesting a race. Of course he has found out before the finish that his chance is hopeless; but his backers cannot often but feel that an earlier effort in the race might have had a more satisfactory result.

There are two schools of riders—the waiting school, Tom Cannon, his pupil Watts, and old Johnny Osborne being among its greatest exponents; and the forcing school, of which the late Fred Archer was the best that ever lived, and Tom Loates, with many other light weights, are examples. A race won by High Havens at Sandown in October last is an example of the success of forcing tactics. It was for two-year-olds, over the five-furlong course, which, as Sir G. Chetwynd points out, requires as much doing as six or seven furlongs elsewhere. It was the last race of the day; and, having backed High Havens, I left the stand, and stopped at the rails on the five-furlong course to see the horses pass, when they were about one furlong from the start. The sight was not pleasing to a backer of the favourite, as Huguenot was sailing away with a four-length head, High Havens was fourth or fifth, and his rider, T. Loates, was sitting down and driving him, as he had done from the start, quite outpaced and apparently not in it. But the colt, who is a rare stayer, caught his horses at the distance, and finished an easy winner. I am firmly convinced that his victory was due to Loates's determined riding, who never let him rest from start to finish; whereas with a lenient rider like Tom Cannon or Watts on his back, he would

never have been in it, and Huguenot unchallenged would have sailed in an easy winner.

The late Fred Archer was the greatest jockey of this class, and of him Sir George writes thus :

"Whatever faults he had, poor fellow, he was the finest 'backers' jockey' that has ever lived. He only thought of winning the race on the horse he rode somehow; and although he often got into trouble about foul riding, it was probably excessive anxiety to win that led him astray in the excitement of the moment."

This is most true; and, with rare exceptions, Archer was so determined to win on the horse he rode that he would risk his own life, or that of any other jockey in the race, for that purpose. When apparently shut in, he would take his horse through the eye of a needle, and escape often by miracle. No other jockey that ever lived would run his risks. But he was absolutely unscrupulous as to the risks he might impose on others. I well remember his winning one of Captain Machell's good things at Alexandra Park. A friend of mine had a good plater in the race that was in excellent form at the time; and the child who was riding her told the owner after the race, with tears in his eyes, "I could have won, sir, but Mr. Archer drove me on to the rails, and nearly killed me." My friend considered that it would be quite useless to complain, as none of the jockeys would have dared to give evidence against the great Mr. Archer, even if his own little boy could have been screwed up to tell the tale. Owing to the nature of the course, nothing could be seen from the stand; and these celebrities, like "Mr." Archer and "Mr." Wood, were able to play with impunity what tricks they liked with the manikins opposed to them.

Talk about a jockey ring is no novelty. Such talk, directed entirely against Wood and Archer, was rampant in 1886, when Sir George Chetwynd, fully persuaded of their innocence, brought the subject by notice before the Jockey Club, and the Stewards, while acknowledging the possibility of the truth of the rumours in question, were of opinion that, as no formulated accusation had been made, they were not required to open an inquiry. I agree with Sir George that this was a weak position to take up, and that it would have been far better to institute a searching investigation. He writes as follows :

"I do not consider that the Stewards acted with wisdom or courage in their treatment of this matter. Who was likely to bring evidence, supposing that such a ring had existed? The jockeys were their servants, their names were freely discussed, and the Stewards could have had them called up, and made them produce their betting and bankers books to prove their innocence. Personally, I do not believe such a conspiracy was ever entered into. If horses were pulled in races, I expect it was done by jockeys of their own accord, because they thought it safe to back Wood or Archer, at a time when both were riding a number of winners. Men would be idiots ever to make a bet, or ever to believe in trainer or jockey, if one-tenth of the roguery went on that ill-natured people—ignorant of horses' form, and spiteful at losing their money—assert to be of common occurrence." (Vol. I. pp. 216-17.)

All this is most true; but I cannot but think

that had a real inquiry, not one for white-washing purposes, then taken place, both Wood and Archer would have lost their licences, and Sir George Chetwynd would have been saved from the terrible position in which he has been since placed by his continued implicit confidence in the former most unscrupulous jockey.

Archer put an end to his own life, at the close of 1886, in the madness of fever brought on partly by wasting, and partly by disappointment at not carrying off the great coup he planned upon St. Mirin in the Cambridgeshire, when he missed making £60,000 by a short head. Sir George exonerates him from all blame in the riding of Galliard in 1883 in the Derby; but there is no doubt that this is not the general opinion of the racing world. Lord Falmouth withdrew from the Turf and sold all his horses after that race, which he thought that he would and should have won, had his horse Galliard been ridden fairly. Those more censoriously inclined than Sir G. Chetwynd consider to this day that the result of that race was caused by a conspiracy of the jockeys concerned, and that Lord Falmouth was not fairly beaten.

It is well known that all these ugly rumours culminated in the Earl of Durham's speech at the Gimcrack Club at York in December, 1887, which resulted in the public trials which followed. In his Preface Sir G. Chetwynd states that in the Appendix of his book a report of the trial is printed. This is not exactly correct; the Appendix of his second volume contains a verbatim report of his own examination, and of the portions of Sherard's and Wood's re-examination which deny his acquaintance with their improper transactions. I think that no fair-minded man can read this Appendix without at once acquitting Sir George Chetwynd of any personal complicity in the charges that had been brought against his stable. In his indignation at the injustice of the charges against himself, he forgets that his proved pecuniary transactions with his jockey gave a colour to the harsh statements so generally made about himself, which Lord Durham in his determination to put an end to a public scandal insisted should be brought to the test of a public investigation. I am convinced that Lord Durham was throughout actuated by the purest public motives; and the result, if in nothing else, was advantageous in getting rid from the turf of the most unscrupulous jockey who ever brought disgrace upon it. Sir George Chetwynd is probably the only individual who considers that the Jockey Club have been guilty of injustice in depriving this man of his licence. He appears still to have a sublime confidence in the purity of his maligned jockey, and would evidently wish him to be restored to a profession which he so adorned. The whole subject is unpleasant to dwell upon; but as one half of Sir George's second volume is taken up with his own evidence on the trial, it was impossible to pass it by without notice.

I have little space left to refer to Mr. William Day's *Turf Celebrities*. The celebrities included in the volume can hardly be brought within that category, and some

names seem to be introduced solely for the purpose of stating that they did not pay their trainers' bills. With the exception of the story of Foxhall and his wonderful triumphs, there is little of interest in the book; and in literary finish the trainer is nowhere with the sporting baronet. Taken all for all, Sir G. Chetwynd's *Reminiscences* is the best racing book I know; and as a neat raconteur, Sir George shows great literary skill. It were impossible for the most practised writer to have told better the amusing story of George Fordham and Woolcott, Digby Grand's trainer, putting to a better use the bottle of old port which Mr. Graham had provided to stimulate the courage of his horse before the race, which he won, when the jockey and not the horse had benefited by the owner's kind forethought.

JAMES INNES MINCHIN.

Selections in English Prose: from Elizabeth to Victoria. By James M. Garnett, Professor of the English Language and Literature in the University of Virginia. (Edward Arnold.)

THE editor of a volume of selections from English Prose may hope to convey some pleasure to his readers, but not to satisfy them; for, if he be worthy of his office, he cannot ever satisfy himself. When his choice is made, and his volume is expanded to its largest size, he must always feel that this author should be added, or that passage might be changed for something better. From these disappointments there is no escape; and the more scholarly the editor, the more fully must he share them with his readers. A selection implies a choice and a refusal; the selector's work is delicate, and his opportunities, no less than his materials, are limited by the very nature of his employment. But there are certain principles, I imagine, about which every selector would agree; and certain objects, I suppose, that each one of them would place before himself as something to be aimed at, and if possible to be achieved. He must wish his volume to include specimens of every development and change in prose, during the centuries which are to be embraced in his collection. He would assemble those whom he thought the best authors to represent the periods in question; and from their writings he would endeavour to choose the most interesting, the most beautiful, and the most characteristic passages. He would select, if it were feasible, from every kind of writer by whom English has been worthily and finely handled; and if he be an editor of absolutely sound and proper feeling, he will give to each author the exact spelling and punctuation used in the best contemporary editions. That is to say, he will strive to make his volume historical and representative, and to display in it the perfection, the strength, and the variety of the English genius. In the application of these principles, however, few selectors can agree. In the periods and in the authors chosen, in the number, the length, and the nature of the pieces, there are many diversities of opinion; and every attempt reveals the utmost latitude in judgment and in knowledge. Of the last, indeed, it is even

possible to have too much; and some editors appear to have indulged in what Tacitus calls the *licentia vetustatis*, the debauchery of philologists and pedants. These usually begin their specimens in a dim antiquity; producing thence not the *impube corpus*, the delicious boyhood of our standard writing, but the unborn members of it, the embryos of prose. These anatomies are indispensable, no doubt, for the historian, the philologist; but the fair field of literature should be guarded from the Canidias and Saganas who collect them, and who delight in them. They are not more necessary to the student of letters than a physiologist's jars and vials are necessary to the culture of an average humane being. Extremes meet, they say, like infancy and second childhood; and "Middle English" is no more fit to appear in a collection of standard prose than "Pigeon English" is, or than "English as She is Spoke": the English, then as now, of people who have a language but not a literature. The anatomists of language are not usually the best judges of English prose, and we may dismiss them to continue their researches in that middle world of the poet,

"Where nameless Somethings in their causes sleep."

From the charge of antiquarian debauchery, Mr. Garnett is entirely free; but, for other reasons, his title itself and the opening of his preface gave me no little anxiety about the remainder of his volume. "Selections in English Prose," he calls it. You may study in, or examine into a subject, but surely you select from, or out of, or among, the various examples from which you are to choose. "A preface may be expected to give the *raison d'être* of a book," Mr. Garnett says, "especially of a book of selections, when one might think this business overdone." And I cannot help thinking that he begins unhappily; for his last clause is neither logical, nor elegant, nor clear. And if Mr. Garnett had read his Addison with more sympathy, we should not have been disturbed at the very entrance to his treasury of prose by his offering us a base coin like "*raison d'être*."

"I have often wished," wrote Addison, "that certain men might be set apart as superintendents of our language, to hinder any words of a foreign coin from passing among us; and in particular to prohibit any French phrases from being current in this kingdom, when those of our own stamp are altogether as valuable."

And he goes on, with his usual sense and irony, to illustrate the vice which he exposes. If the French in Mr. Garnett's volume displeases me, the Latin that is in it, or not in it, pleases me even less. "The labor," as he writes, "of identifying the Latin quotations has been great, and will be appreciated only by those who have undergone similar labor." The labour will certainly be understood by those who know Latin; but I doubt whether the result will be appreciated. "Some of the quotations," he adds, "have, notwithstanding, eluded my search." The term *elementarii senes* is one of them, and Mr. Garnett renders it "premature old men." The words are in Seneca, "*Elementarius senex, res turpis et ridicula*"; but the sense would appear to

be the contrary of Mr. Garnett's rendering, as Ben Jonson's context might have shown him. *Elementarius* means belonging to the rudiments or to the elements of a thing; a *senex elementarius* is an old man still entangled among his nouns and verbs, still blundering through his alphabet; not a "premature," but a backward and ludicrous old man. The well-known quotation, *libertino patre natus*, has also "eluded" Mr. Garnett. In the sixth Satire of the first book of Horace, in the forty-fifth and forty-sixth lines, may be read the phrase which Sir Philip Sidney has adapted; and in Tacitus, in the third chapter of the thirteenth book of the Annals, is the quotation, *temporis ejus auribus accommodatum*. Tacitus uses it of the style and intellect of Seneca; but not, I think, in commendation, as Dryden says when he misquotes the passage and applies the words to Chaucer. I will not pursue any more of Mr. Garnett's fugitive Latin; for not only quotations, but translations, appear sometimes to have "eluded" him. Though, I wonder if it were to save his "labor" that he omitted the whole of the mottoes in the selections from Addison and Steele; it may have been done in kindness to himself, but unkindly to his readers and unkindly to those writers' memory. By nothing is the prettiness of their wit and scholarship more fairly shown than by the placing of those choice posies.

Addison and Steele are masters in the happy art of taking their reader by surprise: they win his confidence by stealth, and often lead him to his destination when they seem to loiter upon the way; and, while I meant to be talking still about the preface, they have carried me into the middle of the selections. These Mr. Garnett has made upon a deliberate plan; and, whether his plan be good or bad, he is faithful to it and very successful in it. Mr. Saintsbury's Collection, he says, and the Camelot volume of English Prose, both err in having too many authors. The former contains ninety-six authors; the latter, fifty-six; Mr. Garnett himself is content with thirty-three. If there be a crowd of authors in a volume, the selections from them are likely to be short; and many readers of Mr. Saintsbury's Collection must have felt that his pieces were sometimes too short to give a fair example of the authors' manner, and sometimes too incomplete to give pleasure in themselves. Mr. Garnett has tried to meet this real difficulty, by choosing very few authors and by giving very long selections. Now, I think it is reasonable to distinguish between a collection of authors, for the purpose of giving authors; and a selection from our prose, for the purpose of exhibiting its perfection, its variety, and its finest writers. If Mr. Saintsbury has too many authors for this latter purpose, and their pieces too short, Mr. Garnett has too few authors and their pieces too long; and the Camelot volume, while exhibiting the faults of both editors, inclines too much in some of its pieces towards the methods of Mr. Garnett. Selections should not be fragmentary, but should not be tedious; and we should be able to enjoy them without labour, though without being tantalised or disappointed; and the volume which con-

tains them should be a companion, to remind us of the great names in English prose, and to supply us with admirable and interesting examples of their style. In such a selection, I should ask myself first of all whether the volume, as a whole, contained an adequate and a representative list of English writers; if I were satisfied about that, I should go on to examine the worth and the character of the individual pieces. It may be doubted whether a list of thirty-three authors can be adequate and representative; and Mr. Garnett's volume seems to me rather a collection of good pieces about English literature, than a selection which does justice to the variety of our authors and to the resources of our prose.

Mr. Garnett begins his volume with Lyly, and ends it with Carlyle. I agree with him entirely when he says, we do not want "to see English prose in the making": that we can see in Dr. Stubbs's "Charters," and in Dr. Freeman's compositions; but I should not be satisfied with a volume of French prose that began with Montaigne or Rabelais. I should like to begin with Joinville or Villehardouin, and to be led through Froissart and De Commynes to the sixteenth century. In an English collection, I like to find something of Maundeville or Wyclif, and so to pass with Fortescue and Malory to Sir Thomas More. Between More and Lyly, English was being written by Latimer and Crammer; and what prose is more dignified and free, more musical and strong, than the prose of Crammer, the prose of the English liturgy? Upon that prose, the Anglican divines were used to form their style; some of our best writing is to be met among them, and I fear Mr. Garnett has frequented them too little in choosing his collection. The place of Clarendon is not among the essayists writing tediously upon "Happiness." He would probably say of himself, "I am happiest, not in writing of a happiness, which I seldom knew, but in recording those misfortunes which I saw and shared, *quorum pars magna fui*"; and it is surely in his characters, or in the stirring events of the Rebellion, that he excels. Sir William Temple, too, is not "in his elbow chair and undressed," as Lamb has it, talking of gardens and of ambassadors; but is writing poorly and ill at ease upon "The Ancient and Modern Learning." Raleigh, Walton, and Berkeley can ill be spared from any collection of the finest prose. Lander is not best in his "Dialogues," where he is but personating the words and thoughts of other men; and if Macanlay must be given, it should be in some of his most glowing periods. Gibbon is admirable in his *Memoirs*, but most himself in *The Decline and Fall*; and never more wanted as a model than in this age teeming with historians. For the same reason are Thackeray and Fielding wanted: to teach those who are "busied with fiction," as they call it, that novels may be written in good English and filled with humour, with tenderness, and with common sense.

ARTHUR GALTON.

NEW NOVELS.

The Maid of Honour. By the Hon. Lewis Wingfield. In 3 vols. (Bentley.)

April's Lady. By Mrs. Hungerford. In 3 vols. (White.)

An American Widow. By A. Kevill-Davies. In 3 vols. (Trischler.)

Just Impediment. By Richard Pryce. In 2 vols. (Ward & Downey.)

Exciting Leaves from a Curate's Diary. By B. S. Berrington. (Elliot Stock.)

Too Apt a Pupil. By Robert Cleland. (Blackwood.)

MR. LEWIS WINGFIELD is an interesting and conscientious writer, and his stories are never rapid or unnatural. He has not written anything better than *The Maid of Honour*, which presents just that agreeable mixture of historical fact and imaginative incident that makes a novel eminently readable. It is "a tale of the dark days of France." France has had a good many dark days; but those which are dark and sombre, *par excellence* or *par infâme*, are associated with the Revolution of 1789. This is the period chosen by the author; and his heroine—a woman of noble courage, great beauty, and steadfast affections—is Gabrielle, Marquise de Gange, one of the loveliest ladies in France, whose wonderful complexion gained for her the sobriquet of "the Lily." She was the bosom friend and attendant of Marie Antoinette and the unfortunate Princess de Lamballe. Her husband seemed unaware of the treasure he possessed in her, and left her to the persecution and the unholy passions of his half-brothers, Phebus and Pharamond. The latter was an Abbé of sensual instincts, a kind of satyr in human form, perhaps the most powerfully drawn character in the book, who reminds us of creations by Victor Hugo and Eugene Sue. Mr. Wingfield draws a vivid picture of French society just before the Revolution, when the aristocracy seemed ignorant of the fact that they were standing upon the edge of a volcano. It was then "the first duty of serfs to labour for their betters; their second, when the worn machinery was out of gear, to retire underground with promptitude." Terrible was the reaction when it came; and this novel embraces the period from the destruction of the Bastille to the execution of the King. The historical element, however, is not obtrusive, the sorrows of Gabrielle forming the real groundwork of the novel. Stage by stage we follow the wicked passion of Pharamond, until at last it leads him into various attempts at murder. The awful retribution which overtakes him and his fellow-plotters the reader will discover for himself. The lesson of the whole story is conveyed in an observation by Gabrielle: "The crafty and unscrupulous often overreach themselves; therein lies the salvation of those who have naught but innocence for armour." Mr. Wingfield's novel is both thoughtful and clever, and offers many flying suggestions of real interest in connexion with the deep things of human reason and philosophy.

The pleasanter aspects of Irish life have

been very agreeably and very smartly depicted by Mrs. Hungerford in *April's Lady*. It is a book without a tragedy, and is perhaps all the more welcome on that account. Joyce Kavanagh is one of the sweetest of heroines, but there is nothing humdrum about her. She manifests a good deal of the witchery of mother Eve, and is altogether such a creature of smiles and tears that the title of the novel very justly describes her. She has two lovers, named Beauclerk and Dysart. The former seems to be the favourite, though he is a mean-spirited selfish creature. Joyce finds out his true character, but it is not until she has "played it rather low" upon the faithful and noble Dysart. But when there is no longer any doubt of the worthlessness of Beauclerk, she gives him his *congé*; and it is with profound satisfaction that we find the heiress, Miss Maliphant, doing the same. Joyce's married sister, Barbara, is another Irish girl towards whom the reader will be irresistibly drawn. In addition to the story of their lives, there is a collateral plot dealing with the unhappy married life of Lord and Lady Baltimore. They are really profoundly devoted to each other, but the tongue of slander has put them apart. Happily, all misunderstandings are finally removed. Two children, Tommy and Mabel, furnish the humorous element in the story, and the former is certainly an *enfant terrible*. This novel has not a dull page in it. Mrs. Hungerford has written nothing better since *Molly Bawn*.

Mr. Kevill-Davies draws a sad picture of an erring woman in *An American Widow*. Beautiful and fascinating Mrs. Leonard seems to carry death about with her wherever she goes; and a good deal of her treachery and villainy seems absolutely purposeless. From the time she is first introduced on board an Atlantic liner, bound from New York to England, to the time when she commits suicide by jumping from the same steamer on the return voyage, she is given over to intrigue and crime. The way in which she is at last run to earth, after causing the death of several individuals during her wicked career, is very ingenious. The Americans will have a bone to pick with the author for some of his social and political deliverances. For example, he remarks that "the greatest enjoyment the average American derives from giving a dinner or party is the reading, on the following day, the account of it which he has paid the papers to publish." Mr. Robert Clinker, the great American detective in this story, undertakes

"to get into a fashionable social circle in England any young American woman who is tolerably smart, good-looking, and has a couple of thousand pounds in cash, no matter how low her parentage, or how bad her antecedents."

Mr. Kevill-Davies manages to lift the veil on a good deal of wickedness, English and American, especially the latter; but we hope that some of his estimates of human nature are overdrawn. He writes, however, with some amount of vivacity.

It was scarcely worth while for Mr. Richard Pryce to devote two volumes to the story he had to tell in *Just Impediment*.

Everybody knows there is a seamy side of life in London, but unless there is some special purpose to answer in its delineation—which is not apparent here—an author might certainly have been better engaged. We have glimpses of a Bohemian club, the Panther, and of music-halls and theatres where burlesque is the chief attraction. The large-limbed lady with richly-coloured hair, who deserts "Billy" Hartley for a friend, is a familiar personage in fiction; and nothing can be said for the rest of the characters except Lord Rutherford and Esther Wilton—two young people who fall in love with each other only to discover that they can never marry. It is not until the last few pages of the book that the nature of the "just impediment" is revealed, and then we discover that it is the incipient insanity of Miss Esther, which accounts for many vagaries hitherto inexplicable. Some time or other life will come to wear a serious aspect with Mr. Richard Pryce, and then he will perhaps wonder how he ever came to write *Just Impediment*.

The *Exciting Leaves from a Curate's Diary* are really not very exciting after all. Of course, clergymen in charge of a parish, if they keep their eyes open, are sure to experience many incidents which throw a strong light upon human nature, with its joys and sorrows, its trials and its triumphs. To the extent of recording some of these faithfully, Mr. Berrington's work fulfils its title. The passage of arms between the curate himself and the bishop who has licensed him for pastoral work is very entertaining. But there is nothing to lift the curate's career out of the ordinary run; and if every curate felt moved to publish an account of his labours, the world would not be large enough to contain the volumes that might be written.

Mr. Cleland writes well in *Too Apt a Pupil*, excellently distinguishing between his English and foreign characters; but we cannot say that we greatly care for the best, that is to say the most original, of them. Nevertheless, it is a real pleasure to meet with a writer who has something more than the ordinary power of analysis and description. Two personages, Colin and Assunta, are even powerfully drawn; and the volume, as a whole, is one of sustained interest.

G. BARNETT SMITH.

SOME BOOKS ON ANCIENT HISTORY.

Graeco-Roman Institutions. Treated from Antievolutionist Points of View. By Emil Reich. (Oxford: Parker.) We have here the substance of four lectures given by Dr. Reich in "the schools" at Oxford during Hilary Term, 1890. The lectures themselves were well attended, and the way in which they were delivered added interest to their subjects. The questions raised are treated with freshness and originality; and, in lecturing in a foreign tongue, Dr. Reich gave proof of very high linguistic power. The last two of his lectures deal with rather miscellaneous topics: the classical city-state and its influence on various usages and political events; the question why Roman law has been adopted in Germany and France, but not in England or Hungary; and an attack on modern evolutionism as

applied to the rise and fall of social institutions. But the most interesting and constructive part of Dr. Reich's work will be found in the first two lectures on "The *vera causa* of Roman Law." He enquires why it was the Romans, and no other nation, who created a well-developed system of private law; and he decides that the *vera causa* of their private law was not their religious beliefs, as De Coulanges taught, but the Roman institution of *infamia*. It is much easier to feel sure that Dr. Reich knows all about *infamia* than to feel sure that he knows what *vera causa* means; but, no doubt, what he wants to express is that the existence of *infamia* at Rome led to the development of Roman private law. "Civil death was the lot of him who had the misfortune of getting defeated in civil lawsuits. . . . In fact. . . . the spectre of *infamia* threatened the citizens at nearly every step of their daily actions." Then of course, "in a commonwealth where ordinary business transactions were saturated with germs of the most deleterious nature, some citizens will naturally fall to thinking about remedies." This, accordingly, is why "the Romans, who never succeeded in systemising their constitutional or criminal law, felt induced to pay such extraordinary attention to the regulation and systematisation of private law." In other words, the law was brought to perfection in order to protect well-meaning but unfortunate citizens against their own acts landing them in *infamia*. But what is the proof of this? So far as we can understand, the proof offered is twofold: first, *a priori*, that the thing must have been so from the nature of the case; secondly, that there was no other cause at work. Indeed, other circumstances at Rome were not, Dr. Reich says, favourable to the growth of private law. "The Romans, until very late, never paid fees to their jurists." And again, "private law feeds on commercial and industrial relations; the Romans held commerce in contempt, as all military peoples do, and industrial enterprises were given over to slaves." This is much too strongly put, and yet without this sweeping assertion Dr. Reich's main position is seriously imperilled.

THE publication of Prof. Schürer's elaborate account of the condition, ideas, and feelings of the Jewish people at or about the Christian era has been proceeding in both Germany and England, and portions of editions in either language lie before us—*Geschichte des jüdischen Volkes im Zeitalter Jesu Christi* (Leipzig: Hinrichs); "Clark's Foreign Theological Library," vol. xli.; *A History of the Jewish People in the Time of Jesus Christ*, by E. Schürer, First Division, Political History of Palestine, from B.C. 175 to A.D. 135, vol. i., translated by J. Macpherson (Edinburgh: T. & T. Clark). These volumes really form part of a second and revised edition of Prof. Schürer's well-known *Manual of the History of New Testament Times*, and Division II. (three vols.) appeared in an English dress some five years ago (see ACADEMY, April 24, 1886). The present English volume goes down to the death of Herod the Great, and therefore leaves the history of a good many years still to be filled in. But English as well as German readers know what they have to expect from Prof. Schürer—a solid and carefully-wrought survey of the course of events and of the history of opinion, with each assertion verified and each contested point conscientiously fought out. The very German practice of accompanying one's statements by a running fire of references to recent literature on the subject is seen to advantage in a topic where the new literature, due to conjecture in the study and to research with the spade, springs up so rapidly. It is in part by the use of this newest information that Prof. Schürer goes further than his predecessors in distinguishing the Hellenistic

(or spuriously Hellenic) cities of Palestine and Phœnicia from those of Aramaic character. But the whole subject seems almost exhaustively dealt with. There is ample illustration of the illwill between Jews and Romans, but we have not been able to find much notice of the incessant bickering of Jews and Greeks. Something of dryness is inseparable from a work written on the above method, and originally meant perhaps rather as a manual to be consulted than as a book to be read through; but, with Mr. Macpherson's help, English readers will not find the dryness very repulsive. Now that we have referred to the translation we must go on to say that it seems on the whole well done. Mr. Macpherson has expressed what his author has to say in language which is really English in words and in construction. It is but seldom that a sentence, over-long or over-involved, reminds us of its German origin. At p. 3, however, the translator has put a rather fatuous remark into Prof. Schürer's mouth:

"The battles of the Maccabean age were epoch-making in the political history of the Jews. By them was the foundation laid for the construction of an independent Jewish commonwealth, and for its emancipation from the dominion of the Seleucidae. This deliverance was wholly effected in consequence of the Syrian empire."

Here the German is "Diese Loslösung ist dann infolge der Schwäche des syrischen Reiches wirklich gelungen," and it gives quite a different complexion to the remark. At p. 201, l. 16, the point is that the king fell, not that "the king himself joined in the mirth." At p. 329, l. 17, for "fastened" read "exposed."

Die Religion der alten Ägypter. By A. Wiedemann. (Münster: Aschendorff.) Prof. Wiedemann's name is a guarantee that the work to which it is attached will be sound, cautious, and complete. The account of the Religion of the Ancient Egyptians, which he has published in a series of volumes now appearing on the non-Christian religions of the world, is the best and fullest that has yet been given, in spite of its compact form and the low price (under three shillings) at which it is issued. His division of the subject is admirable, and the clearness of his statements leaves nothing to be desired. As he points out at the beginning, the religious and political life of ancient Egypt was so intimately connected that the history of the one implies that of the other; and though Egyptian religion, in all its essential characteristics, was fixed before the foundation of the united monarchy by Menes, changes of dynasty brought with them the supremacy of the deity of the locality to which the dynasty belonged. We are glad to find that Prof. Wiedemann follows Maspero in his view of the original nature and development of Egyptian religion, and characterises the rival system of Brugsch as that which represents the conceptions of Greek and Roman days rather than actual history. For the first time Prof. Maspero has brought the modern scientific method to bear upon the analysis of the dogmas of the old Egyptian faith. But we should like to ask both Prof. Maspero and Prof. Wiedemann a question to which we can find no reference in their works: How comes it that Ptah was the supreme god of Memphis and of the earlier dynasties, considering that the local divinity of Menes was Anhur of This?

Mithridate Eupator, Roi de Pont. Par Th. Reinach. (Paris: Firmin-Didot.) There are few more interesting pages, even in the varied story of Roman conquest, than that which tells how a barbarian from Asia became the chosen leader of the Greeks in their last struggle against Rome. The tale is a sad one from beginning to end. It is melancholy reading—however necessary we know the course of events to have

been—to watch the Roman power passing like a steam-roller over the varied and picturesque life of Hellas and the East, and crushing out not only the spirit of nationality, but, along with it, the feelings which had made Hellas great and kept her honest. The day of slavery indeed, as Homer says, takes away half of a man's excellence. It is sad to find Athens involved in the hopeless struggle, and to see the blood trickling out through the Dipylon gate. Nor is it least saddening to observe that Hellas could not find a leader of her own, nor even a worthy leader from abroad, but had to welcome with open arms a man like Mithridates, a despot and a foreigner, but thinly varnished with Hellenism. Even M. Reinach acknowledges (p. 299), and depicts excellently,—"ce mélange bizarre d'hellénisme et d'orientalisme, cette combinaison du sultan et du roi grec, qui caractérisa l'homme et le pays." The quarrel had to be fought out before the Greeks of two continents could reconcile themselves to their fallen estate, and the outrages of Roman governors and speculators gave to it a peculiarly ferocious character. The slaughter of Italians in Asia must, even after all deductions, have been prodigions; and, as Appian says, *δῆλον ἐγένετο τὴν Ἀσίαν οὐ φόβῳ Μιθριδάτου μᾶλλον ἢ μίσει Ῥωμαίων τοιαύτη ἐς αὐτοὺς ἐργασασθαι*. But apart from his association with the Greeks we should not have any great sympathy with the king of Pontus. Not even the romantic tales which Appian or others tell about him would make a striking figure of the "new Dionysus." Obstinate without firmness, treacherous without skill, inventive without power to execute, suspicious, cruel, and betrayed, he could do nothing but delay the inevitable. It would have been well for him and for the world if one of his fabled poisons had carried him off in his youth. The adventures of this ill-starred prince are now told afresh by M. Théodore Reinach. Less inclined to admire him than M. Reinach is, we can hardly join him in calling Mithridates an extraordinary man, or admit that he was so formidable as the Romans themselves thought him. The sources of his strength were rotten at the base. The fact is, that M. Reinach has over-estimated the plans of Mithridates, exaggerated his ability, and over-valued the cultivation of his mind. It is surely going beyond our evidence (App. *Mithr.* 112, *παῖδας ἐπεμέλετο Ἑλληνικῆς*) to say that "la langue et la littérature de la Grèce n'avaient pas de secrets pour lui." But M. Reinach has said, perhaps, all that can be said for his point of view, and he brings to bear on the matter "une étude approfondie." He has written an exhaustive monograph, going very thoroughly into all the sources of our knowledge of the time—the authors, the inscriptions, and the medals. His footnotes exhibit quite a German thoroughness. It requires great skill to control so much learning, but the two qualities are triumphantly united in M. Reinach. His book is illustrated; and the two héliogravures are particularly good which represent Tigranes (from a medal in the British Museum) and the vase given by Mithridates to the gymnasium of the Eupatoristai.

Die Studien des Polybios. Von R. von Scala. Erster Band. (Stuttgart: Kohlhammer.) The attempt for "account for" a great writer by studying his environment has not been made often enough to become tedious, nor has the idea been ridden hard enough to excite a reaction. If Prof. Dowden tried to put Shakspeare's mind and art into relation with his environment, it was after all more his art than his mind that he so treated; and, if Mr. Grant Allen ascribes a great deal to circumstances in the development of Darwin, he is careful to reserve also a great deal for the share of heredity in producing that most original

thinker. But Herr von Seala seems—so far as his book has yet gone—to account for Polybius entirely from his surroundings, and to leave nothing for original force of character. Great is his anxiety to trace the genesis of every idea in Polybius, to see who had uttered it before Polybius, and by what road it is likely to have reached him. But here we confess we grow restive. Surely, Polybius had some thoughts of his own. We need not refer all his ideas to the books he read or to the masters with whom he conversed. It is true that he was a man of unusually wide experience, and probably of very wide reading, too; but he was also a man of unusual ability, or he would never have either sought or found so wide an audience. He was, as Herr von Seala says, the first ancient writer who reckoned upon a circle of readers wider than his own country. But, under the present analysis, all his originality disappears, and one wonders why he found then or finds now an admiring audience. We can more readily follow Herr von Seala when he traces back to his early home in Arcadia some of the sentiments and prejudices of Polybius's mind. Contempt for demagoguery, hatred of tyrants, distrust of kings, may have been caught from the respectable, old-fashioned folk of Arcadia. The taste for hunting, which introduced him to Scipio and to the Syrian prince Demetrius, was learnt among the Arcadian hills. His esteem for cavalry as a branch of military service may be a result of Philopoemen's cavalry-reform, carried out when Polybius was a young man. His somewhat weak vein of admiration for art may have been starved by the comparative poorness of his artistic surroundings at home, and hence perhaps (though Herr von Seala does not say so) some of the cumbrousness and heaviness of his composition. But we believe more in the influence of inherited character and ability than this line of reflection would encourage us to do. It was certainly a happy circumstance, or happy bit of environment, for Polybius, that he had not a very overpowering father in Lycortas. His talents grew up unruined. But there were talents in him, just as there were defects. No analysis of environment will tell us why he was deficient in sense of humour, or why he had the ability to make the most of his circumstances.

Sibyllinische Blätter, von H. Diels. (Berlin: Reimer.) Herr Diels publishes the text of the two hermaphrodite oracles as given by Phlegon of Tralles, and endeavours to prove that they are not of nearly so late origin as has often been supposed. They are, he says, real Sibylline verses, once kept in the collection on the Capitol and consulted by the *decemviri*. They were not, however, delivered by a Sibyl, but were composed with political objects by a Roman about the end of the third century, B.C. The age in which Phlegon published them could not have forged them, for it did not possess the minute acquaintance which they show with early ritual. They are mutilated, but they cannot have been added to, for in that case the acrostic arrangement of first letters (Cic. *de Div.* 2. 54. 112) would betray the imposture. If we look at the metre and the language, we shall come to the opinion that they were not written by a Greek or by anyone skilled in Greek verse-composition. If we look at the special *procuratio* which each oracle enjoins, and then search in Livy or elsewhere for an occasion when that *procuratio* was actually used, we shall get an idea of the time of composition; and this may perhaps be confirmed by any political hints which we can discover in the oracle. In this way we come to the end of the third century; and Herr Diels is even bold enough to name the forger—Q. Fabius Pictor. He had had a confidential mission to Delphi; his Annals showed that he knew much

of Roman ceremonial; *obscurem veram involvens*, he administered to the frightened people both comfort and counsel. On this theory we shall find new reason to admire the bold and sagacious Roman aristocracy, which could turn to good account even the superstitions of its countrymen, and, while reconciling them to the angry gods, could at the same time point to new fields of enterprise in the East.

Nemesis und Adrasteia. Von H. Posnansky. (Breslau: Koebner.) This "mythologisch-archaologische" treatise suffers somewhat from want of internal connexion. It is more like a full encyclopædia article than like an independent essay. But it is a serviceable and, indeed, excellent compendium of what is known and what is conjectured about the two abstractions, or the two goddesses, whose name it bears. For Dr. Posnansky traces with great care the gradual personification of Nemesis in Greek times, and follows even the later degradation of her character when the Romans turned her into a sort of supplementary Fortuna, and looked upon her as a mischievous demon whose spring of action is rather envy than justice. He decides that Nemesis is an offshoot of the cult of Artemis, not of that of Aphrodite, but that the relations are very close between Nemesis-Adrasteia-Artemis and Rhea Cybele. The one great monument in which the attributes of Aphrodite were shared by Nemesis—the images at Rhamnus—was due only to "speculative reflection" of the artist, not to genuine popular feeling. A very well-executed plate of coins and gems enables us to follow easily Dr. Posnansky when he talks of the standing attributes of the goddess, among which the plucking at the breast of the robe (to be followed by *despuere in sinum*) is most conspicuous.

NOTES AND NEWS.

We understand that Mr. S. G. Gardiner has consented to undertake the editorship of the *English Historical Review*, which the original editor, the Rev. Mandell Creighton, is compelled to vacate on his appointment to the bishopric of Peterborough. Mr. Reginald Lane Poole will continue his invaluable services as assistant-editor.

THE Hibbert Lectures for this year will be delivered by Count Goblet d'Alviella, professor of comparative theology in the University of Brussels, and author of *The Contemporary Evolution of Religious Thought*. The subject of his lectures will be "The Evolution of the Idea of God"; and they will be delivered in the Portman Rooms, Baker-street, from April 15 to 28, and also in Oxford. Tickets for the series will be sent by Messrs. Williams and Norgate to all applicants. The lectures will be delivered in French, but a translation by the Rev. P. H. Wicksteed will be published in the autumn.

LADY DILKE is about to publish, through Messrs. George Routledge and Sons, a volume of short stories entitled *The Shrine of Love*. Some of these are reprinted from the pages of the *Universal Review*, but others will now appear for the first time. Among them we may specify "The Weaver of Lyons," which is the history of a Huguenot workman whom Lady Dilke came across some years ago in her weekly visits to the city hospital of Nice. The stories in the present collection are of a less uniformly tragic cast than those in *The Shrine of Death*, by the same writer, which appeared in 1886.

MESSRS. METHUEN & Co. announce as in preparation a collected edition of Mr. Gladstone's Speeches, undertaken, with his sanction and help, by Mr. A. W. Hutton, librarian of the Gladstone Library at the National Liberal Club, and Mr. H. J. Cohen, formerly scholar of

Jesus College, Oxford, a member of the Eighty Club. The work will be completed in from six to eight volumes.

NEARLY three years ago, when reviewing Mr. Kirby's *Winchester Scholars*, we expressed the hope that the work would be extended by the addition of the names of those not on the foundation. Mr. C. W. Holroyd, secretary to the Bishop of Salisbury, was even then, it appears, contemplating such a task. He has now completed one portion of it—namely, a register of Commoners from the commencement of Dr. Moberly's headmastership to the present time, 1836-1890, with biographical notices and an alphabetical index. This will be issued immediately after Easter, and may be obtained from Mr. J. Wells, College-street, Winchester, at the subscription price of 10s. After having brought out this latest portion, Mr. Holroyd proposes to go back to the very earliest period available, which is 1653, and issue separate parts, each covering half a century. We may mention that Mrs. Osborn's *Letters of a Lady of the Eighteenth Century* (reviewed in the ACADEMY of last week) gives the names of ten young noblemen's sons under the charge of Dr. Burton, headmaster from 1724 to 1766.

A DRAMATIC poem entitled *The Fountain of Youth*, by Mr. Eugene Lee Hamilton, author of "The New Medusa," is announced for early publication by Mr. Elliot Steek.

MR. GEORGE ALLEN will publish immediately *From King to King: The Tragedy of the Puritan Revolution*, by G. Lowes Dickenson, fellow of King's, Cambridge; and *Tongues in Trees and Sermons in Stones*, by the Rev. W. Tuckwell, rector of Stockton, Rugby. The edition of Mr. Ruskin's poems, in two volumes, announced for immediate publication, has been delayed by the necessity for careful printing of the illustrations. But Mr. George Allen hopes to have it ready some time in May.

THE fourth volume of the "Pseudonym Library" is nearly ready for publication. Its title is *The School of Art*, and the writer is to be known as Isabel Snow.

MR. GIBBINGS will shortly publish, in a limited edition, *The Memoirs of Lady Hamilton*, edited and annotated by Mr. W. H. Long, with portraits of Sir William Hamilton, Lady Hamilton, and Lord Nelson.

THE second volume of "The Whitefriars Library of Wit and Humour" will consist of a humorous story, *Sawn Off*, by Mr. G. Manville Fenn, with a portrait. The April volume will be from the pen of the author of "Molly Bawn," entitled *A Little Irish Girl*. The first volume, Mr. Andrew Lang's *Essays in Little*, is already in its sixth thousand.

MR. T. FISHER UNWIN will shortly publish a one-volume edition of *Philosopher Dick*, the anonymous novel descriptive of a New Zealand shepherd's life. A third edition of Miss Olive Schreiner's *Dreams* is also preparing.

MR. SIDNEY LUSKA's novel, entitled "As It was Written," will be presented gratis, as an extra supplement, with No. 390 of *Cassell's Saturday Journal*, published on March 18. The same number will contain the opening chapters of a serial story of to-day, entitled "Olga's Crime," by Frank Barrett; also "Political Leaders and their Followers," with facsimile letters from the Earl of Derby, the Marquess of Hartington, Mr. Gladstone, and Mr. Akers-Douglas.

PREPARATIONS have been made for some time past for the issue on the continent by an English firm of the works of English and American writers, in a series similar to that published by Baron Tauchnitz. The friendly co-operation of the chief English authors, especially writers of fiction, has been secured

and a Company formed, which will immediately begin operations at Leipzig. The concern is to be known as Heinemann & Balestier, Limited, the first directors being Mr. William Heinemann the publisher (the present business being entirely independent of his London establishment), Mr. Wolcott Balestier, well known among English authors as the resident member of the New York firm of Lovell & Co., and Mr. Bram Stoker, Mr. Irving's business manager at the Lyceum. The firm of F. A. Brockhaus, of Leipzig, is retained to direct the distribution and sale of books on the continent; and besides Herr Brockhaus's depôts at Leipzig, Berlin, Vienna, and Paris, arrangements are being made to extend the sale in other directions. Among the authors who will contribute to the early issues of the "English Library" are Robert Louis Stevenson, Rudyard Kipling, George Meredith, Henry James, W. E. Norris, Hall Caine, B. L. Farjeon, H. Rider Haggard, Conan Doyle, Sir Edwin Arnold, W. D. Howells, Justin McCarthy, S. Baring Gould, Mrs. Walford, Margaret Deland, Mrs. Alexander, Mrs. Parr, Mrs. Riddell, Mrs. Woods, Miss Poynter, Helen Mathers, Maxwell Gray, Mrs. Hungerford, Ouida, and Rhoda Broughton. The first three issues of the series will be Mr. Rudyard Kipling's *The Light that Failed*, Sir Edwin Arnold's *The Light of the World*, and Mrs. Deland's *Sidney*.

MR. J. QUAIL, formerly of Blackburn, has been appointed editor of the *Northern Daily News*, the new Radical newspaper for Aberdeen and the North-eastern counties of Scotland, which is to appear in the first week in May.

At the last meeting of the Sette of Odd Volumes the following officers were elected for 1891-2:—Mr. George Charles Haité, well known for his studies in black and white, president; Mr. Wilfrid Ball, vice-president; Mr. William Manning, secretary; whilst Mr. John Lane, the Bibliographer of the Sette, and of the works of George Meredith, exchanges the arduous position of secretary for that of master of the ceremonies.

THE Newspaper Press Directory for 1891 states there are now published in the United Kingdom 2,234 newspapers, distributed as follows:—London, 470; Provinces, 1,293; Wales, 90; Scotland, 201; Ireland, 157; Isles, 23. Of these there are 142 daily papers published in England, 6 in Wales, 19 in Scotland, 15 in Ireland, 1 in the Isles. The magazines now in course of publication, including the quarterly reviews, number 1,778, of which more than 448 are of a decidedly religious character.

CORRECTION.—In Mr. Whitley Stokes's letter on "The Etymology of 'Fiam' and 'Féne'" in the *ACADEMY* of February 28, p. 210, col. 3, l. 47, for "stem in i" read "stem in u"; p. 211, col. 1, l. 47, for "far" read "far as"; l. 67, for "lâide" read "lâido."

UNIVERSITY JOTTINGS.

WE understand that Prof. Andrew Seth, of St. Andrews, author of *Scottish Philosophy*, is a candidate for the chair of logic and metaphysics at Edinburgh, vacant by the resignation of Prof. Fraser. Prof. Seth happens to be at present delivering a third course of lectures at Edinburgh, in connexion with the trust founded by Mr. A. J. Balfour.

WE are glad to hear that the late Prof. Sellar left a second volume of his *Roman Poets of the Augustan Age*, dealing with Horace, practically ready for publication. It will be issued by the Clarendon Press.

THE Archbishop of Canterbury has been appointed Lady Margaret's Preacher at Cambridge for the ensuing year. The sermon will be preached on November 1.

CONVOCAION at Oxford has sanctioned a grant of £150 a year for three years, out of the common university fund, to maintain a student at Dohrn's marine biological laboratory at Naples. Cambridge has already occupied a table at this institution for the past fifteen years; but it is feared that the other table supported by the British Association will be given up after the present year.

THE general board of studies at Cambridge have made a report, recommending that the fee required from every student who presents himself at any tripos examination shall be raised from two guineas to £3. It appears that, during the past year, the total amount of fees received for tripos examinations was only £752; whereas the payments made to examiners amounted altogether to £1510, or just twice as much.

THE recent elections at the Oxford Union exhibit some features of interest to those whose experience is more than twenty years old. At the poll for officers, about 700 votes were given, which is said to be an unprecedented number; and the spirit of competition ran so high that polls were also taken for both the standing and library committees—a thing unheard of in former times, when the nominations of the officers were always unquestioned. Still more strange is it to notice that, among 16 successful candidates, Balliol has not a single representative. The prominent position it once held seems to be occupied now by New College, which can boast of three recent presidents out of four.

THE University of Durham contemplates throwing open its new examinations in music to women, and granting them certificates but not degrees.

THE Council of Owens College, Manchester, offer for award a Jevons scholarship of the value of £100 for one year. Candidates must give evidence of having received a sound and systematic education in economic science, and of their ability to prosecute the investigation of some economic problem connected with the industries of Lancashire.

JOHNS HOPKINS UNIVERSITY, Baltimore, has been recognised as a school of medicine in which study may be pursued by candidates for medical and surgical degrees at Cambridge.

THE annual conference of delegates from the representative councils of the four Scotch universities have unanimously adopted a proposal for a summer session in Arts, omitting St. Andrews, where it was stated it would be impossible for students to get lodgings during the summer months.

THE late Dean Plumtre has bequeathed £400 to the council of Queen's College, Harley-street—with which he was connected as dean and principal from 1856 to 1878—for the foundation of a scholarship bearing his name.

MAGAZINES AND REVIEWS.

IN the *Boletín* of the Real Academia de la Historia of February, J. Gomez de Arce reports on the autographs and MSS. of Felix Amat, Abbot of la Granja, lately presented to the Academy by J. Mané y Flaquer. They relate to the reigns of Carlos IV. and Fernando VII. One of the most curious is a proposal made by Carlos IV. for a federation of the Spanish colonies under hereditary viceroys, of whom Godoy was to be one. The first suggestion of federation was made by Aranda to Carlos III. These papers, on the whole, intensify the ignominy of the king and of Godoy. F. Danvila traces the limits of the Saderia of Valencia in 1390. Father F. Fita gives some further details of the visit of St. Luis de Gonzaga to Spain. The official report

of the recent translation of the bones of Popes Calixtus III. and Alexander VI. is here reprinted.

THE *Theologisch Tijdschrift* for March contains articles by Prof. Oort on the native country of Amos (Northern Israel), and the genuineness of Am. iv. 13, v. 8, 9, ix. 5, 6; by Dr. Herderschu on 2 Sam. xii. 31; by Dr. van Manen on a recent defence of the genuineness of the correspondence between Pliny and Trajan respecting the Christians; and by J. G. de Bussy on the moral judgment. Dr. Driver's work on the Hebrew text of Samuel is reviewed appreciatively by Dr. W. Koster. Brückner's study of the chronological order of the Epistles by Dr. van Manen, and Grettillat's System of Theology by Dr. Knappert.

ORIGINAL VERSE.

NOT IN VAIN.

"Had I words to complete it,
Who'd read it, or who'd understand?"

J. W. RILEY.

I SOMETIMES think, below'd, if you could know
Just what you are to me, how all my life has
changed
Since first I saw your face; how it has wider
grown,
And risen to new heights; then might you dimly
see
Some reason that should set you thus apart.
You know you are to me as saint is unto shrine;
You cannot, standing far above me there, so near
to heaven,
And shedding light around—you cannot see what
lessons you have taught,
How high ideals may be loftier grown, ceasing to
be mere visions;
Nay, may change, and with the change may
beautify all life.
I know that I shall never stand beside you there,
I am not worthy to come nigh to you,
I may not touch your life. Nearer and dearer ones
press closely round,
There is no room for me.
Yet, as the furthest planet in its distant path
Obeys the mighty law which bids that he must
still revolve
Round the great source of heat,
And yet forever in far outward space must turn
For all his warmth and light to the same sun,
Even as the nearer, brighter planets do,
So must I turn to you; you showed me light
Where else had still been darkness. Love given
to you
Has warmed my life, although you heed it not.
Why should you stoop to care for it who have all
love?
The best, the brightest, wrapped around you close.
And mine seeks no return, knowing that it must
be laid at your feet;
Not gathered near your heart, but resting there,
It wins the highest place this side the gates of
Heaven.

A. Z.

UNPUBLISHED WORKS OF GIORDANO BRUNO AND ABELARD.

THE reprint, made by the order of the Italian Government, of the Latin works of Giordano Bruno, in two volumes, and in a form corresponding to modern requirements, has just been followed by the issue of a third volume of hitherto unpublished writings. It comprises not less than 700 pages, with a preface of 74 pages. In the latter, the editors—MM. Toceo and Vitelli—give details as to where the MSS. have come from, the scribes who wrote them, their chief contents, their value for the determination of the text, &c.

There is, first, the Noroff MS., which originally came from Germany, and which, the editors believe, is probably part of the legacy of Hieronymus Besler. It came into the possession of Abraham von Noroff, who bequeathed

it to the Rumianzow Museum at Moscow, where it is at present. At the request of Prof. Sigwart, who has done much to elucidate Bruno's life, the main features of this MS. have recently been described by Mr. Lutoslawski in the *Archiv für die Geschichte der Philosophie* (vol. ii.). It contains autograph notes by Giordano Bruno; "De Magia" and "Theses de Magia"; "De Rerum Principiis et Elementis et Causis"; an incomplete "Medicina Lulliana"; "De Magia Mathematica"; "De Veneulis in Genere"; "Lampas Triginta Statuarum"; and a complete "Medicina Lulliana." Part of this MS. is by Bruno, the larger part by Besler, the remainder by an unknown person. It was written partly between the end of 1589 and the beginning of 1590 at Helmstädt, and partly in 1591 at Padua.

Then there are the MSS. which Prof. Remigius Stölzle, of Würzburg, has lately discovered at Augsburg and Erlangen. They contain the "Animadversiones circa Lampadem Lullianam," and "Lampadem Triginta Statuarum"; the hitherto unknown "Libri Physicorum Aristotelis Explanati"; "De Magia" and "Theses de Magia"; and the two letters of Besler on Giordano Bruno. It will thus be seen that several MSS. exist in duplicate, but of different value. The "Lampas Triginta Statuarum," and the "Libri Physicorum Aristotelis Explanati," certainly date from Bruno's sojourn at Wittenberg in 1587; several other treatises from his stay at Helmstädt, towards the end of 1589 and in April, 1590. "De Veneulis in Genere" was probably prepared at Frankfurt, and written at Padua by Besler.

This volume contains four facsimiles of the Moscow, Augsburg, and Erlangen MSS.; also a facsimile of the report of the Company of St. John the Beheaded, which gives the details of the last hours of Bruno. The report has a marginal title: "Justice done to an impenitent heretic, who was burnt alive." It says:

"At two o'clock at night it was intimated to the Company that, in the morning, justice was to be done to an impenitent one; and therefore, at six o'clock at night, the spiritual comforters and the chaplain assembled in Sant' Orsola. Having gone to the prison, and entered our chapel, and offered the usual prayers, we were handed the below-written sentence of death of Giordano or Giovanni Bruno, the apostate friar of Nola di Regno, an impenitent heretic. He, having been admonished by our brethren with every charity—and two Fathers having been called in from San Domenico, two from Gesù, two from the New Church, and one from San Giordano—finally always remained in his accursed obstinacy (*nella sua maledetta ostinazione*), working his brain and his intellect with a thousand errors and vanities; and he so persevered in his obstinacy that he was conducted by the executors of justice to the Field of Flowers, and there, having been stripped bare and tied to a stake, he was burnt alive, always accompanied by our Company, who sang the litanies, whilst the spiritual comforters until the last moment exhorted him to give up his obstinacy, in which, at last, he ended his wretched and unhappy life."

It will thus be seen that Giordano Bruno died nobly and firmly, even as he had lived; and that those who have asserted the contrary have vilely calumniated him. I learn that Sig. Tocco, the author of the important work *Le Opere Latine di Giordano Bruno, Esposte e Confrontate con le Italiane*, is engaged on a critical appreciation of these hitherto unpublished writings of the renowned Italian thinker. The editors, on their part, say in the Preface: "We would not be sincere if we did not express a conviction that those who study the Nolan philosopher owe us a debt of gratitude for the painstaking diligence (*diligenza e solerzia*) with which this edition has been prepared and accomplished."

Another work of a sufferer in the cause of philosophical investigation, the "Tractatus de

Unitate et Trinitate Divina" of Abelard, hitherto of disputed authenticity and unknown in its present form, which, as stated some months ago in the ACADEMY, has been discovered by Prof. Stölzle—has been published by Herder at Freiburg, in Breisgau. It is the treatise for which Abelard was condemned as a heretic, in 1121, by the Church Council at Soissons.

CORRESPONDENCE.

"DESIGNATED TO BE BISHOP."

Oxford: March 11, 1891.

You were good enough to say in your "University Jottings" that I should not be pleased at seeing the University of Cambridge confer a degree on its Dixie Professor by the style and title of "Bishop Designate of Peterborough." The remark was true. I was not pleased to see the University of Cambridge lower itself to such a blundering description of anybody. But I was much less pleased to see, in the *University Gazette* of last night, the University of Oxford, or at least its Hebdomadal Council, lower itself to a description more blundering still. And I am specially sorry, considering who is the subject of these blundering descriptions. Of Mr. Creighton's many friends and admirers I am one of the heartiest, and it is not pleasant to see a scholar, of whom both Universities have a right to be proud, thus made ridiculous by both of them.

In the Convocation of next Tuesday we shall be called on to confer the degree of D.D. "upon the Rev. Mandell Creighton, M.A., of Merton College, designated to be Bishop of Peterborough." Now what is meant by "designated to be Bishop?" In December, while Dr. Browne was still Bishop of Winchester, and Dr. Thorold Bishop of Rochester, Mr. Davidson, Dean of Windsor, was described as "Bishop Designate of Rochester." Now Mr. Creighton is described as "designated to be Bishop of Peterborough." Is this new form thought to be better, to be more accurate than the other? It is hard to see what advantage the new "sumpsimus" has over the old "mumpsimus." It is just as foolish and more awkward. "Designated to be Bishop"—"designated," how, and by whom? There is no such phrase known to either canon or statute law. Mr. Creighton will, no doubt, in due time be "recommended" by the Queen, "elected" by the Chapter, "confirmed" by the Archbishop. When all that has happened, his proper description will be "Bishop-elect of Peterborough." But till that is done he is simply Canon either of Worcester or of Windsor. (There are so many of these things going on at once that I really do not know whether Mr. Creighton has been appointed to a stall at Windsor or not.) At no stage of the long business of making him a Bishop will he be "designated" to anything, because no such word is known to the law.

Now, one will spring up and say: But Mr. Creighton is "designated"; his appointment has long ago been announced in the newspapers. That is to say, we all know what is likely to happen. Mr. Creighton is certainly "designated" to be Bishop of Peterborough by common fame. But it is only by common fame. No legal step has been taken towards making him Bishop, unless it has been taken since the publication of this morning's *Times*. And I submit that the university of Oxford, a legal corporation with internal legislative powers, should not go by common fame, but by law; that it should describe men only by descriptions known to the law, not by vulgar "designation," invented either by the news-

papers, or, as in this case, by the Hebdomadal Council itself.

Directly follows another decree, which speaks of "the Very Rev. Philip F. Eliot, M.A., Trinity College, Dean of Windsor." Is there such a person? I saw Dr. Davidson spoken of as Dean of Windsor only a few days back in the *Court Circular*. And, unless he resigns, he will remain Dean of Windsor till his consecration as Bishop of Rochester. Has Dr. Davidson resigned? Has Mr. Eliot been appointed? If not, while the other decree does not get beyond vulgarity and awkwardness of expression, this one rises to the dignity of misstatement of fact.

I write to you, Sir, because I mentioned the matter once before in your pages. I am just now shut up in an upper chamber; I am very unlikely to be able to be in Convocation on Tuesday, and I do not want to send round any more fly-sheets. So I ask you to record a protest, most likely unavailing, on behalf of the doctrine that a body like the University of Oxford ought, in its public acts, to show some regard both to accuracy of fact and even to accuracy of expression.

EDWARD A. FREEMAN.

"ARISTOTLE ON THE CONSTITUTION OF ATHENS."

Florence: March 4, 1891.

The strange story told by Aristotle about the connexion of Themistocles with the attack on the Areopagus cannot be chronologically reconciled with the narrative of Thucydides, according to whom the flight of Themistocles to Asia took place after the revolt of Naxos, and while the Athenians were blockading it. Now, according to the same authority, Naxos was reduced before the great victory of Cimon on the Eurymedon, as to the date of which I believe there is now no dispute. It occurred B.C. 465 (Olymp. 78, 4) three years earlier than the date deduced from Aristotle's statement about the trick by which it was sought to discredit the Areopagus. On such a point the evidence of Thucydides is much the more trustworthy, and the chronology based on his statements harmonises with all the facts otherwise known; whereas that adopted by Mr. Kenyon throws everything into confusion. The anecdote itself may not be entirely without foundation; but if so, it must relate to some other time than the year 462.

ALFRED W. BENN.

Emmanuel College, Cambridge: March 7, 1891.

Perhaps you will allow me to point out that the reading *πριν ἀνταράξας—ἐξείλεν γάλα*, which is now admitted to be the reading of the papyrus in the line of Solon on p. 32 (l. 15) of Mr. Kenyon's book, was suggested by me three years ago in a note in my edition of Plato's *Crito* (44 D, *ἢ αὖ εἰς τε ἥσαν*).

J. ADAM.

THE NEW FRAGMENT OF EURIPIDES.

London: March 7, 1891.

The fragment of the "Antiope" published by Prof. Mahaffy in the last number of *Hermathena* is emended in this month's *Classical Review* by two distinguished Grecians. Their emendations are numerous and intrepid. Dr. Rutherford "would restore" to Euripides the senarius *οὐ μὲν χερῶν τὸ πνεῦ' ἐκ πολέμιων λαβάν*, which Euripides, I think, would restore to Dr. Rutherford. Prof. Campbell proposes to enrich the tragic vocabulary by the importation of *ἄχει*, in accordance with his opinion that it is not yet "time to cease from guessing and to begin the sober work of criticism." When that time arrives it will occur to someone that l. 18 of fragment C, *ἄλκοις γε ταυρείνισιν διαφερομένη*, is neither verse nor Greek, and should be

amended *ταυρείνισι διαφερομένη*: there is, of course, no such verb as *διαφέρω*. It surprised me that the first editor did not correct this obvious blunder, and I looked to see it removed by the first critic who took the fragment in hand; but our scholars seem just now to be absorbed in more exhilarating sport, so I will perform this menial office, at the risk of incurring Prof. Campbell's censure for premature sobriety.

A. E. HOUSMAN.

DEFOE AND MARY ASTELL.

Heidelberg: Feb. 25, 1891.

In the beginning of the famous chapter devoted to a discussion of female education, in his *Essay on Projects*, Defoe hints at "a method proposed by an ingenious lady, in a little book called *Advice to the Ladies*," which, however, he doubts "would be found impracticable."

So far as I know, it has never been pointed out who this lady was; but I have no doubt that he is referring to Mrs. Mary Astell, and to a book by which she is chiefly known—viz., her essay called *A Serious Proposal to the Ladies*. It was published anonymously "by a Lover of her Sex," as the title-page states, in 1694, and was reprinted in 1695 and in 1697. That this must be the book which Defoe means, though he gives it a slightly different title, will be at once apparent from a brief account of its contents, and a comparison with Defoe's remarks on it.

A copy of Mary Astell's book is in the British Museum; but, in default of sufficient extracts of my own from it, I shall quote from Canon Overton's short article on the author in the second volume of the *Dictionary of National Biography*.

Her "serious proposal" was that a monastery should be erected—

"or, if you will (to avoid giving offence to the scrupulous and injudicious by names which, though innocent in themselves, have been abused by superstitious practices), we will call it a *Religious Retirement*, and such as shall have a double aspect, being not only a retreat from the world for those who desire that advantage, but likewise an institution and previous discipline to fit us to do the greatest good in it."

There were to be no vows or irrevocable obligations, and "not so much as the fear of reproach" should keep the ladies longer than they desired. The establishment was to be conducted strictly on the principles of the Church of England, and the daily services to be performed "after the cathedral manner, in the most affecting and elevating way; the Holy Eucharist was to be celebrated every Lord's Day and holy day"; there was to be "a course of solid, instructive preaching and catechising"; and the inmates were to "consider it a special part of their duty to observe all the fasts of the Church." With this religious training, mental instruction was intended to go hand in hand, for "ignorance and a narrow education lay the foundation of vice."

Compare now what Defoe says of the book which he calls *Advice to the Ladies*. He disapproves of the method propounded in it:

"for," he observes, "saving my respect to the sex, the levity which, perhaps, is a little peculiar to them (at least, in their youth) will not bear the restraint, and I am satisfied nothing but the height of bigotry can keep up a nunnery. Women are extravagantly desirous of going to heaven, and will punish their pretty bodies to get thither; but nothing else will do it, and even in that case sometimes it falls out that nature will prevail. When I talk, therefore, of an academy for women, I mean both the model, the teaching, and the government different from what is proposed by that ingenious lady, for whose proposal I have a very great esteem, and also a great opinion of her wit; different, too, from all sorts of religious confinement, and, above all, from vows of celibacy.

Wherefore, the academy I propose should differ but little from public schools."

Defoe's *Essay on Projects* appeared in 1697, three years after the publication of Mary Astell's book. In order to refute the possible imputation that he had borrowed from her, he thought himself "bound to declare" in his Preface that his scheme of educating women "was formed long before the book called *Advice to the Ladies* was made public." He asserts that he had written the greatest part of his *Essay* five years before its publication. But one cannot help perceiving some signs of Mary Astell's influence on his ideas. The second regulation, for instance, which he lays down for his academy runs thus: "As no woman should be received but who declared herself willing, and that it was the act of her choice to enter herself, so no person should be confined to continue there a moment longer than the same voluntary choice inclined her." This is the same rule as I have quoted above from Mary Astell's book. For her "monastery" it was a very sensible rule; but it sounds rather odd if applied to girls, for whose education Defoe's academy was intended. Besides, the manner in which Defoe's remarks on Mary Astell's proposal appear in his book does not look as though they were inserted by way of a later addition to a finished chapter on female education. Perhaps we may conclude that Mary Astell's book caused Defoe to write his chapter; at all events his project for an academy for women has some connexion with her "serious proposal" to establish a "monastery."

I have written a long article on Mary Astell, which will be published in the *Journal of Education*. In it I hope to show that she was the first writer who formally and decidedly advocated the rights and abilities of her sex, preceding Mary Wollstonecraft, who is generally credited with that merit, by about a hundred years. It is strange to find that, in the *Dictionary of National Biography*, this most distinctive side of her writings is entirely neglected. She has also the merit of priority to Defoe; for the book on which her claims are principally founded appeared in 1696, a year previous to Defoe's *Essay on Projects*. It is entitled *An Essay in Defence of the Female Sex*, and is exclusively devoted to a discussion of the education and social position of women, forming the earliest energetic protest against their subjection to men that I know of. As to Defoe, I may add that this is a good instance to show that he cannot be credited with all the reformatory ideas and schemes put forth in his *Essay*, by which he is frequently said to have anticipated some of the most important public improvements of modern times.

In my article on Mary Astell I have also pointed out several curious parallels between her writings and Defoe's *Compleat English Gentleman*, one of his last works, which I recently edited for the first time from the author's MS. in the British Museum.

KARL D. BÜLBRING.

LONDON STONE.

Mena House Hotel, Cairo: Feb. 24, 1891.

It would really seem as if that "rough and weather-worn block," known as London Stone, possessed as unhappy a fascination for adventurous archaeologists as the Great Pyramid in the shadow of which I write these lines. The latest accession to their ranks is no less brilliant a writer than Mr. Grant Allen, who claims in *Longman's* of this month to identify it as the "palladium of British liberty"—"the city fetish"—"the very oldest and most sacred relic of ancient London."

Mr. Allen, as we all know, is apt to find "sermons in stones"; but I venture to think that in this instance he has wandered somewhat

far from his text. Are we to assume that every place-name ending in "stone," or even "ston," is necessarily derived from a sacred stone? Mr. Allen writes:

"A few selected cases of British sacred stones may help to show the immense importance attached to these palladia of the infant communities. The old name of Brighton, as everybody knows, was Brighthelmston, in Anglo-Saxon Brihtelmestan, that is to say, Brighthelm's Stone. Brighthelm, I suppose, was the Aeneas of the little South-Saxon colony that first settled down among the combes of that chalky region; and the stone, stan, or stane, stood on the spot in the centre of the town which still bears its name in an altered spelling as the Steyne."

There is a charming simplicity about this supposition. But, first, as Mr. Sawyer has shown, the variants of the place-name, "Bright-helmston," are almost endless; consequently we must be guided by analogy in determining the correct form; and analogy, I need scarcely say, is overwhelming in favour of the normal "ton," rather than "stone," as the source of the final syllable. Secondly, the "steyne" is not a "spot," but a considerable area. Thirdly, it was not "in the centre of" the ancient town (which stood to the west of it). Fourthly, we find "steyn" occurring similarly at Nottingham, where, as Mr. Stevenson shows in his glossary to the Borough Records, the word is one of Scandinavian origin, which might well describe such an area as the steyne at Brighton. Mr. Allen speaks of Brighthelm's hypothetical "stone" as now a "vanished mass." The argument he founds upon it must, I fear, imitate its fate.

I may, perhaps, be allowed to refer to one suggestion as to London Stone, because the subject is specially familiar to me. Mr. Allen, like the late ingenious Mr. Coote (whose essay he cannot have read), makes the most of the fact that the first mayor of London, according to "modern" (why modern?) research, was "Henry of London Stone"; and, warming to his subject, he proceeds:

"Even before his recognition as mayor, his signature, when he signs a document, comes first on the roll after that of the 'vicecomes.' I gather from this that he may even then have been the guardian of the city fetish, and, as such, naturally selected for the first human representative of the city in its corporate capacity."

From the words "human representative" Mr. Allen, I presume, holds that, like Jahveh, the Lord Mayor was originally a "fetish stone." But, in any case, he here draws his inference from a fact which, if I remember right, has no existence outside the covers of Mr. Loftie's little book. And Mr. Loftie's facts on the history of London at this period of its existence must, unfortunately, be taken with a large grain of salt. "Henry fitz Ailwin" (whose probable origin I have elsewhere indicated) was also known as Henry of London Stone; and so was Thomas Becket as Thomas of London; but neither Henry, nor any other individual known to his neighbours as "the Stone," was on that account the guardian of a fetish any more than the family of Attree (Atte Tree) were guardians of the Tree of Life.

I will not follow Mr. Allen into his strange fancies about the "imperial importance attached to coronation upon London Stone," which seem to be based chiefly on the circumstance that when Svegen could not be crowned in London he decided (if the expression may be permitted) to "go to Bath" instead.

That London Stone is a venerable relic no one would deny; but such wild speculations as to its story are surely unworthy of so distinguished a writer as Mr. Grant Allen.

J. H. ROUND.

PROF. EARLE'S "FLEXIONAL INFINITIVE."

Oxford: March 7, 1891.

I do not at all despair of getting Prof. Earle to give up his deliberate heresy about the "flexional infinitive." He was once quite as certain about the correctness of his explanation of the construction "I go a fishing." In *The Philology of the English Tongue* (ed. 3, 1879, § 580b) the professor said, "this grammatical character is sometimes illustrated by the help of the French *à* before these infinitives," whereas in ed. 4 (1887), we find, "by the help of a (*perhaps* the French *à*), &c." So we see that in 1887 the professor was hesitating about the French character of the *a* in the phrase "I go a fishing"; let us hope that in 1891 we shall find him ready to give up his idea that the form "fishing" is a flexional infinitive.

The question in dispute between us is a very simple one. Prof. Earle says, on p. 60 of his *English Prose*, that there are three classes of words ending in *-ing* in modern English, namely, (1) participles, (2) verbal nouns, (3) verbs in the infinitive mood, these last being the phonetic representatives of Old English infinitives in *-an*. I, on the other hand, maintain that an infinitive in *-ing* (the descendant of an older *-an*) is the veriest moonshine. It is an assumption unsupported by any historical evidence, clean contrary to the known development of the Old English sound, and wholly unnecessary, as these so-called infinitive *-ings* may in every case be explained as verbal nouns.

Let me take a very familiar case to illustrate what I mean. I have lying before me a profoundly philosophical poem, having for its title "The Hunting of the Snark." I can hardly imagine that Prof. Earle will go the length of denying that the word "hunting" here is a verbal noun. Well, on p. 9 of this book the Beaver is introduced as speaking sentimentally of "the rapture of hunting the Snark." Will the professor really maintain that in this latter case we have no longer an instance of a verbal noun, that "hunting" has now become a flexional infinitive? Of course the true doctrine is that there is here no change in the grammatical or formal character of the word "hunting," and that the construction is equivalent to "the rapture of the hunting of the snark." Bunyan, in his *Pilgrim's Progress* (ed. 1862), ii. 209, says, "She is a taking of her last farewell of her Country"; we should of course now say, "she is taking her last farewell." The *a*, it should be added, is not French *à*, but an unstressed form of the Old English preposition *on*.

Prof. Earle, in the innocence of his heart, asks whether there is any "law" which forbids an infinitival form like A.S. *lufian* having a two-fold development, in one direction "love" and in the other "loving." In putting this naive question, Prof. Earle shows that he has lived and taught wholly uninfluenced by the new school of grammarians (*juggrammatische Schule*), without paying heed to their pregnant dictum that phonetic laws admit of no exceptions—a view first clearly expressed in 1876 by Leskien, who said,

"if we admit arbitrary, accidental deviations, such as are incapable of classification, we virtually confess that language is inaccessible to scientific investigation."

Delbrück, in his *Introduction* (1882), p. 115, said,

"it cannot be doubted that all scholars who have devoted any serious attention to phonetics have consciously or unconsciously been influenced by the idea that the moving spring of all changes is neither arbitrary nor accidental, but prevailingly regular."

Paul, in his *Principles* (1888), p. 57, thus cautiously answers the question, "Can we assert uniformity of Sound-Laws?"—

"Sound-Law does not pretend to state what must always under certain general conditions regularly recur, but merely expresses the reign of uniformity within a group of definite historical phenomena."

This Act of Uniformity, as promulgated by Paul, is the "law" which would forbid an O.E. *-an* becoming in the same dialect at once *-e(n)* and *-ing*.

But perhaps Mr. Earle may mean that in some cases the sound of *-ing* may be substituted for *-e(n)*, from the attraction of other forms in *-ing*. This I have shown to be an unnecessary assumption, as all the *-ings* which are not present participles can be easily explained to be, as well in form as in function, verbal nouns. A form like "hunting" may be either a present participle or a verbal noun; in either case the suffix is derived from O.E. *-ung*; in the latter case the *-ing* is a regular phonetic development of the older *-ung*; in the former case the *-ing* is a substituted sound for the Old English participial suffix *-ende*, the new sound being due to the attraction of the verbal nouns.

A. L. MAYHEW.

TUNIP.

Oxford: March 9, 1891.

Whether Tunip is Semitic or not, it seems to me to represent the name of the locality mentioned in Gen. xxxvi. 32 as *דִּנְהָבָה*, Dinhaba, the residence of Bela, the son of Beor, who reigned in Edom. This king is probably identical with "Balaam, son of Beor of Pethor, which is by the river of the land of the children of his people" (Numb. xxii. 5); *Variorum Bible*, "of the children of Ammon." Balaam was, according to Deuter. xxiii. 4 (5) of Pethor in Aram Nahraim (A.V. Mesopotamia). It is most likely that Dinhabah was not a locality of Edom in the restricted sense, unless the dominion of Edom extended in Balaam's time to Aram Nahraim or Naharina. The list of the kings of Edom (Gen. xxxvi. 32 to 40) seems to point to rulers who were not of Idumaean origin. In Numb. xxxi. 8 and Joshua xiii. 21 Balaam is put to death together with the princes of Midian and Sihon.

A. NEUBAUER.

SWALLOWS BUILDING AMONG THE RAFTERS.

Knill Rectory: March 9, 1891.

There is a mystery which needs explanation in the statement taken from the *Classical Review*, and in Mr. Webster's letter, about swallows building in unusual places in Greece, and in the Pyrenees.

If the bird spoken of be really the swallow (*Hirundo rustica*), it would be quite natural that it should build among the rafters of the house, and not under the eaves. In this country swallows usually build in chimneys, outhouses, &c., showing, apparently, that they prefer dark places for their nests. They never, so far as I know, build under eaves. But if the bird spoken of be the house-martin (*Hirundo urtica*), under the popular designation of swallow, which builds its nest against the walls of a house under the eaves, then their building among the rafters in preference to under the eaves would be, I should say, a remarkable exception to their usual habit.

GEORGE HANBURY FIELDING.

[Two other correspondents have written to the same effect.]

TWO STORIES.

Hampstead: March 8, 1891.

Will you allow me to draw attention to the curious similarity between a story by Mr. Ernest Rhys, entitled "The Last Dream of Julius Roy," which appeared in *Macmillan's Magazine* last month, and one signed with my

name which appeared in the *Newbery House Magazine* for July, 1890, entitled "A Great Success"? I sketch the outline of the two stories in parallel columns:—

"A GREAT SUCCESS." "THE LAST DREAM OF JULIUS ROY."

July, 1890.

February, 1891.

An author after a long life of failure starts from Trafalgar-square in a condition of abnormal excitement and rushes down the Strand intent upon luncheon at a tavern, Fleet-street being suggested. He orders a lunch which for him is unusually sumptuous. He has been full of unreal inflated hope, but overhears a conversation in which he realises for the first time the abjectness of his own failure. He has had ale with his lunch. He throws his arms over the table, lays his head on them, falls asleep and dreams. The dream takes the form of his own troubled experience. Again he "is hurrying through the streets of the great city." He is on his way to the palace of fame. There is a gate which has to be passed through; before he gets in he has to present a gift. This gift he holds in his hand, but it dwindles and vanishes. He falls before the door at last defeated and in despair. Then the dream changes; the door is unexpectedly opened by an unseen hand, and he beholds a face, known yet unknown, which smiles upon him. The poor author enters in, to find the aspiration of his life satisfied in ways not looked for by him. When found by the people of the tavern, he is dead.

An author after ten years of failure starts from Trafalgar-square, goes to Pall Mall to put on a dress coat, and finally returns in an abnormal state of excitement, on his way to a tavern ("The Three Friars") in Fleet-street, to have supper there. He orders an unusually sumptuous meal. He has been realizing the abjectness of his own failure; but on his way he meets with his old love, who gives him a flower, and he is now in a state of wild unreal hope. He has wine with his supper, and he throws his arms over the table, falls asleep and dreams. The dream takes the form of his own troubled experience. He is "being whirled rapidly through the streets of a dark and unknown city," in a carriage with the beloved woman by his side. He gets to a place which is a theatre, and sees a phantasm of himself on the stage struggling in vain to pass in at a door; the phantasm at last falls down before it baffled and defeated. He goes on to the stage to look after his phantasm. He himself knocks at the gate, and it is thrown open, and the beloved woman stands before him smiling. Then he receives in unexpected ways the desire of his life. When the waiter comes to rouse him, he is dead.

E. FAIRFAX BYRNE.

APPOINTMENTS FOR NEXT WEEK.

SUNDAY, March 15, 4 p.m. South Place Institute: "Fetichism," by Mr. J. E. Carlyle.
7.30 p.m. Ethical: "Some Ethical Aspects of Education," by Miss E. E. C. Jones.
MONDAY, March 16, 5 p.m. London Institution: "What is a Poison?" by Prof. C. Meynott Tidy.
8 p.m. Society of Arts: Cantor Lecture, "Photographic Chemistry," II., by Prof. R. Meldola.
8 p.m. Aristotelian: "The Philosophy of Roger Bacon," by Mr. R. J. Ryle.
8 p.m. Victoria Institute: "The Reality of the Self," by Dr. Courtney.
8 p.m. Richmond Athenæum: "Lyrics, Elizabethan and Victorian," by Miss Burstall.
TUESDAY, March 17, 3 p.m. Royal Institution: "The Spinal Cord and Ganglia," IX., by Prof. Victor Horsley.
7.45 p.m. Statistical: "Prison Ethics and Prison Labour," by the President, Dr. F. J. Mouat.
8 p.m. Civil Engineers: "The Subterranean Water in the Chalk Formation of the Upper Thames, and its Relation to the Supply of London," by Mr. J. T. Harrison.
8 p.m. Society of Arts: "Recent Development of Tasmanian Industries," by Sir Edward N. C. Braddon.
8.30 p.m. Zoological: "Some Dermal Plates of *Homosteus* from the Old Red Sandstone of Caithness," by Mr. A. Smith Woodward; "*Lacerta sinuata*," by Mr. G. A. Boulenger; "Some Neuropeura Odonata (Dragonflies) collected by Mr. E. E. Green in Ceylon," by Mr. W. F. Kirby; "Some Antelopes procured by Mr. T. W. H. Clarke in Somali-Land," by Mr. Oldfield Thomas.
WEDNESDAY, March 18, 8 p.m. Microscopical: "A New Method of Demonstrating Cavities in Dental and Osseous Tissues," by Mr. T. Charters White.

4 p.m. Mrs. Jopling's School of Art: "The Poets as Painters," IV., by Miss E. D'Estere Keeling.
8 p.m. Society of Arts: "Harbours, Natural and Artificial," by Mr. F. H. Cheesewright.
8.30 p.m. University College: "Sir Henry Vane," by Prof. Beesley.
THURSDAY, March 19, 3 p.m. Royal Institution: "Modern Chemistry in relation to Sanitation," III., by Prof. C. Meynott Tidy.
7 p.m. London Institution: "Originality in Music," by Prof. Ernst Pauer.
8 p.m. Linnæan: "Researches on Earthworms of the Genus *Lumbricus*," by the Rev. Hilderie Friend; "Hemiptera and Heteroptera of Ceylon," by Mr. W. F. Kirby; "Life History of Two Species of *Puccinia*," by Surgeon-Major A. Barclay.
8 p.m. Chemical: "The Molecular Refraction and Dispersion of various Substances," by Dr. J. H. Gladstone; "Contributions to our Knowledge of the Aconite Alkaloids, I., the Crystalline Alkaloid of *Aconitum napellus*," by Prof. Dunsan and Dr. W. H. Ince; "The Crystallographic Character of Aconitina from *Aconitum napellus*," by Mr. A. E. Sutton.
8.30 p.m. Antiquaries.
FRIDAY, March 20, 5 p.m. Physical: "The Theory of Dislocation into Ions and its Consequences," by Mr. S. U. Pickering; "Some Points in Electrolysis," by Mr. J. Swinburne; "The Variation of Surface Tension with Temperature," by Mr. A. L. Selby; "Magnetic Proof-Pieces and Proof-Planes," by Prof. S. P. Thompson.
8 p.m. Browning Society.
9 p.m. Royal Institution: "Hydrophobia," by Prof. Victor Horsley.
SATURDAY, March 21, 3 p.m. Royal Institution: "The Forces of Cohesion," VI., by Lord Rayleigh.

SCIENCE.

SOME BOOKS ON ORNITHOLOGY.

The Myology of the Raven: a Guide to the Study of the Muscular System in Birds. By R. W. Shufeldt. (Macmillan.) It is no small achievement to be the first to put the anatomy of the muscles of birds on a level with the knowledge of similar structures in any group of animals with the exception of man; but such is the distinction of Dr. Shufeldt in the present volume. The author has chosen for the text of his remarks the ubiquitous raven (*Corvus corax*) because it is the largest example of the oscine division of birds, which is almost universally regarded as the highest development of the ornithic type of vertebrate animals. When all is clear with regard to the muscles of a raven, the relation of the muscles of other birds can in most cases be readily shown; and in the present work deviations are pointed out with much minuteness, whenever such have been recorded. As a text-book, indeed, it must at once take the highest rank, and should soon appear in a second edition. In the ACADEMY it would be out of place to attempt a critical review, for such a work as Dr. Shufeldt's will naturally come under the notice of every specialist, and a fierce light will beat upon it. But we may remark that, in his bibliography, the learned author makes no reference to the work of Dr. William Macgillivray, in a line similar to his own; a work so elaborate in one instance that, when the present writer called the late Prof. Rolleston's attention to it, he remarked that he should never have written on the homologies of certain muscles of the shoulder-joint in birds as he did if he had been aware of the researches of his predecessor. Moreover, if we mistake not, Prof. Ray Lankester has shown to the Zoological Society that Sir Richard Owen's description of the diaphragm in the *Apteryx* is not quite correct. The translation of Sundevall's treatise on birds' wings, by the late W. S. Dallas, should also not have been ignored. But these are little things to complain of in a work so obviously great.

Handbook of Field and General Ornithology: a Manual of the Structure and Classification of Birds, with Instructions for Collecting and Preserving Specimens. By Elliott Coues. (Macmillan.) No one who aspires to be an ornithologist in the true sense of the name can afford to be ignorant of the contents of this book. It aspires to showing us everything about the nature and structure of birds, so far

as a single volume can epitomise the extent of present knowledge; and it fulfils its aspiration to a degree hitherto unknown. It is practically a reprint, for English readers, of the first third of the illustrious author's second edition of his *Key to North American Birds*, published at Boston, U.S.A., in 1884; and it contains some excellent figures which appeal more to English ornithologists than did those of the original work. It consists of two divisions. The first is entitled "Field Ornithology." Here we have minute directions as to how to collect birds and their nests and eggs; how to prepare them for the museum, according to the latest and most refined methods; and how to preserve them. It may hardly be considered credible in a scientific treatise, but we can faithfully avow that almost every page of this part reads like a novel; and it is much more interesting than most of them. The genius of the author alone makes each page as pregnant as most people's chapters could have been. Only those who know him "in the flesh," as he would say, can conceive how it is that he puts dry details so brilliantly. It is part of the man himself, his own way of work; and may it be long before the world knows from his biographer the secrets of the way in which he crystallises the results of his trained enthusiasm; we shall all want to copy him then. Here we are only his critic; and we cannot find anything to criticise, but only to admire now a part of the life-work of a man who concentrates within himself the advanced ornithology of the age. Prof. Coues's second division is called "General Ornithology." General it is, indeed, in the widest signification. He defines birds; he tells us what a bird is, and shows us how it differs from other vertebrate animals, adducing more facts in evidence than we might think necessary if we had lived in pre-Darwinian times. Then he gives us a philosophical disquisition on the classification of birds, such as perhaps has never been equalled. Definitions and descriptions of the exterior parts of birds follow this, wherein everything known is summarised with a master's skill. Illiger was great; but Coues is greater. That is what those who know must feel. The second half of the book is devoted to the entire anatomy of birds. As we close it, we wonder what else there is to be learnt about the matter; it is all so clearly explained and illustrated that Dr. Coues's successors will find it hard to supplant him in anything like the same compass.

A Handbook of European Birds. For the Use of Field Naturalists and Collectors. By James Backhouse, Junior. (Gurney & Jackson.) The intention of this handy little volume is excellent. We are given a descriptive list of all the birds recognised by the author as inhabiting Europe, as well as an appended list of the names of the North American, Asiatic, and African species which are stated to have occurred in the Western Palaearctic region. The variations due to sex or season are carefully noted, and the chief diagnostic points are emphasized by the use of italics. Brief notes on the distribution and habitat of each species are also given. What a boon such a book seems to offer to the travelling ornithologist, or even to him who is not possessed of more expensive works! But, alas, the execution of it fails on close inspection; and where faults are frequent no amount of valuable matter can be recommended to the tyro. The drawback of even only one per cent. of error must discount the percentage of truth to a degree only commensurate with the ignorance of the reader. The very frontispiece, pictorial and accurate though it appears to be, is in more than one point misleading, so that it is worse than useless. The "distribution" of the nightingale (p. 22) is given thus: "Summer migrant breeding in Central and Southern

Europe." Would, say, an American reader gather from this that the bird was common over two-thirds of England? It is often difficult to say whether a given bird ought to be included in a local list; but when we find such a species as the surf-scooter (*Oedemia perspicillata*) undescribed by Mr. Backhouse, when it has been included in the British list by every classical writer on the British avifauna, we cannot help losing some faith in his discrimination. However, we need not multiply instances. By this time the honorary curator of ornithology of the York Museum is probably aware of many points, the correction of which, in a second edition, will make his book one of substantial value. Even as it stands at present it is without a rival. The Germans and Americans are more fortunate than we are; we have waited too long for an English Coues or Jordan.

Sundevall's Tentamen. (Methodi naturalis avium disponendarum Tentamen.) Translated into English, with Notes, by Francis Nicholson. (Porter.) Many thanks are due to Mr. Nicholson for the present translation. Prof. Sundevall's efforts to make a logical classification of birds possible have obtained a world-wide recognition, and the present work, in its original form, has long been the handbook of every scientific ornithologist; but its having been written in Latin made its use limited to those who possessed some knowledge of that language. Now, with the assistance of his friends, Messrs. R. Bowdler Sharpe and Henry T. Wharton, Mr. Nicholson has relieved the most unlearned from making any excuse to themselves for being ignorant of a scientific treatise of the first rank. The tendency of modern science certainly is to undervalue, if not to ignore, many of Sundevall's conclusions; but the careful way in which he marshalled them, and the lucidity with which he explained them, must for ever place his work in a very high position. Mistaken he was, here and there; for he concluded his labours in the first dayspring of the light shed by the theory of evolution; but the results of his careful investigations show much of the glory thrown by the new philosophy upon the old. He wedded the knowledge of the ancients with the theories of the moderns in a quite remarkable manner. Carl Jacob Sundevall was born in 1801, and he died in 1875. The Swedish nation have good reason to revere his memory, as Mr. Nicholson shows us in a brief obituary; and it is not given to every man of science to have a silver medal struck in his honour. A reviewer cannot be expected to read every line of a work like the present, especially when he is familiar with every line of Sundevall's. But the more he looks into it, the more pleased he is with the English dress in which we have it now. The translation seems everywhere faithful, and it reads like an original essay; while the notes bring it up to the modern level. It is a work to have at your elbow, and the references are always valuable. No student who reverences Linnaeus can ignore Sundevall; and the writings of both alike create an era which the history of classification can neither forget nor despise.

Classification of Birds. An Attempt to diagnose the Sub-classes, Orders, Sub-orders, and some of the Families of Existing Birds. By Henry Seebohm. (Porter.) Mr. Seebohm quite takes our breath away. In forty-nine pages he re-arranges the birds of the world, as we know it now. He simplifies his tremendous task wisely by ignoring fossil birds, and gives good reasons for confining himself to existing forms; these are puzzle enough. The bird type is so uniform; a bird cannot be mistaken for anything else. The possession of wings, at one time or another, has so specialised its

possessors that every other attribute seems to become insignificant. There is no class of animals in which authorities have been so much at variance in the disposition of even the most prominent types as in the class *Aves*. One authority took a single basis on which to found his classification, another took quite a different one; some tried to combine a few. Mr. Seebohm's virtue lies in trying to combine all. The only valid objection which can be made to the present work is that it is too much condensed. It ought to have come out as an appendix to a general treatise; it makes too great a demand upon the reader as it stands now. Few but professed ornithologists will spare the energy to master it, although it may make an epoch. The charm of it is that the author has all the results of his predecessors' labours at his fingers' ends, and that he has endeavoured to harmonise this with an extraordinary amount of independent research. Whether Mr. Seebohm convinces the ornithological world or not, it is impossible to deny that he has focussed a greater number of facts than any of his predecessors. The time has not yet arrived to say whether the conclusions he bases upon them are irrefragable. An author is often his own best critic, and it is noteworthy that Mr. Seebohm has already made some changes upon his two alternative systems promulgated in the present treatise.

SCIENCE NOTES.

DR. ARCHIBALD GEIKIE, director-general of the geological survey of the United Kingdom, and the president for this year of the Geological Society, has just been elected by the Académie des Sciences a correspondent of the Institut.

THE Easter excursion of the Geologists' Association will be to the Isle of Wight, under the direction of the president, the Rev. Prof. J. F. Blake.

Journal of the Asiatic Society of Bengal. Vol. 58, No. 5, and Vol. 59, Nos. 2 and 3. (Kegan Paul & Co.) The first of these numbers contains elaborate indexes of the Indian species of insects of the order Rhynchocha and family Pentatomidae, described in previous numbers by the late E. T. Atkinson, and excellent plates of new Indian fishes and butterflies; and the two other parts issued in 1890 contain short papers on new Indian Weevils and Brentiides by M. D. des Loges; on species of the Andaman Flora by Mr. D. Prain; a preliminary list of the Butterflies of Madras by Lieut. Watson; on three new Indian Psychidae by Mr. F. Moore; on a new trap-door spider from Orissa by Surgeon Walsh; and on a new fly of the genus *Dilophus*, by Mr. M. Bigot. There are also four botanical memoirs, one of considerable length on the Uredineae of the Western Himalaya, by Mr. A. Barclay; and another still longer on the Flora of the Malayan Peninsula, by Dr. G. King; also on a new genus of Bamboos by Mr. Gamble; and on a new species of *Ellipanthus* by Mr. Prain.

MEETINGS OF SOCIETIES.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Wednesday, Feb. 13.)

PROF. J. H. MIDDLETON, vice-president, in the chair.—Two communications were read by J. Willis Clark: (1) on the Architectural History of the Church and Conventual Buildings of the Augustinian Priory at Barnwell; (2) on a Book of Observances of the Austin Canons. The principal authority used in both papers is a manuscript volume in the British Museum (MSS. Harl. 3601), usually referred to as "The Barnwell Cartulary," or, "The Barnwell Register." The author's own title is, however, much to be preferred, viz. *Liber memorandorum Ecclesie de Bernwelle*. The contents,

of a very miscellaneous character, are roughly sorted into seven books, prefaced by an excellent table of contents, and a calendar. The eighth book, which has hitherto passed unnoticed, contains a *Consuetudinarium*, or Book of Observances, of the Austin Canons. The whole MS. is written in a large, clear, uniform hand, and internal evidence shows that it was finished in 1296. (I.) The Augustinian Order was first established in Cambridge in 1092, by Picot, the Norman sheriff of Cambridgeshire, who built a small house for six Canons close to the castle. This house Pain Peverel transferred in 1112 to "a much more convenient site" at Barnwell, granted to him by King Henry I. There he set about building "a church of wonderful beauty and massive construction" (*ecclesiam mire pulchritudinis et ponderosi operis*), and so large "that it would have extended as far as the high road." He died, however, in 1122 or 1123, before its completion, and was buried "on the north side of the high altar," a piece of history which indicates that the building had made considerable progress. After his death little or nothing was done until 1165. In that year Canon Robert was elected Prior, "a man of unheard-of strictness and austerity," who was evidently an administrator of rare ability. "He associated with himself," we are told, "a distinguished soldier named Everard de Beche, by whose advice and assistance he pulled down to the foundations the church which had been nobly commenced by Pain Peverel aforesaid, and completed another of more suitable character." This church was consecrated by the bishop of Ely, in honour of S. Giles and S. Andrew, on April 21, 1191. Up to this time the Canons had probably lived in wooden houses; but, during the tenure of office of Laurence de Stanesfeld, ninth Prior (1213-1251), we read of the construction of the frater, the farmery, the great guest hall, the granary, the bakehouse and brewhouse, the stable, the inner and outer gatehouse, and the chapel of S. Edmund. The chapel of the infirmary was consecrated October 2, 1222; the chapel of S. Edmund, January 21, 1229. Tolamus de Thorley, eleventh Prior (1254-1265), built the prior's lodging and chapel, and rebuilt part of the cloister and chapterhouse. The dates of the above-mentioned works fall very conveniently into three periods: (1) 1112-1165; (2) 1165-1208; (3) 1208-1265. During the first the church was begun on a grand scale, and, on the evidence of the date, in the Norman style. In the second the original plan was completely changed, and the church completed in the Early English style, on the same evidence. In the third, the conventual buildings were erected. In 1287 the tower—called in the Dunstable Chronicle *nobilissima turris de Barnwelle*—which probably stood at the intersection of the nave, quire, and transept—was struck by lightning and set on fire. The flames spread to the quire, which was so seriously damaged that two years were spent in rebuilding it. After the Dissolution the buildings of the abbey were used as a quarry; but, notwithstanding this indiscriminate destruction, a good deal was still standing in 1810, and the plan of the whole could be made out. In that year, however, the ancient foundations were dug up, and the ground levelled. Since then, a considerable portion of the site has been removed in the course of digging for gravel. (II.) The *Consuetudinary*, or, as the author calls it—"a short treatise on the observances of Canons Regular in accordance with their Rule"—prescribes, in the most minute manner, how the brethren are to behave in the church, the dorter, the frater, the cloister, &c.; and what are the specific duties of the principal officers of the house. As might be expected, knowledge is assumed on many points which are obscure to us, and on which we should gladly have had fuller information; but, notwithstanding, a graphic picture of the daily life of a great religious house is set before us. After the preface, which occupies five chapters, we come to those which deal with the officers of the house: the Prior (here called Prelate), and his subordinates, or *obedienciarii*. These are: the Sub-prior, the third Prior, the Precentor or Armarius (librarian), who is to have an assistant called *succentor*; the Sacrist and Sub-sacrist; the Hall-Butler (*Refectorarius*) with his servitor; the Almoner; the Chief Cellarer and the Sub-cellarer; the Kitchen Steward (*Cocuarius*)

with his assistant; the Steward of the Granary (*Granatorius*); the Receivers (*Receptores*) the number of which is not specified; the Steward of the Guest-house (*Hospitarius*) with his servant; the Chamberlain (*Camerarius*); and the Master of the Infirmary (*Infirmaryus*). The Prelate was elected by the brethren, but, once in office, was to exercise a despotic sway from which there was no appeal, and to be treated with obsequious deference. Next to him came the Sub-prior. Besides certain specified duties, as the awakening of the brethren in the dormitory in the morning, he was generally to bear the same relation to the Prelate as a College Vice-Master does to the Master. The third Prior stood in a similar relation to the Sub-prior. His principal duty was to go round the house at night, and see that all was safe, and no brother lingering where he ought not to be. In matters temporal the Prelate depended mainly on the Chief Cellarer (*Cellerarius Major*), who is called his "right hand." He combined, in fact, the duties of the Senior and Junior Bursar of a College. He was assisted by the Steward of the Granary (*Granatorius*), who seems to have acted as an agent, and by the Receivers, to whom the rents and other monies were paid. The services were directed by the Precentor (who was also librarian and archivist), and the Sacrist and Sub-sacrist. There was also a priest appointed for each week, called *Hebdomadarius*. The Sacrist and Sub-sacrist were called "the guardians of the church;" in winter they slept in it, and took their meals in it. The directions for the ritual are very minute and curious. The daily occupations of the brethren can be easily made out by comparing these Observances with the statutes of the Premonstratensians, or reformed Augustinians, which are more precise on several points of daily custom. We will begin with Matins. "The brethren ought to rise for Matins at midnight. Hence the Sub-sacrist, whose duty it is to regulate the clock, ought to strike the bell (*nocturn*) in the dormitory to awaken them. When the brethren have been aroused by the sound, they ought to fortify themselves with the sign of the cross, to say their private prayers noiselessly while getting ready, and then to rise. They are then to sit down before their beds, and wait for the Warden of the Order [the Sub-prior] to give the signal for them to leave the dormitory. Next, when the lantern has been lighted, which one of the younger brethren ought to carry in front of them, and a gentle signal has been given, they should put on their shoes and girdles, march into church in procession, and devoutly and reverently begin the triple prayer. . . . When Matins are ended, the brethren, after making a profound obeisance, ought to leave the choir, the younger leading the way with a lighted lantern, and proceed to the dormitory. No one is to remain in the church, except the guardians [i.e. the Sacrist and Sub-sacrist] unless he have leave to do so. When the brethren have reached the dormitory, they are not to sit down before their beds, but to place themselves in them and rest. . . . In the morning, at a signal from the Warden of the Order all the brethren ought to leave their beds. When they leave the dormitory, after washing their hands and combing their hair, they ought to go to the church before they turn aside to any other place. There, after sprinkling themselves with holy water, let them pray with pure hearts fervently, and first seek the Kingdom of God and His righteousness. After this, while the priests are preparing themselves for private masses, let some attend to the duties assigned to them, others take their books and go into the cloister, and there read or sing without conversation." Before they left the church, Prime would have been said; but there is no special mention of this hour—or indeed of many of the other hours—as in the Premonstratensian or Benedictine Statutes, because it was taken for granted that all the brethren would attend them. There is a special chapter, headed, "That all ought to be present at the Hours," which the writer probably thought would be sufficient for his purpose. Prime was succeeded by the Mass of the Blessed Virgin, and the morning-mass or chapter-mass, after which they went to Chapter, which was presided over by the Prelate, or, in his absence, by the Sub-prior. In Chapter—which all brethren were bound to attend—the ordinary business of the house was transacted, and the offences committed during the previous twenty-four hours made public and punished.

Chapter was succeeded by Terce; then came High Mass, followed by Sext. After this the brethren went to dinner in the frater. The food consisted of fish, meat, and vegetables, and apparently did not vary; for the Almoner is directed "to make up every day for ever three plates for the use of three poor men, viz., of the remnants of bread, meat, fish, and occasionally of vegetables left over." Cooked fruit is also mentioned. The directions for the care of the frater, and for the behaviour of the brethren in it, are very minute and curious. Scrupulous cleanliness is insisted upon; and, besides, it is to be beautified in summer with fresh flowers, and made sweet with mint and fennel. Fly-catchers also are to be provided. After dinner the brethren went, in summer, to the dormitory for a siesta. They were awakened by a bell for Nones; after which came collation (the drinking of a glass of beer in the frater, followed by a reading in the chapter house); then Vespers; then supper; and lastly, Compline. This over they retired to their beds in the dormitory. Silence was to be kept, as directed by the rule, from morning till after Chapter. After Chapter the brethren might converse in the cloister till the bell rang for Terce. After this there was to be no more conversation until the same time on the following day. Silence might, however, be broken in the event of four accidents, viz., robbers, sickness, fire, workmen. If strangers of rank, whether lay or clerical, visited the convent, they might be spoken to; and a few words might be used at meals. If brethren were compelled to speak during the hours of silence, they might do so in the parlour. The curious custom of bleeding (*minutio*), has a chapter devoted to it, from which we will make a short extract:—"Those who intend to be bled ought to ask leave of the president in Chapter, and, having received a bleeding licence, are to leave the choir after the gospel at High Mass, and to be bled at the usual place in the Infirmary. . . . After an interval of seven weeks, permission to be bled is not to be refused, except for a reasonable cause. Those who have been bled ought to take their meals for three days in the Infirmary. During this interval they ought not to enter the choir for Matins or the other Hours."

FINE ART.

ART BOOKS.

A Century of Painters of the English School. By Richard and Samuel Redgrave. Second Edition. (Sampson Low.) It is useful to have this book in one volume of a handy size, and carried down to the present time; but we rather regret some of the abridgments, as for instance the information about the rise in the prices of Turner's pictures, and the revision has by no means been as thorough as it might have been. Some attempt should at least have been made to reconcile the conflicting opinions about Wright, of Derby. His Life has been written, and excellent opportunities of studying his work have occurred since 1866. Our knowledge respecting the English School has greatly increased since this book was published; but here, where above all places this knowledge should be clearly shown, it is principally remarkable for its absence. The work of Dr. Propert on miniature painting does not appear to have been consulted, and the accounts of the water-colour painters are very imperfect and inaccurate. Everybody, except apparently the editor of this second edition, knows that Cox excelled as a painter in oil-colours, that his works in that material are even more highly valued than his water-colours; but in this *Century of Painters* it is thought sufficient to say that "he retired to Harborne. . . . and devoted himself almost entirely to painting in oil. His works in this material were rarely seen in London, remaining principally in the hands of his friends." In this respect De Wint is still more badly treated, although his two large landscapes at the South Kensington Museum have long shown to all who know any-

thing about English art that he was one of the finest of our landscape painters in oil. George Barret, Junior, has more justice done to him; but surely there is no excuse for retaining a paragraph which declares that "a certain monotony of colour pervaded" the pictures of one of the most radiant and brilliant of all painters. It would have been well if the additions had been marked in some way, especially in such chapters as the last about the Pre-Raphaelites. They seem to be fairly well done, but on the whole this revised edition is disappointing.

"THE GREAT ARTISTS."—*Memorials of William Mulready, R.A.* By Frederic G. Stephens. (Sampson Low.) A few facts and a few anecdotes are all that Mr. Stephens, with all his diligence and opportunities, has been able to collect as materials for the biography of an artist who lived for no less than seventy-seven years. But the author has filled out the scanty outlines of his story with such detailed descriptions of his pictures, and with such a variety of information on all subjects and persons connected with his life, that with the aid of not a little repetition he has managed to put together some hundred and twenty pages. Considered as literature, it is but a piece of patchwork, not over-well designed nor very neatly stitched; but it has the merit of being written by one who knew the artist himself, and has associated with many of his friends—one moreover who has probably the most intimate knowledge of his pictures of any man living. His portrait of the man is kindly, his criticism of the artist sympathetic, and on the whole just; but it is a mistake to call Mulready a great artist, except in a strictly comparative sense. He was careful, laborious, conscientious, something of a humorist, an accurate draughtsman, an accomplished painter (especially of still life), he had more humour than De Hooghe, more refinement than Jan Steen, was a better colourist than Wilkie; but he was not half so great an artist as any one of these, for all that.

"THE GREAT ARTISTS."—*Corot, Daubigny, Dupré*, by J. W. Mollett; *Millet, Rousseau, Diaz*, by J. W. Mollett; *Ruisdael, Hobbema, Cuyp, Potter*, by Frank Cundall. (Sampson Low.) So much has been written lately about the Barbizon School, and there is so little that is new in the volumes compiled by Mr. Mollett, that little need be said in praise or blame with regard to them, except that they are convenient *resumés* of existing information, neat in arrangement, and fully illustrated. How great a title Mr. Mollett can claim as an original authority on French art may be gathered from one sentence: "The Revolution and the Terror," says Mr. Mollett, "produced both David and Géricault, whose early childhood passed in those years (from 1791 onwards) of which a contemporary historian has said that he 'never remembered then to have seen the sun shine.'" David was born as a fact in 1748; but no one who has any knowledge of the history of French art would need to look up his dates to remember that David was at the head of French art before Géricault was born. Mr. Frank Cundall's book on the four famous Dutch landscape painters is also, and necessarily, a summary; but it is one of a better sort, more varied in its learning, and more complete in its arrangement. It is in most ways a model of how such popular critical biographies should be constructed. It gives all the important facts in excellent order, so that in a small compass the reader may find all the information he needs as to life and works, and the criticisms thereon. Sufficient historical information is also given to make the position of the painters in their school, and the conditions under which they worked, quite clear even to him who runs. These new volumes of this useful series are all full of pictures

and one or two of the illustrations like that of the Queen's Hobbema, "The Watermill," from Buckingham Palace are very good.

THE ROYAL SOCIETY OF PAINTER-ETCHERS.

AN interesting selection from Turner's *Liber Studiorum*—showing many of the plates in different states and as they were affected by the individual work of Turner upon each—fills that wall at the Painter-Etchers which is devoted year by year to the classics of etching. With the brief record of this fact I must perforce content myself, and pass on to the remaining walls, the exhibitors whereon are subjected to the trying test not exactly of competition, but of almost juxtaposition, with the admitted master of the art of landscape. And it says a very great deal for the vitality of etching to-day, that there is at the Painter-Etchers so much work which one can look upon with interest—which one can recognise as masculine, energetic, and personal, even when one is fresh from a survey of the triumphs of Turner.
